The obligation to make every necessary sacrifice rests with double weight upon the organizations for social welfare. We, therefore, commend the patriotism of those social organizations which are lending their most efficient workers for the national service in the government departments, the national Red Cross, the movement for conserving health and morals in the army and navy but by wholesome recreation and by eliminating temptations to intemperance and vice.

On the other hand, we would emphasize the insistence of the President of the United States as to the necessity for conserving those agencies which operate to maintain public morals, public health and the producing forces of the community. We, therefore, urge the importance of maintaining the full force and efficiency of the agencies for social work and of securing for all of them adequate support in view of the new and pressing demands created by the war; especially those agencies which make for the preservation and improvement of public health and family life, the protection of motherhood and the preservation of children from the destructive and demoralizing influences of war. We urge the maintenance throughout the war of all our standards for the protection of industrial employes, especially women and children. The lending of social workers for the national service should not include so large a number as to cripple the effectiveness of these vital agencies which are among the most essential bulwarks for the national defense.

While recognizing that, under war conditions, some exceptionally stringent forms of governmental regulation may be inevitable, we sincerely trust that the fewest necessary encroachments may be made upon personal freedom.

At the close of the business session which adopted the resolution, the election procedure was somewhat modified. The Committee on Nominations will continue to solicit suggestions for the ticket from the members. But instead

of being required to publish its report, and the ticket, thirty days before the conference meeting, it may now make its report "not later than the opening evening session." This will give the committee, whose members are scattered about the country, opportunity for a meeting. C. C. Carstens, of Boston, chairman of this year's committee, had found the present committee work by mail highly unsatisfactory and it was he who suggested the change. The printed ballot will be continued, likewise the provision that the nominating committee must include the name of any person proposed on petition of twenty-five or more members.

Registration at Pittsburgh ran over 4,300 persons, a clean thousand over the high record set at Indianapolis a year before.

POSITION OF THE TRADE UNION WOMEN

AT a time when, as never before, the strength and skill of working women are impressing the world, the sixth biennial convention of the National Women's Trade Union League of America was held at Kansas City, June 4-9. The significance of such a gathering "in a supreme hour in the life of this nation" was brought out by the president, Mrs. Raymond Robins, of Chicago, in her opening address. "This is woman's age!" said Mrs. Robins.

At last, after centuries of disabilities and discriminations, women are coming into the labor and festival of life on equal terms with men. At last the unfair burdens are being lifted from the backs of the mothers of the race. In the awful lightning made as death strikes sharp on life for millions of sons, the value and rights of daughters are being discovered by the lords and masters of the earth. Woman's labor in the fields feeds the soldiers on the firing line. Woman's labor in factories and mills feed the cannon in the trenches. Woman's labor in shops and stores feeds the homes of Europe. Canada, Russia, America and even England should have an enfranchised womanhood when this war is over.

But it is in the industrial and economic field that the world war will mark the most far-reaching transformation in the condition of women. From casual to permanent, from unskilled and unimportant to trained and essential factors in the economic life of the world, this will be the effect of the war in the condition of the working women of the western nations. . . . What a supreme opportunity and responsibility! What a call for service and consecration to the members of the Women's Trade Union League.

The delegates to the convention were well aware of their increased importance, and they were determined to safeguard and to hold on to this hard-won position.

One resolution adopted requested the American Federation of Labor to include trade union women in its delegation to the International Labor Congress at the time of peace negotiations,

and to urge working women to hold a similar international congress, because the warring nations now bear witness to the unselfish and efficient service rendered by working women; because the interests of working women as workers and mothers are identical the world over, and because the voices of the millions of toiling women in formulating terms of peace are of the utmost importance to future civilization.

Another resolution declared that, "whereas no cause of liberty in foreign lands is worth the sacrifice of freedom at home," the Women's National Trade Union League demands that there be no abolition of the constitutional rights of free speech, free press and free assemblage; that no labor standards be abrogated during the war, but be improved if possible; that wherever men are conscripted, wealth be conscripted; that an international congress of working women at the time of the making of peace terms call upon the nations to establish international standards safeguarding the rights and health of working women; finally, that organized workers keep at their task of organizing industry as an only means of establishing democracy which shall eventually bring permanent peace.

A third resolution, intended to protect women in their wider opportunity, condemned the undercutting of American standards on the Pacific coast by coolie laborers. It urged that no changes be made in immigration laws which would affect the importation of Asiatics; that no vacancies created by the call to the colors be filled by Japanese or Chinese workers; that all women filling vacancies resulting from enlistment receive the same compensation for the same degree of efficiency as that received by their predecessors.

The convention sent a cablegram to Katherine Breshkovsky, "grandmother of the Russian revolution," rejoicing with her upon the success of the revolution and the establishment of a government which extends equal rights to all men and women. It also pledged its moral support to the effort of the Russian Council of Workingmen's and Soldiers' Delegates to bring about industrial reforms. Other principles for which the conference placed itself on record are the financing of war by heavy taxes on income, particularly on unearned excess business profits, and on land values created by the community; the establishment of moral and sanitary safeguards at military camps, and the movement for open forums.

Owing to the embargo placed by the British government on women traveling overseas, Mary McArthur, secretary of the British Women's Trade Union League, was not present. Neither did the French delegates arrive. However,

Mme. Gabrielle Duchene, of the Bourse de Travail, and Jeanne Gourlet, secretary of the Intersyndicalist Committee for Action Against Exploitation of Women, sent a report urging a campaign for the adoption of international labor standard agreements by the introduction of labor clauses into the future treaty of peace. They recommended that a minimum wage be put in the first rank of the reforms demanded because it is inseparably bound up with other reforms, such as limiting the length of the working day and because it is especially necessary at a time when women are filling men's places.

Mrs. Robins was reelected president of the league and Melinda Scott, of New York, vice-president.

FRESH AIR FOR BERLIN CHILDREN

THE good effect of clean air on the health and vitality of children suffering from the effects of malnutrition which has been scientifically proved in this country apparently has also been observed in Germany. For the imperial war feeding department, as one of its measures for mitigating the shortage of food, has decided to undertake a transference of city children to rural environments on a large scale.

It will be recalled that a few months ago a Danish doctor offered to start a fund with \$250,000 for the purpose of caring for 15,000 school children from Berlin in the neighborhood of Copenhagen until three months after the end of the war, and that this offer was not accepted by the German government. In the meantime, the latter has perfected its own plans, and over a million children are being sent this summer from Berlin and other large cities to different rural regions within the empire.

East Prussia, in spite of its suffering at the hands of the Russian invaders at the beginning of the war, is ready to take 65,000 of these children, and a branch of the German Union for Rural Welfare has set up a thorough organization for selecting suitable homes among those offered and arranging for the journey. Many homes are offered free; the maximum board paid for a child in any part of Germany is 12 cents a day, a price which does not anywhere cover the actual expense. One hundred special trains have been chartered to empty Berlin of its childhood, the cost of railway transit, at the extremely low rate of about a third of a cent per mile, being paid for by patriotic communal organizations.

Present plans are that, so far as possible, children shall be boarded with families, and that they shall attend village schools rather than form colonies of their own. In East Prussia, voluntary workers have been appointed to se-

lect homes and supervise the care of the children entrusted to them. The families taking children will receive a testimonial to their patriotism which may be framed and kept as a souvenir of the undertaking. No children will, except with the special consent of their parents, be boarded with families of a different religious denomination from their own.

RECRUITING SOCIAL WORKERS FROM THE CHURCH

ANY widely cooperative social effort in Illinois nowadays finds church women in eager participation, sometimes in acknowledged leadership.

The reason lies in a unique organization of Protestant women, the Woman's Church Federation, whose aim is "to coordinate the efforts of Christian women so that, on matters affecting the civic and religious life of their community, they may act as a unit and exert the full strength of their united influence."

Twenty denominations are at present included in the federation which centers in Chicago, but is reaching out to include churches in down-state towns. Members are secured through denominational organizers who present the claims and opportunities of the organization to women's societies in the local churches. These elect two delegates, besides alternates and associates, who must have the pastor's endorsement before they are fully accredited.

The federation was organized with initial committees on welfare, information and legislation. Through the activity of the committee on legislation, many city ordinances, state and federal bills, pertaining to moral, educational and industrial matters have received the united backing of the federation, as well as the individual attention of hundreds of women in the churches. Sixteen women, the number to which the federation was entitled, sat as members of the Illinois Woman's Legislative Congress, and a bill to suppress obscene shows drawn by the federation, endorsed by the congress and backed by sixty city and state organizations, is now pending in Springfield.

As the membership has grown and the interests of the organization have widened, new committees have been added. A wide-awake committee on temperance has organized temperance committees in over four hundred local churches. Through the efforts of a morals committee several burlesque shows have been closed, including the notorious Trocadero, in operation since the World's Fair; undesirable scenes and dances have been suppressed; vulgar posters on billboards covered, and objectionable photographs removed from exhibition on the streets. In the spring of 1916 the morals and temperance

committees working together made a somewhat elaborate investigation of dance-halls having special bar permits, thus endorsing in a most practical way —by furnishing fresh and telling data —the work of those social agencies that have carried on a prolonged fight in behalf of the morals of Chicago's youth.

An active committee on labor follows events in the labor world and interprets them to the membership.

A committee on infant welfare furnishes volunteer aid to infant-welfare stations; a committee on Sunday-school gardens is promoting vacant-lot gardening through the churches; a committee on out-of-town organization has undertaken to secure cooperative federations in other towns; through a travelers' aid committee the federation will become responsible for the social work of the Chicago Travelers' Aid Society where Protestant girls are concerned, thus emulating the excellent work that Jewish and Catholic women are doing for girls of their faith; a committee on peace is struggling to uphold through these times that try men's souls the ideal of human brotherhood.

Just now the organization is doing its "bit" in the promotion of war-time service by church women, with emphasis on social and industrial standards.

The federation is in a real sense the expression of the vital personality and social vision of its president, Mrs. George McCown Mathes, who is giving without financial remuneration time and unlimited energy to its organization and development.

HELPING NEGROES HELP THEMSELVES

JUST at the time when the migration of Negroes from the South to the North in this country is assuming gigantic proportions, two unusual gifts have been made to the cause of higher education for the colored race. Several months ago the General Education Board announced a gift of \$50,000 to Fisk University, Nashville, Tenn., on condition that an additional \$100,000 be raised. Some time later the Carnegie Corporation contributed \$50,000 of this amount, leaving \$50,000 to be raised by the university itself. That sum is now being sought by the university trustees.

When the present war is seen in true perspective it may be discovered that of the several notable migrations that it has caused directly or indirectly the movement of Negroes in this country is not the least, either in proportions or permanence. President F. A. McKenzie, of Fisk, estimates this movement to have involved several hundred thousand Negroes in the past two years. Most of these have congregated in northern cities. This has meant, he declares

that many northern communities have been brought to a new and personal consciousness

that Negroes are a part of those communities, that Negroes are a part of their responsibilities. Race contacts are now present realities, not distant theories. . . . Many of the race relationships adjudged unfortunate in the South are likely to be duplicated in an exaggerated form in the North. Sudden contacts of diverse groups are apt to result first in feelings of opposition and contempt rather than in considerate thought and wise cooperation.

The recent gifts to Fisk University will equip Negroes themselves to help their race meet new problems and new situations. Fisk is a real college. It gives no diploma except for a four years' college course with the same general standards for admission and graduation that are maintained in most universities of the country. It is just reorganizing its requirements so that each student will specialize in some major subject, "without evading," says President McKenzie, "the liberalizing requirements of a certain broad range of subjects. The election of science has almost reached the point where neither buildings nor teachers suffice to meet the demands."

A growing and important part of the course is the department of social science. This represents not only the teaching of sociology, but the applied arts as well. The department cooperates with the Urban League and with the women of the southern Methodist church in conducting a settlement. Students engage in social work as a part of their regular course. Graduates go out to positions of trust in charities, recreation and social work generally. President McKenzie himself is a sociologist, trained under Professors Patten and Lindsay at the University of Pennsylvania.

THE HISTORY OF POLIO IN 1916

JUST how New York city heard of its poliomyelitis and what it did then and through the summer and fall is told in a monograph just issued by the Department of Health. Based upon official documents, the story traces the rapid series of events from the first suspicion to the final declaration that "great and imminent peril" to the public health no longer existed.

There is the response of nursing and other organizations to the need; the authorization of special funds for the crisis; detail of the work of inspectors, nurses, officers from the Public Health Service in quarantine and research; record of hospital experience; many illustrations and maps showing the march of the disease through borough after borough, as well as the methods of treating sick children; a brief history of the disease in general and a resumé of symptoms and laboratory findings.

Among the details that are especially for physician and health officer are many that the layman also will note. The group described, for instance, under the heading Conditions of Nose and

Throat, must hereafter bring under proper suspicion any "sore throat" that might otherwise have been unnoticed. For the summary says that whereas a large number of children with poliomyelitis show pathological conditions of nose or throat—diseased or hypertrophied tonsils and adenoids or both, or an undue amount of blood present in tissues of the throat and naso-pharynx—only a small percentage of cases previously operated on for tonsils and adenoids were found affected with the disease; and among these children the percentage of recovery was much higher. "The number of cases in this group," concludes the report, "is rather small to draw from it any definite conclusions, but it is at least suggestive."

Another recent pamphlet is the study of state work in the control of poliomyelitis, issued by the Institute of Public Service, New York. It gives the gist of methods and rules of forty-three state departments of health last summer. The foreword, written by Dr. Charles F. Bolduan, of the city Department of Health, says:

The information here collected . . . will prove invaluable to health officers throughout the world. . . . Moreover, the bringing together . . . of procedures followed in different cities and states should do much toward the introduction of standard methods and the adoption of uniform regulations. . . .

The larger volume may be had for \$1.50 from the New York Department of Health; the second, for fifty cents, from the Institute of Public Service, 51 Chambers street, New York city.

MINERS REPRESENTED ON COAL COMMITTEE

AS the first outcome of a conference held on June 15 at the office of Secretary of Labor Wilson, seven members of the United Mine Workers of America have been added to the original thirteen members of the Coal Production Committee of the Council of National Defense. The change was made at the demand of the officers of this union of some 350,000 members that they be given adequate representation on what is likely to prove the most effective body for controlling conditions in the coal-mining industry during the war period [the SURVEY, June 9].

The conference of June 15 included F. S. Peabody, president Peabody Coal Company, who is chairman of the Committee on Coal Production; Director Gifford, of the Council of National Defense; Secretary Wilson; Samuel Gompers as a member of the Advisory Commission of the council; and four officers of the union. These were President White, Secretary-Treasurer Green, Auditor Hayes and Statistician Lewis. These four, together with James Lord, president of the Mining Trades De-

partment of the American Federation of Labor; John Mitchell, chairman of the New York State Industrial Commission; and Hugh L. Kerwin, private secretary to the secretary of labor, were accepted by Chairman Peabody for membership on his committee. Moreover, agreement was reached that a meeting of the committee would be held on Thursday, June 21, for reconsideration of its previous acts, for revision of its policy and for reorganization of its work.

On the evening of June 15 there was held in the office of Secretary Wilson a second conference, this one attended by spokesmen of the metal trades and other departments of the American Federation of Labor, as well as by the United Mine Workers. Its purpose was the discussion of a general policy for safeguarding labor standards during the war. Three possible solutions were proposed. The first was the securing of specific clauses, setting standards of wages, hours and conditions of labor in all contracts for

war work. The second was the securing of direct representation of the several national and international unions on the committees handling contracts upon which the membership of these unions would be employed. This plan was proposed by the mine workers' plan. The third was the creation of a national board representing wage-workers, contract employers and the government, to set and maintain adequate labor standards during the war period, either in the war industries or throughout all industry.

The progress made in this discussion is as yet held in confidence, but there is reason to believe that the plan of direct representation of the unions on all effective committees dealing with war contracts will be adopted by several of the more important bodies affiliated with the American Federation of Labor. Metal trades organizations, the railway brotherhoods, and even the sailors are reported to be inclined to this program.

Communications

SUGGESTIONS WANTED

TO THE EDITOR: One of the leading women's clubs of the South is considering the possibility of planning a year's work in all departments on "nationalism" or "internationalism." They wish to adapt the idea to cover their departments in art, music, literature, etc.

Are there SURVEY readers interested in helping to work out a plan or in advising as to sources of information and suggestions? Will any such please address the writer? Their material will be forwarded, and they will be put in touch with the club president.

Is it not probable that other clubs and organizations would care to devote single sessions or a number of meetings to international topics, provided some aid could be provided in working out satisfactory programs. E. G. ROUTZAHN.

New York.

AN OMISSION

TO THE EDITOR: I have been reading with much interest the article on Women and War Work which appeared in the SURVEY for May 19. In going over the names of the women who compose the executive committee of the Committee on Women in Industry of the National Council of Defense I find the name of Mary Anderson, national executive board member of the Boot and Shoe Workers' Union is omitted from the list. Will you kindly see to it that the correction is made? Miss Anderson was appointed a member of the executive board at the meeting held in Washington, D. C., on Friday, May 4.

ELISABETH CHRISTMAN.

[Secretary-Treasurer, International Glove Workers' Union of America] Chicago.

FOR A BONE-DRY WAR

TO THE EDITOR: In view of the strong resolution for wartime prohibition passed by the National Conference of Social Work at Pittsburgh on the 11th, I suggest that you

urge all readers of the SURVEY to write or telegraph the President and their congressmen and their senators on the subject. The resolution was as follows:

"In the present great national emergency, when the full strength of the nation, physical, mental and moral is needed as never before, and when the conservation of food grains is of crucial importance, we favor the absolute national prohibition of the manufacture, importation and sale of alcoholic beverages during the period of the war, and for at least one year thereafter."

IRVING FISHER.

[President Committee on War-Time Prohibition] New York.

HEALTH INSURANCE

TO THE EDITOR: The educational campaign of the advocates of compulsory health insurance has aroused much thought and discussion. Contrary to the course of events in European countries, the medical profession has been aroused in America before any measure has been placed on the statute books. This is fortunate, for the working of any health insurance scheme falls directly on the physicians and tends to change the fundamental basis of the practice of medicine from a personal relation to a corporate or commercial one. Whether this is a desirable change should not be decided hastily.

Whenever health insurance is in operation the quality of the medical insurance work tends to become poorer, due to an overworked and underpaid profession. Nothing has yet been brought forward that proves conclusively that the same thing will not happen in the United States. Figures of any kind in regard to medical fees under the proposed health insurance scheme are almost impossible to obtain from its advocates. It has been said that fees may be twice those of the English system. The highest figures obtainable work out to about 40 cents a call.

Course in Public Health Nursing

in the School of Applied Social Sciences

Western Reserve University

CLEVELAND, OHIO.

SEPTEMBER, 1917--JUNE, 1918

Lectures, required reading, case discussion and excursions compose an important part of the Course.

Training in field work is obtained in the University Public Health Nursing District which has been established in a section of the city where a great variety of problems is offered for study and treatment.

Work in this district includes general visiting nursing; the care of the sick and well baby, of tuberculosis and contagious diseases; field work in the Districts of the Associated Charities and with the staff of School Nurses. Opportunities for experience in rural nursing may be arranged for.

A distinguishing feature of the Course is the responsible field work conducted for its educational value under the close supervision of a staff of instructors, all of whom have held positions of responsibility in Public Health Nursing.

Loan scholarships from \$125.00 to \$500.00 are available at special rates. Tuition \$125.00. For further information apply to

MISS CECILIA A. EVANS
2739 Orange Avenue
Cleveland, Ohio

NOTE: Graduates in Public Health Nursing are in great demand. Requests for nurses thus qualified are in excess of supply. Promising candidates are frequently assisted in obtaining positions paying not less than \$1,200.00 per year.

Other Divisions in this School are:

Family Welfare and Social Service
Municipal Administration and Public Service

Now physicians as a general rule consider their fee a secondary matter and their present apprehension is for the quality of service quite as much as for their personal incomes. People get about what they pay for and value it accordingly. The medical profession does not wish to become a 40-cent profession commanding 30 cents' worth of respect. Nor does it wish to see the evils of lodge and contract practice extended.

Health insurance is an attempt to supplement an inadequate wage and there is no reason why the burden of it should fall on the medical profession. It is fundamentally an economic question. The average wage is not sufficient for a workman and his family to live on in health, nor can they afford to be sick. To this premise all subscribe. But the remedy? A living wage; or various expedients to quiet the social unrest, such as hiring doctors, at a similar inadequate wage, to treat ills that could largely be prevented or cared for in the usual way, if the worker were paid a healthful wage? "Health is purchasable."

General Gorgas tells how good pay, which enabled the workmen in the Panama canal zone to live properly, did more to raise the health of the zone community to its very high standard than all the other sanitary measures. Real public health is impossible without adequate wages.

No one realizes more sympathetically than the doctors the need for better health and care in sickness among the laboring classes, but health insurance, as at present advocated, merely spreads the burden. We must go to the root of the trouble and secure for every man, woman and child his right to health through his ability to purchase the requisites for vigorous well-being.

ALBERT BOWEN, M. D.

Rochester, N. Y.

PROFIT IN "APPEALS"

TO THE EDITOR: Several correspondents have complained in recent numbers of the SURVEY of the unreasonable duplications of appeals for charity, as well as what they assumed was a waste of money in postage and printing in sending out such appeals.

It is an error to assume that well-conducted standard charities spend too large a proportion of their income for printing and postage for appeals for funds. As financial secretary of the United Charities of Chicago, I send letters and printed matter to thousands of people.

The cost of collection of the United Charities of Chicago is about 2.9 per cent of the total amount collected.

A study by the Russell Sage Foundation shows that other leading charities in the United States of our type have a somewhat larger collection cost, but even those range from 3 to 10 per cent.

Here is a new angle to the situation. Nearly every appeal states an evil and describes a way of fighting it. For the fight, money is needed. An efficient charitable organization owes the general public this information. It is gathered in the course of its work and it is in duty bound to disseminate it.

Recently I sent a letter to seven hundred people who had never before been asked to contribute. The cost was \$25 for printing and postage and the returns were \$355. I could name dozens of similar experiences. The other day an appeal to former givers costing \$7 brought \$7,000.

William H. Allen, in Modern Philanthropy, says:

"To send 2,000 appeals, costs including postage, addressing, folding, etc., say \$60. The average life of a contribution is five years. If 2,000 appeals bring \$12 they pay their way. If they bring in \$100 they show

a big profit which increases progressively. A man once complained to me that money was wasted on sending him so many appeals. I counted up the exact cost of letter and stamps, plus circularizing him for several years. It totaled twenty-three cents. As I wrote him, he had sent us \$25, and if, as we hoped, he would continue his gift and interest one or two others we would seem to have made a pretty good investment."

This would seem to answer the criticisms referred to.

After eight or ten letters have been sent without response, then there is danger of annoying the prospect. I send a letter now and then, giving the "appealee" opportunity, by returning a card, to advise me that he wishes his name removed from the mailing list. Even then, very few persons return the card. A "prospective contributor" need not, however, await invitations to be removed from mailing list. If he mail a postcard at any stage of the game and ask to be taken off the list, his wishes will be respected in every case, thus saving the society some printing and postage expense and the recipient of the letters any further annoyance.

Does my argument put a new face on the matter?

B. C. ROLOFF.

[Financial secretary, United Charities of Chicago.]

FREE PAMPHLETS

TO THE EDITOR: In your issue of May 26 on the inside of the cover page, under the general heading of Pamphlets, you list the bulletins of this bureau at a price. Under Education you list the Vocational Education Survey of Minneapolis, which is our Bulletin 199, at 65 cents. Under the heading of Industry you mention our Bulletin 208, Profit Sharing in the United States, at 20 cents. You have listed our Bulletin 211, Labor Laws and Their Administration in the Pacific States, at 20 cents. Workmen's Compensation Laws of the United States and Foreign Countries, Bulletin 203, is listed at 75 cents.

The bulletins issued by the United States Bureau of Labor Statistics are free so long as our supply lasts, and the bulletins which you enumerate, being of recent issue, the supply of these for the time being is ample.

Under the law, the superintendent of public documents may, and he usually does, order a supply of public documents, the distribution of which is controlled by himself at a price. As a matter of practice, this is a reserve supply held by him for sale after the available supply of free documents distributed by the various government bureaus has been exhausted. Your notices, therefore, create a wrong impression, and, inasmuch as this bureau is seeking to reach with its literature all who are intelligently interested in the subjects to which our publications relate, the statement of a price attached is not looked upon with favor by this bureau. I trust you will accordingly make corrections in future issues.

ETHELBERT STEWART.

[Assistant commissioner of labor statistics, Washington.]

JOTTINGS

THE American Red Cross Commission to France is reported safely arrived at Paris.

DR. F. F. ULRİK, of Copenhagen, doyen of Danish housing reformers, died at the advanced age of ninety-nine years.

THE University of Chicago has raised the three million dollars necessary for it to receive the additional \$2,000,000 from the Rockefeller Foundation for a medical school, a gift contingent upon the securing of this amount [the SURVEY, November 18, 1916].

THIRTY tons of quinine are part of the equipment of the "anti-malaria mission" which French military and public health authorities are sending to Macedonia. The unit consists of 20 physicians, 300 soldiers and their officers, 18 automobile drivers and other attendants.

SINCE a large army camp is to be established near San Diego, Cal., the local health officer called recently at the request of the state commissioner of health, Dr. W. A. Sawyer, a conference of army officers and municipal officials. Recommendations were formulated for the strict enforcement of the red-light abatement law, for reporting venereal diseases to health authorities by the military officers, and for a close supervision over saloons.

THE death is announced of Major S. D. Rowland, bacteriologist of Lister Institute, London. Major Rowland fitted up a mobile laboratory which was used as a model for others. He organized and carried out a plan of house-to-house search for malaria carriers in the civil population of areas occupied by British troops, and he had begun a similar search for carriers of cerebrospinal meningitis when he himself was overcome by the disease.

NEITHER state industrial commissions nor the United States Employe's Compensation Commission has discriminated thus far in awarding workmen's compensation against injured men who are subjects of a country with which we are at war. Advice from the federal Department of Justice is to the effect that a bill has been drafted and will shortly be introduced in Congress, which has for its object the regulation of all trading with alien enemies, so-called, including the right to receive workmen's compensation.

THREE fellowships worth \$500 each and maintenance at the Westchester county penitentiary, New York, have been accepted by New York University from V. Everit Macy, county commissioner of charities and corrections. The fellows will be required to do their share of institutional work from that of mere guard duty or night watchman to confidential clerk to the warden, in order that they may understand the prison system thoroughly.

IN ENGLAND it is reported there is one physician to 2,500 persons in thinly settled areas; one to every 4,000 in the more densely peopled districts. In France, says the *Journal of the American Medical Association*, there are practically no private practitioners; every physician is working in the service of the state. In England, the profession itself has sole charge of supplying the army with medical officers. This is still being done without the necessity of a draft except that exercised by the profession.

THE death last week of Thomas Balmer, of Evanston, Ill., recalls the good offices which he extended the *Commons* previous to its merger with *Charities*. During that transition period he contributed not only financial aid, but the editorial services of his son, Edwin Balmer, who has since become a well-known writer. Thomas Balmer was distinguished among advertising men for leading the successful campaign against undesirable advertisements in which he won the support of many large and influential publishing interests.

MINNESOTA is the first state to write an anti-injunction law into its statutes. Governor Burnquist has just signed a bill, passed by the legislature at the request of organized labor, which embodies the main features of the federal Clayton act, including the declaration that "the labor power of a human being is not a commodity or article of commerce." No person can be prevented from persuading others from terminating a condition of employment, and no injunction shall be issued against any person or persons from going on strike or doing any other thing that would be lawful if no strike existed.

UNDER the title, "state committees of national defense, medical section," various organizations working for medical preparedness have been coordinated in order to avoid duplication and confusion of purpose. The new state committees will include the original state committees of physicians for medical preparedness, presidents and secretaries of state medical societies, chairmen of governors' committees, representatives of the American Red Cross, the Medical Reserve Corps, medical officers of the National Guard and other physicians active in cooperation with the surgeon-generals.

SOCIAL workers in Massachusetts are much pleased over the two appointments to the State Board of Charity, which Governor McCall announced on June 13. He reappointed Abraham C. Ratschky, a prominent banker, president of the Federated Jewish Charities of Boston, and rated as an able member of the board. As a new member he appointed B. Preston Clark, who is treasurer of Lincoln House, Boston. He has served as chairman of the Committee on Co-ordination of Aid Societies of the Massachusetts Committee on Public Safety, and is a business man who has become more thoroughly identified with social work than ever before as a result of the war.

MORE than 5,000 persons, at liberty under suspended sentences imposed by federal judges, were excused from returning to custody June 15 by a proclamation of the President granting them "full amnesty and pardon." Federal judges have been suspending sentences and putting prisoners on probation for years, but last December the Supreme Court held that they had no power to do this. All persons at liberty under such sentences would have had to return to custody except for the President's action. "Many of these persons," said the President, "are leading blameless lives and have re-established themselves in the confidence of their fellow citizens."

ACTIVITY by the Central Council of Social Agencies and the Chamber of Commerce has resulted in an announcement by the St. Louis police that there will be restriction as to soliciting funds on the public streets. St. Louis was the first city to start the tag day idea for hospitals, through the Hospital Saturday and Sunday Association. Smaller organizations doing some charitable work then tried the same method by selling flowers, tags or buttons. Undue solicitation by unchaperoned young girls pointed to the need of preventing promiscuous collections of funds on the public streets. The Central Council of Social Agencies worked out a plan, and the constituent members of the council, by a large majority, voted down street solicitation. Then the Chamber of Commerce carried the work further, taking up the matter with the police. The new strict regulations are expected to prevent abuses by small non-endorsed organizations.

IN HIS inaugural message of 1916, Governor McCall made the following statement

Invaluable to everyone who buys, sells or invests

"Story of the Automobile"

By H. L. BARBER

Economist and Financial Writer, Author "Making Money Make Money," etc.

No Other Book Like It Learn the business and investment lesson told in the story of the automobile industry which in a few years jumped into third place by passing the One Billion Dollar Sales mark in 1916—a business in which millions of dollars have been, are and will be invested. Read the chapter by EDWARD G. WESTLAKE, America's foremost Automobile Editor—another by BUSINESS BOURSE, of New York—every chapter fascinating, interesting and authentic.

For Further Information Address,

MISS ANNA C. MAXWELL

Presbyterian Hospital, N. Y. City

SITUATIONS WANTED

AN expert wishes engagement in a system of schools (day or Bible) as advisor in morals and vocational lines. Theodosia Duir, Box 532, Chautauqua, New York.

concerning the need for a revision of the constitution of Massachusetts: "No constitutional convention has been held in Massachusetts since 1853. It is doubtful if another period of history of equal length can be found more characterized by social and industrial change than the sixty-two years which have elapsed since that time. . . . I believe the time has come when our constitutional system should receive that connected and careful revision which it can best receive from a convention chosen for that purpose." The voters approved the recommendation last November, and delegates were chosen this spring for the convention, which began on June 6. The convention organized by electing ex-Governor John L. Bates as president. As showing the growing recognition secured by organized labor in Massachusetts, it is interesting to note that forty-eight delegates to the convention hold union cards. A movement to defer the convention because of the war was defeated.

WARTIME prohibition is not a closed topic in Great Britain as representatives of the liquor interests would lead the American public to believe. The Central Control Board has recently appointed an advisory committee of medical men, of which Lord D'Abernon is chairman and Sir George Newman one of the members—to consider the conditions affecting the physiological action of alcohol, particularly the effects on health and industrial efficiency, produced by the consumption of beverages of various alcoholic strengths, with special reference to the recent orders of the Central Control Board, and further to plan out and direct such investigations as may appear desirable with the view of obtaining more exact data on this and cognate questions.

WOODEN nutmegs are becoming increasingly unpopular in Connecticut of late [the SURVEY, February 26, 1916]. The real thing is being substituted. For instance, an up-to-date department of health was provided for by the legislature this spring. Some of the promising features are the employment of a full-time commissioner who, though he must be a graduate of a medical college recognized by the state and have experience in public health administration, need not be a resident of the state; a public health council of six members to establish a sanitary code and prescribe the qualifications of directors of bureaus and other appointees; the consolidation of cities and towns into sanitary districts. Officials are to enforce or to aid in the enforcement of the code and county officers to prosecute violations.

NO MORE strikes or lockouts, an end of boycotting and blacklisting by the establishment of industrial amity between employer and employed—these are the aims of the Commonwealth Committee of the Oakland Chamber of Commerce just organized. The committee consists of four union leaders and five members of the Chamber of Commerce representing employers. The union men insisted that they should be in the minority to offset the charge that labor was attempting to dictate. The first task of the committee will be to arrange working conditions among ship carpenters, house carpenters and bridge carpenters. This move was made following the offer of Oakland to construct 100 wooden vessels for the government's shipbuilding program, and the acceptance of the offer by William Denman, chairman of the United States Shipping Board.

INFORMATION for the families of American men who are reported wounded, missing or taken prisoner will be supplied through a new Red Cross Bureau of Information of Casualties, established at Washington, with W. R. Castle, Jr., as director.

INFORMATION DESK

The following national bodies will gladly and freely supply information and advise reading on the subjects named by each and on related subjects. Members are kept closely in touch with the work which each organization is doing, but membership is not required of those seeking information. Correspondence is invited. Nominal charges are sometimes made for publications and pamphlets. Always enclose postage for reply.

Health

SEX EDUCATION—New York Social Hygiene Society, Formerly Society of Sanitary and Moral Prophylaxis, 105 West 40th Street, New York City. Maurice A. Bigelow, Secretary. Seven educational pamphlets, 10c. each. Four reprints, 5c. each. Dues—Active \$2.00; Contributing \$5.00; Sustaining \$10.00. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

CANCER—American Society for the Control of Cancer, 25 West 45th St., New York City. Curtis E. Lakeman, Exec. Sec'y. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

MUNICIPALITIES, Union of Canadian. London, Ontario, August 27-29. Sec'y, W. D. Lightall, Westmount, Quebec.

THE SURVEY

*Announces as a Feature of Its Summer Issues
a New Weekly Department*

SOCIAL FORCES *in* WAR TIME

By EDWARD T. DEVINE

THE National Conference of Social Work (née National Conference of Charities and Correction) had its special section at Pittsburgh on social problems of the war, and this is only one expression of the inevitable preoccupation of all of us with those problems.

The fundamental aspects of poverty, disease, and crime, and therefore the fundamental objects and principles of social work, remain the same in peace and in war. Relative values of social problems and social interests, however, are profoundly affected by the war. New problems are created; certain of the old ones become more intense; certain others almost drop out of sight. Social work is inevitably modified by those changes. The activities of many existing agencies are expanded or adjusted to meet the new needs; many new organizations are formed; the federal and state governments exert extraordinary powers over individual lives and social welfare; and interest in social problems is tremendously increased.

EDWARD T. DEVINE, associate editor of the SURVEY, who was chairman of the special section at the Pittsburgh conference, will gather into a condensed and characteristic department—entitled Social Forces in War Time—a discussion of such of these problems as arise in the current experience of American communities. It will be a department of one page, or two, or four pages, as developments and the subjects treated may require. The Red Cross will come in for its full share of attention. The morals of soldiers and of civilians as affected by the war, pensions and separation allowances, will fall within its scope. The social treatment of resident alien subjects and of war-prisoners; the conservation of labor; thrift and economy; the food question and war prohibition, will be perennially fruitful topics. Relief and reconstruction in Europe, the effect of the war on population and on our social and economic institutions, will give a wider sweep to the discussion now and then, but will not be allowed to crowd out very concrete description and criticism of immediate local experiments.

“**S**Ocial Forces” is not new to readers of the SURVEY. Through this department, at different times, Mr. Devine has put out some of his most original and vigorous thinking. Its wartime application is new. It will afford current weekly discussion from a consistent point of view. It will complement both the news service of the SURVEY and the series of quick surveys of wartime social problems which are being prepared by members of the staff for publication as considerable articles, and later as pamphlets. Its announcement is the second notable step in carrying out the wartime service program outlined in the SURVEY for June 9.

*M*EN, women and organizations who have hitherto borne only a detached relation to civic and philanthropic undertakings, are making themselves known to social workers all over the country. This department will do much to give them insight and perspective. Readers of the SURVEY are asked to send in the names of such recruits—or better, send in, or encourage them to send in, four months' trial subscriptions at \$1, dating from July 1, but beginning with the June 30 issue, which opens Mr. Devine's department.

Industrial Poisons in Mmunition Plants

By *Gertrude Seymour*

OF THE SURVEY STAFF

WITH the entrance of our country into the war have come many far-reaching changes in our industrial life. Trades formerly of little general importance now suddenly come into the foreground, making demand for thousands of workmen and confronting us with new, unknown occupational disease and hazards of which till now we have heard only through the reports of British and German factory inspectors. Most conspicuous among them is the munitions industry, and especially the branch which manufactures high explosives, for the work with metals in making arms and cartridges is not attended with any dangers new to us Americans.

But up to the outbreak of the war the manufacture of explosives in this country was largely limited to what are known as "peace explosives," nitroglycerine and mixtures of nitro-cotton and nitroglycerine for mining and construction and for agriculture. Then came the demand from Europe for war explosives, and it met with a quick response. Works were erected to manufacture picric acid, the favorite explosive of the French, trinitrotoluol or TNT, for Russia and England, and still more unfamiliar explosives such as tetryl and TNA. Our nitrocellulose factories were enlarged, new ones built, and factories built to fill shells with high explosive charges.

An even more rapid development had been going on in England, and when the war was less than six months old reports began to come from that country of strange cases of industrial poisoning which were appearing in explosives works in such numbers as to call for a governmental inquiry. The results of such an inquiry, later published, showed that TNT was a subtle and dangerous poison; that the fumes from nitration processes were deadly, and that industrial sanitarians were faced with new and serious problems.

In view of these warnings from England, it seemed only the part of wisdom to institute an inquiry into the situation in this country. Accordingly the United States Bureau of Labor Statistics requested Dr. Alice Hamilton, their expert on occupational poisons, to make a study of the actual conditions in American explosives works and in shell-filling plants. Dr. Hamilton completed her investigation in January of this year and the results have just been published as Bulletin 219 of

the bureau. This is, by the way, an unusual record for a governmental publication, which often appears so many months after the date of investigation as to seem fairly stale to the ordinary reader.

Dr. Hamilton's introduction was evidently written before our entrance into the war, since she assumes that the demand for explosives will soon cease. But in spite of that, she lays stress on the continuing importance of this industry even if no more ammunition is needed for Europe:

It must not be regarded as a temporary industry, one that may be ignored as of little risk to the health of the workers, because it will come to an end with the present war. Even if the demand for munitions should cease with the declaration of peace there is every probability that these factories will still be utilized, if not for the manufacture of high explosives, then for the making of closely allied products. Formerly we imported benzol and toluol from Germany; now, because they are indispensable for the production of explosives, we have learned to distill them, and certainly we shall continue to do so and to apply them to many uses for which formerly they were too expensive. Carboic acid was imported. It is now made here in great quantities and will continue to be. Plants built and equipped to make guncotton may be used to make celluloid and picture films. It is probable that some of these newer explosives may take the place of nitroglycerin for blasting and excavating. So it would be a great mistake to look upon the industry as accidental and transient. It is a permanent addition to American industrial life and deserves careful scrutiny lest the dangers due to its hasty beginning and rapid growth become fastened upon it.

In trying to discover the amount of sickness and death for which this industry was responsible Dr. Hamilton seems to have encountered a great deal of difficulty. She says:

It is impossible to give accurate figures as to the amount of sickness and death caused by work in this industry since the war broke out, for the information can not be secured. Many cases were never recognized, many others were seen by company physicians or insurance physicians, who are unwilling to give any information or tell anything about them. . . .

Then there are factories, some of them employing hundreds of men, where there is either no medical care or it is so inadequate as to be of little use. In such a factory the general carelessness and indifference to the welfare of the men are so great that nobody can be found who is in a position to give trustworthy information about sickness in the working force. . . .

One physician writes as follows, concerning a shell plant where several deaths had recently occurred and where it was impossible to obtain any medical records: "It has been reported to me that a still larger number of deaths have occurred. The workers are drawn for temporary employment from localities all around here

and from a considerable distance away. It must be very difficult to diagnose these cases which occur sporadically in a town at a distance from the plant. Medical and funeral expenses are met by the company, and those who act for the company give to the family or patient some diagnosis which is insufficient to serve as a ground for legal action."

Dr. Hamilton visited 41 factories employing about 90,000 workers, 30,000 of whom were engaged in work which exposed them to poisons. From only 28 of the 41 plants could she secure any information. In these 28, she learned that during 1916 there were 2,507 cases of industrial poisoning and 53 deaths. No study was made of accidents.

CASES OF INDUSTRIAL POISONING IN 28 PLANTS IN ONE YEAR

Poison	Number of cases			Fatal cases		
	Men	Women	Total	Men	Women	Total
Nitrogen oxides and nitric acid	1,389	...	1,389	28	...	28
Trinitrotoluol	659	43	702	11	2	13
Picric acid	7	...	7
Nitrobenzol and nitrotoluol	12	...	12	1	...	1
Benzene and toluol	14	...	14	7	...	7
Sulphuric ether	52	...	52	1	...	1
Anilin	205	...	205
Phenol	2	...	2	1	...	1
Sulphuric acid	4	...	4	1	...	1
Mixed acids	2	...	2	1	...	1
Chlorine gas	3	...	3
Ammonia gas	1	...	1
Mercury	1	...	1
Fulminate of mercury	79	32	111
Nitronaphthalene	2	...	2
Total	2,432	75	2,507	51	2	53

The poison at the head of the list, nitrogen oxides, is the most important because the most widespread. All high explosives are products of the action of nitric acid on various substances, and therefore the "fume sickness," the poisoning resulting from exposure to nitrous fumes, seems to be very common, especially in connection with the making of guncotton, nitrocellulose and picric acid. Mild cases are so frequent in hot heavy weather that they attract little attention. In the summer of 1916, when the weather was very hot, one guncotton plant where 300 men are engaged in nitrating used to have about 20 men every 24 hours who had to go to the doctor with "fume sickness," but could return to work that same day or night." But the typical form of nitrous fume poisoning is a rapidly increasing edema of the lungs. The history of a typical case of this sort Dr. Hamilton describes as follows:

The man has a choking spell, perhaps no severer than he has had on other occasions. He recovers and goes home, feeling fairly well and not apprehensive of any serious effects. Some hours later, perhaps after he has gone to bed, he begins to "choke up," to cough, and be short of breath. Sometimes he has cramps in the abdomen and vomiting. . . . There is an increasing air hunger; the man lies motionless, propped up on pillows, his face livid, his eyes full of fear, unable to speak or move, needing all his strength to labor for breath. At first his cough is dry. Then he begins to expectorate a sticky, frothy fluid which may be bloodstained. As the dyspnea increases his whole body may become livid. He gradually loses consciousness, and just before death there may be convulsions. An autopsy shows intense congestion of the finer bronchioles and air vesicles, which last are filled with an exudation of serum. It is said that the man is actually drowned in his own fluids.

Next in importance to nitrous fumes is that new explosive, trinitrotoluol, called for convenience triton or TNT, which was responsible for 702 cases of poisoning in 1916, and for 13 deaths. There was almost complete ignorance of the effects of this poison in the United States when the manufacture began on a large scale, and it was not till serious illness had appeared among the men and women employed in handling it that information concerning causes and remedies began to spread.

It is apparently in filling shells with this triton that the greatest danger is found. Descriptions are given of the milder forms of poisoning and also of the most serious form, which the British call toxic jaundice and which they have added to their list of industrial diseases the occurrence of which must be notified to the authorities.

Of the other poisons in Dr. Hamilton's list, benzol and toluol seem to be the most important, not because of the number of cases, which is small, but because of the high mortality, for 7 of the 14 died. Apparently the repairing and cleaning of stills and tanks is the work that results in this severe poisoning. This is one of the instances given:

Two steam-fitters were employed to repair the pipes inside a benzol still. The manhole through which they had entered was just large enough to allow them to crawl through. As usual in such work, the still had been not only emptied but washed out and was supposed to be free from appreciable quantities of benzol. One of the men suddenly became excited and irrational, singing and shouting. It was realized that he must be removed from the still as quickly as possible, but this was a difficult thing to do through the narrow opening, since he was not rational enough to help. It took about 10 minutes to get him out, and during much of that time the manhole was completely closed by his body. The second workman who had been helping lift him out was then found to be lying unconscious on the floor of the still. Even more difficulty was encountered in taking him out, for he was quite helpless, and it was about 20 minutes before he was brought into the open air dead.

Nitroglycerine, formerly our most important explosive, is not responsible for a single case of poisoning. How much of the sickness and death caused by these poisons could have been prevented, Dr. Hamilton does not say, but it may be inferred that during the early days of the war at least, if not recently, there was a good deal of reckless manufacturing and that safeguards for the workers were often lacking. She says:

Haste has been the chief evil in this industry since the outbreak of the war. Contracts were accepted that had to be filled within a certain time; construction was started, but lagged because of shortage of labor and delay in the delivery of machinery, and naturally everything that was needed for the protection of the workmen was postponed in favor of what was essential for production. Men were found working in buildings half finished. Fumes were heavy, because exhausts had not yet been installed. One factory, which is said to represent an investment of several million dollars, operated for 17 months with practically no exhausts to carry off very dangerous fumes, with no medical care for the men, and without any provision for personal cleanliness. In the heat of last July and August the workmen would leave the plant covered with the poisonous dust in which they had been working, and, with unwashed hands, would collect in the shade of a railway bridge to eat their lunch. . . .

There is no way of knowing how much illness and death resulted from the mad rush during the first months of the war, before the factories were in a position to carry on the work properly, to get out the product.

Another thing that led to sickness among the workers was the unfamiliarity of chemists and engineers with the new problems and with the poisonous nature of the substances they were handling. Accidents to machinery, leaks, violent decomposition with evolution of poisonous fumes, were fairly common occurrences. However, says Dr. Hamilton:

All these features of the industry are improving, but unevenly and incompletely. There are fewer accidents to machinery, fewer unexpected reactions; the services of physicians are usually provided, and these physicians are far better fitted to cope with the problems than they were at first; there are more experienced workmen, which means less blundering. On the other hand, labor is still hard to get, and foremen are therefore often unwilling to shift or discharge a workman who shows suspicious signs and who should be relieved of work exposing him to poisons. . . .

Hours of work are usually not excessive. Three shifts of eight hours each are the rule in this industry, two shifts the exception. Four plants work the men in two shifts and one of these has even urged them to work overtime for 14 or 16 hours when labor was scarce. It is sometimes hard to prevent men who are on eight-hour shifts from working two shifts and making double pay, and, of course, if the foreman is short of help he will wink at this; but it means that the man is incurring a grave risk of poisoning.

As to labor turnover, the great majority of those employed in these processes in American factories are men. Very few women or girls are found employed in work exposing them to poisonous gases or dusts. One plant which fills high-explosive shells employs women in work necessitating the handling of trinitrotoluol, tetranitranilin and tetryl. Here there have been serious cases of occupational disease among the women, but in none of the other places where similar work is done are women employed. The absence of boys also is very noteworthy. . . .

It is probably fair to say that, on the whole, wages are high

and living conditions poor in many of these places. Necessarily the new plants have had to be built at a distance from centers of population—even from villages—because of the dread of explosions. Consequently the force has had to be housed in whatever quarters could be hastily secured; in old farmhouses transformed into barracks; in shacks built to last only a few months; even in tents. These provisions have never been adequate, and men have traveled miles every day to reach the plant from their lodgings in the nearest town. Even there accommodations were insufficient and rooms have been rented to more than one shift of men. In one charming old town, with every appearance of comfort and prosperity, three shifts of men were found sleeping in the lodging houses, the men renting beds for eight hours and then giving them up to the next shift.

In contrast to such a condition are the model villages erected near some of the big powder plants, especially those owned by the

old-established companies. Here the housing may be excellent, the sanitation beyond reproach, the sanitary control adequate. Yet even in these places, the provision for the foreign workman who has no family with him, or for Negroes, may be quite different. Overcrowded barracks with three-decked cots, with far too little air space, and with no water supply except from hydrants out of doors, are put up for these men by the very companies that furnish such healthful accommodations for their white American employes.

The report concludes with a section on methods of prevention of industrial poisoning based largely on British experience. In view of the entrance of this country into the war and the consequent enormous expansion of the manufacture of explosives, the publication of this bulletin is very timely.

The Task of Civilian War Relief'

X

A CERTAIN woman was deserted by her husband just before the birth of her fifth child. She applied to a bureau, saying that this was not the first time he had left her, but that both she and her daughter were working and that all she desired of the bureau was that it find her husband and make him contribute to her support. The agency did precisely what the woman asked. It found the man and induced him to pay seven dollars a week to his family.

The record of what the deserted wife had asked and what the bureau had done was shown to the secretary of a committee on the prevention of blindness. He was surprised that the agency, knowing that the woman was being attended by an unlicensed midwife, had done nothing to prevent the midwife from practice. The secretary of a child labor committee who learned about the story criticized the organization for having allowed the girl to continue working at the wrong kind of trade. A truant officer was indignant because the bureau had been content to accept the statement of the woman that the children were going to school and had not seen to it that they were regular in their attendance during their mother's confinement. The superintendent of an agency engaged in family work felt that a man who had deserted his family several times ought to have been brought to a more definite realization of his responsibilities than the payment of seven dollars a week involved.

Neither the bureau nor any of the other agencies concerned comprehended the whole of the problem. The scope of what the situation demanded was confined by each to its own specialized form of work. Society and the family would have been best served if all the organizations had been thinking and acting together.

No one agency, indeed, is likely to be many-sided enough to help the families under its care solely through reliance upon its own knowledge and judgment and without the assistance of other agencies. The success of the Red Cross Civilian Relief Committee will depend largely upon its ability to work with other organizations and with individuals—with dispensaries, with day nurseries, with infant welfare stations, with nurses, with clergymen, with doctors, with social workers.

The key to cooperation is an understanding of the point of

view and the aims of the organization with which one is dealing. Thus a social worker who has noticed the odor of liquor about a mother, who has heard rumors that she has no control over the children, who has seen that the rooms are dirty, who has perhaps even witnessed roughness, though never actual brutality, may become morally certain that the parents are not fit to be guardians of their own children. She may report the family to the Society for the Prevention of Cruelty to Children. But when the S. P. C. C. agent calls neither mother nor father is intoxicated and both parents express the greatest affection for their children. The agent, therefore, decides either that the social worker is mistaken or that the family ought to have another chance. And the social worker comes to the conclusion that the S. P. C. C. is not cooperative.

But what the social worker has seen is not evidence enough to warrant a judge in ordering the separation of the children from their parents, and certainly what the agent of the S. P. C. C. witnessed would not convince the court of the importance of such a decision. In calling upon the S. P. C. C. the social worker must remember that the scope of the S. P. C. C. is limited to legal action and to persuasion with the threat of legal action. As persuasion has probably already been tried, legal action is usually all that is left, but a moral certainty is not evidence.

While frequently the social worker will on suspicion be justified in asking the S. P. C. C. to intervene, she should not expect that organization to remove the children from a family even though she may believe that this is necessary, unless she is sure that the agent of the S. P. C. C. is likely to witness actual conditions that would be accepted in court as testimony. Not beliefs but evidence is what the judge demands, and rightly so, for it is a serious thing to separate a child from its parents, a step which should be taken only when the testimony is clear and beyond any reasonable doubt.

The scope and point of view of the various agencies with which the social worker has to deal can be ascertained from annual reports and from executives. Acquaintance is one of the best aids to cooperation. It is a good plan not to confine one's relations with an organization solely to mail and telephone. Much more satisfactory is it to have seen and spoken with the person with whom one has to work. Make a concrete instance the basis for beginning such an acquaintance. To call upon a man and in general terms to ask his cooperation gets one nowhere. On the other hand, to go to an organization with a predetermined and settled plan and then expect

'The tenth and final article of a series based on the lectures delivered in New York city with the sanction of the American Red Cross by Porter R. Lee, of the New York School of Philanthropy. The articles were written by Karl de Schweinitz, of the New York Charity Organization Society. Any who would be interested in reprints of the series for class or other use are invited to correspond with the SURVEY.

that organization to agree to work along the lines suggested is an equally unsatisfactory way of obtaining cooperation. In the first place few people enjoy carrying out decisions which they have not helped to form. In the second place two points of view are always better than one in the formulating of plans.

The best way to obtain cooperation is to make being cooperative part of one's working creed and then to forget about it. The most satisfactory cooperation after all is that which is automatic and unconscious, an expression of personality.

A subject of a different sort which concerns the civilian relief worker is the standard of living. Indeed, the whole purpose of social work might be said to be the enabling of families and individuals to achieve a satisfactory standard of living. Nine or ten years ago the tendency was to interpret the standard of living, particularly the minimum standard of living, in terms of a definite budget. People were fascinated with the quest of a specific figure below which it would not be possible for a family to maintain a decent life in, for example, New York city. Recently, however, this search for a minimum standard in dollars and cents has become less popular. It is not that the conception of a minimum standard has been abandoned; it is rather that it is expressed in a different way or, to state it more accurately, in different ways.

Thus we insist that every child has a minimum of education, and we enforce this minimum by a compulsory school attendance law. We insist that the child has a certain minimum of health, and this we do through school medical inspection. The tenement-house law prescribes a minimum of sanitary conditions under which people are not permitted to live. Food below a certain quality may not be sold, though the pushcarts might be willing to offer it at a reduced price. In industry, the eight-hour day is one way of saying that there is a minimum amount of leisure on which work must not encroach. In industry, moreover, there is discussion about a minimum wage and about minimum standards of safety. In most phases of life minimum standards not only are in force but are constantly being raised.

There have been established in every city various means which people can use in maintaining the minimum standards that society has set. There are schools, public employment exchanges, hospitals, social centers, parks, libraries and the like.

It is when a family or an individual has not been able to keep above one or more of the minimum standards of living that the help of the social worker is required. If a husband deserts his wife, the domestic relations court sees that he returns and contributes to his family's support. If the baby is not being properly fed, the milk station is asked to give advice. If the children are not going to school, the truant officer makes sure that they do.

Hospitals, courts, truant officers cannot of themselves keep a family above the minimum standard of living. Unless the family itself continually makes conscious effort to maintain as high a standard of living as possible, it is sure to fall back to its former condition as soon as the help of the social worker is withdrawn.

The family, in other words, must develop resourcefulness, self-reliance, responsibility. These things are essentially psychological. They are developed largely through the exercise of moral power just as physical strength is developed by exercise. The kind of exercise that develops character and strength of will is the making of decisions, the choosing between alternatives.

Family responsibility may be divided into two parts, responsibility for obtaining an income and responsibility for spend-

ing it. Each phase involves a great variety of decisions. Shall the family be satisfied with less income because the man will be able to work under better conditions or shall it choose the larger income with the poorer working conditions? Shall the man choose a job in the country or one in the city? Shall it be a job which involves a summer vacation or one which, while not permitting a summer vacation, has other advantages?

Shall the family spend less money for food in order to have more for amusements? Shall it go without desserts for a year in order that the fifteen-year-old daughter may take music lessons? Shall the week-ends be spent at Coney Island or shall Coney Island be abandoned and the equivalent in money be invested in a phonograph?

Every family has a multitude of just such problems waiting for decision. It is through the making of these choices that a sense of responsibility and initiative is developed. No one can decide things for a family without weakening it. If it is a social worker or a nurse who is making these decisions the family may enjoy for the time being a more wholesome routine of life, but ultimately its ability to continue that routine of its own accord will be destroyed.

The efficient nurse will test her work not merely by the number of babies she has restored to health but also by the number of mothers who have become more intelligent and more capable about the care of their children. The truant officer's success depends not merely upon the number of pupils whom he has returned to school but in the number of parents who, through his efforts, have been made to realize the importance of education for their sons and daughters.

At best, however, there are sure to be many families and individuals whose opportunities for making decisions are reduced in number during the time that they are under the care of the social worker. The family which is placed upon an allowance has not the same amount of responsibility as is carried by the family which is earning its income. All the varieties of decisions involved in the winning of a livelihood are lost to such a household. Therefore, the social worker should be particularly careful to see that such families have every possible chance to develop their sense of responsibility and to make their own choices in the problems of every-day life.

In helping them as, indeed, in helping all families, ultimate success or failure depends upon the application of a practical psychology. This is not easy. It implies a thorough understanding of the family, its strengths, its weaknesses and its situation. It means that the social worker must do more for the mother, for example, than merely helping her to care for a sick baby; but it also means that the social worker cannot go into the home implying that she has come to raise its ideals and develop its sense of responsibility. It means that she must not preach or moralize and yet that she must often accomplish what preaching and moralizing are designed to achieve. It demands finally tact, insight and, above all else, personality.

The art of having to do with people is the finest of all arts. Like other arts it is to be attained not by the mere absorption of theory but by practice. No one can hope to become a social worker solely by attending a succession of lectures or by reading a series of articles. Only by experience under guidance in helping perplexed human beings out of difficulties to which they have been unequal can the prospective civilian relief worker hope to equip herself for rendering effective service to families unable to cope with problems that have arisen during the absence of their men at the front or on the high seas.

CONGRESS ASKED *to* SAVE *the* DUNES

ON decoration day and the Sunday following, a pageant entitled *The Dunes Under Four Flags*, written by Thomas Wood Stevens and produced by Donald Robertson, was enacted on Sabinsky Dune, a vast natural amphitheatre near Portchester on Lake Michigan, forty-four miles from Chicago.

The production of this pageant culminated six months' work, originally by members of the Prairie Club of Chicago and the Chicago Historical Society, then taken up by over forty women's clubs, the Municipal Art League and numerous lovers of nature.

The movement for the establishment of a national park on the shores of Lake Michigan (see the *SURVEY* for December 9, 1916) has borne fruit in a report by Secretary Lane to Congress, urging the acquisition of these dunes. The project is endorsed by Stephen Mather, superintendent of national parks, Vice-President Marshall, Governor Lowden of Illinois, Governor Goodrich of Indiana, and all the scientific bodies which have inquired into it. It will preserve for the nation a geographical and botanical treasure-house as well as a playground.

"Upwards of 600 persons participated in the pageant," writes Thomas W. Allinson. "In addition to seven historical episodes starting with the mission of Marquette in 1675, there were dances interpretive of the spirit of the dunes, of the winds and waves, of the shore birds, of the wood nymphs, of the sorrowing tree hearts, of Indians—Sioux and Ojibways who have trodden these pathless wastes. The production was an artistic triumph, reflecting credit on a remarkable group of persons from many walks of life drawn together by the love of nature. They felt that here beauty was imperiled by the invasion of ugly, crass commercialism which blasts all its approaches.

"For the dunes themselves were the grand spectacle. The marvelous masses of sand, some shifting, others stationary, the myriads of wild flowers, the mysterious trees of many varieties growing unaccountably in seemingly impossible places, the birds and insects, the restless, gleaming lake, frothing upon an unmatched beach, soft, white and wonderful—all confirmed the resolution of the 20,000 spectators that these things should not pass away and become a mere memory."

Book Reviews

ESSAYS IN WAR TIME

By Havelock Ellis. Houghton-Mifflin Company. 247 pp. Price \$1.50; by mail of the SURVEY \$1.60.

War and Progress

Starting from the vantage point of an unusual breadth of concrete knowledge, Havelock Ellis has been able to draw significant facts from the events of the European war which to most newspaper readers either have not become apparent at all or have been obscured by comparatively trifling happenings. Thus he establishes beyond a doubt that we owe an apology to the memory of the Goths and of other "barbarians" for having rated their vandalism as at all comparable with that which the world has witnessed within the last three years. Even in the thirty years' war nothing is recorded of a military atrocity which was as unscrupulous, as rigidly "efficient," as that which mars the annals of our own time. Nor can we flatter ourselves that war has become a rare occurrence in the relationship of nations, or that there is more international fellowship in the world than there was in ancient times, during the middle ages, or even at the beginning of the modern epoch.

"Internationalism of feeling is much less marked now than it was four centuries ago. Nationalities have developed a new self-consciousness, a new impulse to regain their old territories or to acquire new territories." Even though the people as a whole are pacific, the danger of war is more permanently present now than most people were aware of prior to August, 1914. But it is only one group of causes of war which has increased, that of political necessity; every other cause, racial, economic, religious, and personal, has diminished.

Havelock Ellis, as a eugenicist, does not believe much of the talk about the advantageous effect of war upon racial health and vigor, except perhaps in so far as it kills off so large a part of the population as to make a more drastic eugenic and sanitary state policy a matter of national necessity. Nor does he see any pronounced moral advantages to any nation in the pursuit of war. He maintains, as an Englishman would be likely to, that Germany has, in the present war, taken the initiative in abolishing the old incongruity between destructiveness and moral sentiment, and that the war is now being fought out deliberately upon the basis of scientific barbarism.

This collection of essays also contains discussions on matters of vital importance to humanity which are only incidentally connected with war. For instance, the author points out that the only possible danger to the world of a falling birth-rate in the civilized countries would be the appearance of this tendency exclusively in the classes of the population which contain the best stock.

If, on the other hand, the decline is general, a tremendous gain to civilization must occur. Many of the present causes of international rivalry will disappear; possibilities for a careful and scientific bringing up of the human race will be created which are now non-existent owing to numbers and the persistent poverty of resources. And, con-

trary to the belief generally held, he sees such a decline in the birth-rate actually coming. "All social movements tend to begin at the top and to permeate downwards. This has been the case with the decline in the birth-rate, but it is already well marked among the working classes, and has only failed to touch the lowest social stratum of all, too weak-minded and too reckless to be amenable to ordinary social motives."

In view of recent discussions in the SURVEY, the reader's attention may be directed more especially to some very sane things which this English biologist has to say on the mental and physical differences of the sexes and the prospect for the industrial emancipation of women. In the first place, Ellis establishes the fact that "when today we see women entering the most various avocations, that is not a dangerous innovation, but perhaps merely a return to ancient and natural conditions." "The modern industrial activities are dangerous, when they are dangerous, not because the work is too hard—for the work of primitive women is harder—but because it is an unnaturally and artificially dreary and monotonous work which stifles the mind, depresses the spirits, and injures the body, so that, it is said, 40 per cent of married women who have been factory girls are treated for pelvic disorders before they are thirty."

In this matter, which has assumed a new importance for the future through the changes brought about by the war, the author believes that the best approach is that of intelligent experimentation which, though it may entail suffering to individuals here and there, will swiftly and automatically bring about the desired social equilibrium. It is only through freedom in the choice of profession that the sexes can find their natural levels.

There are many other fine observations in this volume, on the absurdity of the argument against eugenics that it would stamp out genius, on marriage and divorce, birth control, the conquest of venereal disease, and related topics.

THE CHARTIST MOVEMENT

By Frank F. Rosenblatt. Longmans, Green & Co. 248 pp. Price \$2; by mail of the SURVEY, \$2.09.

THE DECLINE OF THE CHARTIST MOVEMENT

By Preston William Slosson. Longmans, Green & Company. 216 pp. Price \$2; by mail of the SURVEY, \$2.08.

CHARTISM AND THE CHURCHES

By Harold Underwood Faulkner. Longmans, Green & Company. 153 pp. Price \$1.25; by mail of the SURVEY, \$1.32.

History in Circles

The incurable folly of the human race is a striking phenomenon of history. Last century was inaugurated in Europe by great and devastating wars; there followed ghastly industrial depression and extensive revolutionary agitation. We have begun the twentieth century with yet greater and more devastating wars; that in due course we shall have the depression and the labor troubles is not a very hazardous prophecy.

And so these three careful and detailed works on the Chartist movement in England are peculiarly timely and interesting. Though there is little attempt at coordination they form together by far the best account of the agitation that we possess, and they bring out the very suggestive fact that much of what has been previously written on the subject is in German and French. English students seem certainly to have paid to the movement less attention than it deserves.

Dr. Rosenblatt's work is of particular value as giving a very full account of the rise of the movement, devoting special attention to those phases that have before received but little attention, and not repeating once more in any detail those parts of the story that have so fully and so often been set forth in the ordinary history books. He gives an interesting account of many of the leaders. From his pages and those of Dr. Slosson we get a fairly full account of that brilliant and yet most erratic Irishman whose statue is so conspicuous in the upper part of the Arboretum at Nottingham, Feargus O'Connor himself. An immense amount of information in a very readable form is packed into 244 pages.

There is perhaps rather more of the philosophy of history in the work of Dr. Slosson, which (despite its title) covers practically the whole story of the movement. Very suggestively he discusses the reasons for the collapse not only of Chartism, but of virtually all democratic agitation soon after the great year of revolution, 1848. The gradual return of prosperity doubtless accounted for much.

But probably the most important reasons were, first, that no inconsiderable amount of social reform was accomplished by the two historic parties in the state; second, that unhappy tendency to squabble among themselves which has dogged the path of British social reformers since the movements of the fourteenth century; and lastly, the fact that none better than third-rate leaders were forthcoming.

A closer knowledge of history might have convinced the Chartists that the whole of the famous "six points" could quite easily have been put into the law of the land and the worst abuses be left much as before. This indeed was emphatically pointed out by Charles Kingsley, one of the greatest men of those times. Chartism failed, but, as Carlyle said, it was but "a new name for a thing which has had many names, which will yet have many."

On the whole, great accuracy and most scrupulous references to the sources mark all three volumes, but it is a pity to find a person so well versed in English affairs as Dr. Slosson repeating an old error (on page 173) to the effect that the Church of England is subsidized from the public revenue.

The utterly deplorable attitude of that and all other British churches (with the possible exceptions of the Unitarians and Baptists) to Chartism is well brought out with full detail by Dr. Faulkner. The Oxford movement was frankly reactionary. The non-conforming bodies were overwhelmingly of the opinion that interest in social reform might divert the mind from higher things. Of course, there were many individual exceptions; Joseph Stephens was a Wesleyan preacher who had been unfrocked by his sympathy with Oastler.

The Chartists knew how to hit back; it is strange to read how they anticipated, but with comparative restraint, methods of political persuasion only too sickeningly familiar in British politics for several years before the outbreak of war. They showed a better spirit by founding Christian churches of their own, one of which, at Birmingham, actually so gained the confidence of the community as to get support from the well-to-do.

For purposes of references these volumes

would be vastly improved by the provision of more copious indexes. This, however, is a very common omission. It may confidently be asserted that no serious student of the social and economic history of Great Britain during the nineteenth century can afford to miss any one of these three books.

IAN C. HANNAH.

THE STORY OF MY LIFE

By Helen Keller. Houghton, Mifflin Company. 140 pp. Price \$.44; by mail of the SURVEY, \$.49.

Possibly an unusual use can be made just now of this school edition of Helen Keller's autobiography. Perhaps never in the history of the world has there been a time when so many men were being made blind as now. There is, of course, no real comparison between what can be done for them and what has been done for Helen Keller, or what she has done for herself. But if children are to read this book it might serve as a sort of ideal or beacon, illuminating what is being attempted in Europe for blind soldiers and giving an intimate picture of the life of one who cannot see, of whom just now there are so many.

W. D. L.

GIRLHOOD AND CHARACTER

By Mary E. Moxcey. The Abingdon Press. 400 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

The plan of Miss Moxcey's book, while it is clear, makes some repetition inevitable. It may be due to this that certain features of the girl's life seem exaggerated, while others seem slighted. The emphasis upon utilizing for character building, the girl's sensitivity to personal criticism and the influence of public or private opinion upon her life, seems to take precedence over the creative social motives that group life affords; personal service rather than hearty cooperative endeavor becomes the character factor. This lack in the book is counterbalanced by the suggestive treatment of certain other points: the educational use of everyday situations in the girl's life; provision of the best objective interests so that "motion" will keep "emotion" from running away with her; building up in her a standard of criticism that will give her intelligent independence of action.

From reading the book one cannot fail to get a sense of the dignity and struggle of individual life in the adolescent period, of its crowded imagery and impulses, which can be made strong and beautiful by the intelligent cooperation of older persons. To those who are interested in exploring the subject, Miss Moxcey offers a carefully chosen and classified bibliography.

K. T.

PROFIT AND WAGES

By G. A. Kleene. Macmillan Company. 171 pp. Price \$1.25; by mail of the SURVEY \$1.33.

This book is a study of the distribution of income, an analysis of how the flow of goods from mine and farm and factory spreads and divides into streams of private income: into the rent, profit and interest of the well-to-do on the one hand, and into wages on the other. To understand the basis of the division it is necessary either to find an independent explanation for one factor with the other share as the residual; or if that cannot be done, an independent explanation for wages and also such an explanation for interest; or finally we may regard the division of product between capital and labor as the outcome of a tug of war.

An examination of the principle interest theories follows; Böhm-Bawerk's theory, the time-preference theory, the abstinence theory, and the productivity theory. None of these is a complete explanation of profit. The

conditions governing the supply of labor and the demand for labor are next discussed. The productivity theory of wages is rejected and the conclusion reached that the general level of wages is determined by the size of the wages fund and the supply price of different quantities of labor. Distribution is based therefore on a theory of wages with profit as the residual claimant.

The whole analysis is careful and well reasoned. It will interest everyone who is thinking in the field of economics.

H. F. G.

CITY RESIDENTIAL LAND DEVELOPMENT.

Studies in Planning. Edited by A. B. Yeomans. University of Chicago Press. 138 pp. \$3 net; by mail of the SURVEY \$3.20.

The City Club of Chicago adds an original and uniquely valuable contribution to the literature of city planning in producing this scientifically executed and beautifully printed and illustrated volume. It is the first of two studies to be published which should and perhaps may be

followed by at least two others. Starting with the development of a quarter section of land supposedly devoted to residential purposes, this initial volume logically led to the same elaborate preparation for the forthcoming Studies for Neighborhood Centers. This in turn should be followed by similarly thorough dealing both with the city "block" and the individual family home, in order to carry the series down to its logical conclusion. Since this present volume is as valuable in its suggestion of the procedure which attained its results as it is in the presentation of the plans and specifications for residential land development, the space we have at command may well be shared by both of these interests.

In entering upon its prolonged undertaking the City Club announced its purpose to be to contribute initiative, suggestion, designs and publicity toward improving the development of residential districts outlying the centers of large cities. To that end it bid for competitive plans to be publicly exhibited, awarded prizes and published, hoping that this would be the best way to stimulate interest and constructive effort for better housing. The program for the competition was carefully drawn by a joint committee of the club, and the Illinois Chapter of the American Institute of Architects.

The quarter section of land to be developed was hypothetically described as eight miles to the west of the city center, having no building, trees or subdivisions, surrounded by sections laid out on the usual "gridiron" plotting of streets and blocks. It was specified that the plans should provide for the plotting of streets, lots, gardens and parks, and for the location of buildings for business, recreational, educational, religious and administrative purposes to serve not more than 1,280 families. A birdseye perspective was to be a feature of each plan. A list of helpful literature to be procured through the club was given to each designer.

Thirty-nine plans were submitted, grouped, eliminated or awarded either prizes or places in the publication by a jury of five experts in housing, engineering, landscape and building architecture, with a consultant who applied economic tests to the plans. Many of the designs are accompanied by photographs and birdseye views of developments which have been or are being carried out elsewhere. The tests for acceptance and award applied by the jury were: Economy

and practicability of the plan for such a site as was specified; health and sanitation; beauty and originality; comfort and convenience, and the provision for community activities.

For meeting most of these tests the plan presented by Wilhelm Bernhard was awarded the first prize. It provided 1,128 families with single dwellings and 152 with flats. Although 434 of these single dwellings are restricted to building lots only twenty feet wide, yet each single family is thus provided with more space than each of two families usually possesses when housed on lots from twenty-five to thirty-three feet wide. The combination of originality, unity, beauty and utility gave this plan the precedence.

The reservation of space for a private playground, restricted to the use of the occupants of the buildings surrounding it, is a feature of this and several other plans. While this provision assures the maximum space for gardens and playgrounds at minimum expense, yet it ignores the necessity for definitely locating public control where public responsibility is more or less assumed. Moreover, the direction of play in so many small scattered playgrounds would be impracticable. But the emphasis laid upon the good policy of publicly providing for play and recreation is very marked in the space allotted, and in the attractiveness assured to the parks and playgrounds, gardens and cultivated street spaces which are noteworthy features of all the plans.

Much skill, architectural taste and social vision are manifest in designing and locating the buildings at the approach or at the community center of the quarter section. They betoken both hospitality and civic pride, a community consciousness at the center which screens the home privacy of the residential streets. Railway lines and stations, elevated structures and terminals, are made ornamental and befitting their surroundings, as is the equipment for water, light and wires. The houses seem designed to be more within the financial resources of an average community than the public buildings for administrative and utility purposes, which appear to be far more expensive in some instances than could be built and maintained by 1,200 families.

To all these items of expense, however, Robert Anderson Pope, of New York City, applied his "economic yard stick" in his rigid economic review of the use of the land, the system of streets and the provisions of community facilities. His elaborate tables of areas and costs, rentals and charges are based upon tests devised to measure the relative economic merits of the plans. He thus worked out a comprehensive comparative analysis of actual economic values for residential town planning, more complete than has been attained hitherto.

Other constructively critical and appreciative reviews of the plans by landscape and other architects from their aesthetic points of view, and by Carol Aronovici from his sociological point of view conclude the volume most interestingly. The spirit of the competitors, jurors and reviewers finds fine expression in the texts furnished by all of them. The designers' texts accompanying their plans are very human documents, while not failing to be technically professional. One of them perhaps best illustrates the social spirit and vision shared more or less by all of them, in pleading the need for some such "neighborhood unit" plan as he presents. Anticipating the neighborhood center competition, and possibly thereby forfeiting some chance of preference in planning for residential land development, William Drummond writes and sketches away from bad present conditions toward the better day dawning.

GRAHAM TAYLOR.

NATIONAL INTEGRATION

UNITY in sentiment, harmony in planning, co-ordination in action, are recognized to be the essential conditions of effective warfare. With the application of these ideals to military and political spheres we are not here and now concerned. With their application to social welfare we are deeply concerned. Religion, philanthropy, education and health, each after their kind, considered as ends demand social integration and considered as means contribute to it.

Unity, harmony and coordination clearly do not for us imply autocracy. Against that principle we are fighting in the war. The autocracy of a set of elected officials might obviously be no better than that of a hereditary or a military caste. When autocracy comes it will not be so labelled. The Czar originally styled himself autocrat of all Russia, not as we popularly think to emphasize his arbitrary rule, but as a proud and legitimate boast that no foreign ruler could any longer successfully dispute his sovereignty within the country. Autocracy is not a necessary adjunct of the monarchical principle. Mr. Taft told the National Conference of Social Work that kings in England and in Italy rank with ex-presidents in the actual power they exercise. Our presidents have a better chance to become dictators than any king or kaiser if they and we have it in the blood. Our defense is not in our form of government, good as that is by comparison, but in our social ideals and in the unseen forces which they inspire.

Unity, harmony and coordination do not imply reactionary politics. It is a common fallacy that the only way to get together is on a platform of unrestrained license for strong people to exploit the weak, on a platform of non-interference with privilege, on a platform of "ancient good" which time has made obsolete and uncouth.

Unity of sentiment is not to be sought in the death of sentiment. On the contrary, our emotions are kindled as with a spark from on high. As we become more alert we become also more sensitive.

Harmony of plans is not to be that of deaf ears or of a magician's wand, hypnotizing the nation with the magical charm of a fatuous delusion.

Coordination in action is not to be that of a mechanical toy, jerked by a fakir's string, wriggled by punch-and-judy fingers, manipulated in a marionette performance. Our American coordination of action, harmony of policy and unity of purpose must be something more organic, more spiritual, more vital than that of the most ingenious machinery. The army, a very necessary instrument of national life, is not its prototype. Even if the enemy were at our gates, the nation would be something more than an armed camp. We shall feel alike, not because some one group of self-styled ardent patriots has imposed its psychology on all the rest of us, but because the national cause has made us, each after his own psychology, one with the nation; patriotic not by imitation but from intelligent choice; supporters of the government by an inner compulsion of conscience and conviction.

We plan our course not sullenly or grudgingly or with suspicion of one another but in mutual good will, in generous faith that the justice of our cause and the righteousness of our acts strike responsive chords in every American heart. There doubtless will be traitors and slackers who will have to be dealt with drastically. There will also be false charges and groundless suspicions, and these may be as harmful as treason itself. Among other tasks in this crisis we have had the problem to solve for many loyal Americans of reconciling

SOCIAL FORC

their loyalty with natural bonds of affection and loyalty to those who are now our enemies, and to institutions and ideas which are now anathema. This cannot be done in every instance over night. Definite acts can be proscribed and such regulations obeyed; but the reconciliation is a gradual process. So far it has gone amazingly well. With patience and discretion and persistence it will be accomplished for all except the deliberately disloyal. Social settlements, trade unions in which foreign-born are members and churches whose services are conducted in other than the English language have an extraordinary opportunity to perform here a necessary patriotic service of mediation.

Unity of sentiment is the goal, not the starting point. The conditions under which Americans entered the war were not such as to call forth any extraordinary fury of patriotic response. Our sober and informed public opinion relies on no mystical appeal, no obscure oracle. It is not a phenomenon of neuropathology. No press nor pulpit nor university nor war council controls it. When it seems most assured it may be already undermined, for it is as delicate as it is all-powerful. In time of national danger or of great national enterprise this substantial unity of sentiment is a precious asset, to be maintained at any reasonable cost, to be maintained as it was secured, by holding fast to the purposes which reunite the nation.

How then are we to secure the rational and harmonious cooperation of all citizens in time of war? Partly, no doubt, by what seems like compulsion, as in taxes and the selective draft. Partly by such exhortation as has been happily exemplified in some of the President's addresses. Partly by quasi-official organization, as in the American Red Cross and in the Council of National Defense and its network of subordinate committees. Partly by conscious public education, as in the food campaign which Secretary Houston and Mr. Hoover are to conduct.

All these means, however, are subsidiary. Mainly we shall achieve social integration in the war, if at all, by far more subtle and complex means. It will come in response to half-conscious, deeply-rooted social impulses. It will come partly because of things done long ago at Appomattox and Yorktown; because of words spoken in the burial ground at Gettysburg and in Independence Hall and Faneuil Hall. It will come because of Pacific railways and the Panama canal and the Monroe Doctrine. Our history and our traditions have made us the nation that we are. Every strain of our immigration from the Mayflower to the slave ship, from Alexander Hamilton to Alexander Berkman, every institution we have inherited, every problem we have faced, whether in triumph or in humiliation, enters into the momentous decisions we are now making.

No traffic policeman will turn the semaphore to speed or check the car of our national destiny. No censor will tell us what fateful word to say or leave unsaid. We move majestically by the forces of our being to strike where we must, to stay our hand when it is time, to suffer as others of our generation have suffered, to drink

THE editor questions to topics which in these pages the country at consequent d be appreciated

in WAR TIME

By Edward T. Devine

the cup as it is appointed. This is not to say that we are helpless or feeble. Through it all we may hold the faith that right makes might, that love is mightier than hate, that the brotherhood of man is surely coming, is indeed a present fact, tragic and contradictory though these present steps of the demonstration may be.

ALLOWANCES TO SOLDIERS' FAMILIES

ALLOWANCES to the families of soldiers and sailors are a necessary part of any rational war policy. They should be adequate in amount; flexible, within reasonable limits, according to the number of children; and conditional, as in Canada, on the assignment by the head of the family concerned of a substantial portion of his regular pay. The increase to \$30 a month and subsistence puts the compensation of soldiers on the basis of a modest family budget and contrasts strikingly with the mere token paid to the French soldier. From one-third to two-thirds of the pay, sent by the soldier's order direct to his family, supplemented by a direct grant by the government, is the logical method of meeting the financial problem caused by the absence of the natural breadwinner. The policy of calling only young men without dependents will not be carried out strictly, and if any large army is recruited it will doubtless be abandoned outright.

The Red Cross civilian committees are the appropriate channels through which the whole voluntary interest and sympathy of the nation may flow in rendering those multitudinous services in the families of soldiers and sailors for which the financial payments made by the government cannot in the nature of the case provide.

REGULATION OF FOOD

THE food administration bill is of extraordinary interest to social workers because of the bold policy of social control which it embodies. It will aim to prevent speculation, to control the distribution of exports, to encourage production, to educate consumers, and to prevent the waste of food in the form of drink. These aims are legitimate, and the nation will acquiesce in grants of sweeping powers to the President and his representatives to secure them. If, however, the nation expects that any grant of power will succeed in securing an ideally equitable distribution of sacrifices from the grain-producing countries and colonies, or of supplies to neutral and belligerent countries, the nation will be disappointed, for no conceivable standards exist by which finite wisdom could determine what an equitable distribution would be. The shortage of food and the abnormal buying through controlled international channels make some sort of national control necessary, but it would be well not to expect the administrator or the cabinet or the President to work miracles.

PREPARATION FOR WAR CRIPPLES

ON another page is printed the announcement of the American Red Cross of an Institute for Crippled Soldiers

and Sailors to be established in New York city by the gift of Jeremiah Milbank. It is astonishing how little serious attention the social and economic problems of crippled men have hitherto received. There has been considerable interest in cripples, to be sure, but it has been centered almost wholly on children. Crippled men have been forced upon our notice as a conspicuous part of the wreckage in almshouses and breadlines, among park loafers and street beggars, but little has been done for those who are in this situation, and they have served for the most part merely as explanations of pauperism and mendicancy and as texts pointing to the desirability of preventing accidents.

The efforts which have been made to reach the adult cripple before he becomes demoralized and help him keep his place as a productive member of society have been modest and few. Individual employers and friends have no doubt given thought to individual cases, and charitable societies have furnished artificial limbs and done what they could to find employment, but they have been hampered by the lack of facilities for training and for securing information about opportunities for work.

The war, however, has dragged this neglected problem from its obscurity into a prominent place among the questions of pressing concern. Much thought and effort have been devoted to it already, especially in France and in Germany, and many experiments are in progress. With the advantage of the European experience and the further advantage of several months in which to get ready for the reception of disabled soldiers and sailors, we should be able in the United States to make effective and suitable preparation.

From this European experience with war cripples and from the experience of individuals in America who have concerned themselves intelligently in the interest of civilian cripples two things are clear:

1. That a natural result of the loss of a leg or an arm in adult life—and therefore the usual result, since so little has been done to counteract this natural tendency—is discouragement, deterioration of ability, pauperization of spirit;
2. That, on the other hand, this natural and usual result is not the inevitable outcome, but rather the consequence of apathy and neglect, since there are hundreds of cripples who, by their own unaided energy and initiative and courage, have found a way to make and keep even an enviable place in the competitive industrial system.

So marvelous is the ability of the human body to provide compensation for the loss of a member, and so marvelous is the power of the human will to overcome physical obstacles if only sufficient stimulus be present, that the normal social prognosis for the man who loses an arm or a leg, in spite of so many instances to the contrary, is not dependence and demoralization but complete restoration to economic independence.

The broad outlines of what must be done in order to realize this normal result already emerge from the scattered experiments:

1. Sympathy must express itself in stimulation, prodding and unflinching discipline, not in coddling and indulgence;
2. Re-education for performing the routine of every-day life and for returning to work—whether the old occupation or a new one—must begin as soon as the surgeon pronounces the patient in condition for it, while psychological preparation for it should begin even before the physical training;
3. To ensure permanent success the cripple must take his place in economic life on a competitive basis, relying for employment on his own productivity, not on the pity of his employer and fellow-workmen; and to this end
4. Each cripple must be trained for an occupation in which his particular disability will not interfere with proficiency and his particular qualities will be assets, and for which there is an effective demand in the labor market; and

COMMON WELFARE

LAST WEEK OF THE FIGHT AGAINST BEER

THE whole war prohibition program was swallowed at a gulp by the House on June 23 as incorporated in the food administration bill. No food or food materials may be used hereafter in the manufacture of alcoholic beverages and the President is authorized to seize all stocks of distilled liquor.

The measure now goes to the Senate, a much wetter body than the House. There, it is expected, a bitter fight will be made by the brewers to save beer and by the California and other wine and vineyard interests to save domestic wines, together with stiff opposition from others who are appalled at the thought of having to make up in some other way the prospective loss of some \$300,000,000 in excise taxes.

Elizabeth Tilton, of Massachusetts, one of the most determined of the prohibitionists, has issued a call to social workers to help in the fight before the Senate, which must settle the matter for this congress, probably in the next week. Her manifesto reads:

Social workers, at the Conference of Charities and Correction you broke through your custom of not going on record for causes and went unanimously on record for prohibition during the war. That ought to mean that you care to see this great man- and food-conservation measure pass. The moment has come. The House of Representatives passed the food bill on June 23, and as an amendment to this bill they passed a drastic prohibition law—they voted to stop the manufacture of beer, wines and distilled liquors. As for the vast quantity of distilled liquor now ripening in the warehouses, the President was given discretionary power to seize these and redistill them for war purposes, munition making, etc.

This latter measure follows the advice of Dr. Haven Emerson, of New York, who said at the meeting of the American Medical Association: "Let alcohol explode in the trenches of the Germans and not in the stomachs of the American people," and as a measure of food conservation I think we can count on the President to act. This bill passed by the House was practically the bill that the war prohibitionists wanted.

But please note that the victory was close—the whole amendment passed by vote of 132 to 114. And note, further, one amendment to allow beer and light wines was defeated by only 10 votes.

Now it has been understood for some time that the House would pass war prohibition, but the dangers ahead are the Senate—and that the amendment should be weakened to allow beer and wines. The brewers are powerful, and, being human and rich, they will fight a hard fight for beer. This will mean that the whole saloon system goes on—it will mean that 94 per cent of our consumption goes on; for beer and wine form 94 per cent of our consumption (1906-10). It will mean inefficient food conservation, for 63 per cent of the grain used in alcoholic beverages goes into beer. It will mean that the labor needed for necessities, now that labor is so scarce, goes for non-essentials—for beer.

Note this fact, that whereas only about 6,000 men are employed in making distilled liquor, about 54,000 are employed in making malt liquors. And please note that of this aggregate only 15,000 are engaged in occupations peculiar to the industry, such as brewers, malsters, distillers and rectifiers. The remaining three-quarters are employed as carpenters, electricians, machinists, teamsters (Charles Stelzle), and would be quickly absorbed in industry.

There is no efficiency in keeping beer and wines. But there is danger that your senator does not know it or does not know that you know it. You cannot expect dry votes from men who believe the commanding voters of their community are wets.

Governor Capper and Kansas have waged a superb fight out West that has left few weak spots in the senators from their section. But the South has weak spots. Alabama, Georgia, South Carolina need to rise up and work, and the northeastern states have only dry spots here and there. These are the states where the social worker abounds. Let these workers see to it that their states at least give one dry senator each to the cause. Get every prominent man to write at once and do not be put aside by statements sent out by the wets.

SUPERVISION OF WOMEN'S WAR WORK

A STUDY of the industrial conditions in the munition plants, supply factories and other industrial establishments engaged in war work with a view to determining the fitness of various classes of this work for performance by women, and with a view to suggesting changes in conditions which would make the employment of women possible where that is not now the case, is among the activities begun by the Bureau of Registration and Information of the National League for Women's Service. Mrs. J. Willis Martin, of Philadelphia, is president of the bureau and Marie L. Obenauer, former chief of the Women's Division in the Department of Labor, is executive secretary.

The bureau's other activities include the registration of women and girls trained in industrial, commercial, agricultural and professional occupations who are ready to take wartime employment, and assistance in distributing and looking after the general welfare of women and girls so employed away from their home environment. Already it has been instrumental in securing employment for large numbers of working women at wages and under conditions more favorable than they as individuals would have secured. Thus one employer informed the bureau that he would pay \$6 a week and wanted 100 girls. He finally raised his offer to \$9 a week and secured them.

At the suggestion of Samuel Gompers, chairman of the Committee on Labor of the Advisory Commission of the Council of National Defense, there was held in the office of the secretary of labor on June 18 a conference attended by the representatives of this Bureau of Registration and Information and of the Labor Department, the Committee on Labor, the Women's Committee of the Advisory Commission of the Council of National Defense, the sub-committee on Women in Industry of the Committee on Labor, and the National Women's Trade Union League. Its purpose was the reaching of an understanding as to

the function of each of these organizations, during the war, in shaping the policy of the government with relation to women's war work.

Secretary Wilson explained that the work of ascertaining the industrial conditions in the shops having war contracts, as a basis for judgment as to the fitness of these shops for women's employment, was one that he had desired done by his department. Although he had failed to secure the backing of Congress in this plan, he still wished the task performed as promptly and as efficiently as possible. The Bureau of Registration and Information had been financed to undertake at least a considerable part of this work, through private subscription, and the Department of Labor had accepted the responsibility of supervising its activities, thus making it all but official.

The Women's Committee, headed by Anna Howard Shaw, the Committee on Labor, with its sub-committee on Women in Industry headed by Mrs. J. Borden Harriman, and the National Women's Trade Union League, will advise the secretary of labor and the Council of National Defense as to industrial conditions affecting women performing war work, according to the understanding reached in this conference with the secretary. Their activities will not, however, overlap the activities of the bureau in gathering data on the industrial environment of women in the contract shops and government plants, to be used officially by the Department of Labor.

Importance is attached to the investigations undertaken by the bureau because employers thus far interviewed are in virtual agreement that as soon as the first selective draft of men for the army shall be made the industries will require the services of hundreds of thousands of additional women and girls. Women who hitherto have not worked for wages will be drawn into the munition shops, the garment factories, the machine shops, where they can perform the less heavy but still arduous work required for production of various metals, and into all of the industries allied to the actual manufacture of war goods. Selection of the work they shall be advised to do, and bringing of pressure to bear upon the industries to improve sanitary and hour-schedule and wage standards to meet the new requirements, will be carried on under the eye of the Department of Labor and with the cooperative advice of the Women's Committee and the Committee on Labor.

In this arrangement the function of the National Women's Trade Union League appears to be that of a special defender of the industrial rights of the women who depend upon their own organization and the force of the labor movement. It will carry on a program of protest to the government against the continuance of such conditions as obtain

WHERE GARIBALDI MADE CANDLES

Tens of thousands of Italian-Americans, among them some veterans in the red shirts of the revolutionary army, greeted the Italian commission on its visit to the house on Staten Island, New York city, where Garibaldi lived and supported himself by candle-making during his exile.

in the Bureau of Engraving and Printing at Washington, where a large number of the 3,000 women employes are working twelve hours a day. Remonstrance against this overwork was made by a delegation of the league last week to the President and the secretary of the treasury, with intangible results.

BEAMS THROWN FROM GARIBALDI'S CANDLES

THE Italian commission now in this country has visited the little wooden house on Staten Island, New York city, where Giuseppe Garibaldi, the Italian emancipator, lived as a refugee in 1851-3. Forced to leave Italy after the failure of the attempted Roman republic, depressed by the death of his wife, who had been his constant companion in exile and poverty, he was glad when an old acquaintance, Antonio Meucci, met him at the Battery and took him to his modest home at Tompkinsville, now Rosebank, Staten Island.

There Garibaldi immediately started to support himself by laboring in Meucci's small candle factory. The accompanying illustration shows the boiler used by him in that establishment. He joined the social life of the neighborhood—among other things taking the first three degrees of freemasonry in a local lodge—and was especially popular with children. His patient and resolute bearing during his worst time of trial, preceding his return to Italy and the historic triumph of his cause, may prove an inspiration to other war refugees now.

The caretaker of Garibaldi's home when he lived in this country is an old Garibaldi soldier and proudly wore a number of war decorations on his red shirt when visited by the Italian commissioners. A number of other "red-shirts," linking the present war to the memories of those great days, also were among the eighty or hundred thousand Italians who lined the streets.

The sociability of the Italian immigrant, an asset not always fully utilized in efforts at Americanization, was strikingly illustrated in New York and the other cities visited by the commission by the vast numbers of American-Italian societies and lodges which lined the streets, each with its heavily embroidered banner and most of them with their brass bands.

Of timely interest in this connection is the report of the Society for Italian Immigrants in New York city showing that since the beginning of the war the stream of Italian migration has reversed. The net result of Italian migration to and from this country during the three years ending December 31, 1916, was an excess of 71,000 emigrants over the total number of immigrants, as compared with a surplus in the opposite direction of over 200,000 for the previous three years. Some of the effects of this reduction, coupled with the unusual prosperity of industry during the war, are shown in the society's report:

Where formerly the so-called *padrone* often abused and cheated his men, he now is compelled to treat them fairly and honestly; otherwise, work being plentiful, the men leave him to obtain employment with those *padroni* from whom they obtain just treatment. Another interesting fact is that where formerly an Italian laborer had to pay a fee when obtaining employment through a licensed agency, he now pays nothing and in many cases is offered a small bonus to be induced to accept the employment offered. All quarries at the present time are offering attractive bonuses with an increase of from 35 to 60 per cent higher wages. Brickyards are doing the same and some railroads, relying mainly on Italian labor for the maintenance of their roadbeds and tracks, are contemplating similar action.

The society also confirms an impression noted by others that the one-time prejudice against Italian laborers among employers is gradually breaking down.

In every industry they are now given a certain preference where previously they were employed only when other help was unobtainable. . . . As a result of these changed conditions, positions are offered to the Italians remaining in New York which have heretofore been denied them, the building trades having lowered the former barriers. In consequence we find Italians amongst the foundation builders, shoremen, timbermen, iron workers, etc.

COLLEGE RECRUITS FOR THE NURSES

AS the SURVEY has already shown [June 2, 9] the withdrawal of many skilled workers from the nursing field, a field never too well supplied, leaves training schools as well as all the organizations for public health nursing, face to face with a serious situation. To meet this difficulty, a special course is planned by the school of nursing of the Presbyterian Hospital, New York city, in cooperation with the department of nursing and health of Columbia University, to open on July 6.

College graduates from accredited institutions will receive credit for part of the regular nurses' training and will be allowed to complete their course in two years and three months instead of three years. Further arrangements are under consideration by which women who have had two years of college work in certain courses may enter the regular course of training and by adjustments in the required theory and practice may complete at the same time the nurses' course and receive also the degree of bachelor of science.

Recently an informal letter was sent out to presidents and deans of women's colleges urging that before the students dispersed this call should be brought to their attention. The letter was signed by Lillian D. Wald, of Henry Street Settlement, New York; Julia C. Lathrop, of the Federal Children's Bureau; Annie W. Goodrich and M. Adelaide Nutting, of Teachers College, Columbia University.

Never was there greater need of conserving child life. Never was there greater need for the fullest enlightenment of all classes of society concerning hygiene and sanitation. . . . We shall need to increase greatly our force of trained nurses in order to meet the consequences of throwing back into a country already unable to cope with its problems of poverty and sickness additional burdens of helplessness and disease. And we need to begin now to train the larger forces for the certain task before us.

Within the week since the first announcement of the course at Presbyterian Hospital was announced ten applications were received, one from Illinois coming by special delivery.

CONSCRIPTING TUBERCULOSIS BEDS

Governor WHITMAN has written to the boards of supervisors in nineteen counties of New York state calling their attention to the bill passed during the recent legislature providing that every county of more than 35,000 population not already having a hospital for its residents suffering from tuberculosis shall erect such an institution and have it ready for occupation not later than July 1, 1918.

That the state is determined to care properly for its tuberculous patients is evident from the mandatory character of this new law. Writes Governor Whitman:

In order to insure prompt action in this matter and to meet the demands which will probably be imposed within a year for the care of tuberculous soldiers the law provides that if the board of supervisors of any such county shall have failed to secure a site for a county tuberculous hospital, and to have awarded contracts for the erection of suitable buildings thereon by the 1st of January, 1918, it shall be the duty of the state commissioner of health to forthwith proceed to locate, construct and place in operation a tuberculosis hospital in and for such county, and all expenditures incurred

by the said commissioner of health in this connection shall be a charge upon the county, and provision shall be made for the payment thereof by the board of supervisors of such county in the same manner as in the case of other charges against the county.

The immediate urgency of this measure is the likelihood that American soldiers and sailors may become infected with tuberculosis as those of other armies have, through the peculiar conditions of the present war and the serious exposures to which the men are subject in trenches and dug-outs. But the gain to tuberculosis work in the state of thus having adequate provision for tuberculosis patients will extend beyond the necessities of wartime, and make possible a strong program of control and prevention in the future.

Such a program will doubtless provide some means of consolidating into hospital districts the remaining fourteen counties, each of less than 35,000 population and hence not affected by the present law, even though they have no provision for tuberculosis hospitals. The total population for these fourteen counties is 340,364, according to the state census of 1915. The State Charities Aid Association estimates that 275 beds are needed for this population. Of this number, fifty-six have been authorized by local authorities.

JEWISH WAR RELIEF FUND GROWING

THE State Department announces that a commission consisting of ex-Ambassador Henry Morgenthau and Felix Frankfurter has been appointed to go to Egypt to ascertain what measures might be taken to ameliorate the conditions of the Jews in Palestine. It is hoped that the Turkish government will permit the mission to visit both Palestine and Syria. It has granted such a permission with respect to Palestine to a committee of German Jews and also to representatives of the Spanish, German and Austro-Hungarian consulates at Constantinople.

The State Department does not know whether the supplies shipped many months ago to Alexandria for the relief of destitute Syrians and Armenians have ever reached their destination.

The Jewish relief committees, though the appointment of the commission had not been requested by them, are using this opportunity to secure full information on the condition of the Jews recently ejected from Jaffa and of Jews in Asia Minor generally. Without appropriating a definite amount for this purpose, they have asked the commission to use its own judgment in relieving distress, should they find an urgent need for immediate action.

The ten million dollar fund which the Joint Distribution Committee of the three great Jewish war-relief funds has set out to collect for this year, is still short of about four and three-quarter

millions. But organization all over the country has been so perfected during the last few months that there is every hope of achieving this aim.

In addition to the contribution of one million dollars by Julius Rosenwald, of Chicago [the SURVEY for March 31], eight prominent men, Gov. Simon Bamberger, of Utah; Gov. Moses Alexander, of Idaho; S. R. Travis, of Oklahoma; William Topkis, of Delaware; Jacob Epstein, of Maryland; Ben Selling, of Oregon; Adolph S. Ochs, of Tennessee, and E. M. Chase, of New Hampshire, have promised to give 10 per cent of what their respective states will raise, and fifty-two men and women will give 10 per cent of what their respective cities will raise. Members of a single family have offered a 10 per cent premium on all the collections taken in eight states and one large city.

The American Jewish Relief Committee desires it to be widely known that international complications will not interfere with the relief work which, where necessary, is carried on with the full cooperation of the State Department and the ambassadors of neutral countries. In Russia, the revolution has opened the door to many forms of cooperation which previously were not available; and here machinery for a very intensive and effective relief work among the Jews, including many thousands of refugees, has been established.

INDUSTRY SEEKING HYGIENE FOR ITSELF

THAT the labor sanitation conference organized among members of trade unions in New York city with the division of industrial hygiene of the Department of Health [the SURVEY, April 14] means business and not simply a passing interest, is evident from recent action of the conference.

A few weeks ago the conference passed several resolutions approving strongly of the work done thus far by the division of industrial hygiene, indicated their belief in the need for extending such work and their hope that the division might be given opportunity for even more thorough investigation and enforcement of sanitary laws. These resolutions, representing the conviction of fully 750,000 members of unions, were given to Mayor Mitchel, who referred the conference personally to Commissioner of Health Haven Emerson. Dr. Emerson received the delegation, heard their views and asked them to act as a special advisory committee with him concerning this branch of the department's work, and also requested that they should, as soon as practicable, present to him a statement of what they believed should be done by the division of hygiene to protect the health of workmen and women in the city and suggest the amount of money which would

be required to accomplish this satisfactorily.

At its next meeting, on June 10, the conference formulated such an estimate. To make possible the annual inspection of even one-sixth of the shops, factories and mercantile establishments of the city by a competent medical inspector, they recommended that the department employ fifty additional inspectors at \$1,080 each, which is the minimum salary of a medical inspector. And in addition to this item of \$55,000, they urged that \$10,000 be appropriated for special educational work alike for employer and employe, that the care of health and the prevention of accident might be widely taught through literature, lectures and exhibits.

That this was a valuable war measure as well as a needed development in local public health work was urged by speakers at the meeting.

The conference also discussed recent activity of the division, especially its efforts to secure a standard of disinfection of the wool, hides and skins coming from ports known to be infected with anthrax. More definite education in diagnosing this disease would, Dr. Harris, chief of the division of industrial hygiene, believed, lead to the identification of many cases as erysipelas, or "blood poisoning." Interest was shown in the hazard reported in the use of hydrofluoric acid in glass-blowing establishments; the investigation of laundries in connection with the New York city Consumers' League; and of conditions in several chemical works.

Specially important was the plan to follow up children who receive their working papers, but who are at present lost sight of after the first examination. It was suggested that these papers be had by employers from the health department rather than from the child, and that a new certificate be required every time the child goes to a new position. In this way his health could be supervised and a change of occupation be secured when such a step seemed desirable for his well-being.

At this meeting the conference also expressed its sympathy with the effort which the waiters' union is making to be allowed to provide its own uniforms. At present, the waiters declare, they have to use the linen of discharged employes, no matter what disease these men may have been suffering from, and this is a menace to themselves and to the customers whom they serve. By adopting a style something like the negligé collar of the English army uniform they could be more comfortable, more clean and save laundry bills. At the one restaurant in the city (Ofer's) where this plan has been adopted, the only expense to the employer was that of having his name sewed upon the collar.

CONTRACT LABOR ADMITTED FOR FARMERS

SECRETARY of Labor Wilson, taking advantage of a clause in the immigration act of last February, empowering the commissioner-general of immigration with his approval "to control and regulate the admission and return of otherwise inadmissible aliens applying for temporary admission," has issued a circular instructing immigration officers that the contract labor clause and the literacy test may be waived in the case of aliens who in all other respects are admissible and who are shown to be coming to the United States for the purpose of accepting employment in agricultural pursuits. By later circular, this exemption was confined for the present to agricultural laborers from Mexico and Canada.

The alien applying for admission under this exemption is subjected to special methods of identification and is allowed to enter temporarily upon the understanding that he will engage in no other than agricultural labor. If found engaged in any other industry, he will be deported.

In a further circular dated June 6, temporary admissions of this kind are limited to six months. If in any instance an extension of time is desired, the necessity for it must be shown in an application by the party desiring to continue the services of the laborers for a further period not exceeding six months. The prospective employer must send for or come to the boundaries to get the aliens before they can be admitted, and precedent to admission of the alien must disclose to the immigration officer in charge at the place of entry his plans with respect to the employment, including wages and duration of employment.

He must give a written promise that he will keep the officer in charge advised of any change made in these plans, that he will notify him if any alien admitted to him proposes to leave his employ or has left it without his previous knowledge, and of helping, if necessary, to trace him.

The Bureau of Immigration, in a communication to the SURVEY, says that it has no knowledge of the approximate number of laborers who will be likely to avail themselves of this arrangement, and that it is unaware that there now exist organized sources looking to an immediate importation of laborers from the two countries named in the circulars. For the time being, therefore, the effect of the measure is quite problematical. It is not likely, however, that it will lead to any very large increase of harvest labor.

According to information collected by the United States Bureau of Labor Statistics, there will be no shortage of harvest hands in Oklahoma and Kansas. In the former, ample labor supplies are

obtainable from nearby states. The Kansas wheat crop has been so seriously damaged that the local labor supply will be sufficient to take care of it. In the northern belt of spring wheat-growing states, the situation will be quite different, as all information indicates a large increase in acreage and probably a very large crop. In other states, the labor shortage, where it exists, is being supplied by making use of boys. In the opinion of Royal Meeker, commissioner of labor statistics, the agricultural labor situation is not yet serious but is likely to become so when haying and harvesting commence.

WASHINGTON RAILWAYS UNDER SCRUTINY

A PETITION signed by more than 12,000 residents of the District of Columbia and presented to the special committee of the United States Senate investigating the strike on the lines of the Washington Railway & Electric Co. in the capital, points to one of the possible solutions of the struggle between the company and the Amalgamated Association of Street and Electric Railway Employees. It reads:

We, the people living and doing business in the District of Columbia, earnestly petition and urge your honorable body [Congress] to speedily enact legislation providing for the ownership and operation by the District of Columbia of the street and interurban electric railways now operating in said district, in order to prevent future disturbances in the industrial and commercial life of the district, provide regular and continuous street car service in the nation's capital city, and insure adequate compensation and better working conditions for the men who perform the necessary and important service of operating the street railways of the district.

The only alternative proposal which would admit of industrial peace for the future, as affecting the car lines, was suggested by Pauline Goldmark, secretary on public utilities for the National Consumers' League, one of the last of the many witnesses examined during the eight weeks of the hearing. She pointed out the danger to the community as well as the injury to the employes involved in the individual contract with which the company sought to crush organization on its lines, and suggested a bill for adjustment of disputes or strikes arising between the employes and the company.

This proposed bill, sanctioned by the officers of the National Consumers' League, provides in general for four processes: the continuous investigation of conditions, mediation in case of impending or actual trouble, emergency mediation, and consideration of labor conditions as a vital factor in public utility rate-making.

It provides that for each public utility there shall be created a board to be composed of two representatives of the com-

pany, two representatives democratically elected by the employes, and a chairman taken from the Public Utility Commission. This board shall keep an accurate record, based upon continuous investigations, of conditions and terms of employment in the industry, and shall report these facts annually. It shall have power to pass on the terms of any proposed contract between company and employes. It shall then have power to settle any dispute arising under an existing contract. When any dispute or strike shall impend or take place, the board will attempt mediation. Should mediation fail, it will conduct an emergency investigation, and will report all of the salient facts of such dispute or strike to the public.

Even more important, from the standpoint of the employes and company, is the provision that in all hearings for the purpose of fixing of rates to be charged for the service of public utilities, this board shall designate a member of each party in interest—labor and capital—to appear and testify; and it shall be the duty of the Public Utilities Commission to give prior consideration to the recommendations of these witnesses concerning needed changes in wages, hours and conditions of labor, in providing new rates for the utility service.

This proposal of legal recognition of the right of the employes to equal authority with the owners of the stock in the dictation of industrial conditions, and the emphasis upon the fact that justice to the workers in the industry is to be first considered when payment for the services of the industry is under discussion, is by no means approved by Clarence P. King, president of the Washington Railway & Electric Company. He has repeatedly stated, on the witness stand, that he considers the entire senatorial inquiry to be a process carried on as the result of pressure brought to bear upon Congress by the amalgamated association. He is shown by the testimony of Chairman Newman and others of the Board of Commissioners of the District of Columbia to have welcomed the threats of strike last March, and to have prepared for it long in advance. He is declared by various witnesses to have promised to give the police "something to do." He positively refuses to have any dealings with the union.

Senator Hiram Johnson, of California, who has taken the leading part in the inquiry, has throughout found it impossible to secure from the officials of the company any statement that the policy of demanding that employes sign the individual contract and forego the right to strike or to join the union would be abandoned under any terms of compromise. Senators Jones of Washington, Pittman of Nevada and King of Utah, equally interested in seeking to

lay a basis for settlement of the dispute, have likewise failed. Their report, which may be in print by the date of publication of this issue of the SURVEY, is expected to make drastic recommendations built upon this attitude of the company.

If the report of the Senate committee shall favor public ownership, as appeared likely at the time of closing of the investigation, the movement will be very strongly supported in both branches of Congress next winter.

FOR THE CONSCIENTIOUS OBJECTORS

ADMINISTRATION officials have told the American Union Against Militarism that, under the draft law, exemption from military service on the ground of conscientious objection can be granted only to those who belong to religious sects which are opposed to war; the individual conscientious objector, whose objection is on social or political grounds and the objector who is a member of a church which is not historically opposed to war, must enter the army if he is drafted, or take the consequences.

To find a way out for this objector and for the government, which may possibly find itself with an embarrassing "army of martyrs" on its hands, a group of religious leaders are working with the American Union Against Militarism in securing information and opinions which they hope may form the basis for such an amendment to the law as will incorporate the tempered provisions of the more recent English practice.

They are sending out widely to religious leaders and educators a set of suggestions based on "the solution finally accepted in England after one and a half year's experience" and on "the expressed intention of the administration to deal liberally with real objectors on conscientious grounds."

As to "evidence of conscience" to be presented before the local boards which make the exemptions, the suggestions are that the "recognized religious sects" be named so that their members may know that they are not included; that "the difficulty in presenting evidence of conscience before local boards can be somewhat overcome by recognizing those who were members, before the draft act was passed, of an established organization whose purposes are opposed to war;" and that individuals who are not members of such organizations "should present legal evidence before the local boards either by witnesses or by affidavits . . . to the effect that the applicant is well known to have been opposed to war."

As to provision for conscientious objectors, the suggestions distinguish between those who are willing to engage in non-combatant service, either at home or abroad; those who are unwilling to

engage in any service under military authority, who "should be released under a written agreement to engage in some occupation essential to the national welfare . . . such occupations should be determined and listed"; and those who are "absolutists":

In connection with the latter group—men who are unwilling to accept any national service under compulsion or agreement on the ground that any such service helps in carrying on the war—we desire to call attention to the English experience and to suggest that in the case of men who are to be tried or courtmartialled the following procedure be followed:

First, that the trial or courtmartial take place immediately after the refusal of a board to exempt a drafted man; second, that arrangements be made to place such a man either in a detention camp or prison under civil, not military, authority; and, third, that the penalties for men who refuse any service under compulsion or agreement be standardized.

At the meeting of the Federal Council of the Churches of Christ in America in Washington, in May, the following statement was adopted:

When the state compels men to military service, it raises the ancient religious question of freedom of conscience. Churches who have furnished martyrs for this principle are under particular obligation to see that the conscientious objector is allowed such non-combatant service as does not violate his conscience. We, therefore, request the administrative committee carefully to consider what practical steps can be taken to secure this end.

INSTITUTE FOR CRIPPLED SOLDIERS

THE War Council of the American Red Cross has announced the establishment in New York city of a special institution for the training and readjustment to industry of men permanently crippled by the war. This has been made possible through a gift of \$50,000 by Jeremiah Milbank, a member of the Central Council of the New York Charity Organization Society. The managers of the institute will be appointed by the War Council of the Red Cross.

The institution will at first devote itself to the education for new trades and occupations of men injured in the ordinary processes of industry, an undertaking for which at present there is great need. Even in Canada at the present time there are more industrial cripples than war cripples. Mr. Milbank has placed at the disposal of the Red Cross the building formerly occupied by the Packard Business College at Twenty-third street and Fourth avenue. As soon as necessary arrangements have been completed, classes will be opened there for the instruction of permanently disabled men.

Mr. Milbank has attached no conditions to his gift except that preference shall be given to helping permanently crippled soldiers and sailors to become

self-supporting. Tentatively it is planned that the institution shall receive them after they leave the convalescent hospitals, fit them by training for some trade, and then help them to obtain employment. It is not for medical or convalescent care, but for educational and industrial readjustment.

Preliminary to the undertaking, Edward T. Devine has been asked to conduct an investigation into the subject of returning disabled men to industry.

As a part of this preliminary investigation, visitors are looking up men who have undergone amputations in New York hospitals in the last two years in order to find out what they have done to fit themselves for new occupations or for their old ones. An investigator will probably be sent to Canada and to France and England to see what is being done in those countries to adapt disabled soldiers and sailors to industry. The work of public and private employment bureaus in the placing of handicapped persons will be studied and also the experience of the State Industrial Commission with victims of accidents.

The actual work of trade training will not be started until the needs of the situation have been ascertained and the inquiry into the methods in use in other countries has progressed far enough to afford a secure basis for a method of procedure. Correspondence is invited by Mr. Devine from others who are interested.

SOCIAL FORCES IN WAR TIME

[Continued from page 291]

5. There must be facilities for placing the men in positions where they will be of the maximum utility.

The investigation which the institute is undertaking this summer is not academic. Its object is to assemble the concrete facts on which to decide how to begin: how to bridge the critical period between discharge from the hospital and strapping on the artificial leg; how to supply the imagination which is ordinarily lacking in the disabled man and his friends when he makes his plans for the future; what classes to organize first; how to find the opportunities in organized industry for cripples who are equipped with marketable skill.

Dozens of practical questions suggest themselves on each of these points. To answer them a study is being made of what has been done in an organized way in France, England, Canada and the United States; of the conclusions reached by individuals who have given personal attention to the problems of cripples as teachers or employers or in other capacities; and of the stories of a large number of crippled men now living in New York city. Help from any reader who has information that will be useful or suggestive would be appreciated. It desired especially to learn of cripples who have succeeded in reconstructing their lives and of employers who have had satisfactory experience with cripples in work requiring skill and capability. There are men who date the beginning of a successful career from the time when a crippling accident has made necessary a new start in life. Such men may now give inspiration to the soldiers and sailors whom the war will send home similarly disabled.

JOTTINGS

THAT the Red Cross fund of one hundred million dollars would be largely oversubscribed was the expectation when this issue of the SURVEY went to press before the final returns were in.

SOCIAL Work and the War is announced as the subject of the summer course in social economy at Columbia University under Prof. Edward T. Devine, running from July 9 to August 17.

BOTH houses of the California legislature have passed the social insurance amendment and in 1918 it will be upon the referendum ballot.

THE American Red Cross has established in London, in a building donated by William Salomon, of New York, an up-to-date orthopedic hospital for American officers.

NAVY YARDS, arsenals and other government establishments where there is considerable industrial hazard are to be safety-surveyed by the United States Employees' Compensation Commission, as its first task. The National Safety Council has delegated its field representative, C. W. Price, to act as director of the survey.

HARVARD offers a summer course on Principles and Methods of War Relief, by James Ford, assistant professor of social ethics, with practice in case work provided by the charitable agencies of Boston. Further information may be had of Professor Ford at 35 Walker street, Cambridge, Mass.

"URGENT obligation to avoid all possible duplication of effort and expense in these days of wartime stress" is the reason given for the merging of the New York Committee on Feeble-mindedness with the Mental Hygiene Committee of the New York State Charities' Aid Association. Homer Folks will be chairman and George A. Hastings, secretary. James P. Heaton, executive secretary of the former and late business manager of the SURVEY, goes to Boston, July 1, to become head of the research department of the Filene store.

THE Y. W. C. A. (this is not a misprint) has opened its first camp house at the Plattsburg Training Camp, New York. Intended as a social center where student-soldiers may meet their women friends and their families, it is equipped with a restaurant, a broad terrace facing the parade grounds, a reception room and rest and writing rooms. The Y. W. C. A. is endeavoring to raise one million dollars for the erection of similar buildings at other training camps here and in Europe. Some of its workers are already in France in preparation for this work.

ACCORDING to *Rochester Commerce*, the sub-committee on investigation of solicitations arising out of the war of the Home Defense League in Rochester, N. Y., is doing what the article by Barry C. Smith in the SURVEY for June 2 demanded. It has sent a letter and questionnaire to over sixty organizations soliciting for the relief of war sufferers or for preparedness organizations of some nature, asking for accounts. "The replies come in so slowly that it can plainly be seen how great a need there is for more system on the part of a great majority of these relief agencies."

Social Work and the War, Pamphlets

- No. 87 **Social Problems of the War**, a report by Prof. EDWARD T. DEVINE and Mr. ERNEST P. BICKNELL (10 cents).
 No. 88 **War Relief in Canada**, by Miss HELEN R. Y. REID, of the Canadian Patriotic Fund (12 cents).
 No. 89 **Public Health Nursing and the War**, by Miss Mary E. Lent, Associate Secretary, National Association for Public Health Nursing (8 cents).
 No. 90 **The Treatment of Disabled Soldiers**, by Mr. E. H. Scammell, Secretary of the Canadian Hospitals Commission (8 cents).
 No. 91 **The Public Health in War Time**, by Dr. C. E. A. Winslow, of Yale University (8 cents).
 No. 92 **Infant Welfare in War Time**, by Dr. Grace L. Meigs, of the Federal Children's Bureau (8 cents).

 No. 95 **Public Health as a Social Movement**, by Prof. Irving Fisher, of Yale University (12 cents).

THE PRESIDENTIAL ADDRESS ON THE CONQUEST OF POVERTY

by Frederic Almy (No. 85, 10 cents) also available in pamphlet form.
 Complete Proceedings of the Pittsburgh Conference will be published soon.

Order by Number. Send Remittance with Order.

ADDRESS

National Conference of Social Work, 315 Plymouth Court, Chicago

Write for descriptive literature, free.

POLICEWOMEN of the United States and Canada, at their recent international conference in Pittsburgh, pointed out "the peculiar importance of their work in this crisis," dedicated themselves once more to "the work of home defense, especially with regard to homes broken by the war, to industrial problems caused by the entrance of women into new fields of labor and to the unprecedented social problems attendant upon the establishment of large training camps," and urged "the need of increased numbers of policewomen" throughout the country. Alice Stebbins Wells, of Los Angeles, the original policewoman, was re-elected president of the association.

"EFFICIENCY only can win this war. To succeed as a nation, we must apply in each local city every power of close organization and careful planning. The war demands immediately the most orderly way of working and living in all cities as a matter of necessity." With these words, the California Conference on City Planning urges the cities of the state to appoint immediately strong city planning commissions as provided in the act of 1915. The cities of the East suffer, because of lack of forethought, from the great influx of new industrial workers last year with the result that these live in congestion, are not as productive as they might be, and endanger the health of the community.

MILITARY age is the age of a great majority of the men who act as big brothers, many of whom will go into the army. Moreover, pleas for economy may be expected to interfere with the development of the probation system, recreation and teaching, just at the time when, by European experience, we may look for a serious increase in juvenile delinquency. Facing such a situation, Alexander H. Kaminsky, of New York, speaking at the first American Conference of Big Brothers and Big Sisters, in Grand Rapids, Mich., suggested that every big brother and big sister who goes into other service be required to find a substitute, and that a campaign be started to enroll older men who have not hitherto been called on to look after rambunctious boys.

ACTING on the motion of the attorney-general [the SURVEY, April 21] that the murder

charge against John R. Lawson, leader of the Colorado miners, and Louis Zancanelli, a miner, be dismissed, the state supreme court has unanimously reversed the decision of the circuit court which found them guilty. The supreme court based its decision on the fact that Judge Hillyer, appointed to try the miners, had formerly been an employe of the coal operators. The defendants were not remanded for a new trial and no further prosecution is expected—the end of the famous coal strike of 1913 so far as legal steps are concerned.

WOMEN still continue to swamp the New York State Public Employment Bureau with requests for work. During May, 1,430 applied, an increase of 60 per cent over April. Although there is no demand for inexperienced women on farms, many apply for agricultural positions. The bureau has a call for women experienced in gardening and poultry raising, at \$40 per month and maintenance. A munitions plant up the state has asked the bureau to secure female help, transportation paid. There has been an increased demand for operators on canvas tents and such government work, but in other lines the demand has fallen off. Some of the firms that took on women in April to train and fit them for men's jobs in office work, are holding off from employing any more women until they discover how far the selective draft will disrupt their male force.

REGARDING as its principal field of activity the connecting up of local community effort with the national social agencies, the American Institute of Social Service is offering expert advice on any questions that may arise in connection with the organization of community resources for patriotic ends. A bureau of programs, of which Robert A. Woods is director and Albert J. Kennedy, assistant director, will issue bulletins giving detailed suggestions about different kinds of work. Meantime, social workers, especially in smaller cities and towns, are urged to create general committees on public welfare representing the various elements in the population and the different geographical sections. Sub-committees, says a bulletin of the institute, should each be placed in charge of five chief subordinate divisions of work, military, productive resources, special assistance, food conservation, and community solidarity.

WHEN the case of Rev. William M. Fincke, pastor of the Greenwich Presbyterian Church, New York city, whose sermon on war caused his congregation to vote for his resignation [the SURVEY for June 27] came before the Presbytery of New York June 11, Mr. Fincke had already resigned by cable from France, where he is serving as an orderly with a hospital unit. Mr. Fincke's case is the first one of a minister who preached an anti-war sermon to reach a higher church body for action. His friends contended that the hostility to the pastor involved the issue of "the right of a minister of Jesus Christ to say from his pulpit what he honestly believes to be God's truth." The presbytery unanimously adopted a resolution, which is understood to close the incident, in which, after acceding to the dissolution of the pastoral relation and expressing appreciation of Mr. Fincke's "faithful and effective service," it declared: "Further, the presbytery maintains the liberty of its ministers under the constitution of the Presbyterian church in the U. S. A. to declare freely and fully the gospel of Christ with all that it implies for the public and private life of men, as God grants them to understand that gospel; but it reminds its ministers that this liberty is to be lovingly used for building up the church, the nation, and the whole brotherhood of mankind."

THREE all-steel mine-rescue cars have just been completed for the mine safety service of the Bureau of Mines to replace three of the eight remodeled Pullmans which have been operating as mine-rescue cars since 1910 and were recently condemned as unfit for further use.

SCARCITY of shoe leather has revived the clog fashion. It is reported that the industrial population of Lancashire and Yorkshire, England, where the clog has never quite disappeared, have now adopted wooden shoes. Clogs have their drawbacks, such as the "clang of wooden shoon" on paved streets. But there are compensations. It is said they are comfortable (appearances are deceitful)

SITUATIONS WANTED

COLUMBIA University graduate in sociology, having experience in social work, desires position teaching or in social service. Address 2534 SURVEY.

HELP WANTED

WANTED—Man and wife of Protestant faith to take charge of a Cottage of twenty-five boys in an Orphanage; the man to fill the position of Carpenter and Instructor in Manual Training. Salary for the couple ninety dollars and maintenance. Position open August 1st. Address 2532 SURVEY, giving particulars as to age, health, experience and references.

VISITORS with substantial experience, preferably in New York, in supervising care of children in boarding homes. Special opportunities for summer, and perhaps permanently. Write immediately, giving complete details and salary. Address 2533 SURVEY.

MISCELLANEOUS

WANTED—Lessons in advance English in exchange for Russian. Address 2534 SURVEY.

and drier than leather footwear. A new pair of woman's clogs can be bought for as low a sum as 70 cents, and men's for 90 cents to \$1.25. They can be reclogged for 37 cents, and with occasional repairs are guaranteed to last eighteen months to two years. Most clog-making is still in the journeyman stage, but recently factories are being established in England for the manufacture by machinery of wooden clog bottoms. The American vice consul at Bradford, England, suggests that the use of clogs in America could be greatly extended with a resultant economy for the workmen, and a diminution in the consumption of shoe leather.

FIFTEEN of the most powerful unions of America, affiliated in the metal trades department of the American Federation of Labor, have adopted a resolution agreeing that there shall be no cessation of work on government contracts during the war, provided that in such contracts is inserted a clause for the just arbitration of grievances. If employers and employes fail to reach an adjustment in any difficulty, the metal unions ask that the matters in dispute be referred to the Council of National Defense, and the officers of the metal trades department of the American Federation of Labor for final settlement. Furthermore, the metal trades call upon the government authorities to provide in all contracts let by the government a clause guaranteeing a just standard of working and living conditions.

REALIZING that the success of selective conscription and ultimately of the war itself will depend upon the support of American wage-earners, President Gompers, of the American Federation of Labor, is urging that labor be represented on every national, state and local board concerned with administering the draft law. In England, he points out, labor is consulted to prevent men being drafted into military service who are indispensable to the production of munitions of war. All full-time labor officials are exempt because of the British government's recognition of the importance of enabling the labor movement to perform its function as an essential element in organized production. Practically all war agreements affecting wage-earners in Great Britain have been the result of conferences between representatives of trade unions and the government. Mr. Gompers pleads for similar co-operation in the United States.

A NEW factory law in Switzerland was anticipated by many manufacturers, writes Dr. Stephan Bauer, director of the international labor bureau at Basel, with the prolongation of the working day until the new law came into operation and made an end to this practice. An interesting experience, however, is reported by a factory which, on the contrary, used the intervening period to try out a system of nine daily working periods of fifty minutes each. "In the sewing department of the factory, a rest of ten minutes was introduced after every fifty minutes' work. During it the women were obliged to leave their places and exercise in the open. They welcomed the innovation because they soon realized that with this time division they were able to earn more at piece-work than previously. The manufacturer himself noted an average increase of productivity amounting to 25 per cent, varying from no change for the slowest to 40 per cent for the most efficient of the workers."

CAPT. J. W. PETAVEL, an English Christian socialist and author of a number of books on social reform which have influenced thought, especially among the younger

clergy, writes to the SURVEY from Calcutta that the object of one of his English organizations, the Educational Colonies and Self-Supporting Schools Association, is about to be put to the practical test in India. Through the generosity of Maharajah Kasimbazar, a rich Bengalee, a polytechnic institute has been established where a thorough training—manual, physical, and academic—will be given to promising children, independent of caste, and with the unique provision that the students must pay for their maintenance at the completion of their training by a short period of employment, which at the same time is profitable educationally. Captain Petavel, who has been appointed principal of the school, is especially anxious to introduce in India a proper appreciation for the benefits of cooperation. Some of his Indian backers believe that this new form of practical training will help to solve the problem of middle class unemployment. The principals of a number of Indian colleges support it as an aid in the never ending fight against class prejudices.

WHEN is a weed in Philadelphia a nuisance? The local Bureau of Health, with the approval of Select Council, ordered last summer that "weeds, noxious and poisonous plants, docks, tall grass and other offensive vegetable growths" must not be permitted to attain a "height of more than one (1) foot" in any portion of the city laid out in blocks. Lands under cultivation with growing crops are excepted. The constitutionality of the regulation was tested in the lower courts last fall. In court the question at issue was not the character of weeds as nuisances or the responsibility of the owner—in this particular case, the trustees of an abandoned cemetery—but whether the title of the housing and sanitation act was as inclusive and detailed as the state constitution requires. The city won its case, so that nothing stands in the way of its enforcing the order this summer. This ought to assist very materially in eliminating mosquitoes and flies, in preventing accumulations of decaying vegetable and animal matter, and in preventing the seeding of yards and gardens with weeds.

BOOKS RECEIVED

BIOGRAPHY AND TRAVEL

REAL PEOPLE AND REAL ADVENTURE

RUSSIAN COURT MEMOIRS 1914-16

Fully illustrated with Portraits of the Modern Russian Court and Russian Leaders. *Net \$5.00*
Intimate glimpses of the life of royalties and social leaders in Petrograd. One of the most interesting books that has yet appeared about Russia, for it is written within and with full knowledge.

THE CHEVALIER DE BOUFFLERS

A romance of the French Revolution by NISTA H. WEBSTER, author of the "SHEEPTRACK."

Miss Webster possesses all the qualities necessary in order to present a true picture of the most terrible transition from gay to grave that the world has ever witnessed. She can estimate, as none but a woman can, the secret which enabled Mme. de Sabran to maintain for a lifetime her hold on a man who "adored women with a fury but without fidelity." Male readers will in all probability fall posthumously in love with her heroine.—*London Spectator*.

New Edition. *Net \$4.00*

LORD REDESDALE MEMORIES

2 vols. New Edition. *Net \$10.00*

"Kings and Queens, Statesmen, diplomats, artists and writers walk through the pages of the book, made to live again by the author's keen insight, knowledge and accurate sense for character."—*N. Y. Sun*.

PRIVATE CORRESPONDENCE

1781-1821; by GRANVILLE LEVESON GOWER (First Earl of Granville). 2 vols. *Net \$10.00*

Edited by his daughter-in-law, Castalia Countess Granville.

An important collection of private letters giving valuable sidelights on the politics and diplomacy of the last great reconstruction of Europe. Travelling everywhere and viewing those troublous times through the eyes of a dozen nations, Lord Granville's correspondence is especially important to students.

PARLIAMENTARY REMINISCENCES AND REFLECTIONS

1868-1885, by the Right Hon. LORD GEORGE HAMILTON. *Net \$4.00*

Lord George Hamilton's Parliamentary career began in the days of Mr. Disraeli and continued without a break until 1906. During that time there was no political or social leader with whom he was not personally acquainted. Containing a good deal of the form and gossip of Parliament as well as of its naked history.

SIXTY YEARS OF AMERICAN LIFE

By EVERETT P. WHEELER. *Net \$2.50*

The period covered is from the Compromise Measures of 1850 to the Administration of President Roosevelt in 1900. Few people are as well qualified as Mr. Wheeler by experience and personality to give an account at once trustworthy and interesting of this eventful epoch in American affairs.

ELEFThERIOS VENIZELOS,

his Life and Work

By DR. C. KEROFILOS. *Net \$1.25*

With Greece in the forefront of War News the life of Venizelos is especially timely. The author is an intimate friend of Venizelos, accompanying him on many of his diplomatic missions. The book is well translated by Bertrice Barstow.

THE DEVONSHIRE HOUSE CIRCLE

By HUGH STOKES. *Net \$3.50*

Dealing with the reign of the fifth Duke and his beautiful Duchess, the incomparable Georgiana, during the last quarter of the eighteenth century. In this volume the courtyard in Piccadilly is once more crowded with the life and hustle of chariots, sedan, footmen, grantees and fink-boys.

TWO SUMMERS IN THE ICE WILDS OF EASTERN KARAKORUM

By FANNY BULLOCK WORKMAN and WILLIAM HUNTER WORKMAN.

The exploration of nineteen hundred square miles of mountain and glacier. With three maps and one hundred and forty-one illustrations by the author.

Net \$8.00

CANADA THE SPELLBINDER

By LILIAN WHITING. *Net \$2.50*

Describing its scenic beauties with radiant enthusiasm and growing appreciation, and showing how these delights are easily accessible to travelers. It gives excellent impressions of present-day Canadian activities in town and country and forecasts industrial and commercial developments which will make Canada the wonder of the world.

THE NEW ERA IN CANADA

by the following writers: Stephen Leacock, Sir Edmund Walker, Prof. F. D. Adams, Sir John Willson, John W. Dufoe, Miss Marjory MacMurchy, Dr. Herbert Symonds, Sir Clifford Sifton, Archbishop McNeill, G. Frank Beer, Prof. G. M. Wrong, A. J. Glazebrook, Mrs. H. P. Plumptre, J. O. Miller, Peter MacArthur. Essays dealing with the upbuilding of the Canadian commonwealth.

Net \$1.75

A NATURALIST IN BORNEO

By ROBERT W. C. SHELFORD. *Net \$5.00*

Do you want a legitimate distraction for an hour at a time? Then purchase this book and you will find it much more thrilling than any novel of adventure—for it is all adventures in the fairy land of science and almost more incredible than any fairy romance conceived. Nevertheless it is packed with undiluted truth from the first page to the last. It is a work destined to become one of the classics of natural history, to rank with books by Bates and Humboldt, Wallace and Fabre.

FROM THE GULF TO ARARAT

By G. E. HUBBARD. *Net \$3.50*

Mr. Hubbard, Secretary of the Anglo-Russian Commission for the delimitation of the Turk-Persian frontier, described in a splendidly illustrated book a year's experiences at boundary making among the turbulent tribes of the wild mountain country which stretches from Basra to Ararat, of Bible fame. It is a stimulating mixture of adventure, romance, fighting and mountaineering.

THE SLAVS OF THE WAR ZONE

By W. F. BAILEY, C.B. *Net \$3.50*

This elaborate work by one who has lived among the varied and fascinating peoples of eastern central Europe takes up the little nations in turn. The reader goes into all their doings, work, play and worship, with a vividness that brings them very near. For those who may have tired of travel volumes or wearied of "war books" here is a novelty that combines the merits of both.

THE ENGLAND OF SHAKESPEARE

By P. H. DITCHFIELD. *Net \$2.00*

Fully illustrated.

It is a thoroughly informed, sympathetic, and highly successful attempt to draw the real background for the living figure of the great Shakespeare, so that we may see him living among his fellows in Elizabethan London and the Jacobean countryside.

RUSSIAN MEMORIES by Madam Olga Novikoff

Fully illustrated with portraits. *Net \$3.50*
Few women in history have played so important a part in international affairs as Madam Novikoff. General Ignatieff referred to her as "a gallant and intrepid warrior" and Disraeli called her "The M.P. for Russia in England."

Postage Extra. At all Bookstores.

The High Cost of Living

THE increasingly high cost of living can be reduced at once only by the application of Domestic Science, which shows how to lessen the food bills, how to save time and labor, how to keep the family in health, how to manage all the details of housekeeping in the best and easiest way. Domestic Science makes the work of the housekeeper an interesting profession instead of deadening drudgery.

The correspondence courses of the American School of Home Economics were prepared by leading teachers, especially for home study. They have been tested, proved by over 15,000 housekeepers, teachers, institution managers, etc.

The attractive illustrated 100-page handbook of the school, "The Profession of Home-Making," will be sent on request. Address a postcard or note—A. S. H. E., 519 West 69th St., Chicago, Ill.

Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new.

They protect your Mattress from all impurities and lengthen its life.

A single trial will convince.

Insist on seeing our trade mark and name—Excelsior Quilted Mattress Protector—on each Protector.

"None genuine without
Trade Mark"

Excelsior Quilted Mattress Co.

SURVEY ASSOCIATES, INC., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 25 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1917, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

FOURTEEN millions over the goal of one hundred millions is the latest estimate of the Red Cross fund—a tidy sum for relief and reconstruction. The spending of it now becomes a tremendous task of humanitarian statesmanship. The commission to France is at work on the ground, and this week a commission to Russia, headed by Dr. Billings, is announced. Page 327.

APPARENTLY the Senate is about to save the beer and spill the grain. Page 326.

SIXTY foreign war relief agencies, fearful that their three years of service and their very organizations may be swallowed up in a great relief trust, met to discuss their relations to the Red Cross. A German-American editor protests that the American Red Cross is becoming nationalistic whereas its real function is international. And there's a pretty row on over the barring of German or past-German-Americans in Red Cross service abroad. Discussion of it all by Mr. Devine, together with his challenge to social workers to help win the war. Page 314.

JUDGE MACK is to draft the bill to provide compensation, pensions and separation allowances for soldiers and sailors and their dependents. He stands on the workmen's compensation principle, on insurance, on varying the allowance with the size of the family and on making it all "a matter of justice and not of charity." Page 323.

QUITE unheralded and almost unknown, the British, French, Belgian and Italian governments have been caring for the families of their reservists in this country—more than 2,000 in the New York district alone. A proposal that the Red Cross take it over and put it on the basis of the American standard of living in place of the standard of a peasant family in rural Italy. Page 299.

CONGRESS has before it a bill to establish a civilian health reserve for the protection of the public health in times of emergency. Page 324.

MOONEY, charged with murder and about to be hung, became an international figure through the protest of Russian revolutionists; became, then, a national figure; has gradually won to his support one after another of the labor bodies; has had a petition for a new trial issued by the very judge who sentenced him; has put San Francisco's "law and order" campaign once more in a painfully conspicuous position. The story of a remarkable trial of a radical labor man. Page 306.

IOWA has a plan for making its little cripples "strong and straight and fine." Page 312.

FRIENDS of the German Republic, a new society open only to persons of German birth or descent, has been organized in New York with branches forming in other cities. Page 324.

CALIFORNIA'S labor commissioner takes sharp issue with the plea for importing coolie farm laborers, and declares the real shortage to be due to poor pay and bad conditions on the farms. Page 325.

THE old-fashioned patriot who stands out in the front yard on the Fourth of July and reads the Declaration of Independence has, this year, all Russia for his audience. Life, liberty and the pursuit of happiness have suddenly become watchwords for new hundreds of millions of men. Page 318.

GEORGE SCHOOL

A Home School in the Country for Boys and Girls

Careful supervision. Graduates succeed in college. Special courses. Athletics. 227 acres of woods and open country.

A Quaker school which teaches the high patriotism of good citizenship, the danger of militarism, the virtue of the democratic ideal of peaceful progress by law and order.

GEORGE SCHOOL, PA.

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travels, Real Estate, twenty cents per line.

"Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19 St., New York City.

SITUATIONS WANTED

GENTLEMAN, 35, at present remuneratively employed, seeks more congenial and stimulating work; trained investigator of social and economic problems, experienced with methods requiring the handling of statistics. Best of references. Address 2535 SURVEY.

WANTED—By October 1, superintendent of institution (charitable or correctional) for boys or children by a man of education and experience. Prefer private institution, where politics play no part, and efficiency and character are demanded. Address 2536 SURVEY.

AN expert wishes engagement in a system of schools (day or Bible) as advisor in morals and vocational lines. Theodosia Duir, Box 532, Chautauqua, New York.

TRAINED publicity secretary is now free for permanent or temporary work. Energetic young man who knows how to get results. Address 2537 SURVEY.

HELP WANTED

WANTED—Man and wife of Protestant faith to take charge of a Cottage of twenty-five boys in an Orphanage; the man to fill the position of Carpenter and Instructor in Manual Training. Salary for the couple ninety dollars and maintenance. Position open August 1st. Address 2532 SURVEY, giving particulars as to age, health, experience and references.

FOR THE HOME

SEVEN CENT MEALS

\$1.50 per week per person; 42 meals with recipes and directions for preparing each. 10c or FREE for names of two friends.

WAR WITHOUT TAX

on Food, Labor or Industry

Will you think or pay? The Nation creates all land values—justice demands their use for National Defense—not for private gain. Tax on land values alone with no other taxes whatever will provide entire annual national budget—even five billion dollars. Will force idle land into use. Increase crops. Stimulate industry. Reduce taxes for 95% of the people. Will not raise prices or reduce production.

Booklet free. NATIONAL SINGLE TAX LEAGUE, Cincinnati. Dept. 25

Within Our Own Gates

Lonely Women Folk of the Allied Nations, Their Husbands
Fighting Overseas

By Margaret F. Byington

ASSOCIATE SECRETARY, AMERICAN ASSOCIATION FOR ORGANIZING CHARITY

WITH Joffre there came unheralded to the United States a group of men from the French trenches, home for their first furlough since the war began. For, European born though they were, home to them meant the United States. There were more than a hundred of them whose families had been here waiting through all these months, and only when the English had taken over a larger section of the front could they be spared.

One man came with his wife to the French Hospital in New York city, where she had had one operation while he was gone, and where she had another and a severer one to face after he went back. His answer when asked if he were going back was "Assuredly."

The tragedies of the war have come nearer to us here in America in the last two years than we have perhaps realized. This group of women whose husbands are fighting in the armies of our allies is not a small one. In New York alone there are 800 families of Italian reservists who have gone back to fight. In the New York district, including New England and New Jersey, there are still 600 French reservists' families, though 600 others have gone back to France to live. The British consulate in New York is caring for 350 families in New York, New Jersey and Connecticut whose "men" are on the other side fighting.

These families certainly deserve special sympathy, for they have many of them faced anxiety without kin or neighborhood ties to comfort them. Mrs. Jones, for instance, had a mother and sister and brothers in England, but when Jones enlisted one day, leaving only a brief message of his departure, she found herself without near friends, but with a fifteen-day-old baby and a little crippled boy. St. George's Society and the New York Charity Organization Society saw that she had temporary care and that medical treatment and braces were secured for the boy. In spite of their kindness and interest (which she fully appreciated), she was, nevertheless, very

lonely here, and very happy when with the help of her brother she was enabled to go back to her family in England. Another case was that of the twenty-two-year-old Italian girl whose husband was called to the colors just a few months after her marriage. He went back to Italy at once, leaving her to the care of her father, who was a widower. There were a few months of loneliness for her, and then a month after her baby was born she died. As her father could not care for the baby, the New York Department of Public Charities placed it in an institution and there will be no home awaiting him if he does come back.

They have lacked here, too, that contagion of enthusiasm and sense of common sacrifice which have buoyed up wives and mothers in the warring countries. Instead, their neighbors must often have expressed the feeling, as did someone in my hearing the other day, that the husband's duty was to stay home and take care of his family, even if his country was at war. Such an attitude, of course, has made the situation much harder to face here than it would be in a country where the spirit of wartime devotion is so keen that it is the women who make the best recruiting officers.

It seems, moreover, to be true that up to the moment of our going into the war, America, with all that it has given for relief work in Europe, had not shown any spirit of friendliness to those within its own gates who were the loneliest of the war's victims. At the offices of the consuls I visited there was no word of complaint at our aloofness, only a feeling that it might be different now we were "in."

What has been happening to these families? Each consulate accepted the responsibility for the care of the dependents of its own soldiers, and for each nationality there has been some private society supplementing the government allowance.

The first table on page 303 gives the government allowances for the three nationalities. These are the regular amounts allowed to the families in the home country, and the varia-

EN BELGIQUE LES BELGES ONT FAIM

THESE two posters and the one on the cover are from the collection of Dr. Herman T. Radin, New York city. That on the left, by Steinlen, is from a poster by the French-Belgian Alliance in Paris, announcing a sale of work by Belgian artists to buy food for Belgium. The one on the right, by Abel Pann, advertises a concert arranged for the benefit of wounded members and the widows of fallen members of the French Jewish Legion.

tions indicate not so much differences in policy as differences in the cost of living in the respective countries.

The most inadequate allowance, from the standpoint of American household expense, is the Italian, which is obviously based on the extremely small expenditure necessary to maintain an Italian peasant family. All three of the governments have had to raise these allowances to meet the general increase in the cost of living everywhere.

In contrast to the system in Canada, the Italian soldier's pay is so small that it is impossible for him to make any large assignment of wages. Similarly, 6d a day, or \$3.60 a month, is all that an English soldier is expected to give his family. The

French soldier receives only four cents a day, just enough to meet his own needs at the front. Then, too, there are in every foreign country generously supported private associations for the care of soldiers' families; in England, for example, at least forty-seven. While there are private societies here, they are, of course, neither in number nor funds equal to those on the other side.

About 50,000 English, Scotch, Irish and Welsh men from the United States have gone back to fight—7,000 of them through the port of New York. Their reasons for going are various. With many it has been, of course, the most genuine self-sacrificing patriotism. Some have gone because they are restless and seek the great adventure. Some are veterans of the

South African campaigns, who "prick up their ears at the word 'war'." Some go for yet grimmer reasons. There was in Chicago a man, fifty-four years old, formerly a sergeant in the English army, when the war broke out an artisan earning something like \$100 a month, with a family dependent on him. His oldest son went back at the beginning of the war, serving in the cavalry. During a battle he was thrown from his horse and the reins twisted about his arm forming a tourniquet. The story brought back by his comrades, and believed by his kindred, was that a German officer riding up said, "At least that arm will never do any more work," and with a sword-stroke cut it off. When this word came to the father, he straightway left his work and his family and went back to "get a few of them."

Some of those who are interested in the English families feel regret that so many men with dependents have gone back when there are unmarried men still here. Many of those who went were, of course, business and professional men whose families had sufficient resources, but, as has been said, 350 families are now receiving allowances from the British consulate in New York. Any woman who wishes an allowance may apply for it to the consul, bringing papers to prove that her husband is really fighting. Evidence is required, also, that the family was in fact dependent on the man at the time he left. For instance, women who were deserted some time before sometimes come to claim their allowance when they hear that the man has joined the army. In such cases assistance is refused. The officials recognize that the allowances so far have been inadequate, but if the increases which went into effect in England on June 1 apply to families here also, the situation will be far more satisfactory.

The families also receive help from various private societies, the English from St. George's Society, the Scotch from St. Andrew's, the Irish from the Friendly Sons of St. Patrick. For example, 100 to 150 of these families have received some help from St. George's Society, in addition to the government allowance. Sometimes this merely tided them over the two or three months that usually elapse before they receive the government allowance; sometimes it supplemented the allow-

ance. No regular amount is given the families, but when special crises occur, they can come to the office of St. George's Society for special help, money or medical care or whatever else may seem necessary. In addition, a good many families who had relatives in England have been sent back there. A special "war fund" has been raised by St. George's Society for this purpose and about \$1,500 was given from it last year. Incidentally, it is interesting to know that this society was organized before the revolution and reorganized in 1786 for the care of English families in distress. The Canadian Club of New York is caring for the families of all Canadians here on the same basis as the Canadian Patriotic Fund.

The English consulate has already had to face the problem of the care of the returning soldier. Some of the soldiers have been held up at Ellis Island, as they return without resources, suffering from wounds and shock. One of the consulate staff then goes over and stands sponsor for them. Perhaps this, too, will be different, now we are "in." (It is strange how that one little word is the symbol of our whole new attitude toward the old world and its war, now ours.)

They have a small fund which is used to tide these men over while they help them get jobs, necessary surgical appliances, etc. This work is described very briefly at the consul's office, but one does get a sense of the understanding welcome that the men receive and the help extended in getting through the difficult process of readjustment. Much of this money is later refunded, "so you can help some other fellow through."

The French and Belgians

THE problem of the care of families of Belgian reservists is not, of course, a large one. About 180 soldiers have gone back from New York, but only forty-five families are receiving government allowances through the Belgian consulate. Moreover, all but a very few of these are fairly well-to-do families who really do not need the allowance, some of them even sending it on to the soldier at the front for his own use. The family heads are many of them business or professional men; others have been making good use of the skill which they had acquired in the old country, diamond-cutting, in New York, or raising endive on farms in Michigan.

The allowance itself is very small; one franc and twenty-five centimes per day for the wife, and fifty centimes a day for each child under sixteen. Mothers and fathers receive one franc and twenty-five centimes a day if they have one son at the front and sixty centimes a day for each additional son. These allowances are obviously inadequate for the support of a family here. In cases of need they have been supplemented by the Belgium Bureau, a society in existence before the war, which has a special fund for reservists' families. This money has come both from wealthy Belgians and from Americans, and while there has been a recent falling off in the number of such contributions, they are still able to give whatever is necessary to the individual families.

One of the finest pieces of war-relief work being done here is among the French families. Their care has been entirely in the hands of the French Benevolent Society, through whose office the government allowance has been paid.

This allowance is supplemented from the funds of the French Benevolent Society with a genuine effort to adapt these gifts to the needs of individual families. The society generally gives, however, \$3 a month and also pays for the depreciation in the value of the allowance caused by the rate of exchange, so that a woman who is to receive sixty francs

will get \$12. The allowance is sent by check each month, with a receipt and return envelope accompanying it. Visits are paid to the families at intervals by the social-service nurse of the French Benevolent Hospital. The hospital has provided also free medical care in the home, the clinic and the hospital for all who need it, especially in confinement cases.

At first, out of a desire to shelter from anxiety women who had given so much, the French Benevolent Society assured the applicants that their needs would be entirely provided for. Soon, however, the society came to realize that, in view of the anxious state of mind of the women, it would be wiser from the start to encourage them to make some effort to help themselves, instead of trying to worry along on a greatly reduced income.

Nevertheless, many of the women whose husbands went to the front had never done any work outside their homes. Many of their husbands were skilled artisans or clerks and had earned \$75 to \$100 a month. The women were crushed by the sudden disaster, overwhelmed with loneliness, so that it took tact and patience and skill to open up opportunities whereby they might contribute to their own necessities. One young woman who had just moved into a \$100-a-month apartment took humbler quarters and was sent pupils in French. Another was helped by the women of the committee to get the laundering of the finest lingerie blouses. For these she could charge a good sum. Another who had not worked outside her home for a good many years was found a position as cook and is now earning \$60 a month. Others were helped to work up little businesses, caring for the apartments of "bachelor girls" and making \$15 to \$18 a week. Some became seamstresses. Then, of course, there were the less skilled who did ordinary day's work. The women were further handicapped by their inability to speak English. One woman who had been here twenty-seven years and was a competent worker could only seek employment within walking distance of her home, because she could not, or would not, learn to say "Tenth avenue car."

Those who had little children were not, of course, expected to work regularly. If there were not too many children they did part-time work and put the children in the French day nursery and kindergarten, the French Benevolent Society paying the fee. If there were a good many children, other plans were made. A special committee provided shirts and pajamas for women to make at home, paying them fifty cents for the latter and thirty cents for the former, so that they were enabled to earn \$3 to \$5 a week. Sometimes the committee would arrange for two families to live together, one mother caring for all the children and sewing at home, the other taking a job outside the home.

Thus, with government allowances and some help from the private funds of the French Benevolent Society, the families of the French reservists have been managing. At first it was hard to persuade some of them to take up work, but little by little the enthusiasm for independence, for bearing a share of France's burden, has grown. Now there is hardly a woman who is not earning something. It has meant, however, very careful work on the part of the committee to overcome initial hesitations, to learn the real possibilities of the individual women and to organize employment opportunities. Altogether between 800 and 1,000 positions have been secured for these women. The experiences of this committee should be of value to social workers who are charged with the responsibility of caring for the families of our own soldiers. Two of the most active members of the committee had served as members of a district committee of the New York Charity

Organization Society and brought the results of that experience into this new wartime activity.

Altogether \$239,000 has been spent in government allowances and \$60,000 in private relief funds. A few families have been sent back, but only when, because of age, the number of little children, or for some other reason, it has seemed impossible for them ever to become adjusted to conditions here so that they could at least partially support themselves. For every village in France has its community kitchen, where one can get a big bowl of stew for two or three cents, and a common coal-bin, where one can buy at cost. So, in France, too, a \$3-a-week government allowance makes life possible as it does not here.

Yet in that Thirty-fourth street center in New York, also, one feels that there must be for these women a real sense of home, of personal interest and devotion, something which indeed outweighs in value the government allowance which they receive, essential as that is.

It is certainly a difficult problem with which the Italian consulate is wrestling, as one realizes after a visit there on the morning, once a month, when the pensions are paid. A very beautiful woman of noble type, with dark hair and worn face, sat beside the vice-consul's desk, telling of the death of one of her fourteen-months-old twins. The other child was in her arms. She had received an allowance of \$27 a month from the government and the Italian Red Cross for herself and her five children, but this would now be reduced probably to \$23. She was granted an extra allowance of \$10 toward the baby's funeral expenses. Another woman, rosy-cheeked, with red-gold hair, carried a little child with the same gold in its tight curls. She told us that she received \$15 a month for herself and her two children and earned \$3 to \$3.50 a week, besides "finishing" at home.

All the women stood in a big waiting-room until they were called and then, standing in line, went up to the desk to receive the monthly allowance, at one window from the government and at the next from the Italian Red Cross. One felt everywhere the happy, kindly spirit of our southern allies, and there was evident a genuine solicitude for their welfare on the part of the staff in the office. But the latter recognize quite frankly the difficulty of acting intelligently; of knowing how much to give to the individual family; of helping to solve the problem of individual families.

In addition to the 800 families of Italian reservists in New York city, there are 300 in the New York district, including Connecticut, Rhode Island and New Jersey. The Italian Red Cross only helps the families in New York city. At the present time the government allowances amount to about \$5,000 every four weeks and the Red Cross about half that. The Red Cross has spent altogether only \$12,000 or \$13,000 since the war began.

The Italian Red Cross has one investigator; the consulate none. This investigator visits all families before the Red Cross begins to help, but obviously can make no attempt to keep in touch regularly with them, except as the women come for their money. As a result, probably some families are receiving money who could get on without it; while others do not receive enough to enable them to maintain proper standards. I heard of one young Italian woman whose husband has gone back as a reservist and who lives with her widowed mother. The latter has two children, sixteen and twelve; the former three, three, two and one year of age. For a time they received \$11 a month from the consul and \$9 a month from the Red Cross for the daughter and \$5 a month for the mother. They also received \$20 from a special fund.

MONTHLY SEPARATION ALLOWANCES TO SOLDIERS' FAMILIES

	English	French	Italian
Wife alone	\$13 ¹	\$6.50	\$3.92
1 child	18	12-15	5.88
2 children	22	18 and over	7.84
3 children	24	22 and over	9.80
4 children	26	30 and over	11.76
5 children	28		13.72
6 children	30		15.68
7 children	32		17.64
8 children	34		19.60
Father or mother alone.....	36		3.92
Both			6.38

¹ Includes 6 d. a day from man's pay.

But they proved to be unreliable and lazy. The young woman, who was an expert sewer, could have earned \$8 or \$9 a week in the factory while her mother cared for the children, but this she refused to do. The man, moreover, was on the police force in Italy, not at the front. He wanted her to come over where he could care for her, but she refused to go. Consequently, while the government allowance continued, the help from the Italian Red Cross was withdrawn.

In contrast, take another family which was receiving help from the Brooklyn Bureau of Charities as well as the Italian government and the Red Cross. This woman had five children when her husband went back in July, 1915, and was expecting another. He had been here seventeen years, but was not a citizen. The consul promised to give his family \$12 a week, but after two payments he had to decrease this amount. At the end of three months they were getting only \$6 a week and in March, 1916, only \$3 a week. From that time on the wife received \$14 a month regularly from the consul and irregular help from the Italian Red Cross. The Bureau of Charities tried to arrange for the mother to have hospital care in her confinement, but she refused to accept it. There was a decided discrepancy between her income and her normal expenditures:

Coal	\$2.00	Italian Consul.....	\$3.25
Light48	Red Cross.....	3.75
Insurance80	Lodgers75
Food	8.00	Washing50
Clothes50		
Rent	2.25		
	<u>13.23</u>		<u>\$8.25</u>

The bureau, therefore, gave her an additional allowance of \$5.50 a week. The first time the visitor carried the money to the family, the aged father's eyes filled with tears and he said that they could not realize what it meant to have this regular weekly gift. This spring, however, so our points of view change, Mrs. X. is again asking to commit her children because her income is not adequate.

There is, of course, no doubt that the problems faced by the French and Italian organizations are very different. The French had a well-established private relief agency, whose secretary had been for years accumulating experience in dealing with French families in distress. Moreover, the group of agencies—hospital, day nurseries, etc.—was a center where the French families would naturally turn for assistance and to which the consul could also delegate this responsibility. Moreover, they were dealing with a group of frugal women, who had the skill to achieve economic independence, in so far as it was wise for them to do so, with some outside guidance. On the other hand, no matter how competent a committee, its members would find it very difficult to secure well-paid work for Italian women, who are largely untrained, though they probably need such guidance even more. Most

of them are apparently supplementing their allowances by doing finishing at home, of course the most poorly paid and unsatisfactory form of woman's work.

It has not so far been possible for me to study extensively the problem outside of New York city. It is probable that only in the few large cities is there any private society to supplement the government allowances, but that in the smaller communities there are usually few reservists to whom fellow countrymen probably give kindly, generous assistance. For instance, in Newark there are only twenty-six Italian families receiving government allowances. When a family is in particular distress it writes to the consulate in New York and a special additional allowance may be given. Only among the French was any attempt made to visit families outside the city from the office here. They occasionally send the social service nurse to nearby cities, especially to see that families have needed medical care.

Baltimore sent 900 Italian reservists, but they were almost all single men, and only three families in that city are receiving the government allowance. There is no private Italian society which might assume responsibility for the families if the need were greater. Three French families receive government allowances, and the French Benevolent Society is prepared to interest itself in any families of their soldiers.

The general attitude of the charitable agencies in New York, at the beginning of the war, was that if a foreign government was calling its men back to fight it must bear the expense of maintaining their families here and this attitude, which was probably a logical one, has been adhered to.

That in the main the families have managed after a fashion is shown by the small number of applications for help received by any of the general charitable agencies. So far as I could learn, practically no English or French reservists' families have applied to either the Department of Public Charities, the Charity Organization Society or the Brooklyn Bureau of Charities. A larger number of Italian families have asked additional help, but still an almost negligible one compared with the number cared for. The danger is probably rather that they struggle to live on an inadequate income. Many of them doubtless have had other sources of income, including earnings. Nevertheless, the stories of the few families visited by the charitable societies indicate that the income available has in some instances at least not been enough to maintain good standards.

There was one Italian woman with five children, the oldest seven, whose husband went back in August, 1915. She received regularly twelve dollars a month from the consul, but the Red Cross grant was uncertain from the first. She earned a little by taking lodgers and at times did some washing. The Charity Organization Society was deeply interested in the family and helped to secure medical care and special diet for the children, two of whom were suffering from scurvy and rickets. They felt, however, that the Italian government should make adequate allowances for the maintenance of the families of Italian soldiers, and would do so if the need was definitely presented to them, and were therefore unwilling to give a regular supplementary allowance. The Department of Public Charities also felt that the responsibility should rest with the Italian government and not the city of New York, and were therefore unwilling to commit the children when the woman once applied. The Italian consul agreed fully with this position, but was unable to increase the allowance beyond that authorized by the government, and the funds of the Italian Red Cross were at that time low. All he could do was to offer her transportation back to Italy

(it was before the U-boat campaign) where she could live on her government allowance; probably a wise suggestion. But the woman was unwilling to go and there the matter rested. So the woman is apparently managing on three dollars a week each from the consul and the Red Cross, supplemented by what little she can earn—two dollars to three dollars a week, according to last reports. As the man's maximum earnings were said to have been one dollar and seventy-five cents a day in the Street Cleaning Department, this does not fall so far below his earnings, but it is obvious that at present prices it is impossible to provide adequate nourishment for six people when the total income is nine dollars a week. Moreover, this family and several others seemed to need better standards of living and medical care which they might well be helped to secure during this period of crisis.

To sum up the situation as a whole, there are now in New York and vicinity some 1,500 families whose men are at the front fighting in the armies of our allies. So far, they have been left entirely to the care of the consuls and their fellow countrymen here. This probably was logical at the beginning of the war, but our own entrance into it makes it necessary to reconsider this question. Moreover, the problem will in all probability increase in magnitude since the allied governments are now at liberty to recruit men here. Already a few of these families have asked for special allowances.

One can hardly generalize as to what needs to be done because of the great difference in the service now being rendered to the various nationalities. In Canada the Patriotic Fund has assumed the same responsibility for the families of reservists as for those of its own soldiers. There is a special Franco-Belge Committee, including on its staff some fifty French and Belgian women, which is caring for the families of reservists of these two nationalities. During the first year there were 612 French reservists families and 116 Belgian reservists families. The money for the care of this group comes from the regular Patriotic Fund, but the allowances are on the whole larger because the French and Belgian soldiers do not receive enough pay to assign part of it to their families. During the first year the average monthly allowance from the Patriotic Fund for the families of Canadian and British soldiers was sixteen dollars; for families of French and Belgian soldiers twenty-six dollars and for the families of Italian soldiers, nineteen dollars.

The experience of the Canadian Patriotic Fund indicates how absolutely essential it is that allowances for these isolated women be accompanied by the most thorough and kindly personal interest and service. The American Red Cross here is, of course, assuming the same attitude in its insistence on trained service as part of our obligation to the families of soldiers. The question which may well be raised is whether we should now make any offer to our allies of cooperation in the case of these families. No such request has come from them, but an offer from the American Red Cross might be a gracious method of expressing again our sense of our joint interest in the war and of our joint concern for those who are desolated through it. We should at least be aware of the number of these families who are here and should be prepared to serve them in whatever way seems best to the representatives of our allies.

Beyond the value of this offer as a demonstration of alliedness, have we not a responsibility for this group of families who, as much as our own soldiers' families, have a claim on the best service we have to offer and who are not yet receiving it?

The San Francisco Bomb Cases

By John A. Fitch

OF THE SURVEY STAFF

“IF the thing were done that ought to be done the whole dirty low-down bunch would be taken out and strung up without ceremony.”

It was in San Francisco on June 14. I was in the office of Edward Cunha, assistant district attorney, and we were talking of the bomb cases.

“They’re a bunch of dirty anarchists,” went on Mr. Cunha, leaping from his chair and moving about the room. “They’re a bunch of dirty anarchists, every one of them, and they ought to be in jail on general principles. I’m disgusted with all this outcry over Mooney—making a hero of him, when he’s an anarchist and a murderer. If he ought to be out of jail, let him get out. The courts are open to him. But I’m not going to help. If I knew that every single witness that testified against him had perjured himself in his testimony I wouldn’t lift a finger to get him a new trial.

“And now people like Judge Griffin are going around saying he ought to have a new trial. Judge Griffin almost cried there on the bench because we searched the *Blast* office without a warrant; the *Blast* office, mind you, run by Berkman and that bunch of anarchists! Berkman is the man who shot Frick, and he told me he had no country and he’d as lief as not spit on the flag. I ought to have murdered him right there for saying that. My only regret now is that I didn’t.

“These are the people who have defended the Los Angeles dynamiters,” he went on. “And they let such people talk on the streets! If I had my way I’d get a bunch of cops and go after them and beat their heads off.”

I had called on Assistant District Attorney Cunha because he was in charge of the prosecution of Thomas J. Mooney, who was convicted last February of murder in the first degree and sentenced to death by hanging. It took a dispatch from Russia to interest the people of the United States in Mooney. The strange story came under the sea that radicals in Petrograd were rioting in front of the house of the American ambassador because they believed that Mooney had already been hung, contrary to law. Next came news of the remarkable letters written by Oxman, the chief witness against the condemned man. And then one learned that the judge who had pronounced the sentence of death upon Mooney had said that the man ought to have a new trial.

So I called on the attorney who represented the district attorney’s office in the Mooney trial and he talked to me in the manner indicated above. It’s a very strange case, and none of it can be understood without the recounting of many details. Perhaps it can’t be understood even then.

The Crime

ON JULY 22, 1916, during the preparedness parade in San Francisco, a bomb was exploded among the spectators that killed ten marchers and bystanders and injured fifty more. During the next few days the police department of San Francisco and Oakland, across the bay, were busy with clues. Many paraders and observers called at headquarters to tell what they had seen. In a few days arrests were made. After that, small interest was shown in any theories of the case unconnected with the prisoners. The chief of the Oakland police department abandoned the investigations he was making

because the San Francisco authorities, who had the case in hand, were not interested.

The San Francisco grand jury indicted five people, Warren K. Billings, Thomas J. Mooney, Rena Mooney, his wife; Edward D. Nolan and Israel Weinberg, charging them with murder. All of the defendants had been connected more or less directly with the labor movement. Billings, Mooney and Nolan had been especially active. Billings was formerly president of the local union of boot and shoe workers. He became involved in the strike against the Pacific Gas & Electric Company a few years ago. He was convicted at that time and served a term in prison for transporting dynamite. Mooney, just before the bomb explosion, had gone through with an unsuccessful organizing campaign on the cars of the United Railroads and had tried and failed to bring about a strike. In this campaign Mrs. Mooney had actively cooperated with her husband, although she is a music teacher and not connected with any union. Mooney has been very prominent in strikes and other labor troubles for a number of years. He, too, was indicted on a charge of having high explosives in his possession during the Pacific Gas & Electric strike, but was acquitted.

The Labor Union Attitude

EDWARD NOLAN is a member of the Machinists’ Union and has been identified with a number of labor conflicts on the Pacific Coast. He was one of the leaders in the metal trades strike in Los Angeles in 1910. In July, 1916, he was a delegate from the San Francisco local to the convention of the International Machinists’ Union, which met in Baltimore. Israel Weinberg is a member of the Carpenters’ Union, but had been for some time a driver of a jitney. He is a member of the executive board of the Jitney Drivers’ Union.

None of the defendants was in very good standing with the labor leaders of San Francisco. Weinberg was practically unknown, but the others, Billings and Mooney especially, had the reputation of being trouble-makers, radicals and direct actionists. Their methods were not those of the orthodox trade unionists, and there was a feeling among the latter that such methods were bringing organized labor itself into disrepute. Consequently there was little disposition at first, on the part of organized labor, to come to their aid. Local bodies here and there passed resolutions and raised funds, but the State Federation of Labor refused to take any definite action. The San Francisco Labor Council stood aloof. “This is not a labor case,” was their attitude. “Some people have been indicted on a charge of murder. They happen to be trade unionists. But their plight has nothing to do with that fact.” This in substance is what San Francisco labor men told me at Baltimore last November during the convention of the American Federation of Labor.

But now all that is changed. Prominent trade unionists of San Francisco tell you that it is a labor case, that labor men are being railroaded to the gallows in order to fasten the crime of July 22 on the labor movement. The labor council of San Francisco has denounced the prosecution and declared its belief in the innocence of the defendants. Other labor organizations are becoming aroused and there is coming to

be a nation-wide interest in labor circles in the trials going on in San Francisco. There are open charges of dishonesty and "frame-up." All this has come about after two of the five defendants have been tried and convicted.

Immediately after the bomb explosion there entered the employ of the district attorney a private detective named Martin Swanson, who had been for a long time in the employ of the Pacific Gas & Electric Company. It is said that he was given charge of the search for evidence. In a very short time the search was abruptly terminated. The five defendants were arrested, some of them by Swanson personally, and preparations for their trials were begun.

The Trials

SOON afterward Attorney Maxwell McNutt, later of counsel for the defense, met Swanson on the street. When an assistant district attorney, McNutt had known Swanson. McNutt says that Swanson asked him what he thought of the case and that he replied that there appeared to be "too much Swanson." He states that Swanson then asked, "Don't you think that if we can keep the private detectives in the background and make it appear that the regular officers of the law worked up the case we can convict Billings and then get Mooney, the man we want?"

During the agitation for a streetcar strike some towers used to carry high-power electric wires were damaged by a dynamite explosion. The defendant Weinberg swore, during the Billings trial, that Swanson had sought him out before the Preparedness Day explosion and offered him \$5,000 to testify that Mooney had dynamited the towers. Billings testified that Swanson had come to him also with the same proposition before June 22. Counsel for the defendants challenged the prosecution to put Swanson on the stand to refute the testimony. The judge on the bench asked the district attorney why he didn't call Swanson as a witness. The district attorney asked for a recess. When court again convened he announced that he would not call Swanson, and Swanson has not testified to this day.

The preparedness parade began at the Ferry building, at the foot of Market street, the main business thoroughfare of San Francisco, and proceeded up Market street. The explosion occurred a few feet from Market on Steuart street, which is one block from the Ferry.

The principal testimony against Billings and on which he was convicted and sentenced to life imprisonment was offered by John McDonald and Estelle Smith. Other witnesses, in the main, appeared only to corroborate the stories of these two. The explosion occurred at six minutes after two. McDonald swore that eight or ten minutes before two, on July 22, he saw Billings at the corner of Steuart and Market streets, where he was joined by Mooney. He testified that he saw them place a suitcase at the point where the explosion occurred. After seeing them with the suitcase, McDonald said that he walked to a café which is eighty-three feet from the corner where he had been standing, and as he arrived at the café the explosion occurred. This testimony placed Billings at the scene of the crime from eight or ten minutes before two until about one minute before the explosion, or until five minutes after two. It placed Mooney there at five minutes after two.

Estelle Smith worked in a dentist's office at 721 Market street, about three-quarters of a mile from the scene of the explosion. This is a two-story building, and the roof was a convenient place from which to view the parade. Miss Smith testified that on the day of the parade a man with a

heavy suitcase came and secured permission to go to the roof. At the trial she identified Billings as the man with the suitcase. It appears to be the theory of the prosecution that the first plan was to throw the suitcase containing explosives from the roof of this building in order that it might explode among the paraders on striking the street.

Estelle Smith swore that she went to the window to wave at Mayor Rolph as he passed in the parade. In her testimony before the grand jury Miss Smith swore that after the mayor had passed she turned from the window and saw Billings coming down the stairs from the roof. Photographs of the parade of undisputed accuracy taken at this point show, by means of street clocks, Mayor Rolph passing 721 Market street at nine minutes before two, the precise moment when McDonald swore he saw Billings at Steuart and Market, three-quarters of a mile away. Miss Smith's further testimony indicated that the man with the suitcase remained at the dental office until two o'clock. In her testimony in the Billings trial, however, Miss Smith stated that Billings was at the dental office at 1.30.

John Crowley, who was called as a witness for the prosecution, testified that he saw Billings "positive sure" at 1.55 on July 22 at the corner of Steuart and Mission streets, and that he walked away in the direction of Howard street. Mission street is one block south of Market and Howard street is the next street south.

Here, then, enters the first peculiarity about the bomb trials. Three witnesses swore positively as to the whereabouts of Billings between 1.55 and two o'clock on the day of the parade and each had him in a different place. McDonald had him at the corner of Market and Steuart, the scene of the crime. Crowley had him a block away and going in the opposite direction from Market. Estelle Smith's testimony before the grand jury indicated that he was at 721 Market street, three-quarters of a mile away. Estelle Smith's mother, Mrs. Kidwell, went before the grand jury and corroborated the testimony that Billings was at 721 Market street while Mayor Rolph was passing. The defense got possession of a letter written to her husband, who is in the penitentiary, in which Mrs. Kidwell told him that she expected to be able to arrange very soon for his pardon. She was not called as a witness in the Billings trial.

What effect this contradictory testimony had on the jury I do not know. Billings drew a chart of his movements on July 22 while he was in the custody of the police and being held incommunicado. He accounted for the whole day and, according to his statement, was not at any time, until after the explosion, near Steuart and Market streets. He produced corroborating witnesses at his trial, and the prosecuting attorneys failed in their efforts in court to trip him up or get him to alter his statement. Judge Dunne, however, who was on the bench during his trial, made the statement afterward that this testimony would not have deceived a jury of children.

The jury convicted Billings of murder and fixed his sentence at life imprisonment.

Testimony of a Clock

THE Billings conviction came in December, 1916. In January, the state proceeded to the trial of Thomas J. Mooney. After the conclusion of the Billings trial, and before the trial of Mooney began, attorneys for the defense made a very important discovery. In the Billings trial Mooney had testified that at two o'clock and for some time before, at the time when, according to McDonald, he had been placing a bomb at Steuart and Market streets, he had been with Mrs. Mooney

THE SNAPSHOT THAT SAVED A MAN FROM HANGING

Tom Mooney and his wife on the roof of a building one and one-quarter miles from the explosion. By enlarging the face of a street clock (left) 25,000 times, the hour was made clear and the defense established Mooney's presence here at the exact time the state's witness had sworn he was at the scene of the explosion.

on the roof of the Eilers building on Market street, more than a mile from the scene of the explosion, watching the parade. It became known that the district attorney had in his possession photographs—snapshots made with a Brownie camera—taken from the roof of an adjoining building. At the request of the defense the court ordered the district attorney to produce the pictures. The district attorney turned over dim and faded copies. They clearly showed Mr. and Mrs. Mooney on the roof of the Eilers building, but there was nothing to indicate the time. They were, therefore, of no use to the defense.

An Alibi from a Snapshot

AFTER Billings had been convicted, the attorneys for the defense demanded an opportunity to have new prints made from the original films. This was done in the presence of the police and the new prints showed a Market street clock in the picture, so small that it appeared to be nothing but a white spot. The pictures were then enlarged. The face of the clock was magnified 25,000 times, and it showed that the camera was snapped at 1.58, 2.01 and 2.04, respectively. It was a complete refutation of any testimony that Mooney had been at the scene of the crime between 1.58 and 2.04. It showed that any testimony placing Mooney at Steuart and Market streets at a time that would not permit him to travel

a mile and a quarter before 1.58 was false. It looked bad for McDonald's testimony.

The Mooney trial began and Estelle Smith and Crowley were dropped as witnesses. McDonald was put on the stand and swore that Billings and Mooney were at Steuart and Market streets at twenty minutes before two, instead of eight or ten minutes before, as he had sworn in the Billings trial. Mrs. Edeau, an Oakland woman, and her daughter Sadie had testified in the Billings trial that they had seen Billings in front of the dentist's office at 721 Market street. They took the stand in the Mooney trial and swore that they had also seen there at 1.30 Mr. and Mrs. Mooney and Weinberg and that all four got into Weinberg's jitney and rode east in Market street toward the place where the bomb was set off. When asked on cross-examination why she had failed in the Billings trial to mention seeing the other three defendants, Mrs. Edeau replied that it was because no one had asked her about them.

Then came the surprise of the trial. The district attorney put on the stand F. C. Oxman, an Oregon cattle man, who testified that he had arrived in San Francisco from Portland on July 22, shortly before the beginning of the parade. He went to the Terminal hotel, which is near the Ferry building, and soon afterward crossed the street to buy some fruit. As he stood at the corner of Steuart and Market streets at twenty

THE DEFENSE EXAMINING A PIECE OF METAL INTRODUCED AS A FRAGMENT OF A BOMB

At the left, holding the piece of metal, Tom Mooney. Behind him, W. Bourke Cockran of New York, Mooney's attorney. Behind the railing, left to right, Warren K. Billings, Edward D. Nolan and Israel Weinberg.

FRANK E. RIGALL

FRANK C. OXMAN

MRS. MOONEY

JUDGE FRANKLIN A. GRIFFIN

Four of the principal characters in the Mooney trial

minutes before two, he testified that he saw a Ford automobile come down Market street and turn into Steuart street and stop. In the car were five people. Four of them he identified as Mooney, Mrs. Mooney, Billings and Weinberg. The fifth was a man with a "stubby mustache" who has never been identified. Mooney, Billings and the man with the mustache got out, the last with a suitcase in his hand. They walked to the point where the explosion occurred, Billings took the suitcase and set it down. Then, after a hasty conversation accompanied by nervous consultations of watches, the man with the mustache disappeared in the crowd; Mooney and Billings got into the machine, which drove south toward Mission street. Oxman went back to his hotel and soon afterward the explosion occurred.

This testimony threw the attorneys for the defense into consternation. Oxman had not been heard of before. His testimony was clear and positive and it allowed the Mooneys time to get back to the Eilers building and on to the roof by 1.58. The cross-examination failed utterly to dislodge a single statement of Oxman's. He left the witness stand with his story intact. It had made a strong impression on everyone. A number of San Franciscans have told me that it convinced them of Mooney's guilt. The *Sunset* magazine published in its May issue a story by a reporter who had covered both the Billings and the Mooney trials. He was so impressed by the Oxman testimony that he said, "Without Oxman, had I been a juror, I might have returned a verdict of acquittal in the Mooney case; but with his testimony, under my oath, I would have been forced to convict."

The jury returned a verdict of guilty, and Mooney was sentenced to be hung.

Enter "John Regal"

So much for the testimony on which Billings and Mooney were convicted. Soon after the termination of the Mooney trial, a woman from Portland, Ore., came forward and made affidavit that she had recognized Oxman, whom she had seen in Portland, viewing the parade from a point far removed from Steuart and Market streets at the very time when, according to his testimony, he was a witness of the placing of the suitcase. The *San Francisco Chronicle* on February 15 quoted District Attorney Fickert as saying in reply to this affidavit that he had three witnesses who would corroborate Oxman. The most important of these was "John Regal," who was "prepared to take the stand and corroborate, detail by detail, the testimony of the Oregon cattle man." In the light of later events this statement is important.

Mooney was sentenced to die on May 17. His attorneys asked for a new trial and it was denied by Judge Griffin,

the trial judge. Events moved on rapidly. Preparations were made for beginning the trial of Weinberg, the third of the defendants. But suddenly, in rapid succession, came certain disclosures that raised in the minds of many people who had had no doubts before serious doubts as to the validity of the convictions and the good faith of witnesses and officials.

Conflicting Testimony

THE attorneys for the defense learned that Mrs. Edeau and her daughter, Sadie Edeau, who were important witnesses in both the Billings and the Mooney trials, had told a story to Oakland police officials quite at variance from their testimony at the trials. They swore on the witness stand that on the day of the preparedness parade they saw Billings with a suitcase on the roof of 721 Market street at about 1.30 and that a little later they saw Billings, Weinberg and Mr. and Mrs. Mooney on the sidewalk in front of the building. They swore that the party went away together, going east in Market street. Thus they corroborated the story of Estelle Smith. When information was sought from Chief Petersen, of the Oakland police department, however, it developed that Mrs. Edeau had first come to him a few days after the explosion and told of seeing two old men with a suitcase at Steuart and Market some time before the explosion. Chief Petersen says that he sent Inspector Smith across the bay to San Francisco with Mrs. Edeau to see whether she could identify the suspects who were being held at the jail. She was shown Mooney and Billings and, according to Smith, said that those men were much younger than the ones she saw.

I talked with Chief Petersen and he showed me Smith's notes, made at the time, in which he stated that Mrs. Edeau had "failed to identify" the men. At no time, Chief Petersen told me, did Mrs. Edeau mention having been at 721 Market street, so it was with some surprise that he read in the papers that she had testified at the trial that she had seen the men there. With the attorneys for the defense, Chief Petersen called on Mrs. Edeau and asked her why she had so testified when she had never mentioned 721 Market street to him and after she had failed to identify the men in the jail. He says that Mrs. Edeau replied that God was leading her, that she had known all the time "in her heart" that Mooney and Billings were the men, even though she had failed to identify them in the jail, and that she was looking into the "brown eyes" of her dead husband, who was telling her to speak the truth.

Inspector Smith's notes show further that after Mrs. Edeau and her daughter had testified, District Attorney Fickert sent for him and asked him to corroborate their testimony. Smith told him that he could not do that because Mrs. Edeau

had failed, in his presence, to identify Mooney and Billings. Smith says that Fickert told him, in that case, to keep his mouth shut, observing, "You'd make a good witness for the defense."

Then word came that there was a man in Illinois named Rigall to whom Oxman had written letters offering him inducements to come to San Francisco and corroborate his testimony. Rigall had shown these letters to his attorney, and the latter had communicated with Mooney's counsel.

On the heels of this information Estelle Smith, of 721 Market street, the witness against Billings, came forward and swore that Oxman had tried to bribe her to testify against Weinberg, offering her, she stated, "a sum in five figures."

Attorney Edwin V. McKenzie, of the Mooney counsel, went to Grayville, Ill., the home of F. E. Rigall, and when he returned he had the Oxman letters in his pocket. On April 11 the San Francisco *Bulletin* published an extra announcing the discovery of the letters under the headline, Oxman Framed to Hang Tom Mooney. The next day it published photographic reproductions of the letters, written on the stationery of the Terminal hotel of San Francisco. They were as follows:

The Famous Oxman Letters

Mr. Ed Rigall,
Grayville, Ill.

Dear Ed has ben a Long time sence I hurd from you I have a chance for you to cum to San Frisco as a Expurt Wittness in a very important case you will only hafto anscur 3 & 4 questiones and I will Post you on them you will get milegag and all that a witness can draw Proply 100 in the clearr so if you will come ans me quick in care of this Hotel and I will wange the Balance it is all ok but I need a wittness Let me no if you can come Jan 3 is the dait set for trile Pleas keep this confidential Answer hear

Yours Truly

F. C. OXMAN

Mr. F. E. Rigall
Grayville Il

Dec. 18, 1916

Dear Ed Your Telegram Recived I will wire you Transportation in Plenty of time allso Expcce money will Route you by Chicago, Omaha U.P. Ogden S. P. to San Frisco I thought you can make the Trip and see California and save a letle money as you will Be allowed to collect 10c Per mile from the state which will Be about 200 Besids I can get your Expences and you will only hafto Say you seen me on July 22 in San Frisco and that will Be Easey dun. I will try and meet you on the wa out and Tolk it over the State of California will Pay you but I will attend to the Expces The case wont come up untill Jan 3 or 4 1917 so start about 29 off this month.

you know that the silent Road is the one and say nothing to any Body the fewer People no it the Better when you ariv Registure as Evansville Ind little more mileage.

Yours truly

F. C. OXMAN

Will you want to Return by Los Angeles can Route you that way

12/25/1916

Mrs. J. D. Rigall
Grayville

Dear Mrs Rigal As I am sending Ed Transpertation to morrow 26 it might be that I can use you allso about the 10. of so I can obtain you a ticket that you can see California if you would like the Trip Adrees me care this Hotell tell F. E. to say nothing untill he see me can probly use a Extry wittness Been a long time I dont see you

Yours Truly

F. C. OXMAN

Mrs. Rigall is F. E. Rigall's mother.

The publication of these letters was like exploding a bombshell in the office of the district attorney. It took them entirely by surprise, and their actions indicated great bewilderment. The first tendency was to bluster. This would have no effect on Oxman's testimony. "I knew Rigall was the bunk from the beginning," said Cunha. But then it appeared that Rigall had come to San Francisco and had been entertained by the district attorney and his associates for ten days after they knew he was "the bunk." Rigall states that he

could not testify as to the happenings of July 22 because he was not in San Francisco on that day. Nevertheless, the prosecutors asked him to stay.

Soon District Attorney Fickert and his assistant, Cunha, gave evidence of a different mood. They entered into conferences with the attorneys for the defense and with the editor of the *Bulletin*. The latter and Attorneys Maxwell McNutt, Thomas O'Connor and Edwin V. Mackenzie state that Assistant District Attorney Cunha came to them in despair, saying that his career was wrecked and asking what he could do. They state that they told him the way out was a new trial for Mooney, that he agreed to this and that District Attorney Fickert later also agreed. It was agreed further, according to these men, that Oxman would be prosecuted in police court for subornation of perjury and that the matter would not be taken before the grand jury where the public could not look on.

All this has been publicly stated, over their signatures, by Attorneys O'Connor and McKenzie and by the editor of the *Bulletin*. Cunha and Fickert now deny that they agreed to a new trial.

At any rate, on the very evening that Fickert is said to have made these promises, he went before the grand jury and arranged to have it take up the Oxman matter. Two days later he gave out a statement to the papers attacking the editor of the *Bulletin* and intimating that he had guilty knowledge of the bomb explosion. The grand jury decided that the matter ought not to be handled by Mr. Fickert and they asked the attorney-general to appoint a special prosecutor. Accordingly Judge Robert M. Clarke, of Los Angeles, was named to represent the attorney-general's office.

In the meantime Judge Griffin, who had sentenced Mooney to death and denied him a new trial, had read the Oxman letters. He called attorneys for both sides before him and said that if he had known of the Oxman letters when the motion was made for a new trial he would "unhesitatingly" have granted it. He asked the district attorney to "confess error" and move for a new trial. This the district attorney refused to do. Whereupon Judge Griffin said that he would ask the attorney-general of the state to take that action. Judge Griffin has since written to the attorney-general, calling his attention to the Oxman letters and urging him to take action looking to a new trial.

The next move in the drama was the arrest of Oxman. He had returned to San Francisco voluntarily on getting word of the publication of the letters and was arrested on a charge of subornation of perjury sworn to by Edwin V. McKenzie, of counsel for the defense. The defense was bound that Oxman should have an open police-court hearing, the district attorney seemed equally anxious to have the case handled by the grand jury.

Oxman's Postscript

THE first act of the district attorney's office was to get a lawyer for Oxman. They secured Samuel Shortridge, one of the leading attorneys of San Francisco and incidentally the attorney of John D. Spreckels, Jr., who was foreman of the grand jury. When Oxman appeared before the grand jury, he explained that he had added a postscript to the first letter to Rigall, saying that if Rigall had not been in San Francisco on July 22 he need not come as a witness. This had been written on a separate sheet and had not been published with the rest of the letter. A juror pointed out that there was space enough below Oxman's signature for such a postscript to be written on the same sheet. To this Oxman

replied that his reason for taking another sheet was that he did not know how long the postscript would be. It was only after he had written it that he found that it could have been put on the last sheet of his letter after all.

On the basis of this explanation the grand jury refused to indict Oxman and adopted resolutions commending District Attorney Fickert for the "able and fearless" manner in which he had been conducting the trials.

Judge Robert M. Clarke, the special investigator appointed by the attorney-general to present the Oxman matter before the grand jury, told the *Bulletin* next day that, in his opinion, there was ample evidence to warrant an indictment.

While the grand jury was in session a preliminary hearing was begun in police court of the charge of subornation of perjury. Attorney Shortbridge, for Oxman, attempted to stay proceedings by applying for a writ of habeas corpus, first in the District Court of Appeals. Failing there, he went to the Supreme Court of the state. The Supreme Court, after a hearing, decided that the proceedings in the police court were legal and valid, and remanded Oxman to the custody of that court. In deciding the case, Chief Justice Angellotti, of the Supreme Court, said: "I have read the record of the Oxman case and it seemed to me that Rigall's testimony was overwhelmingly sufficient to establish the crime charged against Oxman as far as the magistrate's authority to hold him to answer was concerned."

In the hearing before the Supreme Court, Assistant District Attorney A. R. Cotton refused to make an argument and told the court that he was in agreement with Oxman's attorney. It remained for Maxwell McNutt, attorney for Mooney, who was present as a "friend of the court," to make the argument which was accepted by the court as the correct line of reasoning.

With the case thus sent back to the lower court, Police Judge Brady held Oxman for trial in the Superior Court.

It is evident in all these proceedings that the district attorney's office has shown anything but eagerness to have Oxman brought to trial on the charge of subornation of perjury. Every move against him has been made with reluctance and every effort has been made to explain away his letters.

On April 24, District Attorney Fickert gave out a long statement to the papers. He called attention to the horrible nature of the crime, reviewed briefly the efforts to find the guilty men and bitterly arraigned the defendants, whom he called "anarchists and murderers," and the editor of the *Bulletin*, whom he charged with desiring the acquittal of "red-handed murderers, the blood of whose innocent victims calls aloud, not for vengeance, but for the just retribution of the law." He concluded with an appeal to the people of San Francisco to aid in upholding justice and seeing that "San Francisco is not made the home and refuge of anarchism."

"Law and Order"

IN response to this appeal there appeared on Saturday, April 28, in every San Francisco paper except the *Bulletin*, an advertisement covering nearly a full page. It reminded the public of the bomb explosion nine months before. With the district attorney's office at work on the case, the public had turned to other matters, notably to patriotic service. While the public mind had been thus diverted "those very forces that made the bomb outrage of Preparedness Day possible have been taking full and measured and unscrupulous advantage of you to spread again their doctrine of anarchy, their intimidation of courts and of elected officials."

The advertisement contained a pledge of aid to the district attorney in order to avoid a "miscarriage of justice." It was signed "Law and Order Committee, Chamber of Commerce, by Frederick J. Koster, Chairman."

The Chamber of Commerce advertisement appeared under the caption "Law and Order." On the following Monday, April 30, another advertisement appeared, also under the caption "Law and Order." The advertisement reviewed the matter of the Oxman letters and "not as defendants but as accusers" demanded an investigation to determine whether or not perjury had been committed. This advertisement was signed by a "committee of citizens" of some twenty-five people, a majority of whom are representatives of organized labor.

After all this more or less bewildering account, it may be well in the interest of clarity to restate the situation. Billings has been sentenced to life imprisonment. Mooney has been sentenced to be hung. Both sentences are automatically stayed by appeals pending before higher courts for new trials. These appeals were made before the Oxman disclosures and the letters do not figure in them. Oxman must be tried for subornation of perjury. Meanwhile, the trial of Mrs. Mooney is in progress.

Is Mooney Guilty?

I HAVE tried to set forth the most essential out of a maze of facts, all interesting and of greater or less significance, with respect to these trials. They justify the statement made at the beginning that it is a strange case. And what shall we say of it? Are the defendants guilty? Though two of them have been convicted, I must say in all honesty after spending more than two weeks in San Francisco, talking with attorneys for both sides, examining the records and discussing the matter with citizens, that I do not know. But I cannot avoid the conclusion that the way in which the case has been handled by the district attorney's office throws grave suspicion on the validity of the proceedings. From the very beginning of the case, when the defendants were held incommunicado for many days without opportunity to see friends or counsel, down to the time when Assistant District Attorney Cunha told me that they ought to be hung without ceremony, there is continuous evidence of far greater zeal for conviction than for justice.

The district attorney has repeatedly assailed the defendants as anarchists because they were defended in the columns of an anarchist publication, the *Blast*; and he would make it appear that if they are anarchists they must be murderers. When Alexander Berkman and Emma Goldman were arrested in New York for interfering with registration, a representative of the district attorney's office in San Francisco mentioned the fact as having a bearing on the guilt or innocence of the bomb-case defendants.

What are the facts as to the testimony on which two men have been convicted of murder? The witnesses in the Billings case hopelessly contradicted each other. Three of the most important ones were dropped when the Mooney trial came on, and a fourth altered his testimony on a vital point in order to fit into the testimony of the new witness, Oxman. Yet the district attorney will tell you today, as Cunha did tell me, that Mooney could have been convicted without Oxman because the rest of the evidence was the same as that which convicted Billings—a statement which the record shows to be false.

It is conceded by every disinterested observer that Oxman was the chief and probably the deciding factor in the Mooney trial. Now Oxman is known to have written letters which

challenge his good faith so directly and so plainly that none but a stupid person or a hopeless partisan can fail to see it. Another important witness, Mrs. Edeau, is charged with perjury.

Yet the district attorney opposes a new trial for Mooney. Weeks after Rigall, who came to San Francisco at Oxman's request, had gone home to Illinois, stating that he was in Niagara Falls on July 22; weeks after the district attorney's office now say they knew him to be "the bunk," they told the newspapers that they had a witness named "Regal" who would go on the stand and corroborate Oxman detail by detail.

The facts seem to me to indicate that nothing short of reopening the whole matter will suffice to convince the public that justice has been done. It seems clear that Mooney ought to have a new trial. There is sufficient doubt about the Billings case to lead many San Francisco people to feel that he, too, should be tried a second time. The district attorney should have every opportunity to prove that he is innocent of the charge of framing evidence. If the defendants in the bomb cases are guilty they should be punished, but it would be a crime worse than that of July 22, 1916, to send men to the gallows on evidence secured in a manner to cast doubt on its validity.

This is a program to which every believer in law and

order can give his most loyal adherence. San Francisco people cannot, and, I think, will not, ask for less. It is more than a question of the guilt or innocence of Mooney and Billings and the others. The district attorney and the courts are on trial, no less than the defendants.

The actions of the district attorney in this case call for investigation. He called off the inquiry as soon as he had the present defendants in custody. He turned the search for evidence over to the private detective of a determined anti-union corporation—a man whom he dares not put on the stand to answer a charge of subornation of perjury and conspiracy to railroad a man to jail. He has built up his cases against these defendants on the testimony of witnesses, some of whom have been guilty of unspeakable crimes, and others of whom have changed their testimony at will to corroborate the testimony of other witnesses. As witness after witness has failed, he has repeatedly reconstructed his case and brought in new witnesses to meet the changed conditions. He has refused to listen to witnesses who had evidence favorable to the defense, and when he received information that one of his chief witnesses had lied, he enjoined secrecy upon his informant. He defends and protects the witness Oxman, the evidence against whom no less than ten California judges have judicially examined and declared ample for trial upon a charge of subornation of perjury.

"Strong and Straight and Fine"

How the State of Iowa is Ridding Itself of Cripples by Curing Them

By Mildred E. Whitcomb

JAMES WHITCOMB RILEY'S "Little Cripple" had no hope of becoming "strong and straight and fine" until he reached that far-off place called heaven and gained the symmetry of an angel. But in Iowa, since 1915, the little lame ones, the halt and those becoming blind, have not had to pack for so long a trip, for the state gives them a free ticket to the University Hospital and health.

For eighteen months the state has provided at its own expense free treatment at the University Hospital for "all children under sixteen years who suffer from a deformity or malady from which there is reasonable probability of benefit by medical or surgical treatment and hospital care," in case the parents can not afford such treatment. Thousands of dollars have been expended under the law, and the state has recently appropriated \$150,000 for a new hospital to be devoted entirely to the treatment of children's diseases and deformities. This building will be erected at once.

Children thus receiving treatment are generally known as "Perkins children," since the law bears the name of Senator Perkins, who introduced the bill into the legislature. Almost 900 children have been received into this Perkins family, and but few have returned home not cured or materially improved. The cases have been classified as: orthopedic, 454; eye, ear, nose, throat, 220; diseases of children, 131; surgical, 37; genito-urinary, 2; medical, 18; skin, 14; gynecological, 2.

School teachers, physicians, overseers of the poor and probation officers are the usual persons who procure a hearing for the crippled child of their community. This is the normal method of procedure in Perkins cases: A local physician appointed by the court examines the child. If his condition admits of improvement and the parents consent, he is sent to the

University Hospital at Iowa City. The necessary expenses are paid by the state to the person accompanying the child to and from the hospital. Then the child is treated at state expense for as long a time as may be necessary.

An entire wing of the University Hospital is given over to these children, and six stories resound to the thump of crutches and ring with their chatter. The basement of the wing accommodates a brace shop and cast rooms. There the orthopedic surgeon and his assistants fashion the casts that correct hideous abnormalities. School is held on the seventh floor, for mental progress is contemporaneous with new physical growth under Iowa's plan. A gymnasium adjoins the schoolroom, fitted with the latest apparatus for correcting deformities and strengthening special muscles.

But it is something besides school and the propinquity to heaven that makes "seventh" the attractive place it is. The children delight in it because—"there's fairies up there, on the roof garden, y'u know, and castles and kings and bankrets, just play bankrets where y'u don't eat really, only 'tend as if y'u did." Certain it is that the spacious roof garden is the scene of much revelry for those who are not permitted to play in the park adjoining the hospital.

A convalescent home accommodates the overflow from the hospital, and twenty of the more active girls recover health there.

The greater part of the Perkins cases are orthopedic. Among these, victims of infantile paralysis, congenital deformities and tuberculosis of the bones and joints are dominant. At the head of the department of orthopedic surgery is Dr. Arthur Steindler, a skilled surgeon who has had many years experience in Austria. He is the idol of the children, who have

labelled him "Mr. Gee Viz." This slangy title was won by the big Austrian from his custom of exclaiming as he inspected splints or casts, "Gee viz, you're coming fine, so fine." He plays tricks on nature, this able surgeon. It pleases him to steal bones from strong legs, slip them into useless arms, and then sit back to smile at nature as she exerts herself to mend matters. He inserts tendons, stretches muscles, grafts skin, and at his touch dreadful malformations grow beautiful. He averages an operation a day throughout the year, and fits forty casts as a usual week's work.

Of the 454 orthopedic cases treated since the law became operative, more than 80 per cent have been materially improved or cured. The greatest success is obtained with children who have been left crippled as a result of early attacks of infantile paralysis. Those absolutely bedfast frequently regain full use of their members in a few months. By careful attention immediately after the attack, thorough massage and manipulation of the limbs, many of the deformities which usually follow that attack, such as those of the ankles and knees, are prevented. In this way the number of cases in which operations are necessary is reduced.

Not one operation is performed but many, in the straightening of deformed limbs. Muscles and tendons are transplanted, the healthy substituted for the paralyzed. Parents from the ninety-nine counties in the state have become mute with wonder as they caught sight of their children, a few months before unable to take a step, running about without crutches. The newspapers find human interest stories in the dramatic scenes which follow the return of Perkins children, and former playmates are compelled to seek out new nicknames, now more pertinent than "Crip."

Nor do they in this work perform miracles merely on crooked arms, legs and backs. Dreadful facial deformities, such as hare lip and cleft palate, are made imperceptible by early treatment. Within a few months, cases marked by a complete absence of the upper lip and such a wide cleft in the palate that there is really no roof to the mouth, have been closed up so no trace of defect remains. Such cases, which are under the direction of Dr. L. W. Dean of the medical college, usually require two or three separate operations and are accomplished by a gradual restoration of the parts. Scores of babies have been treated for such malformations.

Sight has been restored to blind children and infectious diseases threatening total blindness have been controlled. The state has thus brought beauty into many lives and will itself profit in return for its services. Viewed from a mer-

cenary standpoint, the state's generosity has saved many thousands of dollars of the cost of educating blind children.

Closure of the œsophagus from the drinking of lye or some acid is not by any means a rare occurrence, but the recovery of such children is considered extraordinary. Several cases have been taken into this hospital after it had become impossible for the victim to swallow even water. Nutrition is kept up and water hunger appeased through feeding the patient by means of a tube inserted through an opening made in the stomach. Then, by a series of operations, perhaps twenty, which involve the gradual dilatation of the parts, the passage is healed until food passes down its natural course.

While they are in the hospital, the crippled children do not grow dull from inaction. School days for them are not so humdrum as many of their more robust brothers and sisters find them. The individualized method of instruction is employed, and its success is phenomenal. The school opened last November with forty students, ranging from kindergarten to high school grades. Mental tests, given by educational authorities in the university at this time, were repeated during the Christmas holidays, and the examiners were astonished to discover a full year's progress within that brief interval. Such advancement gives evidence both of efficient methods of instruction and of exceptional mental ability among the children.

Two instructors, trained in special teaching methods for handicapped children, with the voluntary assistance of fourteen university women devoting one hour each day to the work, form the teaching corps of this exceedingly informal school. A set program with classes at regular times is the rule, but for the ambitious opportunity is granted for as rapid progress as they can make. This has been found to create competition and stimulate industry.

Women's clubs, lodges and students help furnish amusement to the little cripples. Each holiday brings suitable gifts for each of them. Presents, trips to picture shows and even occasional automobile rides help to drive away homesickness and banish pain. They themselves invent many games to brighten dull days. They have at different times held city elections, published a newspaper, and become proficient in the art of kodaking.

So when the long-looked-for day comes when they are allowed to go home, they have to take with them the memory of many pleasant days, a knowledge gained through books and helpful suggestions, and a body transformed from pain and ugly deformity into strength and beauty.

And their farewell is, "Good-bye, Mr. Gee Viz. I'll write you a letter some day."

SCHOOLROOM IN A SUN PARLOR

A CORNER OF THE GYMNASIUM

THE WAR AND THE COMMON WELFARE

THE first task is to win the war. The second is to preserve what is good in the nation. Food, money, munitions and man-power must be conserved and controlled, in order that the nation may have them unstintedly at its disposal at the hour and the spot dictated by military considerations. Agriculture, mining, transportation, industry, commerce, finance are for the time being to be carried on strictly in subordination to the national purpose in entering the war. In this diversion of national energy from the ordinary routine of peace, universities, churches and philanthropic institutions are no more exempt than factories, railways, mines and farms. "It is not an army that we must shape and train for war; it is a nation." Social agencies are an integral part of this nation. We can no more be neutral or noncombatant on Sunday than on week day; in our charity than in our industry or our army. If our higher nature, our deeper sentiment, were not engaged in the war, it would be wicked to send our army and navy into it. As a nation, wholeheartedly and determinedly at war, we are the more constrained to remember our second task as well as the first. We are not only to win the war, but we are to save the state.

Education, religion, civil liberty, justice, philanthropy—in a word, social organization and all that it implies—stand now in special need of zealous defenders, in need of men and women who consciously, and of those who instinctively, care for them. Teachers, preachers, judges and lawyers, reformers and social workers, whether they like to admit it or not, have a joint and several responsibility for keeping the torch of social progress alight and moving. If the metaphor must follow the changes in warfare, the torchbearers become perhaps the aeronauts above and far beyond the trenches, spying out dangers, discovering the line of least resistance, fighting sometimes in single combat. The conservation of social work, using this comprehensive term for all the individual and collective effort consciously put forth to protect and to promote the common welfare, is a part of both tasks: useful as a means of winning the war, essential as a means of preserving the nation and making it continually better worth saving.

Social work is endangered in the war in various ways. Financially it must take second place to war taxes, to such immense bond issues as the liberty loan, and to the demands of war philanthropy. Administratively it is threatened by the withdrawal of workers for military duty and for emergency civilian work of various kinds. More serious than either is the certainty that the war will eventually impose new burdens, increasing the number of dependents to be cared for and interfering with the natural course of well-devised schemes for social improvement. There is no reason for undue alarm, much less for pessimism, in these considerations. There is reason only for forethought, for diligence, and for a sense of proportion. Financial hardships may have only the effect of spurring the institutions to greater efforts. In some instances the war may force desirable combinations resulting in economy and efficiency. Some dubious agencies may be constrained to give up the losing fight for existence. Unfortunately there is no guarantee that the hardships will fall most heavily upon the least useful agencies. Some of the plans which will have to be given up are likely to be among the best. Some of those that appeal most strongly to the war psychology may be, from the standpoint of genuine human welfare, among the worst.

SOCIAL FORCES

EXEMPTION OF CONTRIBUTIONS

THE Hollis amendment to the war revenue bill, authorizing the deduction of gifts to educational and charitable corporations from gross income along with certain other deductions, such as taxes and bad debts, does not create a new form of special privilege or a new subsidy. It does not enable a wealthy man to secure a lower income tax rate, nor does it violate any established principle of taxation. There is no presumption that any lessening of revenues attributable to this amendment would increase the burdens of those who have small incomes. The difference may quite as well be made up by increasing the tax on war profits.

What the Hollis amendment does is to save the revenue bill from penalizing gifts to colleges, churches and charitable agencies. By means of this exemption contributions to recognized religious, charitable and educational institutions are put on the same basis as the loss of money in business, or the payment of money in taxes. Since the taxpayer, or the bad investor, or the donor does not have the use of the money, he is not asked to pay the income tax on it. In the first case it is taken from him by the state; in the second, he loses it involuntarily; in the third, he parts with it voluntarily for a public or social purpose. In no one of the three does he in fact have the money from which to deduct the amount of the income tax. If required to pay it in the third case, as he is not in the other two, he must take it from some other source. Every gift to philanthropy, in other words, costs the donor not only the amount of his gift but a substantial sum in addition.

Of course the added expense can be deducted, if the donor chooses, from the amount which he had intended to give; but in that case it ceases to be an income tax and is instead a tax on the philanthropic institutions. The time may come when the government will have to choose between national defense, on the one hand, and the continuance of educational and philanthropic institutions. We may have to turn our schools and hospitals and playgrounds into battleships and ammunition. That time has not yet come even in France. To begin the war tax with burdens on universities, settlements and other voluntary social agencies is analogous to the wonderful scheme for making industries more efficient by removing the legislative protection of women and children and thereby reducing the productive power of labor.

THE NATION'S MANDATE TO THE RED CROSS

THE American Red Cross has received its mandate from the nation. The oversubscription of the liberty loan by 50 per cent is all but matched by the oversubscription of 20 per cent to the Red Cross fund. The percentage of excess is less, but in the case of the Red Cross the excess is accepted and the fund thus becomes one of something like a hundred and twenty million dollars. This is more than the entire principal of the Rockefeller Foundation, which so greatly agitated the United States Commission on Industrial Relations a year or two ago; more than has ever been raised at any one time for a philanthropic purpose; more than the en-

in WAR TIME

By Edward T. Devine

dowment of any university; nearly one-third as much as the combined productive funds of all the five or six hundred higher institutions of learning in the United States. Moreover, this fund is not to be an endowment, but is to be regarded as disposable income for quick expenditure.

The week's campaign was marked by many novel and some questionable features. Among the latter was the disappearance for the time being of clearly recognizable distinctions in the newspapers as to what is news, what is editorial opinion, and what is simply free advertising. Perhaps no great harm is done in this instance, as news and editorials were undisguised free advertising quite as much as the great displays given by the newspapers or by advertisers who paid for the space. The teams for personal canvass and the whirlwind campaigners deserve much credit. The lead and the direction came from Wall street and from cooperating financial groups throughout the country. The chief feature, however, of the campaign was the response, sympathetic in quality, magnificent in volume. There were small contributions, but the real opportunity for the giving of small sums will come later. At the outset big subscriptions were necessary, and they were forthcoming.

The Red Cross, having gathered much experience in its character as a neutral international relief agency, now puts on its shining armor as the relief arm of a belligerent nation. The time for boasting will come when that armor is to be put off. Now is the time for consecration, for vision, for searching of heart, for the making of a program, for wise counsels, for securing public confidence, for establishing co-operation, for courage in policy, for caution in the choice of means.

The Committee on Cooperation appointed by the Red Cross War Council receives at the start rather a rough but perhaps wholesome intimation that cooperation is a reciprocal matter. It seems that there are some sixty war-relief organizations whose officials, valuing their autonomy with the ardor of small nations, see no safety except in the principle of collective bargaining. They have, therefore, formed a federation, or at least an entente alliance, and agree not to make a separate arrangement with the Red Cross, but to confer with the latter through a joint committee of seven. That the relief organizations which have been active in support of the allies while we remained neutral should have some recognized standing in the new plans for giving similar support on a larger scale is obvious, and the very appointment by the Red Cross of a committee on cooperation may justly be interpreted as evidence that such a relation is desired. The problems of reconciling the natural and legitimate desire for the continuance of work already undertaken with the advantages of a unified and cooperative national system should not be beyond the powers of Judge Lovett and his associates in the Red Cross if they are met half way, as they doubtless will be, by the patriotic and energetic leaders of the other agencies.

The Red Cross is an international organization. Its emblem, always accompanied by the national flag, gives protection under the Geneva convention to "matériel" and "personnel" charged exclusively with the care of the sick and wounded. This does not mean that the American Red Cross is indiffer-

ent as between its own armies and those of the enemy. It means that in the relief of individual suffering the Red Cross is no respecter of uniforms. On the battle-field its motto is *Tros Tyriusque mihi nullo discrimine agetur*. In every land the Red Cross has this international character; but it has also everywhere an ardent national character which is not in the least inconsistent with its obligations under the Geneva convention. It is engaged in very extensive relief operations. It establishes hospitals and equips hospital ships. It mitigates the conditions of prisoners, and it cares for the widow and orphan. It succors those wounded in battle, but also those who suffer from chronic disease. It may rebuild homes, reestablish workers in industry, protect the public health, and do anything else within its resources to make the world safe for humanity.

In these tasks the American Red Cross is entitled to the services of every section of the nation. As no one may hold back unless there happens to be some other channel through which he can work to better advantage, so no one can properly be rejected except on the ground that for the particular task someone else is better qualified. To refuse the services of competent doctors, nurses or social workers because of German names or ancestry, or to refuse the services of Catholic sisters because of their garb, would be alike indefensible. Mr. Wadsworth promptly denounced the rumor that the latter discrimination was to be permitted in a letter to Cardinal Gibbons. If England or France is unwilling to permit American Red Cross agents of German birth or ancestry to aid English or French soldiers, such feelings must no doubt be respected, but it would be appropriate to put very plainly to our allies the seriousness of any such discrimination against persons whose loyalty and devotion to the nation are beyond question. Not knowing our conditions, they are through ignorance making a colossal blunder about a trivial matter.

Some sentences from a newspaper statement by the chairman of the Red Cross War Council have been interpreted in the journal formerly called the *Fatherland* to mean that the Red Cross is to be utilized as a war measure in a sense contrary to the Geneva convention. Mr. Davison certainly had no such intention. To supply doctors and nurses to our own and the allied armies is the first obligation. Could the American Red Cross be expected to send doctors, nurses, ambulances, medicines and money into Germany to become a part of the military resources of the armies against which our armies are engaged? If not, what basis is there for peevish criticism because of insistence on the national character of the Red Cross and its alignment on the side of world democracy? The Red Cross should, of course, guard its phrases to prevent misconstruction; but eventually its policy will be disclosed in action. It will be neutral where neutrality is legitimate and reasonable, and it will be national and patriotic where this is reasonable and legitimate. Thus it will command respect abroad and affection from Americans of every party and section. Already the Red Cross is the best known of all humanitarian agencies. It is not to be doubted that it will be as well beloved as it is known.

GENERAL ORDERS NO. 100

April 24, 1863

THE social worker who begins young and lives fairly long, who keeps his mind open to the exigencies of his work, seeking the knowledge it demands, to whatever field it leads him, can hardly escape acquiring a liberal education. We have long since realized that thorough courses in medicine,

plumbing, law, politics, psychology, cooking, biology, would be advantageous to one who tries to do social work, and the list of subjects recognized as desirable is growing fast.

International law has not heretofore been suspected of belonging among the necessities of our professional equipment. Social work in America has been indigenous in character, except for two or three exotic institutions, like the almshouse and the jail, which have given us a good deal of trouble. Voices have been raised, to be sure, in recent years in praise of legislative and administrative methods for handling social problems in European countries and in advocacy of their adoption by us ready-made. But there have been other voices to counsel against the assumption that a method which has been successful somewhere else will necessarily be successful when applied to American conditions and subjected to the American temper; and most of us, like most people in most other countries, have been cheerfully unconscious of what our foreign contemporaries do about their social problems.

The war, however, as has frequently been observed in other connections, has changed all that. We have been learning more about the social institutions of Europe, as we have been learning more about its geography and politics. The exigent social problems created by the war, moreover, are forcing the development of social work of an international character, beyond anything ever foreshadowed in the past, which rests—which must rest, to be useful—on elementary principles of universal human applicability, not on the traditions and tastes of any one nation. These international problems of social welfare (the treatment of prisoners, the treatment of the population of conquered territory and of non-combatants in the theater of military operations) lead us sooner or later to international law—"that law," in the words of Grotius, "which obtains between peoples and their rulers, springing from nature itself or instituted by laws divine or by custom and silent agreement."

There is one document of international law which should be peculiarly interesting to all Americans in these days when our first troops are landing in France.

The basis for the modern rules for warfare on land—the rules which were observed, that is, in modern wars between civilized nations up to 1914—is to be found in a document of our Civil War known as General Orders No. 100, Instructions for the Government of Armies of the United States in the Field. It was prepared by Francis Lieber, revised by a board of officers, approved by President Lincoln, and then issued by the secretary of war, on April 24, 1863, as a manual to guide the military operations of the United States forces.

It is a document in which we may well take pride, both for the power of intellect it displays and for its loftiness of tone. It is not a mere list of directions as to the proper action under given circumstances. Explanations and reasons for the orders are given, marvelously compact and cogent, making it a veritable philosophy of war, and one "without rancor."

Its author was a "German-American," Francis Lieber, who was at the time professor of constitutional history and public law in Columbia College. Born in Berlin in 1800, he fought against Napoleon under Blücher at the ripe age of fifteen, and soon after was arrested for the political sentiments expressed in certain songs of liberty and was forbidden to study in the Prussian universities. He continued his education at Jena, Halle and Dresden; took part—inevitably—in the Greek war of independence; came to the United States in 1827; edited the *Encyclopedia Americana* in Boston for five years; then went to the University of South Carolina as professor of history and political economy, and thence to Co-

lumbia, which was the seat of his teaching until his death in 1872 and which commemorates his name in the Lieber professorship of history and political philosophy.

The "instructions" consist of 157 short sections, which will repay a careful reading in full. We quote a few paragraphs, from the text as it is given in Wilson and Tucker's *International Law*, in justification of our assertions:

11. The law of war does not only disclaim all cruelty and bad faith concerning engagements concluded with the enemy during the war, but also the breaking of stipulations solemnly contracted by the belligerents in time of peace, and avowedly intended to remain in force in case of war between the contracting powers.

It disclaims all extortions and other transactions for individual gain; all acts of private revenge, or connivance at such acts.

Offenses to the contrary shall be severely punished, and especially so if committed by officers.

15. Military necessity admits of all direct destruction of life or limb of armed enemies, and of other persons whose destruction is incidentally unavoidable in the armed contests of the war; it allows of the capturing of every armed enemy, and every enemy of importance to the hostile government, or of peculiar danger to the captor; it allows of all destruction of property, and obstruction of the ways and channels of traffic, travel, or communication, and of all withholding of sustenance or means of life from the enemy; of the appropriation of whatever an enemy's country affords necessary for the subsistence and safety of the army, and of such deception as does not involve the breaking of good faith, either positively pledged, regarding agreements entered into during the war, or supposed by the modern law of war to exist. Men who take up arms against one another in public war do not cease on this account to be moral beings, responsible to one another and to God.

16. Military necessity does not admit of cruelty—that is, the infliction of suffering for the sake of suffering or for revenge, nor of maiming or wounding except in fight, nor of torture to extort confessions. It does not admit of the use of poison in any way, nor of the wanton devastation of a district. It admits of deception, but disclaims acts of perfidy; and, in general, military necessity does not include any act of hostility which makes the return to peace unnecessarily difficult.

19. Commanders, whenever admissible, inform the enemy of their intention to bombard a place, so that the noncombatants, and especially the women and children, may be removed before the bombardment commences. But it is no infraction of the common law of war to omit thus to inform the enemy. Surprise may be a necessity.

29. Modern times are distinguished from earlier ages by the existence, at one and the same time, of many nations and great governments related to one another in close intercourse.

Peace is their normal condition; war is the exception. The ultimate object of all modern war is a renewed state of peace.

The more vigorously wars are pursued, the better it is for humanity. Sharp wars are brief.

35. Classical works of art, libraries, scientific collections, or precious instruments, such as astronomical telescopes, as well as hospitals, must be secured against all avoidable injury, even when they are contained in fortified places whilst besieged or bombarded.

44. All wanton violence committed against persons in the invaded country, all destruction of property not commanded by the authorized officer, all robbery, all pillage or sacking, even after taking a place by main force, all rape, wounding, maiming, or killing of such inhabitants, are prohibited under the penalty of death, or such other severe punishment as may seem adequate for the gravity of the offense.

70. The use of poison in any manner, be it to poison wells, or food, or arms, is wholly excluded from modern warfare. He that uses it puts himself out of the pale of the law and usages of war.

75. Prisoners of war are subject to confinement such as may be deemed necessary on account of safety, but they are to be subjected to no other intentional suffering or indignity. The confinement and mode of treating a prisoner may be varied during his captivity according to the demands of safety.

118. The besieging belligerent has sometimes requested the besieged to designate the buildings containing collections of works of art, scientific museums, astronomical observatories, or previous libraries, so that their destruction may be avoided as much as possible.

SOCIAL ORGANIZATION FOR WAR NEEDS

CONSCIOUSNESS of social problems, intelligent interest in them, and a genuine desire to do something about them, have never been so conspicuous as they are now. Enthusiasm for social service is epidemic. Everyone wants to "do something." Those who are already "doing something" want to do something more, or something different. Those who have never "done anything" want to begin at once. Estab-

lished agencies are developing new functions and evolving new organs. A luxuriant crop of new agencies is springing up. We scurry back and forth to the national capital; we stock offices with typewriters and new letterheads; we telephone feverishly, regardless of expense, and resort to all the devices of efficient "publicity work;" we change places—as in the old game of Going to Jerusalem—C moving into the chair of B, who has been called upon to succeed A, who has "gone to Washington," while C's old place is taken by a promising college graduate—at any rate until he is drafted or until she hears of something even more "worth while."

In a time like this most of us are not very critical, not very particular about what we do or what others do. The excitement goes to our heads. We accept the seething ferment unquestioningly as evidence of tremendously vital forces, and we burn to add our own energies to these forces. It is all very exhilarating, stimulating, intoxicating. Activity and enthusiasm are the qualities of the moment.

In the midst of this fermentation, this tropical flowering—if that is a more pleasing figure—of energy and devotion, there may be some cool and controlled spectators who question the value of it. The cynic may be tempted to liken his fellowmen at the present moment—if the cynic would stoop to use so homely a simile—to chickens with their heads off. But if he does he will be ready to apologize as soon as he has seen beneath the surface to the motives responsible for the motions at which he mocks. Our jerky, uncoordinated, apparently unreasonable gestures are not reflex actions due to the severance of connection with the controlling nerve center. They are the direct result of such respectable emotions as sympathy and patriotism and a desire to be of use. They are more like the bucking of an engine which is getting under way than the senseless floundering of a decapitated hen, and when the awkward actions are over we hope to find under our hands not a dead chicken but a smoothly running powerful machine.

There are, of course, no cynics among us, but there may be some who cannot help feeling a little uneasiness, and there are undoubtedly many who find themselves a little bewildered, at the increasing multiplicity of efforts and agencies.

One of our correspondents writes that she came away from Pittsburgh with the feeling "that 'conservation ideas' were lying around in various individual brains, but that there was a woful lack of coordination and no means by which we could coordinate and pull together. . . . The people want to do, but expert guidance leading this army of would-be doers is what is lacking." She refers to "Conservation Manuals," one for men and one for women, published by the German government at the beginning of the war, and ventures the flattering hope that this department may serve as a serial "conservation manual" for the social workers of America.

Another correspondent writes that he and his associates are giving some thought to organizing the social resources of the state—official and private—for war needs. He goes on:

You are familiar with the facilities of a state of the size and development of this. We are writing to ask for your suggestions as to what may be done and the most effective way of doing it. What can the state do through its officers, boards and institutions? What can the counties do through their officers, institutions and agencies? What can the cities do officially? What can the voluntary charitable and welfare agencies do? What can individuals do? What are some of the things that such social welfare agencies both public and private are going to have to consider? Can you briefly outline a plan that we can have before us and let us have it by early mail?

The German Conservation Manuals which we are asked to emulate may be as useful as our correspondent assumes they should be, but imagination cannot figure a handbook so comprehensive and sound and far-sighted that it will be

a trusty guide for well-meaning citizens. Nor would a program which undertook to organize in advance all the social resources of a state for war needs command much confidence.

We shall have to feel our way point by point, very cautiously—though that does not mean passively. One duty is clear at the very outset. Each existing institution should specialize on its own job, perfecting its administration and personnel to the *n*th degree. Hospitals should get ready to take care of the sick, wounded and disabled; employment agencies to deal with irregular employment and industrial readjustments; relief agencies with an accentuation of their ordinary problems.

In the second place, the Red Cross should represent in its membership and in its direction the whole population of the country, as nearly as that is possible, and should put itself in condition to cooperate effectively with the military authorities to the extent that voluntary cooperation is needed and to do all the enormous amount of humanitarian work which lies within its scope. This requires a tremendous increase in members, in resources and in efficiency—such as is indeed taking place before our eyes from hour to hour.

In the third place, it is a good thing to have state and county and city councils or committees of national defense, appointed by the governors and supervisors and mayors, to provide a channel for receiving and disseminating national policies emanating from Washington, and to provide also a center for the coordination of other agencies within the state, county or city. As far as possible it would be well that formal social organization for the war should be concentrated in these quasi-official bodies, and that irregular voluntary schemes of a vague and sentimental character should be discouraged. If the national defense committee as appointed by the governor or mayor is not such that it can be developed into a representative, coordinating, unifying body, then it may be desirable to create another organ by the voluntary action of responsible officials and influential persons connected with the private agencies. But there would be great advantage in having this work done by a network of coordinate state and local committees, all responsive to direction and stimulus from the Council of National Defence in Washington.

If every department of government and every voluntary agency stands at attention, so to speak, in this way; and if the country as a whole organizes through a network of quasi-official councils or committees of defense, working from Washington down to the local community; and if the Red Cross is made the efficient and trusted agent of the whole population for the functions which it has assumed, we shall be ready for whatever comes, and shall not have to multiply or diversify machinery. In other words, the effectiveness of our social organization will depend on the efficiency of federal and local government in its own field, of voluntary agencies in their own field, and of a single set of not-too-elaborate officially recognized agencies occupying the borderline between the government and the voluntary agencies and private citizens.

We may not be able to make our social organization as simple and as effective as this, but we can at least keep it in mind as an ideal and scrutinize severely every proposal that faces toward complexity and multiplication of machinery.

THE editor of this department will welcome questions from readers, and suggestions as to topics which they would like to see discussed in these pages. Information from all parts of the country about conditions due to the war, and consequent developments in social work, will also be appreciated.

Editorials

THE FOURTH'S ESTATE

THE day we celebrate is one whose meaning can be shared in, this year, by the Russian millions. Each decade has seen new bodies of people the world over, no less than on the American continent, who could respond to its message, but never such accessions as those of the present decade. Like the finger of an old-fashioned dial, the day has thus marked the slow emergence of greater and greater reaches of human life into the sunlight of liberty.

Through the Root mission to Russia, through the Bakhmeteff mission to the United States, through the new Red Cross commission and—perhaps even more than through any of these or all of them combined—through the return westward across the Pacific and by way of Siberia of exiles who, bred of the revolution and understanding its great motivation, have come also to know American democracy and labor, can we share with these new pursuers of happiness our experience in organizing life and liberty.

Only four short months ago, England was closing its old rights of asylum to such fugitives from despotism and proposing to turn them over to the secret service of the Czar. Today the English premier, while marking the revolution's cost in prolonging the war, is hailing it as the great assurance of the quality and permanence of the settlement when it comes. Such have been the mighty changes which in the midst of our own entry we have scarcely recognized.

As Professor Taylor points out, we have long looked upon independence as a social heritage and not merely as an individual possession. Comes the Russian revolution and holds it aloft, less as a heritage than again as something achievable—to be striven for no less than handed down. But again social—the strivings of the many.

Insofar as we have fallen short of the vision of the founders, have tried false leads, have stumbled into pitfalls and followed will-o'-the-wisps, we can serve the new Russia no less than where we can point to practical gains. And for these very reasons, this day will mean more to us than its immediate predecessors, if we turn our faces not to Russia as the East, but like these exiles among us, to Russia as the West—to a young nation where old night is breaking up. It is rather for us to share with them in their fresh realization of the primal meanings of our day of freedom.

A SIGN OF GROWTH

FOR the third time a social settlement head resident has been chosen president of the "National Conference." When it was the Conference of Charities and Correction, this choice did not signify that the settlements had either abandoned or in any way compromised their historic point of view. And now that it is the Conference of Social Work, it does not signify that either this change of name or choice of a man indicates any less emphasis upon charity and correction. It

means that the two groups have been impelled by the growing sense of the complications involved in all their work to emphasize the community as the all-embracing source from which problems issue and from whence solvents are to be derived. Community workers all are they. And social work is nothing more nor less than work with and for the whole community.

G. A. D.

CIVIL service standards and the merit system have come in since the Civil war, but there is every reason to expect that a grateful people will reward the surviving soldiers of this war with public office. Service in France will be considered the best probation for service in city council, legislature and Congress. We may, moreover, confidently look forward to a large and energetic organization of the veterans of the war for democracy—a G. A. D. to outnumber the G. A. R. and perhaps to outstrip it in united action in behalf of deserving members. Therefore, argues the Philadelphia Bureau of Municipal Research, let us accept the inevitable and take it into camp—let us

see to it that the ex-soldiers get their jobs via the merit route. . . . Take immediate advantage of the concentration of our young men in training camps to teach them about their city, state and nation.

"SOCIAL FORCES IN WAR TIME"

THE editor of the SURVEY counts himself and all SURVEY readers fortunate in mustering in an associate editor as an every-week contributor throughout the summer. Social Forces in Wartime is just what the name implies—a resumption of that characteristic department through which Mr. Devine has from year to year given counsel and inspiration to the fellowship of social workers; an application of that department to the practical adjustment in wartime of organized philanthropy and public service. It is in a sense a seminar—an all-summer's conference, building upon those sessions at Pittsburgh which blazed certain of the great trails of patriotic obligation and opportunity. It will be a mosaic of experience, interpretation, criticism, proposal—drawing on suggestions and reports from a wide range of work and workers; and through it all the consistent handling of difficult problems by an executive, teacher and editor who for twenty years has helped guide the forward-moving current of American social work. By vigorous and convincing leadership, by open-minded induction, and by practical demonstration, he has put us all in his debt.

While Mr. Devine will draw on staff resources and budgets of information, the department is essentially his own. He will be quite unconstrained in developing his own approach and conclusions with respect to events and experience as they are covered in the regular news service of the SURVEY; under no obligation whatever to conform to predilections of the editor. Thus, in this week's issue, he quite completely breaks with

the position of the latter on the subject of exemptions of philanthropic gifts from the provisions of the income tax.

He will be thinking for himself, and provoking just that in editors, contributors and readers; and in these formative weeks ahead we will all be the richer for the reach and incisiveness with which he articulates his constructive principles to the half-recognized needs of a war epoch.

"LET NO ONE GO HUNGRY AWAY"

PRESIDENT WILSON may have been unconscious of a notable precedent when he made it clear recently that he is against scrapping essential public and social service in the midst of war. Unmistakable in tenor, if cast in the phraseology and social customs of an earlier epoch, was this letter from George Washington, written at Cambridge, November 26, 1775, to his representative at Mt. Vernon:

Let the hospitality of the house, with respect to the poor, be kept up. Let no one go hungry away. If any of this kind of people should be there in want of corn, supply their necessities, provided it does not encourage them in idleness; and I have no objection to your giving my money in charity, to the amount of 40 or 50 pounds a year, when you think it well bestowed. What I mean by having no objection is, that it is my desire that it should be done. You are to consider that neither myself nor my wife is now in the way to do these good offices. In all other respects, I recommend it to you, and have no doubt of your observing the greatest economy and frugality as I suppose you know that I do not get a farthing for my services here, more than my expenses. It becomes necessary, therefore, for me to be saving at home.

The above is copied not only to remind yourself of my promises and requests, but others also if any mischance happens to

GEORGE WASHINGTON.

FOREIGN RELATIONS

AT the time Lord Bryce visited American cities in gathering material for his American Commonwealth, municipal affairs were largely isolated. What one city was actually doing was little known to its neighbors; municipal government was largely out of the hands of the rank and file; public interest was lethargic; and our community life had still to be stirred by those movements for democratic control which have manifested themselves in such a variety of ways—in Steffens' Shame of the Cities, in the citizens' union, voters' league and other non-partisan campaigns; in the militant agitations for public ownership and regulation of utilities; in our housing and health movements; our surveys and municipal research—efforts stretched out over a period of years which at once have brought expert and citizen into a working partnership, have made municipal policy a concern of all city dwellers, and have broken away from the old party systems and watch-cries, revolving around newer social forces and considerations.

This process in municipal life and law, spreading over a generation, affords us a clue to what may be ahead in international life and law. Only here the war, coming as a challenge to an even more complete isolation, calls for swifter self-education. It comes, however, to a lay public which has gone through a tutelage in its struggles in city and state and nation, and which has acquired habits of organization, of scrutiny of facts, and of searching out the kernel of common public interest in new situations.

Herein lay the significance of the Long Beach Conference on Foreign Relations, recently held under the New York Academy of Political Science. A who's who of speakers, published in the program, showed the wide range from which public interest may be recruited. The list is too long to set down, but these designations drawn from the first of four closely printed pages will illustrate it: the head of an immi-

grants' protective league, a settlement worker, the head of the ethical culture movement, the secretary-general of the American Institute of International Law, a statistician, a former governor, a war correspondent, the president of a transportation company, the president of a university, the librarian of the American Geographical Society, a former Associated Press correspondent in Mexico, a novelist, a former ambassador, a professor of education, the American member of the Balkan Atrocities Commission and the ambassador from Brazil.

From fifty to seventy-five newspaper editors made up the central core of the meeting, the purpose of which was to acquaint those present with the broad outlines of the issues which will be to the fore in our relations as a participant in the war and as a factor in settlement and reconstruction. The old technical formulations of international law were laid aside; new issues and new forces were uppermost. The conference was national in membership, and there was discussion of making it a permanent factor in American life—to take its place beside the professional and public conventions which have contributed so much to progress in domestic affairs.

But even more than a second annual conference of this sort, there is opportunity for a series of regional conferences which in New England, in the South, the Middle West, Southwest, Pacific Coast and elsewhere, would bring newspaper men, educators, business men, labor leaders, social workers and members of the professions together for intelligent discussion of civil foreign policy.

That there would be response to such conferences is illustrated by the success of a series of meetings held in May by the Chicago City Club on "America's part in the great world

INDEPENDENCE DAY IN INTER-DEPENDENT TIMES

By Graham Taylor

IF it ever was to be sanely doubted, it is now demonstrated that independence is a social heritage and not merely an individual possession. In the new light of the Russian revolution the old challenge with which James Otis led up to the American Declaration of Independence is as demonstrable now as it was then, that we will hang separately unless we hang together. As surely as times are made up of days and yet days merge into times, so surely such Independence Days as America and Russia have had must precede and lead up to that democratic inter-dependence which is the only basis and guarantee of personal, national and international liberty. Without such inter-dependence, "independence," only a little later if not sooner, leads straight and inevitably into more abject dependence.

So also may these very inter-dependent times unless those Independence Days prove to have established free enough spirits among men and enough free spirited men in the world to be the only units which can constitute democracy.

This seems to have been done so securely in America that democracy can not only never fail to reconstitute itself here, but can neither perish nor fail to propagate free peoples in all the earth. Independence must have its day, therefore, with all the glory and uncertainty of the dawning. But brotherly spirited inter-dependence must as surely be trusted to be the meridian of democracy—personal and political, economic and industrial, educational and religious—whatever other sunset glories may illumine its western horizon.

conflict, the historical background of her entrance into the war, and her ideals and purposes in taking up arms." These included:

The Threat of German World-Politics, Harry Pratt Judson.
American Democracy and World-Politics, Shailer Mathews.
The Passing of Splendid Isolation, Arthur P. Scott.
Patriotism and Pacifists in War Time, Jane Addams.
From Spectator to Participant, Andrew C. McLaughlin.
Democracy the Basis of a World-Order, Frederick D. Bramhall.
Civilization's Stake in the War, Paul Shorey.

If the same type of Americans who have thrown themselves into the municipal movement enter into the organized discussion and development of foreign policy, it will mean a great deal for the future. And in Lord Bryce they, of course, have a great prototype in both.

"AT HOME"

UNDER the date line "A French Seaport," this week's dispatches tell of the safe arrival of the first American troops. In due time, from "Somewhere in France" will come the first of those lists of casualties which for over two years have been scanned from week to week in the Canadian papers. Except for occasional items telling of the death of an air-man, the wounding of an ambulance driver, or losses in the Foreign Legion, most of us have not rubbed elbows with the inexorable human equation in the great war. This has not been true, however, of the immigrant communities; and the foreign-language press has carried its black-bordered columns into hundreds of American homes.

Miss Byington's article reveals the household embodiment of all this. As Americans we can appreciate the quiet way in which these national groups have shouldered the responsibility for their own compatriots without asking our help—just assuming that it was theirs to carry as part of the big war burden.

And at a time when we are sending Red Cross commissions across Atlantic and Pacific to find out ways to help, here, as at Sir Launfal's gate, is an opportunity at ours. Let us meet it.

THE LONGSHOREMEN

COL. GOETHALS lent a bit of racy color to the wooden-ship controversy when he said that birds were still nesting in the trees that were to go into the boats. Certain of the federal employment exchanges, which have been looking into the labor supply for such ship-building, carry the simile a bit further and say that ivy is growing over most of the old-time ship carpenters. Such as are left are many of them entangled in garden projects and small farms out on Long Island or back from the New England coast. The man skilled with an adz is about as rare an article as that lonely artisan on suits of armor employed by the Metropolitan Museum of Art. And when it comes to navigation—steel ships as well as wood—we shall have a juster public appreciation of the great social loss, so long pointed out by Andrew Furuseth, bound up in our belated removal (through the La Follette law) of those ancient tyrannies which, decade after decade, had been driving American labor from the sea.

There has been equal neglect of the conservation and organization of dock labor, as was brought out in Charles B. Barnes' study of *The Longshoreman*, for the Russell Sage Foundation, and later by the Municipal Unemployment Commission in New York.

Questions of port development are much to the fore just now, especially all along the eastern seaboard, where a great permanent increase in foreign trade is looked to as a certain

result of the war. There are also plans for increasing port facilities to meet war needs. In the case of New York, discussions of a greater port area under uniform administration have been reopened, and there are many plans for harbor improvements and increased terminal facilities which are more immediately realizable.

Yet it is a curious fact to notice the almost total neglect of the labor factor in all this talk and in all these projects of expansion. There was, for example, a remarkably strong supplement of the *Evening Post* on the Greater Port of New York (June 20) in which, none the less, the labor factor was not even mentioned. The shipping trade has been so accustomed in the past to a tremendous oversupply of dock labor at so cheap a rate and on so casual a basis that the question usually foremost in the minds of those who project great inland industrial extensions—how to secure a sufficiency of labor—has hardly been thought of.

Yet recent studies made in New York show that the wastefulness of human material at the waterfront is unequalled in this country and that, if trade continues good and conditions do not greatly improve, there will soon be a serious undersupply. And this in spite of the fact that until recently no other trade in the state has been so continuously and so excessively oversupplied with men willing to take a hand in it. The reason is, of course, that there never has been anything in the nature of a consistent labor policy on the part of the employers; each has tried to have hanging around his piers a more or less dependable margin of unused men who could be called in at a few minutes' notice, and none has taken the slightest notice of the demoralizing effect of this method of hiring upon the working efficiency of the men themselves.

There is nothing in all the United States so much resembling a slave market as a typical hiring of longshoremen in certain parts of the port. No wonder the saloons thrive across the way, and the longshoremen, obliged to wait around so as not to miss a chance of a few hours' work, get a reputation for being shirkers. At present many longshoremen, more particularly those in the unions which have wage agreements, at least earn enough for a fairly comfortable minimum of subsistence. But there are more who, even now when the port is exceptionally busy, have to rely partly on other jobs or allow their wives to help support the family. As soon as there is a slackening of trade from any cause, the old condition will at once return, and the unions will have the toughest fight to retain the standards they have secured.

The only way to give this calling the dignity due to its importance and to regularize incomes is to rid it of those who only come in occasionally to grab for a job, who aid in lowering general earnings and give a bad name to the trade. That can only be done by some sort of registration. The next step is a pooling of labor reserves by different employers, which can be accomplished if they give up hiring at their own piers and use a common labor market which, by a system of clearing houses, could any day supply a surplus in any one part of the port to other parts where there is a shortage. This without reducing the potential supply for any one employer, would make possible a reduction of the total number of men calling themselves longshoremen and give those who remain regular work and wages.

THE DEPORTATIONS

LITTLE doubt seems left from unofficial communications received in this country, as well as from bulletins of the Belgian government, that the deportation of civilians by the German military commanders has been resumed. It may be

true, as German propaganda maintains, that "deportations of unemployed Belgians into Germany have ceased;" it is also true that many of those deported have been returned. But the military authorities do not, apparently, consider themselves bound by any assurances given by the German civil authorities in Belgium, and large numbers of men and some women are being forcibly employed in the military zones extending for some miles behind the front. Not only residents of these regions are so employed, but thousands are brought from other parts of the country. They are employed almost exclusively upon works of direct military value to the enemy of their country, chiefly road-making and railroad construction. The pretense of finding work for the "unemployed" has been dropped, and the new deportations are, if anything, even more hostile than the earlier ones to the spirit and letter of international law.

WAR IN AN INDUSTRIAL DEMOCRACY

IT was Major Higginson, of Boston—if memory serves us—who once spoke of Colonel Shaw and other New England friends of his youth that set off for the Civil war, never to come back. He used an imagery which was rich in suggestiveness of the days of chivalry and knightly adventure.

"They tossed their lives in like a flower," he said.

Not only in its romantic quality, but in the homely, sober facts of war as we have come to know it in this twentieth century, is the phrase suggestive of another time. It was true of feudal times, when knights and their retainers set off for the wars. Whatever befell, fiefs and communal lands remained, to provide for those left behind; harvests could be gathered by the old, the young and the women-folk. It was only less true of agricultural society—and even in Civil war days, America was still largely a nation of farmers. Plantation and homestead remained and the slow-ripening course of the seasons. But it is the industrial democracies which are at war today; it is wage-earners who fill the ranks in larger and larger proportions; and if we were to recast Major Higginson's phrase, it would be not the bloom and foliage of our youth alone which must be pictured as tossed into the balance, but the tap roots of family life. When the modern breadwinner goes to war, his going cuts at the economic basis of subsistence more deeply than in the older societies. The tenement household has not within itself those reserves of capital, such as flocks or gardens or orchards, which knotted hands or young fingers can employ and so tide over the time while the man is at the front.

We are told that this is a war unlike other wars; and if we examine those factors which are set down as making it so, we shall see that each factor in its way adds to the stress upon the social and economic fabric which has been indicated. Now, as never before, nations are fighting—not through small expeditionary forces, but as nations. They are not sending merely the footloose and adventurous. They are going *en masse*. And while the present plan is for us to send at first younger men, without dependents, only those who take the optimistic short view of the war can regard that as our permanent relationship to it. While we may cling to the hope that the entry of the United States may lead to a swift release for the world from the conflict, either through decisive victory or through civil changes that will open the way for an enduring negotiated peace, we should in city and nation lay a frame-

work of social effort that will stand the strain, meet the wastage and provide the succor for a prolonged struggle.

Again, in a recent interview, Orville Wright, the inventor of the aeroplane, pointed out that the mastery of the air had transformed war from the uncertainties of a struggle in the dark, in which a military genius might mass his forces and strike at the weak point of his adversary, to the deadly certainty of the trenches, stretching half-way across a continent. Every mobilization of men and material is known in advance to the other side, leading to counter mobilization. Thus war has become a matter of attrition, a slow breaking down of contingent after contingent. Thus, with nation mustered against nation, this unspectacular wastage of life and limb, such as the world has never known, brings as never before its tragedy and loss home to every neighborhood and crossroads of the countries at war.

So it comes about, at the threshold of our entry into the conflict, that we are called upon to apply social craftsmanship to working out some scheme making good the interrupted earnings of citizen soldiers and weaving a fabric of insurance against death and injury.

A first step has been taken—in lifting the pay of the men in the ranks from \$15 to \$30 a month—from the Civil war to the Canadian level.

A second step is the devising of an adequate system of separation allowance. Here, as Miss Reid of the Canadian Patriotic Fund pointed out, the English system is the better—a system which provides a sliding scale based on the number of dependents. The provision that it should hinge on the man's assigning at least half pay to his family is a wise one, and Canadian experience goes to show that the scale should be raised as the cost of living rises. The consensus of judgment among social workers at Pittsburgh was that, like compensation benefits, this provision for dependents should come as a right, unaffected by whether a man owned his house or was a renter, or whether there were other sources of family income.

Beyond this base load—as Mr. Wadsworth aptly called it—lie all those emergencies of every-day living and household distress, which can best be met through voluntary organization, centralized under the civilian branch of the Red Cross.

There remains the question of pensions for men disabled or the families of men killed. Here, it cannot be too strongly urged, the insurance principle should be employed. The United States government has already provided a system for ships and men in the merchant marine, and Secretary McAdoo has called into conference insurance experts to discuss its adaptation to soldiers and sailors. An adequate, carefully devised public insurance scheme put into operation now would remove the uncertainty which hangs over the future for man and family and perhaps, as in compensation for industrial death and injury, stave off the possibility of a never-ending succession of flat-rate increases and special grants. At a time when private insurance companies are increasing their rates because of war risks, the government could establish a certain minimum as a soldier's right, and permit him to take out additional insurance at low rates. And it could conceivably be later adjusted so that if he survived he could continue the insurance in the years to come.

The Council of National Defense could not have put the drafting of a broad-gauge program in better hands than those of Judge Julian W. Mack.

RED CROSS WEEK

CARTOONISTS rendered yeoman service in helping raise the Red Cross hundred-million-dollar fund. The examples reproduced above are, beginning at the top and from left to right by rows: Cesare in *New York Evening Post*; Brinkerhoff, *New York Evening Mail*; Carter, *Philadelphia Press*; *Philadelphia Record*; *Philadelphia Red Cross War Finance Committee* (also the hospital zone drawing at the bottom, left); Donahy, *Cleveland Plain Dealer*; Morgan, *Philadelphia Enquirer*; Brown, *Chicago Daily News*; McCutcheon, *Chicago Tribune* (copyright); Ding, *New York Tribune*; Wced, *Philadelphia Public Ledger*.

COMMON WELFARE

JUDGE MACK TO REPORT ON ALLOWANCES

JUDGE JULIAN W. MACK has been appointed by Samuel Gompers, of the executive committee of the Committee on Labor of the Council of National Defense, as chairman of a committee to draft legislation to provide compensation to disabled soldiers and sailors, pensions for their widows and dependents, and separation allowances for their dependents.

In accordance with a new policy of the council, to appoint one man to handle each particular problem, Judge Mack will have behind him no real committee; he may secure as many advisers as he pleases, but his will be the responsibility for the program he reports. The title is Section on Compensation for Soldiers, Sailors and Their Dependents under the activities of the Committee on Welfare Work.

This program has been undertaken on the understanding, suggested by Director Gifford of the council, that nothing will be entered upon by it which is not directly concerned with the winning of the war. Judge Mack, addressing the executive committee, declared that to win the war the men must be relieved from worry as to the possible destitution of their families and the families must be free from the same worry, so that they may enthusiastically support the recruiting, conscription and taxation that will fall upon the country. Said Judge Mack:

What is it that this government ought, in justice, to do for these men? Well, in the first place, we have reached at the present stage of our conceptions of social and industrial justice, the stage of the workmen's compensation act, the stage of the mothers' pension legislation. In other words, we have reached the conception that even private industry must bear the accidents that are necessarily incident to the conduct of the business.

Of course, from the purely industrial standpoint, the government ought to do at least what private industry is compelled to do for its workmen who are injured or killed in industry. That means that there would be involved a study of current thought as developed in the workmen's compensation acts, federal and state, in order to get at

the prevailing conception of what is just, and then it should be considered that this service is in many respects different from private industrial service, in that it either is worse pay or better pay; in that it is not voluntary, but, under our present law, drafted or conscripted; and again there should be taken into consideration the wealth and the power and the ability of the government, as distinguished from the private manufacturer, to bear the burdens incident to the occupation of the soldier and sailor.

That would involve, of course, compensation for injury and compensation for death, and that compensation should go to the family. The question of just how it should be divided is another question that the workman's compensation acts suggest. In some of the states a lump sum is given; in some of the states wiser appropriations are made, in monthly and quarterly allowances to widows and orphans—to orphans until they have become self-supporting—and amounts are to be paid proportioned to the family, and not merely to the man himself and his position in the industry.

These are all questions that require very careful but very prompt consideration and study.

And, entirely apart from what may happen to the soldier in the way of injury, disease or death as incident to his occupation, comes the question of what is going to happen to his family from the mere separation, and that involves the question of separation allowance.

It would be the height of folly to start out with any such thought as that, because in our law exemption is given to the men who have people dependent upon them, we are not going to have the problem of the need of separation allowances in some form; that we are not going to have the problem of the need of the family because of the separation of the head right from the start; because we have got it already. . . .

Again, that ought to be a matter of justice and not of charity; that ought to be a matter of the government giving the proper sort of allowance, either by deduction from the pay of the soldier or by supplementing the pay of the soldier; and the problem as to just which is the wisest thing and under what circumstances any additional allowance should be made, whether as in one bill now before the assembly, it should be the general allowance to everybody, or whether it should be an allowance dependent upon the circumstances—these are problems to be considered. . . .

As a part of that problem goes the rehabilitation of the soldier, because, if he is wanted in the service of his country, it is just as much the country's duty to make a man of him again and put him on his feet, purely from the humanitarian standpoint, as it is to make provision in case he dies; but

still more important, apart from the humanitarian standpoint, from the standpoint of the country at large, to avoid a condition of beggary and destitution. It is of the utmost importance as stated here by Dr. Devine that every one of these returned partially-disabled soldiers shall be made as complete men as it is possible to make them. That entire problem of rehabilitation and re-education ought not to be solely a question of Red Cross or private philanthropy, but ought to be in the main a government problem.

Of course, all of these matters, while governmental in a strict sense, and while primarily a matter of government allowance and government pay, as a matter of justice, will necessarily be supplemented by Red Cross and philanthropic activities, because the government can really do only the financial part. There comes into play, in the consideration of the separated family, that intense personal service that only the community and the personal service of the philanthropic agencies of the local community can give. . . .

The problem that must be considered, is, to sum up, this: A determination of separation allowances and the method and amount; a determination of the grant to be made for disability of each and every kind, and for death; the determination of methods of rehabilitation.

Of course that involves the entire question of insurance. First, it is advisable that there should be a definite, fixed sum for everybody, regardless of anything and everything else. And certainly the United States government, either out of its own funds or by the payment of insurance premiums to private insurance companies, should provide for the possibility of the soldiers and sailors securing additional insurance—insurance in the strict sense of the word—inasmuch as today private companies cannot in justice to their present policyholders insure the lives of these extra hazardous risks except at what would seem to all of us a very exorbitant premium. Is it the part of the federal government to pay that additional premium, or to provide some bureau by which this extraordinary risk should be cared for as a government matter?

The real question is that if legislation of this kind, embracing all of these matters, is to be studied and studied promptly and then put through an enactment, after having been approved by the Council of National Defense, how can it best be done, and how done in such a way that the soldier, when recruited, and his family, knows that while he is going to serve his country, his country is going to serve him.

Judge Mack commented upon the announcement by Secretary of the Treas-

ury McAdoo of a conference, called by the latter, with the insurance men of the country, to discuss the insurance of the soldiers and sailors. He said that over a month ago an elaborate report on this very subject was made to the Council of National Defense at the council's direction. This evident confusion, he believed, showed the need for considering the entire problem as a whole.

Since this discussion took place, the Treasury Department and the committee have reached a basis of common understanding and will cooperate in the study of the insurance problem.

At a meeting of insurance men with Mr. McAdoo on July 2, the government was strongly urged to create a bureau to carry its own insurance.

FRIENDS OF THE GERMAN REPUBLIC

HERMANN FERNAU'S pamphlet entitled, *Gerade weil ich Deutscher bin!* (Just because I am German), a reply to the widely read book, *J'accuse*, has just seen its third edition in Zurich and has been translated and published in the United States, France, England and Holland. It was the first evidence that intelligent discussion of the origin and aims of the present war still exists in Germany and it has been followed by a number of smaller publications emanating from Switzerland and indicating the rumblings of a revolutionary storm which has its center in the heart of Germany.

One of these publications, entitled *Peace?*, and signed "A German," openly accuses the imperial government of a conspiracy to deceive the people. *Who Governs Germany at Present?* is one of its captions, and the reply is: "The Junkers, the big industrialists, the Pan-Germans, the annexationists, briefly the war party. They do not reign without opposition, but they reign. Not the moral code of Kant or the pure humanity of Goethe, but domination and expansion are the loadstars of those who govern Germany."

Referring to the peace propaganda of these circles, the author says: "Even more than Germany's enemies has the German people to fear such a peace. For, it would mean for the people the triumph of reaction, and a hopeless absolute government by the Junkers and war-makers. For decades the German people would have to lead a sad, unfree existence under the whip of the military camarilla, in a state of siege, of 'protective' imprisonment, enslaved in soul and body to the Junkers of field and factory." And the prophecy is made that in the end the "holy anger" of the masses, now directed by misrepresentation against foreign enemies, will set flame to the whole structure of German government and social organization.

A series of bulletins, entitled, *Who*

Has Lit the Torch of War? Leaves for Truth-Seekers, Published by a German, periodically continues this revolutionary propaganda. One of the numbers, under the caption: *Our Aim in War: a Free German People*, proves by extracts from *Vorwaerts* in the last days of July, 1914, that the culpability of the imperial government was at that time well understood by the leaders of democratic thought.

The echo of this revolutionary movement in this country so far has been weak and spasmodic. But there has now been formed in New York a society of the Friends of the German Republic, and similar organizations are in process of formation in other American cities. The provisional committee of the New York society are J. Koettgen, chairman and organizing secretary; Mary Ritter Beard, treasurer, and William E. Bohn, secretary. Its purpose is "the support of the elements in Germany striving for the establishment of a German republic."

In order to disarm the possible criticism that this movement is engineered by Germany's enemies, active membership has been restricted to persons of German birth or descent, while members of any nationality may become honorary members. A preliminary appeal issued through the press has brought hundreds of letters from every part of the country enthusiastically supporting the movement. As soon as arrangements can be made, a convention will be held for permanent organization.

An appeal issued by the society warns against taking too seriously the present talk of constitutional reforms in Germany. "Such discussions crop up regularly whenever the German ruling class finds itself in a tight corner. . . . Idle words which the people are not likely to believe." The republican movement is spreading, not merely or even predominantly among social democrats, but among all classes and members of a number of political parties. In this country, many of its supporters are the children of men who were driven here by the unsuccessful revolution of 1848.

One of the few remaining revolutionary veterans of that time writes: "As one who fought in 1848, it is my most fervent wish to hail before my death a German republic, and to know all Germans free from the fetters of bondage."

TO KEEP THE UNIFORM UNSPOTTED

AT a recent mass meeting of students of the University of Minnesota, 400 senior engineers unanimously adopted the following resolution:

We stand to respond to the call of the country in ready and willing service; we undertake to maintain our part of the war free from hatred, brutality or graft, true to the American purpose and ideals; aware of the temptations incident to camp life and the moral and social wreckage involved, we

covenant together, as college men, to live the clean life and to seek to establish the American uniform as a symbol and guarantee of real manhood.

Students in the schools of medicine, pharmacy and dentistry to the number of 450 adopted the resolution of the engineers and specifically pledged themselves as their contribution toward that end:

1. To enlighten men regarding the dangers of impure living and to do our share in maintaining wholesome moral conditions.

2. We register our commendation of the stand taken by the Council of National Defense that "continence is compatible with health," and placing alcoholic beverages under strict control and in creating moral zones around American troops.

3. Convinced, in view of a possible world famine, that it is immoral and absurd to waste approximately a sixth of our food cereals in the manufacture of intoxicants, we appeal to the President of the United States and to Congress to establish entire prohibition as a war measure.

FOR A CIVILIAN SANITARY RESERVE

THE Senate has passed the joint resolution number 63 establishing a reserve of the Public Health Service. It allows the appointment by the President, at a time of national emergency, of trained non-medical sanitarians—sanitary engineers, chemists, bacteriologists, etc.—who otherwise would not be available for such duty on a federal basis, and brings the entire civilian health activity into close relation with the federal government.

Reporting for the Senate Committee on Public Health, Senator Ransdell explained that the purpose of the proposed legislation was to create machinery whereby the government could check civilian epidemics that threaten to spread to the armed forces; to increase the means of procuring sickness reports; to insure federal supervision of sanitation; and to maintain and correlate civilian health institutions.

The Public Health Service is at present too small to cover the entire field, said Senator Ransdell, in showing the necessity for this legislation; state health agencies have no authority outside their own states and should therefore be enabled to work together as a part of the national health machinery for maintaining civilian health—a matter of great importance for military reasons, as well as others. By the terms of this joint resolution, an organization would be effected which would be not only elastic, since the needed number of sanitarians might be drawn immediately from health departments or from schools of public health, but also economical, since the organization would be reduced at once when the necessity for its service passed, he said. It would not interfere with military service, since it does not exempt these men from such service, but only coordinates them with the

Public Health Service while they are on a civilian status. The value of such a plan for the protection of the general public health was also indicated. By thus protecting the zones about training camps the civil population would be saved from infection from possible outbreaks of disease within the camps quite as surely as the troops from infections in civilian circles.

The proposed legislation has the approval of the Council of National Defense, the Conference of State and Provincial Health Officers and the Conference of State and Territorial Health Authorities with the Public Health Service. The resolution is now before the House.

COOLIE LABOR OR HIGHER FARM WAGES

THE suggestion made by chambers of commerce and other employers' associations that oriental labor be used on farms to replace men of draft age has stirred California. John P. McLaughlin, commissioner of labor, has issued a statement placing the blame for any scarcity of farm hands squarely on the low wages paid agricultural help and the common lack of proper working, housing and living conditions on farms.

"The answer to the farm labor problem," says Mr. McLaughlin, "is simple. Pay the laborer adequate wages and give him working and living conditions fit for human beings."

The experience of the California public employment bureaus, at which over 1,000 men are applying each day, has shown that wherever a farmer offers a proper wage for labor, there is no difficulty in filling the job. The difficulty lies in the fact that most farmers are offering only the same wages as were paid fifteen and twenty years ago, whereas pay has increased constantly in factories and commercial establishments. Investigations of the bureau also bring out that over 60 per cent of farm laborers are not furnished board. Many are obliged to use the haystack or the ground for beds and to do their own cooking.

Commissioner McLaughlin points out that probably California's proportion of the draft will not exceed 18,000 men and, furthermore, that men employed in agricultural pursuits may be exempted. For the reduction in the farm labor supply due to enlistment or to shifting into other industries, a force of 40,000 boys attending high school, academies and colleges is available. Moreover, in addition to this untapped resource and to the effect of decent pay and working conditions, on agricultural labor, the commissioner believes that another and equally important way in which to insure the harvesting of crops is to eliminate the immense waste in loss

The Weight of War

The heavy hand of war has disturbed the balance between supply and demand the world over. Our problem of serving the public has all at once assumed a new and weightier aspect.

Extraordinary demands on telephone service by the Government have been made and are being met. Equipment must be provided for the great training camps, the coast-defense stations must be linked together by means of communication, and the facilities perfected to put the Government in touch with the entire country at a moment's notice.

In planning for additions to the plant of the Bell System for 1917, one hundred and thirty millions of dollars were apportioned. This is

by far the largest program ever undertaken.

But the cost of raw materials has doubled in a year. Adequate supplies of copper, lead, wire, steel and other essentials of new equipment are becoming harder to get at any price, for the demands of war must be met.

Under the pressure of business incident to war, the telephone-using public must co-operate in order that our new plans to meet the extraordinary growth in telephone stations and traffic may be made adequate.

The elimination of unnecessary telephone calls is a patriotic duty just as is the elimination of all waste at such a time. Your Government must have a "clear talk track."

of time by farm hands roving from place to place in search of work.

Commissioner McLaughlin recommends the better mobilization of farm labor by cooperation between employer and state, federal and municipal bureaus.

CHICAGO'S FIRST FOREST PRESERVE

CHICAGO and Cook county have been upheld in their far-sighted plans for forest preserves to constitute the circle of outer belt parks. The referendum vote for a bond issue of \$3,-

000,000 in accordance with an act of the legislature enabling Cook county to issue \$11,000,000 worth of bonds for the purpose, has been made effective by decision of the Supreme Court, upholding the validity of the act. It is expected that the forest preserve district commissioners will thus be enabled to purchase about 35,000 acres, including most of the woodland left in the county. Nearly 3,000 acres have already been bought for \$838,000 and on June 16 Forest Preserve No. 1 was formally dedicated to the people's use.

RECREATION EQUIPMENT

Playground and social center directors and leaders, park commissioners and superintendents, civic improvement committees, managers and trustees of children's institutions, social settlement workers, and manufacturers interested in employees' welfare will find this directory convenient and helpful when planning and ordering recreation equipment.

The SELF-PROPELLED SWING

is a favorite where youngsters are entrusted to the care of an older boy or girl. The commodious car will accommodate a number of children.

This is another piece of apparatus resulting from careful observation of playground needs and which lends prestige to Medart Equipment.

The prestige of Medart Playground Apparatus is not a recent achievement—it has existed for years and acknowledged by leading authorities in this work.

WRITE FOR CATALOG W. It is more than a pricelist. It has helped to solve many playground problems.

This preserve consists of nearly one thousand heavily wooded acres at Palatine, about thirty miles northwest of the city. A lake covering thirty acres has been created by damming a stream running through the forest. The dedication was happily connected with the fifth annual country life festival of the rural public schools in the three adjoining townships. Under the direction of their county superintendent, 500 of their children took part in the march, the music, the games and the campfire drill. The graduating exercises of the rural eighth grade pupils were a feature of the occasion. Dances interpretative of the winds, waves and nymphs were given by fifty girls from the University of Chicago who had furnished the same feature at the dunes pageant described elsewhere in this issue of the SURVEY. Other tracts when opened will be connected by roads, several of which are now either being rebuilt or newly constructed.

FOOD STILL TO GO INTO BEER

"HELL will freeze over before I vote for prohibition," said one senator from a large eastern state, thus elegantly putting in one brief sentence the situation over the food-control bill, with its drastic prohibition features, voted by the House. As debate went on it became increasingly clear that the Senate was in for such a bitter fight that the whole food bill was in jeopardy.

The President sent for the leaders of both sides. Apparently the wets did not withdraw or offer even to budge an inch. The President then asked the Anti-Saloon League to withdraw, as a patriotic act to help in food conservation. The Anti-Saloon League did withdraw.

The outcome is still in doubt. Up to Sunday it appeared that whiskey had not a friend in Washington—that the use of food and feed in distilling would be absolutely prohibited, with power given to the President to seize existing stocks of liquor; that authority to prohibit beer and wine would be vested in the President who, to save the situation and expedite the bill, had expressed his willingness to take on this most trying piece of administrative work. But as the week went on the brewers, led in the Senate by Senator Henry Cabot Lodge of Massachusetts—"the scholar in politics"—made constant gains.

At the time of going to press there was much doubt over the outcome and the probability was said to be the prohibition of distilled liquor, with beer and wine in doubt—perhaps untouched; the possibility of a smashing victory by the brewers which, by undoing the House provision for seizing distilled liquors, may keep the situation as it is now.

The dry champions, whatever the outcome on the food bill, announce they will press for a separate bone-dry bill and demand a vote before Congress adjourns.

THE RED CROSS COMMISSION TO RUSSIA

HOW the American Red Cross can best help Russia will be determined after the report of a special commission of twelve men which has been dispatched in the wake of the railroad commission and of the official commission of which Elihu Root is chairman.

The Red Cross commission carries medical and surgical supplies for immediate use. Its main function, however, is to study the needs and opportunities for help in sanitation, public health, general medical problems, food supply, social service, railroad transportation and the shipment of supplies.

At the head of the commission are Dr. Frank Billings, of Chicago, one of the best-known medical general practitioners in the United States, and William B. Thompson—copper financier of New York. The other members are Raymond Robins, Chicago; Dr. J. D. McCarthy, professor of public health at the University of Pennsylvania; Dr. George C. Whipple, professor of sanitary engineering, Harvard; Prof. William S. Thayer, Johns Hopkins; Prof. C.-E. A. Winslow, Yale; Dr. Wilbur E. Post, Chicago; Harold H. Swift, of Swift and Company, Chicago; Prof. Henry C. Sherman, Columbia; Henry J. Horn, formerly vice-president of the New Haven Railroad; John W. Andrews, Thomas Thatcher and Dr. Orin Weightman.

RUSSIAN EXILES HELD IN AMERICA

THE Society of Friends of Russian Freedom in New York, acting upon the advice of George Kennan who has visited most of the Siberian penal settlements, is raising a fund for the temporary relief of political exiles in Siberia, many of them no longer able to support themselves or disabled by their long absence and life in utter destitution from finding suitable employment. A committee to inquire into their needs and to distribute contributions made for the relief or temporary support of these exiles was appointed almost immediately after the establishment of the provisional government, by Paul N. Milyukov, minister of foreign affairs. Since then, thousands of them have returned to Russia.

In curious contrast is the attitude of the United States government to Russian exiles in this country. Only those who represent some recognized organization are allowed passports. Individuals, equipped by training and experience in this country to render service to their motherland and anxious to do so, are refused.

Among those desirous to return to Russia are a number of nurses. One group is in process of formation which consists of nurses of Russian origin or parentage, most of them able to speak

INVESTMENT SECURITIES

The Survey accepts only the advertisements of reliable banking firms, brokers, trust companies, savings banks and other financial institutions.

Corn Belt Farm Loans

offered and recommended by The Merchants Loan and Trust Company—the Oldest Bank in Chicago.

These loans are all secured by First Mortgages on improved farms of established value in the Corn Belt—the safest farm loan section in the United States. They are made only after thorough and exhaustive personal investigation and never for more than one-half the value of the land alone.

No investor purchasing these mortgages has ever failed to receive principal and interest when due.

At present, these loans are being sold to net 5%.

A detailed list and description of loans aggregating any amount you state, will be sent upon request.

Our service includes the examination and approval of title by the Bank's own attorneys, an inspection of the property by our own salaried examiner, the certification that all taxes are paid as they mature, the collection and remittance of interest and principal, and the facilities for renewal or substitution of mortgages at current rates, all without charge to the investor.

Russian, who have had experience in tuberculosis work and in home visiting and desire to organize work on these lines in Russia. Another case is that of a Russian nurse, a political exile, who wishes to visit her home and friends before taking up work in her own profession but, under the ruling of the State Department, is unable to secure a passport. She writes to the SURVEY:

It never occurred to me that I should be refused a passport. In Russia I have been of some trouble to the government; I have many times been arrested and was sent to Siberia, but escaped and went back to the work I considered just. There, in Russia, I always fought for liberty and progress; but in this country I did not take any active part in political movements. Here I just worked and tried to study as much as possible. . . .

Conditions in old Russia grew from bad to worse. I could not think of going back, and only last year I became naturalized. Then the revolution came—and with it a longing to go to Russia, a longing to breathe the air of liberty there where I nearly suffocated from tyranny, a longing to do constructive work there where I was compelled to do destructive work. I resigned my position in . . . hospital to go to Russia with just enough money to pull me through. . . . I felt so positive that I should have no trouble in getting a passport that I told many people I was going. And now this unexpected obstacle, the refusal of the government to issue a passport!

QUAKER RELIEF OF WAR VICTIMS

GLOWING tributes have been paid by George B. Ford and other Americans who have visited the devastated areas of France to the work of reconstruction and moral support of the stricken people by English Friends. According to the latest report, between 400 and 500 wooden houses for peasants in destroyed villages have been erected since November, 1914. By the loan of agricultural machinery and the distribution of seeds, tools, poultry, rabbits, etc., the confidence of many distressed families has been restored, and they have been encouraged to cultivate their weed-covered fields.

Clothing, beds, furniture and other household goods also were systematically distributed where this was necessary to enable a return to normal family life. While most of the house-building appears to have been done by men exempted from military service on conscientious grounds, women Friends started work-rooms for farm women and undertook the management of convalescent homes, a small general hospital and a maternity hospital. In the last named over 400 babies have been born.

The idle life of war refugees in camps, where both their duties and their pleasures are few, is bound to have a bad moral effect, especially upon the young. Friends, soon after the beginning of the war, took in hand the thousands of Belgian refugees in camp in Holland, organized industries among them, opened rec-

CANADA STEAMSHIP LINES

recreation rooms and planned entertainments. More important, however, they supervised the construction of many wooden houses by Belgian workmen, so built that when the war is over they can be removed to Belgium.

Owing to difficulties of communication, work of this kind proceeded but slowly where it was even more needed, namely in Russia. Here hundreds of thousands, perhaps millions, of peasants and townspeople were forced to retreat before the enemy, without any of their belongings, often through regions where no food was to be obtained, strewing the road of their exile with the sick, the lame and the dead. In the eastern province of Samara, where many refugees eventually arrived, the Friends were able to establish centers for medical and general relief in buildings provided for them by the local authorities. In one place, they house and care for 100 to 150 refugees, many of them children who have lost all knowledge of their parents. Small hospitals have been opened in two other towns, and in several workrooms have been organized where the women can add to their small government allowance by spinning and weaving. One of the English doctors found that there was absolutely no other medical aid available in a radius varying from thirty-five to a hundred miles, and he had to attend to 117 out-patients on the day after his arrival.

This work in Russia is now to be reinforced by the American Friends' Service Committee. Lydia C. Lewis, who has been a resident at Hull House and a member of the staff of the Chicago School of Civics and Philanthropy, Anna J. Haines, Nancy J. Babb, Amelia Farbiszewski, all experienced in social work, and Esther M. White and Emilie C. Bradbury, teachers in Philadelphia Friends' schools, will leave in July for Buzuluk in the government of Samara, where they will join a contingent of English Friends.

The American Friends' Service Committee, further, has arranged to begin training July 1, at Haverford College, a unit of one hundred young men for reconstruction work in France, probably to be followed later by the training of other units, including one of women. The members of the unit will be supplied with all necessaries, but no salaries will be paid. Those able to pay their own expenses are urged to do so. Their work in France will include building, repairing, agriculture, horticulture, sanitation, medical aid, social work and "all forms of ministrations to a stricken people." Special emphasis is laid on the need for an elementary knowledge of French. This unit will be affiliated with the civil branch of the Red Cross and, joining it, in the opinion of the committee, will in no way compromise a conscientious opposition to military service.

Group Life Insurance

The Metropolitan Life Insurance Company has organized a special group insurance division because it believes that in this way it can enlarge its service to the people of the United States and Canada.

What Is Group Insurance?

Group insurance is insurance at wholesale whereby 100 or more persons are covered by the single policy.

What Is Its Purpose?

1. It seeks to provide a continuance of the pay envelope after the death of a wage earner.
2. It is used to provide endowments for schools, colleges, hospitals and churches.
3. It is a method for providing pension funds for the police force or the teachers of a city or for employees in a private business.

What Are Its Advantages?

1. It means insurance at lower cost.
2. When taken out by employers for the benefit of their employees it means more satisfactory results in industry.
3. It provides an easy method of securing protection.
4. It brings better relations between employer and employees, increases the interest of the worker in his position and in the firm for which he is working.

How Are Benefits Paid?

Group insurance may be written so that the amount of the insurance is paid in one lump sum on the death of the person insured, or it may provide for regular installments after death.

The Metropolitan Life Insurance Company is interested in Group Insurance. It believes that in offering it to the people of America it is filling a very important need.

One of the first groups on whom it wrote this insurance was its own employees, numbering nearly 20,000 persons.

You are invited to ask any questions concerning it. Address the

MAZDA

"Not the name of a thing, but the mark of a service"

MAZDA Service—a systematic research for making good lamps better

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

WELCOMING SOUTHERN NEGROES

East St. Louis and Detroit—a Contrast

I

The East St. Louis Pogrom

By Oscar Leonard

SUPERINTENDENT JEWISH EDUCATIONAL AND CHARITABLE ASSOCIATION OF ST. LOUIS

TWO days before the nation was to celebrate the signing of the Declaration of Independence with its recognition that "all men are created free and equal" came the news that in East St. Louis Negroes were being slaughtered and their homes pillaged and burned by white Americans. East St. Louis, as all good St. Louisans wish to make clear, has nothing to do with the southwestern metropolis. It is an industrial town across the Mississippi. It is not located in Missouri. It is part of the state which gave us Abraham Lincoln. This circumstance made the "pogrom" upon the Negroes more tragic. They were being murdered mercilessly in a state which had fought for their freedom from slavery. They were forced to seek refuge and safety across the river in Missouri, which was a slave state at one time.

I just called the riot a "pogrom," the name by which Russian massacres of Jews has become known. Yet when I went to East St. Louis to view the sections where the riots had taken place, I was informed that the makers of Russian "pogroms" could learn a great deal from the American rioters. I went there in the company of a young Russian Jew, a sculptor, who had witnessed and bears the marks of more than one anti-Jewish riot in his native land. He told me when he viewed the blocks of burned houses that the Russian "Black Hundreds" could take lessons in pogrom-making from the whites of East St. Louis. The Russians at least, he said, gave the Jews a chance to run while they were trying to murder them. The whites in East St. Louis fired the homes of black folk and either did not allow them to leave the burning houses or shot them the moment they dared attempt to escape the flames.

What is the reason for this terrible situation?

Fundamentally, the reason is purely economic. It is not that the white people in Illinois, or rather in East St. Louis, have any terrible hatred for the Negro. The two races go to

the same schools. The laws of Illinois even permit inter-marriage between whites and blacks. Negroes hold state, county and municipal offices. They own a great deal of property in the state and in the city where the riots took place. But being the most disinherited of men, Negroes at times work for lower wages than do whites. Some of them will not join labor unions and most of them would not be admitted if they cared to join.

This condition is extremely objectionable to the white workers with whom they compete for jobs. But this very fact makes the Negro laborer more attractive to employers who want labor at the cheapest possible terms. They favor any labor force that will not join unions, that will not strike, that will not make periodic demands for increased wages or shorter workdays. Such an element introduced into the community acts as a whip over the heads of the white workers. Employers know that. Laboring people are painfully aware of it. This is the main reason for the race antipathy in East St. Louis, as I judge from talking to business men, laborers, professional men and labor leaders.

East St. Louis is what Graham Romeyn Taylor called a "satellite city." It is not a city of homes, in the American acceptance of that term. It is a manufacturing town where industries locate because land is cheap, transportation facilities good, coal and water near and cheap. The many factories make the place unattractive for home-building. Capital goes there simply in search of dividends. It is not interested in the welfare of the city or of the workers who help make those dividends. Only those who must, live there. Those who can live in St. Louis, while working in East St. Louis, do so.

The result is that the city is run to suit the lowest political elements. The foreign laborers who were imported by the industries in East St. Louis know nothing of American standards. There is practically no social work being done in that

Capture in N. Y. Evening Post

"SPEAKING OF ATROCITIES—!"

city which boasts a population of 100,000 souls. Saloons are numerous and gambling dens abound. They run wide open. In fact, when Governor Folk closed the St. Louis saloons on Sunday, the city across the Mississippi reaped a rich harvest. Multitudes crossed Eads Bridge for their liquor in spite of the Illinois law which prohibited Sunday selling. The saloon element has been pretty much in control of the town, from all I can learn. I have these facts both from observation as a neighbor, and from good citizens, not necessarily prohibitionists. One can not visit East St. Louis without seeing at a glance that saloons are more numerous than schools and churches. That in itself would indicate how much control the liquor interests have over the city.

This, too, has helped bring about the situation which resulted in the massacre of Negroes both May 28 and July 2. The undesirable Negro element, like the undesirable white element, was used by self-seeking politicians. In order to be able to control that element the politicians had to make concessions. Evil dives were permitted. Lawless Negroes were protected. All too frequently the St. Louis papers reported outrages committed upon white women by Negroes in East St. Louis. There were robberies and stabbings and shootings of white men at frequent intervals. Yet criminals were not punished. They were "taken care of." This helped stir the ill will of the better element among the white population.

There were grumblings on the part of laboring people at the increased number of Negro workers who were coming into the city. But there was no open or pronounced hostility, although there were old scores to settle, from the days when some 2,500 white workers went on strike in the packing plants last summer and Negroes were imported to take their jobs. According to the former president of the Central Trades and Labor Union of East St. Louis, at that time

Negroes were imported in box-cars and given the jobs held by striking white workers. When the strike was over about 800 of the Negro strike-breakers were retained and the white strikers lost those places.

In speaking to a man connected with the stockyards the same facts were brought out. This man has a specialized work to do which can not be done by Negroes. In fact, it can not even be done by white men, excepting as they receive his special training. He could speak dispassionately, for his job was not threatened by the black workers. He said:

Of course, no one can condone this killing of innocent Negro men and women and children. It is terrible. I saw it on Monday night and I never want to see such a sight again. But here is the situation: The Negroes are not only taking the places of common laborers in the packing plants, but they are beginning to take the places of the skilled workers. The packers, no doubt, want to fill their plants ultimately with black labor. They are angry because the white workers beat them in a strike and obtained two and a half cents an hour increase. The packers are charging wholesalers five cents a pound more for meat than they did a year ago. They do not take into consideration the fact that everything is so high and the men cannot live on what they used to make. They want to give the places of the white workers to Negroes because they work for lower wages. They live in shanties which a white man could not occupy. Their wives wash clothes and their children work. A white man wants his children to get some education and would not think of sending his wife to work. He must demand higher wages. The employers who bring the Negroes here in carloads are responsible for the terrible situation which has arisen.

The employers insist that they do not encourage Negro immigration and absolutely deny that they import Negroes. They insist that there are not enough white workers to take the jobs. They point to the fact that since the Negroes left East St. Louis, on July 2 and that entire week, four important industries have entirely shut down. When asked why it is that Negroes do come in such large numbers to East St. Louis they say that the lure of better wages than the South pays attracts them.

R. F. Rucker, superintendent of the aluminum ore plant, says that the employers were glad to employ Negroes when there were not enough white workers to fill the jobs. According to him, many of the white workers went east to take employment in munition factories where wages are higher. Some Negroes who had come voluntarily from the South were given their places. These men wrote home of the fine opportunities for employment at high wages and urged their friends to come to East St. Louis.

The fact remains that during a recent strike, when the government took possession of the factory, Negroes took the places of the strikers. This intensified the feeling against the race. The feeling was aggravated by the many lawless acts committed by the bad Negro element. Feeling began to run high so that on May 28 a meeting was called which was known as the "anti-race meeting."

In spite of the fact that the meeting was known in advance to be against the Negroes, permission was given for holding it in the city hall. I have these facts from a business man who was present. Mayor Mollman and the Board of Aldermen were among the 1,000 men who attended. Intemperate speeches were made and the last speaker is said to have hinted that unless the mayor and the city fathers did something to check the coming of Negroes, the people would take matters into their own hands. That night a race riot took place. The militia came and quelled the riot before it went too far.

Those who had attended the meeting, however, continued to agitate the idea that "East St. Louis must remain a white man's town." Feeling against the Negroes was stirred constantly. Here and there personal encounters between men of the two races took place. Sunday evening, July 1, a rumor

Copyright, 1917, by John T. McOutcheon; Chicago Tribune

was spread that the Negroes had gathered in one of their churches to plan revenge upon the white population. A number of policemen in charge of Detective Sergeant Coopedge drove over to the church. As they approached the place they were fired upon by Negroes and Coopedge was killed. The same night a policeman and two other white men were shot by Negroes.

These deeds acted as a match applied to powder. Monday morning it was apparent that there would be trouble. Mayor Mollman said he tried to prepare for it. East St. Louis has just thirty-six policemen. The mayor says that he spoke personally to them, urging them to do their duty. They were not inclined to interfere because their comrades had been shot. The deputy sheriffs felt the same way. Some militiamen were in town, but according to all accounts the militia fraternized with the white population. The mayor was urged to call up the governor and ask for reinforcements and for a declaration of martial law. He refused to do so. His opponents say that he had political reasons for his failure to act.

Be that as it may, the fact remains that through someone's negligence, black men and women and children were murdered wantonly. In the seven Negro districts of the city fires were started at the same time. Negroes were hanged and stoned and shot and kicked. White women and boys as well as men took part. A black skin was a death warrant on the streets of this Illinois city. How many black persons were killed will never be known.

It was fortunate for these harassed Negroes that their inhospitable home town was located near St. Louis, which took them in readily. The St. Louis chapter of the Red Cross, under the leadership of Mrs. Frank Hammar, took charge of the refugees, who fled half naked. They were housed in the City Lodging House, where blankets and food were provided out of Red Cross funds. The Provident Association and the Jewish Educational and Charitable Association provided social workers to handle the situation. The Red Cross Emergency Committee, with Acting Mayor Aloe, Director of Public Welfare Schmoll and representatives of the Chamber of Commerce, the Provident Association and the Jewish charities met daily to devise means of helping the refugees.

A committee from the Greenville, Miss., Chamber of Commerce was ready to charter a boat and take 1,000 Negroes to that city to be placed on plantations where their labor is needed. Employers in St. Louis were ready to offer jobs. The industrial plants of East St. Louis offered to take their men back. The Emergency Committee, however, considered all these offers from the point of view of the Negroes. It secured the assurance of the city, county and state authorities that the safety of the Negroes would be guaranteed should

"AN AWKWARD INTERRUPTION FOR INDEPENDENCE DAY"

they desire to return to work. Consultation was held with prominent Negroes of St. Louis as to what is best for their own people. At a citizens meeting held in the City Hall in East St. Louis on July 6 a reorganization of the police force was decided upon and a committee of 100 citizens will assist the mayor in keeping order. The militia will be retained as long as necessary under the direct command of Adjutant-General Dickson of Illinois. Efforts will be made by the St. Louis Red Cross Emergency Committee, with the cooperation of the Bar Association, to recover from the state of Illinois damages to life and property.

According to eye-witnesses, many Negroes must have been burned in their homes so that no remains will be found. It is believed that one hundred Negroes who took refuge in an old theater in one of their sections were burned when the building was set on fire. I saw that building, of which only part of one wall was left.

It was a distressing sight to see block after block where peaceful homes had been located burned to the ground. The innocent suffered with the guilty. Thrifty black folk, who were doing their bit by raising vegetables, were murdered. I saw the ruins of their homes, into which had gone the labor and savings of years. The little thrift gardens had escaped the flames and the orderly rows where seeds had been planted gave the plots the appearance of miniature graveyards.

II. The Detroit Newcomers' Greeting

By Forrester B. Washington

DIRECTOR DETROIT LEAGUE ON URBAN CONDITIONS AMONG NEGROES

DURING the past twelve months the colored population of Detroit has increased by about 100 per cent through migration. The experience of this city in the absorption of this large new population of Negro citizens and the program of work for its assimilation springing, as it did, from actual experience rather than speculation may be of use to other communities which face a similar problem. The subject may, perhaps, best be consid-

ered under the separate headings of employment, housing, recreation, crime prevention, cooperation and aids to efficiency.

The first prerequisite in the task of organizing a local community is the establishment of a vocational bureau. In the past, when labor agencies brought the majority of Negroes who came north, the problem of employment was simple. They were assured of jobs before they arrived. But now the majority of immigrants come without such inducement. They

come in larger numbers and at all times of the year, when the demand for labor is strong and when it is slack. Moreover, the majority come knowing nothing of the city which is to be their home and unacquainted with any of its citizens. Impossible as it may seem, it is not uncommon for factories in one part of the city to be crying for labor while many of these strange Negroes wander about other parts of the city unable to find employment. This situation is fraught with danger because in a few days idling about the city in search of a job the immigrant may come into contact with conditions and people whose influence is demoralizing and may destroy his chance of ever becoming a useful citizen. The immigrant needs more bolstering up in the first week than at any future time. Until he gets his first pay at the end of two weeks, he finds it difficult to get anybody to trust him. He is apt to become a charity seeker and a dependent.

Moreover, in a rapidly growing industrial center like Detroit, where the demand for houses is greater than the supply, few landlords will rent a house or room to a prospective tenant who has no job. The vocational bureau should strive to make itself acquainted with every possible industrial opening for Negroes in the city and, on the other hand, make its presence widely known so that the immigrant Negro will be directed to it immediately on arrival. The Detroit League on Urban Conditions among Negroes, therefore, has not been content merely with locating vacant jobs but has approached manufacturers of all kinds through distribution of literature and personal visits and has been successful during the last twelve months in placing 1,000 Negroes in employment other than unskilled labor. It has made itself known to immigrants by cards of direction placed in the hands of Negro employes about railway stations and intends, as soon as its funds permit, to station a capable, level-headed representative at each of the railway stations of Detroit to direct Negro immigrants to the league's office or to other responsible individuals and societies who will look after their welfare. It has persuaded the proprietor of a local moving picture theater, which is a great gathering place for colored newcomers, to run lantern slides nightly announcing that employment and other services can be secured free at the office of the league.

In order to care for the women and girls who are beginning to appear in appreciable numbers, five cigar manufacturers in the city were induced to experiment in employing them, and a sixth has started a new plant employing only colored help. To solve the difficult problem of the first week's board, the league has arranged with certain factories a system of checks issued to guarantee payment for bills incurred at restaurants and boarding houses. Some direct arrangements previously made between certain factories and boarding-house keepers resulted in exploitation of the immigrant by the latter.

The establishment of a bureau of investigation and information regarding housing comes next in importance. The character of the houses into which Negro immigrants go has a direct effect on their health, their morals and their efficiency. The rents charged determine whether the higher wages received in the North are real or only apparent, whether the change in environment has been beneficial or detrimental. The tendency is to exploit the Negro immigrant in this particular. Rents charged him in Detroit have risen by from 50 to 200 per cent in one year. He is forced into a district inhabited by colored people where housing accommodation is inadequate for those already there. The proximity of the colored district in most northern cities to the center is responsible for the imposition of the vice district upon the Negro. This bureau should, therefore, scour the city for

every available house, tenement or room inside or outside the recognized Negro district. It should make also a thorough investigation of comparative rents charged Negroes and whites and give the findings the fullest publicity. The bureau should constantly remind employers of Negro labor that it is to their advantage to see that the Negro is well housed and that, if nobody else will build, it is good business for them to do so.

The Detroit Urban League has induced one of the largest foundries to build low-priced homes for its colored employes near the plant. It also has somewhat relieved the housing problem by the purchase of leases from the proprietresses of a number of disorderly houses which were closed by the police. In each case the league persuaded some manufacturer to take over the lease, and in this way a large number of colored families were accommodated. It also keeps a list of empty houses and has been surprised to find how many of them are not listed by commercial real estate agents. It uses the daily and Negro press in appeals for more notifications. A list of furnished rooms also is kept and immigrants are kept away from those connected with disorderly houses. Lists of these rooms are furnished to factories.

With the shorter working hours, recreation is more important for the Negro in the North than in the South. On the other hand, he is beset by many vicious attractions entirely new to him, and there is not the restraining influence of his family, friends and those that know him. I am sorry to say, but it is true, he does not receive a warm welcome from the great majority of colored citizens of the better class in the city to which he migrates. While they try to decide whether his coming is a benefit or an injury to them, he gets a royal welcome from another element of the Negro community—the saloon keeper, the pool-room proprietor, the owner of gambling club and disorderly house.

The only way to counteract these vicious influences is to provide the immigrant Negro with wholesome recreation that will satisfy his natural instinct for active amusement and society of his own kind. This is no simple affair and can be met by existing institutions in only a few cities. The hard-working laborer recently from a rural section of Alabama cannot be attracted away from saloon or pool-room with art lectures or literary forums or even the facilities of the average Y. M. C. A. The first demand he makes of recreation is that it be active and practical, to a certain extent primitive. If he does not get it under wholesome conditions, he will seek it under evil ones.

The Detroit league some time ago inaugurated a ten-cent newcomers' community dance, held every Tuesday in a public school in the heart of the Negro district. A Young Negroes' Progressive Association, developed by the league, has helped in promoting this dance as well as in all other plans for adjusting the newcomers to the city. A committee of the association handed printed cards about the street where most of the immigrants collect and placed them in the hands of newcomers, inviting them to the community dance, where another committee welcomes them—the rougher the type, the heartier the welcome. This committee also introduces the newcomer to the more desirable people present who have been longer in Detroit. Certain dances are introduced which are calculated to lead to better acquaintance. The school auditorium has already been outgrown, and the use of the gymnasium of a neighboring high school has been promised for these dances.

The league also develops athletic features for the immigrants, especially basket-ball. The first colored basket-ball team, not a member of which was a native of Detroit, last winter played against strong white teams and lost only on

game. It has played against colored teams as far away as Pittsburgh. Teams have been created in the various industrial plants of the city, and the recreation commissioner was so pleased with the progress made that he offered to persuade certain business men to donate a silver cup for the team which wins the supremacy of the league.

Camp-fire girls, mostly the children of newcomers, also have been organized. There are only twenty-one regular members—the regulations do not permit a larger number in one camp. All the expenses for these girls, such as rent, refreshments, etc., are paid by the Young Negroes' Progressive Association from the proceeds of the community dance. It is very encouraging to find these young men take upon themselves the responsibility of providing decent recreation for young girls of their own age.

A department for the suppression of crime is necessary in a program for the assimilation of the Negro immigrant. The increased crime among Negroes has had two bad results: it has made both white and native colored citizens believe that the southern Negro is more criminal by nature than his northern brother; and it has created a general distrust against all Negroes. The assistance of the local police should be solicited from the outset. It should be impressed upon them that they must not, as they are prone to do, let matters go from bad to worse in a colored community until conditions are so acute that drastic and unusual measures are necessary. The appointment of colored detectives should be urged to filter from the community as soon as possible the inevitable floaters, crooks, bums and adventurers who are parts of every hembra.

The league has persuaded the police commissioner to appoint a special officer, selected by the league, to work entirely with the newcomers. It is his duty to mingle with crowds on the streets where the newcomers congregate and urge them not to make a nuisance of themselves by blockading sidewalks, boisterous behavior and the like. He is also provided with cards directing newcomers to the office of the league when in need of employment. The league itself keeps a close watch on the Negro underworld of Detroit and immediately apprises the police when dives are developed especially to prey on the immigrant.

Much strength can be added to the program and much energy saved by enlisting the aid of every possible organization in the city whose functions can in any way be construed as touching on Negro migration. The urban league found the Board of Commerce exceedingly willing to cooperate in a movement for the investigation and improvement of working conditions of Negro employes in the various manufacturing plants in the city. The Board of Health gave considerable assistance in obtaining better and more sanitary housing conditions. The aid of several mothers' clubs among the col-

ored women was enlisted to instruct immigrant mothers in the proper diet and clothing for children in a northern climate. From the outset, the aim was not only to put each immigrant in a decent home but also to connect him with some church. Many times the churches have reciprocated with considerable material as well as spiritual assistance.

But the greatest cooperation received has been that of the Young Negroes' Progressive Association to which reference has already been made. This is a body of thirty-four young colored men, most of them attending the various schools and colleges about Detroit. They have been the finest possible agent in the development of all the different activities.

In the adjustment of the Negro, a definite place must be given to the development of industrial efficiency. This is perhaps the most important feature in the program; the welfare of the Negro in his new environment depends upon the opinion that the community has of him. If the community can be convinced that the Negro is and always will be a business asset, we need not worry much about his housing, employment and recreation. But the Negro has got to convince the captains of industry. This he can only do by developing to a maximum his industrial efficiency. The more trades and occupations Negroes become familiar with, the more efficient they will be as a race, and the greater an asset to the community. Therefore the league has endeavored to get them into as many different kinds of employment as possible. It also uses every opportunity to develop individual efficiency by calling the attention of Negro employes to the fact that they must be punctual, zealous and ambitious in their work. These points are always emphasized when a Negro is sent to a job.

In pursuance of this object the league, with the assistance of the progressive association, is carrying on a movement which, I think, is unique. Representatives of the two organizations visit the various factories where large numbers of Negroes are employed and talk to them during the noon hour on the necessity of creating the best possible impression at the present time so that they may be certain of retaining their jobs in the future. At the same time, the speakers circulate these cards:

WHY HE FAILED

He watched the clock.
 He was always behindhand.
 He asked too many questions.
 His stock excuse was "I forgot."
 He wasn't ready for the next step.
 He did not put his heart in his work.
 He learned nothing from his blunders.
 He was contented to be a second-rater.
 He didn't learn that the best part of his salary was not in his pay envelope—SUCCESS.

NOTE: By not paying strict attention to the above details you may not be able to keep your job after the war is ended and foreign labor is again available.

THAT UNLUCKY 25 PER CENT

WHEN the Red Cross campaign for \$100,000,000 was nearing its close a statement appeared in the press that 25 per cent of the total collected was to be retained by the local chapters for their own use. This announcement drew a natural protest from many who read it, if they thought about it and figured out what such a statement as it stood would mean.

William H. Allen, for instance, wrote to the SURVEY that he couldn't help asking questions like this:

What can local chapters possibly do with one-quarter of \$114,000,000?

What of other communities which have not local chapters but which contribute generously to that fund?

Would the public have accepted this proposal as just if it had been announced in advance?

Has the United States government any right to use its appealing power to help raise a fund of over ten million dollars in New York city for a local chapter of the Red Cross, at least without telling the public that twenty-five cents of every dollar will be held back for a local chapter?

Is it too late to have the hudgeting of this 25 per cent done by the nation rather than by 1,500 local chapters?

A letter from Eliot Wadsworth, vice-chairman of the American Red Cross, gives the explanation of the report:

When we first talked with the chapter committees about taking up this campaign the question, of course, arose as to what they would do for funds if they used all their effort for a national fund and did not keep anything for their own operations. After full discussion it was decided that chapters should make up a hudget of what their needs were and file this hudget with the War Council, with the request for a refund of part of their collections, but in no event in excess of 25 per cent.

We are asking the chapters to keep the amount of money sent them by the War Council in a separate fund and to account for it separately, so that ultimately the full amount of money paid in from this campaign will be accounted for either by the War Council expenditures direct or by careful reports of the chapters.

The local chapters, it seems, are not to "retain" anything, but they may ask for a "refund" of part of their collections, filing with the request a budget of their needs. It is reported from Washington that many of the chapters, including most of those in cities where large amounts have been raised, have already waived all claim, and it is not likely, in view of the scrutiny which the War Council will give to the budgets accompanying requests for a refund, if for no other reason, that any part of the contributions will be used for purposes that would seem illegitimate to the contributors.

PATRIOTIC SERVICE OF SOCIAL AGENCIES

TO win the war is the paramount issue: more important than prohibition, or votes for women, or the cost of living; more important than industrial standards or safety in factories; and more important than security of property or of human life on land or sea.

For the sake of clear thinking about social forces and social problems in wartime this fundamental consideration must be reiterated. No patriot denies it but very patriotic people in considering other subjects are in danger of overlooking its implications. That the nation at war has a prior claim on our services, intellectual and physical, on our possessions, on the institutions we have created, on the leadership and the loyalty of which we are capable, is the starting point of all profitable discussion of social forces in wartime. We are not thinking of wars in general but of this war and our own part in it; concretely, of social work as affected by this war.

Property and man-power, to be useful to the nation in war, must of course not be wasted. To leave property idle or to throw away a life cheaply is not to serve the state. What is

SOCIAL FORCE

obviously true of man-power and property in general is equally true of energy and resources heretofore intended and in various ways specially adapted to social work. In order to be serviceable to the nation they must be conserved, their application under present conditions carefully reconsidered and a suitable program made in harmony with national policy. But first of all the energy must not be dissipated. Resources must not lie idle. Buildings should not be left unoccupied or human energy unemployed. Carefully devised measures for saving life, for preventing sickness or suffering, for decreasing lawlessness, for making local government more efficient, must not be suspended unnecessarily. Social work for the sake of its immediate beneficiaries loses its relative importance, but regarded as a part of the organizing and training of a nation for war and for the world in which those of us who survive are to live after the war, it regains what it has lost. The standpoint is national, but the essential features remain.

National Prohibition

TEMPERANCE reform has thus become a war measure. The consideration most strongly urged is that "booze" wastes food material. This, however, is only a small part of the indictment. It destroys more than grain and fruit. It destroys industrial efficiency. It destroys military efficiency. It destroys financial resources. It destroys health. It destroys character.

Those who have denied all this and have opposed temperance reform at every stage are now highly indignant because prohibitionists are unwilling to limit their demands to the economy of corn and rye used in the manufacture of distilled liquors. But when has the Anti-Saloon League or any other bona fide temperance reform advocate ever considered the loss of food products the chief reason for prohibition, and why should they be expected to be eager now to compromise merely because overwhelming reasons are suddenly presented for doing a part of what they have long contended should be done for other and even, as they think, better reasons? Temperance reformers who really believe in their movement, who regard alcoholism as a great national danger to be attacked vigorously in its incipient as well as in its intermediate and advanced stages, are warranted in looking upon their legislative and educational campaign as legitimate war measures, as patriotic service.

Moral Tone

THE sex-hygiene movement is likewise in line with sound national policy. In this instance, as in the case of alcohol, there will be those who preach moderation, covertly if not openly; who insist that the limitation of venereal disease is all that concerns the military authorities and that actual suppression of prostitution and promiscuous immorality is a policy which is visionary, impractical and even perhaps undesirable.

Sanitary considerations are important, but they are reinforced by others of a more fundamental kind. The soldiers and sailors are the young men of the nation. They have just been in high schools and colleges, on farms, in shops, and in offices. They are sons and brothers in American families.

in WAR TIME

By Edward T. Devine

From drunkenness and immorality, as from other vices and weakness, they must for the most part protect themselves. Their actions will not rise higher than their source in the ideals and character of the officers and soldiers. The standard of public opinion in the army and navy has suddenly become of the very foremost importance to the nation. It should be as high as in industry, on the farm, or in college. Whether this will be so depends largely on the moral influence exerted by churches and schools, by physicians and parents, during the past generation. The influence, and especially the effort consciously made, by such agencies as the Bureau of Social Hygiene, will now be brought to a severe test. In this connection neither optimism nor cynicism would be appropriate; but a sober confidence that the young men of America will in some measure justify the increasing attention and the genuine concern which have been given to this kind of moral education seems not unreasonable.

The subject is one which may be approached also from the opposite direction. Soldiers need to be protected from temptation; but unfortunately innocent girls of more or less unsettled character, and for that matter even those who might not be called innocent, need as well to be protected from the lure of the uniform. The girls' protective leagues which have been so successful in securing wholesome recreation and mutual self-protection for their members might perform a national service here comparable in importance to that which the Y. M. C. A. renders to the soldiers. The time seems opportune for extending the scope of this movement. Working girls organized into leagues of this kind could protect those of their number who are exposed to special danger as a mere incident to a number of other mutual services, thus avoiding every suggestion of sensationalism and morbid interest in this particular social menace. Policewomen might also be utilized to patrol the vicinity of soldiers' camps.

Prevention of Tuberculosis

THE prevention of tuberculosis is so obviously a war measure that the national and local societies have been quick to adapt their programs to present conditions. When the selective draft comes into operation these agencies will be in position to cooperate in securing the services of an adequate number of skilled diagnosticians, able to detect even the early cases of tuberculosis. The failure to do this in other countries has been little less than a scandal. There has been some excuse for their failure which we cannot plead if it is repeated here. We have been warned by their experience and we have had time to prepare to make a proper examination of all candidates.

To detect incipient tuberculosis, however, is not an easy matter. By no means all doctors in general practice, by no means even all of those who have recently graduated from good schools of medicine, have the necessary technique. To point out the necessity of careful examination, therefore, as the National Association for the Study and Prevention of Tuberculosis was prompt to do, is not enough. It is a question of securing enough competent men, and having them at the appropriate places at the right time, and giving them the necessary authority.

That is the main problem as far as it concerns the army,

but at once the larger problem arises: What is the community to do for these rejected men, many of whom will then discover for the first time that they have tuberculosis? To cure these men, if they are curable, at least to arrest their disease and to lessen the chance of communicating it to others—this also is a patriotic national service. To perform it efficiently may help to win the war, and at any rate it will help to make the nation after the war better and stronger.

These are only three illustrations of a general principle. If the discussion is to proceed in a way that will have practical value, the SURVEY must hear from its readers.

PAUL ELMER MORE AND MISS ADDAMS

IN his volume entitled *Aristocracy and Justice*, and especially in his essay on *The New Morality*, Paul Elmer More makes a vicious attack on what he calls "humanitarianism." Jane Addams, whom Mr. More singles out as the "most honored teacher" of the code which he denounces, needs no defender, being very well able and possibly even preferring to take care of herself.

As one who does not share the views of Miss Addams on pacifism and who does share Mr. More's views on individual responsibility, the editor of this page cannot withhold his pen from protesting against the gross injustice of this criticism. The quarrel seems to be with those who lose sight of the distinction between good and evil. Miss Addams has, in fact, helped in many a doubtful place to clarify that distinction. Mr. More objects to confusing the innocent with the guilty. Miss Addams has often helped to free the innocent from the unjust odium of guilt; and has helped us to recognize the brand of Cain on brows shielded by "prejudice," that odious aristocratic vice for which Mr. More, following Edmund Burke, is not ashamed to become apologist. Mr. More prefers "justice" to "social sympathy," though he cannot abide the word "justice" on the lips of one whom he dislikes. He distrusts a "social sympathy" which leaves the responsibility of the individual out of account and so is "bound to leave the individual weakened in his powers of resistance against the temptations which can never be eliminated from human life." Jane Addams, more than any other daughter of man in our time, has shown herself capable of a sustained passion for justice, of consistently holding to the "everlasting morality of distinctions," of insisting in the places where it requires insight and courage on the principle of personal duty and responsibility.

Every quotation which Mr. More makes from Miss Addams is misinterpreted. His criticism of her philosophy is based upon misrepresentation of it. He understands Plato and Burke because he has studied their writings sympathetically. If he is to pay Miss Addams and Colonel Roosevelt the compliment of discussing their teachings in the same volume, he should present their views in such a way that they would be recognizable. In the *Newer Ideals of Peace* Miss Addams tells of a boy—a fine, manly fellow—who was put to work at twelve years of age to help in the support of his grandmother and younger brothers and sisters. After a time he became listless and indifferent, and at sixteen turned

THE editor of this department will welcome questions from readers, and suggestions as to topics which they would like to see discussed in these pages. Information from all parts of the country about conditions due to the war, and consequent developments in social work, will also be appreciated.

COMMON WELFARE

GERMAN MINIMUM PEACE PLANS

WHATEVER may be the truth concerning the motives which have actuated the German government in permitting Philip Scheidemann and his colleagues of the Socialist majority in the Reichstag to lay their peace program before a neutral conference at Stockholm, it can no longer be doubted that independent thinkers among the German Socialists have arrived at conclusions which very largely represent the views held by radicals the world over. This appears from the following memorandum handed by the minority Socialist delegation to the Dutch-Scandinavian Committee at Stockholm a few days ago and cabled to American newspapers:

In its peace views as in its general policy, the German Independent Social Democratic Party proceeds from the common interests of the international proletariat and development of society. These interests demand immediate peace.

In the peace to be concluded we demand an international arrangement for general disarmament as being the chief means for strengthening the debilitated states. General disarmament is the only way to break any militarist supremacy and to obtain a lasting and peaceful understanding between the nations.

We demand the fullest freedom for international trade and intercourse, as well as the unlimited right of migration. We condemn all economic barriers and all economic struggles between states. All disputes between states must be settled by compulsory international arbitration.

We demand international treaties to make workers secure against impoverishment, especially as to women and children.

Political rights for women we regard as a social necessity. Equal rights should be granted to all the inhabitants of every country without regard to tongue, race or religion. This would also mean securing to national minorities the right to declare their national life.

National and social liberation cannot be achieved by the government at war; it can only be done by democracy. Democratic control of foreign policies will prevent aggressive measures. Secret treaties must be abolished, and all state treaties must be made dependent upon the assent of parliaments.

Though not regarding state boundaries as inviolable, we condemn the war and its prolongation as a means of regulating boundaries. Regulation of frontiers must be condi-

tional upon the assent of the populations concerned and not an act of force. With all firmness we object to the violation of any nation in any form.

From the beginning of the war we have consistently demanded peace without annexations or indemnities, based upon material self-government.

It is not our affair to draw up a program, covering all the questions to be dealt with in the peace settlement, but in regard to the questions raised in the discussions now going on we declare the following:

Re-establishment of Serbia as a self-governing and independent state is our absolute demand. The uniting of the Serbs in a single national state, and its combination with the other Balkan states in a republican Balkan federation we regard as the best way of removing the eastern question as a cause of war.

To admit the right of Russian Poland to national independence, but to deny that same right to Prussian and Austrian Poland is contradictory.

We condemn the prolongation of the war as a means of settling the question of Alsace-Lorraine. The population of Alsace-Lorraine, which in 1871 was annexed against its will, can obtain peace no sooner than by a direct and free vote to express its wish as to what state it shall belong.

The full independence and economic self-dependence, that is, freedom from economic interference, of Belgium is inevitable. In fulfillment of the German government's promise at the beginning of the war, the Belgian nation has to be compensated for the damage caused by the war, and especially for the economic values that have been taken away. Such repayment has nothing to do with various kinds of indemnities, which simply mean the plundering of the vanquished by the victor, and which we therefore reject.

As opponents of any policy of conquest and foreign dominion, we reject, as we have always done, the policy of colonial conquest. Possession of any colony without its own self-

administration is nothing else than possession of an unfree people, and, like slavery, is incompatible with our principles.

A peace treaty would be made secure only when there was a single international force to watch over it. We do not regard international government officials as such a force, but rather the international Socialist proletariat. Only when an international (force) is erected, independent and powerful, and the proletariat everywhere lends it its full force through keeping control over the governments and maintaining peace, will there come in the future a state of mutual confidence between the nations instead of a contest in armaments.

The proletariat in every country must now do its all to bring the war to an end. To attain this aim the independence of the Socialist parties in relation to their imperial governments must be presupposed. Every government must be challenged to give unconditional adhesion to an international peace program. Credits are to be refused to any government which refuses this program or answers evasively or does not declare itself ready to enter upon peace conversations on the basis of this program. Such a government must be fought in the sharpest manner.

TUMULTUOUS WELCOME FOR THE RUSSIANS

THE reception of the different war commissions—the list is not as yet ended—affords an opportunity for the study of popular American sympathies in the war which is important as indicating the democratic foundations of our foreign relationships.

The enthusiasm which greeted Joffre and Viviani was that which is given only for a great cause. The remarkable warmth of the greeting given by a densely packed multitude to Balfour was largely a personal tribute; but there was in it also an evident expression of family feeling and pride in the achievements of an older brother. The Italian commission was followed about from place to place by so large and jubilant a crowd of their fellow-countrymen and of Americans of Italian descent that the slightly smaller attendance upon them of the public of purely American stock was hardly noticeable. The most tremendous reception, however, in both size and enthusiasm of the crowds, was that accorded to the Russian commission last week in New York city. Its personnel

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

was practically unknown, the exact nature of its mission obscure, and public curiosity, especially as regards the views of its members on war and peace, intense.

The rumpus between Colonel Roosevelt and Samuel Gompers, over the race riots at East St. Louis, at the great mass meeting in Carnegie Hall, took up space in the daily press at the expense of a verbatim report of the address, made in English, by the new Russian ambassador to the United States, Professor Bakhmeteff. He defined "peace without annexation or indemnities" as "peace which shall not permit the seizure of the homes and fields of the neighbor; peace that excludes forcible conquest of alien lands and enslavement of peoples."

The outstanding feature of the present political situation in Russia, he said, is the formation of a national will, "the crystallization after some time of vacillation of the majority of the nation around a national government on the basis of a national program." He created the impression of an intensely earnest lover of peace, forced as is the provisional government which he represents, to suppress for the time being his natural sympathy with that powerful section of Russian public opinion which desires at once to return to the pursuits of industry and national reconstruction so that eventually a permanent peace may be brought about, "when all democracies will agree to hold to and follow certain precepts and embody them with all sincerity and without reserve."

At another great meeting, attended by over 10,000 Russians and Russian Jews, held in Madison Square Garden, he brought a message of love and gratitude from the motherland to those who, under the old regime, have had to seek refuge in this country from tyranny and persecution. "Russian freedom rests now," he said, "upon absolutely secure foundations." The dissensions between the different radical and socialist groups, evident at this meeting as they are in the American-Russian press, he placed in their proper perspective as evidence of a healthy national life rather than of disunion where fundamental principles of freedom and democracy are at stake.

Unpremeditated by the authorities and a complete surprise was the demonstration which greeted the Russian commission when it visited the lower East Side of New York, the heart of Russian America, probably the most populated abode of Russian Jews anywhere. The ambassador and his staff had been invited by Lillian D. Wald to meet some of the Friends of Russian Freedom and a few neighbors at the Henry Street Settlement—for many years a frequent refuge for Russian political exiles—and the envoys went there in the expectation of a quiet talk over a cup of tea.

But the fact of their visit had leaked

out, and as soon as they entered the neighborhood they were surrounded by multitudes of men, women and children, cheering in three languages, filling all the streets, windows, fire-escapes and roofs, wildly waving the red flag of the revolution, singing, and, many of them, weeping. The ambassador was obliged to address the people from a window, and many of the people attempted to address him, but only succeeded in fragmentary exclamations of the common enthusiasm for the revolution and the love of the people for the new Russia.

"I greet you," shouted one woman, "in the name of my son who was killed in battle; I greet you in the name of my daughter, who was assaulted in a pogrom; I greet you in the name of my father, now dead, whose eyes were burned out. The freedom of Russia was worth these sacrifices!" "Jewish blood," replied the envoy, "is being shed with Russian blood for the common cause of liberty. The Jews have got the liberty they have earned by valor. They are free."

AS THE FOOD BILL STANDS TODAY

DISPUTE over the prohibition clauses of the food bill before the Senate has, for the time, entirely obliterated other sections highly important from the point of view of food preservation. Practically all new amendments have been agreed upon except one which would make it unlawful for the members of any advisory committee or other organization to sell to the government articles in the production of which they are interested.

The clauses which would give the President power to commandeer food, feed, fuel and other supplies necessary for military purposes or the common defense, have been swelled out to such an extent by the addition of more and more articles, including cotton, hemp and wool, that doubt has arisen whether this generous interference with normal liberty of trading has not perhaps been motivated by the desire of certain senators to overload the bill altogether and thus make it impracticable.

An amendment by Senator McKellar, that the board created to carry out the provisions of the bill should be responsible to Congress, was not accepted; nor did the Senate seriously entertain a proposal by Senator Johnson, of South Dakota, to substitute for all the detailed provisions of the bill under consideration a very simple measure authorizing the government to commandeer both men and property whenever and wherever needed in the conduct of the war.

Stocks of the articles to be placed under government control are to be exempted from it, under an amendment adopted in the Senate, if held by farmers, gardeners, stock raisers and farmers'

cooperative associations. On the other hand, the authority of the President to prevent hoarding has been substantially increased by an amendment, offered by Senator Kenyon, authorizing the government to buy and sell at minimum prices fixed by itself, not only grains and flour, but all of the necessities named in the bill. This provision would practically prevent speculation in food, fuel and the raw materials of clothing.

Mention of some of these new clauses in the administration food bill—a more detailed resumé of it will be given in these columns when the bill has been actually passed by both houses—suggests that so far as control of prices by government purchase and other administrative measures is concerned, the President in all probability will be given all the power which he requires. But this power is exercised after the factors which determine prices have already been at play; that is, it does not affect real shortage or abundance. Another bill, now in conference between House and Senate, gives to the administration certain powers of affecting production through the instrumentality of the Department of Agriculture, especially in relation to distribution of fertilizer and seeds.

But there is no guarantee whatsoever, so far, that assured prices or new facilities offered to farmers will actually increase the cultivated area or improve the processes of cultivation. The main, and only permanent, promise of higher cultivation lies in the retention on and attraction to the farms of the greatest possible number of experienced agriculturists. This fact was forcibly brought out by a number of speakers at a conference on the cost of living held in New York city on July 3. "The economic condition of many farm tenants," wrote Carl Vrooman, assistant secretary of agriculture, in a statement which was read at the conference, "is below that of the skilled or semi-skilled day laborer of the industrial centers. We cannot expect to get back the thousands of farmers' boys who desert the country for the city unless we hold out to them the hope of becoming farm owners."

In common with most of the other speakers, he insisted on the need for a program of taxation which, without throwing additional burdens on the bona fide farmer, will place idle land within the reach of men of limited means who can and will cultivate it. Without some such method, it was urged, the administrative actions of the government would either remain ineffective, except for purposes of immediate relief, or if they did stimulate increased and better cultivation, add merely to the unearned incomes of absentee landlords without improving the lot and prospects of tenant farmers, thus leaving the problem of rural depopulation untouched.

In the meantime, while Congress is still debating the vital questions of production and control, the board of food control, under Herbert C. Hoover, has already taken a number of steps to check wastefulness in consumption. The food administration card, pledging its holder, who is made a "member" of the food administration, to every possible economy in the home, is hanging in thousands of kitchens. The rules given out to housewives under the caption "win the war by giving your daily service," are simple and concise. Some of them, no doubt, it may be difficult to carry out in households with small resources—a wheatless meal a day, for instance—but thousands of women's clubs in every part of the country have started educational services which will make it easier for all to translate into practice the advice rendered by the board.

MORE TESTIMONY ON NEGRO MIGRATION

AN advisory investigation of the Negro exodus from the South made for the federal Department of Labor by Prof. James H. Dillard, dean of the faculty of Tulane University, New Orleans, brings fresh evidence of industrial unrest below the Mason-Dixon line. Professor Dillard reports that probably 250,000 Negroes have emigrated North. Certain sections in each state have been unaffected. For example, while many have left the southern part of Louisiana, practically none have left the northern part. On the whole, however, according to Professor Dillard, there is a serious lack of labor throughout the South.

From letters and interviews, Professor Dillard found that not a very large percentage of the Negroes were taken North by labor agents. They were mostly attracted by the reports of high wages received in letters from relatives.

It was agreed almost unanimously by both white and black informants that the chief cause for migrating is the demand for labor in the North with resultant high wages. Secondary reasons given were a desire on the part of many for a more hopeful future for their children; dissatisfaction with conditions in the South, such as schools, unfair treatment in the courts and lynching.

The government report is not yet issued. In a summary given to the *Atlanta Constitution*, from which the points above were taken, Professor Dillard thus sums up the situation:

The burden of the testimony of all from whom I have heard and with whom I have had an opportunity of talking here in Atlanta as well as elsewhere, is that if the South has the desire that the Negroes remain in the South the remedy against the migration fever lies in the willingness of the southern white man to remove the causes by raising wages and by standing up for better treatment of the Negro people.

THOSE WHO GAVE THE RED CROSS MILLIONS

AMERICA'S first great Red Cross war fund is virtually completed with \$115,000,000 the net total subscribed and tabulated to July 7. Reports made to national headquarters in Washington show that 1,232 cities conducted organized campaigns and that in virtually every township and village within the United States some form of canvas was carried on. Estimates as to the number of individuals who contributed vary from 8,000,000 to 10,000,000.

Curious contrasts are discovered in the attitude taken by people toward this subscription. In some of the small towns as high as 95 per cent of the adult population joined in the gift. In Cincinnati, where more than \$1,000,000 was given, only about 1½ per cent of the population contributed. The well-to-do gave readily but in certain places the wage-workers outdid them. Thus when employes of the duPont powder mills at Wilmington, Del., were asked to contribute one day's pay each, they gave two, and in three plants \$60,000 was subscribed on that basis. In some western labor centers the workers looked askance at the movement, as being something allied with the employers' interests, while at Everett, Wash., 80 per cent of the employes in the mills gave a day's pay, and the employers made a similar subscription. In the plant of the American Window Glass Company, at Jeannette, Pa., the thousand employes contributed \$32,000. In a plant at Youngstown, O., \$55,000 was given.

Reports thus far made by local committees give almost no details as to gifts in kind, made by those who had no money to offer. The one case reported is that of a woman at Middletown, O., who, having nothing else to give, donated a hen and a dozen eggs. These were auctioned by the local committee for \$2,002.

The reports disclose clearly enough the readiness of the average American to join in humanitarian work when the opportunity is fairly presented. Manual workers, struggling with a rising cost of food and a stationary wage, opened their flat pocketbooks to the amount of more than a million dollars. A Hungarian laborer in an Ohio town, when asked to give one day's wage, contributed four. He understood and approved the work of the Red Cross, despite the fact that he was an "enemy alien."

The organization formed for the collection of this first great fund will be available for future occasions and will gain much in efficiency through this experience. That it will not only maintain the Red Cross funds but will go far to lighten the financial burdens of the associated charities in many parts of the country is judged from evidence offered in Baltimore and other cities. Due

largely to the impetus of the Red Cross "drive," the charities of Baltimore were able to raise \$750,000—a triumph of finance for that city—before the Red Cross subscriptions were taken. Statements forwarded by organizations in other cities give further testimony that the awakening of interest in the Red Cross fund has made the public more generous to every form of constructive giving.

The Red Cross organization itself has gained tremendously. More than 200 cities and towns formed chapters during Red Cross week alone, and between February 1 and July 1 the total number of local chapters grew from 272 to 1,534. Iowa shows a gain from a mere handful to 112 chapters actively at work. New York now has 110 chapters, Pennsylvania has 96, California has 91, Indiana 89, Illinois 68, Michigan 69, Ohio 66, and New Jersey 57. Chapters have been formed in Haiti, Guam, Porto Rico, Cuba, the Canal Zone, Syria, Persia, Turkey and several countries of South America.

Indiana is the first state to bring every part of the state under the jurisdiction of some one of its chapters. The Woman's Bureau, newly formed within the national Red Cross, will seek to extend local organization in all of the states, systematically to cover their entire area.

KEEPING COMPETITION OUT OF WAR RELIEF

THE Federal Council of Allied War Charities, recently created to confer with the Red Cross on the best methods of cooperation in foreign war relief [the *SURVEY* for July 7] at a conference held last week decided that it must not only hold out for the absolute independence of the different American organizations, so far as appeals for support are concerned, but that, considering the great experience and efficiency secured by them in the work of distribution of supplies abroad, they should also retain each its separate machinery.

These views were presented at a joint meeting of the Red Cross Committee on Cooperation and committee of the federal council. Judge Lovett presented a memorandum drafted by the Committee on Cooperation and approved by the War Council of the Red Cross which, in substance, is an invitation to all war-relief organizations to become national auxiliaries of the Red Cross, each retaining its identity and continuing to raise funds in its own name as heretofore.

This plan, in essentials, is satisfactory to the war charities so far as the American end of cooperation with the Red Cross is concerned. The greater part of the meeting was taken up, however, by the much more difficult task of evolving a workable plan of coopera-

tion abroad. Although both sides are eager to perfect methods which would avoid duplication of effort and friction arising from conflicting policies, the war charities are determined not to give up the machinery of distribution, often of a complicated nature and involving delicate personal relationships, already at work in the different allied countries and on the different specific tasks of war relief. Further conferences are to be held to consider detailed methods of cooperation and to carry into practice the evident desire on both sides for a harmonious alliance in the joint war upon disease and destitution in Europe.

In the meantime, the Red Cross department for foreign relief will have more than enough to do in filling the obvious gaps between the fields covered by the different agencies. The mass meeting held in New York to welcome the Russian ambassador was informed, for instance, that the American ambulance in Russia still is the only American organization working in that country which has preserved its identity during the change of government, supported entirely by private subscription.

INSURANCE PLANNED FOR SOLDIERS

VARIOUS plans for the insurance against injury and death of the soldiers and sailors in the military service of the United States have simmered down in the conferences held by Secretary of the Treasury McAdoo with the heads of life insurance companies and with various public officials to one proposal—the payment of compensation to the injured man and to his dependents in case of his death, and the payment of separation allowances to his dependents.

As this is the identical plan proposed at the recent Pittsburgh Conference of Social Work [the SURVEY for June 16] and endorsed by the Council of National Defense, the council and the treasury are now working in cooperation on the draft of the necessary legislation. Dr. Rowe, assistant secretary of the treasury, stated on July 6 that the work had been launched and that the payment of lump-sum life insurance was no longer contemplated.

Secretary McAdoo took up the idea of wholesale insurance of the lives of the soldiers at the instance of Assistant Secretary of Commerce Sweet, following upon the enactment of the Simmons law, which enabled the government to compel owners of vessels to insure the lives of their crews. At a conference with insurance men representing all of the chief life companies, held at the Treasury Department on July 2, Secretary McAdoo urged the companies to agree on a plan of assuming this risk. The insurance men refused, saying that the risk would do a serious injustice to their

present policy-holders. They suggested that the government alone was strong enough to carry insurance on a great army.

Mr. McAdoo appointed, on July 5, a committee of ten insurance men to advise the government officials. When the proposed legislation is drafted, these will be called upon as experts to advise as to details. The men named are George E. Ide, president of the Home Life Company; Edward D. Duffield, vice-president of the Prudential; Louis F. Butler, president of the Travelers'; Arthur Hunter, president of the Actuarial Society of America; John L. Shuff, of the Union Central Life; John T. Stone, president of the Maryland Casualty; George B. Woodward, vice-president of the Metropolitan Life; Franklin B. Meade, secretary of the Lincoln Life; T. W. Blackburn, secretary of the American Life Convention, and I. L. Boak, president of the National Fraternal Congress of America.

In the plan approved by the Council of National Defense for the work of Judge Mack [the SURVEY for July 7], the rehabilitation of crippled soldiers was not included. In the plan announced by Secretary McAdoo as his own, this work of bringing the injured back to self-dependence in the community is covered. It is considered to be a part of the payment of compensation, and to be, as well, a means of reducing the period and degree of dependency.

No definite plan has yet been worked out in the conferences between Judge Mack and the treasury officials, as to either the rate of compensation for injury, the rate of payments for separation allowance to dependents, or the rate of pension or compensation for the death of the breadwinner of the family while in military service. The idea held by treasury officials is that separation allowances and pensions must at least provide a decent livelihood for the dependents, when added to all other sources of family income, and that they must provide, under this standard, for the education of the children.

Approaching the problem from this viewpoint, the officials who will be responsible for the finished plan as submitted to Congress this summer will ask that the federal treasury be called upon to meet the total public expense. It is assumed that Congress will concur in the provision that a certain part of the pay of each soldier having dependents shall be diverted to the support of his family. All other charges for their maintenance during his absence will be met by the government. The raising of a subscription for separation allowances will not be sanctioned. Private subscriptions will be asked only for the Red Cross.

That the condition of vast numbers of families of the working class will

be distinctly improved, when the system of compensation and of separation allowances is in operation, is anticipated by treasury officials. They believe that to the degree that the men of these families enter the military service the standards of living of the dependents will be raised, and that after events will not permit their return to the old social level.

Compensation for injury or death of the soldier will not be made in large sums, but will be paid out monthly, and for the period of dependency either of the injured man or of the widow and children. There will be no set rate, but there will be established certain minimum standards of living to which the payments will be adjusted.

Thus far in the preliminary suggestion of the plan the ideal of democracy in economic footing is maintained. What the conference committee, the advisory committee of insurance company officials, the committees of Congress and the membership of the House and Senate will do to obscure or deny this ideal is for the coming months to show. It is realized in both houses that great pressure will be brought to bear to so alter the legislation as to make impossible the setting of a higher standard of living through adjustment of these benefits. On the other hand, the organizations seeking to improve the condition of women and children in industry, and to a lesser extent the trade-union movement will seek to guard this ideal along the road to the President's desk.

ONE ALPHABET FOR ALL THE BLIND

THE Portland convention of the American Association of Workers for the Blind, held the last week in June, will go down into history as the final bringing to an end of the unfortunate discussion with regard to a tactile printing system for the blind. The British Braille alphabet has been adopted as the basis of the future system in this country. For more than forty years the United States has stood alone in its unwillingness to use the alphabet which was invented by Louis Braille, which has been adapted to the needs and requirements of over twenty-two countries. To be sure, America, with its restless inventiveness, believed that improvement could be made upon the European device, and it must not be forgotten that the prolonged struggle with raised types in this country is going to result in certain modifications, which unquestionably will prove of value to those who have to read with their fingers.

The immediate result of the Portland convention is that from this time forth there will now be but one system of raised type for blind readers in the English-speaking world, instead of three. To put this in another way, it means

that the blind will have three times as much reading matter available as they have had previously. Their Tower of Babel has been razed, and razed at a representative gathering attended by delegates from seventy-five organizations in nineteen states and Canada.

Next to the type question, probably the most important result of the conference was the appointment of a legislative committee, which was instructed to draw up a model bill for the provision of outdoor relief for the blind, and a cooperative purchasing committee, which is to attempt to evolve some plan whereby widely separated industrial institutions may have the advantage of a common purchasing and distributing agent.

The program this year was arranged somewhat differently from that of previous occasions. Instead of having the various addresses given as separate complete units, they were grouped together under the four general headings of Social Problems, which included the much mooted and difficult problem of outdoor relief for the blind, causes of failure of the blind, etc.; Employment and Industrial Problems; Commercial Problems and Educational Problems.

PENNSYLVANIA'S DO-LITTLE LEGISLATURE

IF legislatures are known by the bills that they pass, the lawmaking body in Pennsylvania, which has just closed its biennial session, will not go thundering down the ages. Its lack of achievement arose from a distraction within itself, to the one question that vitally concerns a large majority of the members of the legislature—who shall control the political organization called Republican? Shall it be Senator Penrose and the contractor, J. P. McNichol, or shall it be the other contractors, Edwin H. and William S. Vare and Governor Brumbaugh? Neither faction was willing that the other should get through any bill which carried the remotest opportunity for political advantage either in the way of creating new offices or in acquiring credit for any advanced legislation.

Bills to refer the woman suffrage amendment to the voters, to inaugurate the state-use system in the penal institutions, to establish local option, to abolish the death penalty and for excess condemnation were at various times moved down with the utmost ease. The mortality rate of bills in committees was even higher. It was there that most of the measures designed to improve the structure of Philadelphia's city and county government and prepared with much care by a large non-partisan committee of leading Philadelphians were last seen. The system of state subsidies to private hospitals and charitable organizations was continued unabated.

A measure to impose a tax of 1 per cent on the capital stock of manufacturing concerns and one to levy a two mill ad valorem tax on the production of coal, gas and petroleum were killed; a bill to tax all inheritances 2 per cent was passed and is now in the governor's hands. It has been pointed out that this latter measure will put a tax of \$2 on the widow who inherits \$100 in insurance or savings which she herself may have helped to earn.

But just as the individual politician, whatever his public record, can usually be credited with being good natured or fond of babies, so this session showed a little activity not wholly partisan. The two-platoon system was extended to include the Philadelphia Fire Bureau, a law providing for municipalities to pay 65 cents a day to the wives of prisoners committed for desertion and non-support and for the non-support of their illegitimate offspring was put on the statute books; the police in third-class cities were inadvertently put under civil service; it was made possible for the fines for minor infractions of the law to be paid in instalments; and a strict control of the sale and other transfer of habit-forming drugs was provided for.

Before adjournment the legislature provided \$100,000 for building the State Village for Feebleminded Women at Laurelton and \$130,000 for construction and maintenance of the State Industrial Home for Women—two institutions which have been needed for a long while but had not materialized. The action of the legislature is not final, however. The governor has a month in which to review the numerous appropriations bills and to reduce or eliminate items. It is customary for the legislature to appropriate moneys far in excess of the estimated revenues and to pass on to the governor the unenviable job of bringing the appropriations within hailing distance of the revenues.

ILLINOIS' BIG LEGISLATIVE CROP

WHILE in its war legislation the Illinois fiftieth General Assembly responded promptly and to every appeal for money and men, neither attention nor funds was diverted thereby from immediate local necessities or from the demand for reconstructing the organic law of the state, which was met by the acts for a constitutional convention and the new administrative code.

Bills for industrial changes, which were in the forefront at the beginning, were for the most part defeated or left to die at the end. The strong labor lobby lost measures for restricting the use of injunctions and for jury trials when contempt of court is charged against acts alleged to have been committed beyond the personal observation of the judge. The woman's eight-hour day failed by

only two votes. War conditions are held accountable for the failure.

The enabling acts proposed for the consolidation of the surface and elevated street railways of Chicago as a basis for vastly increased investment failed because they involved the extension of the franchise period from twenty to thirty years, with a possible addition of twenty more years. The many good features of the measure could not win against the alarm raised by the long previous attempts to secure "fifty-year franchises" which led to Chicago's successful fight for the possession of its streets, waged through more than a decade.

Some advances, however, were made in improving industrial conditions. Child labor was still further restricted by requiring every child over fourteen years of age to finish the fifth grade, be able to read and write in English and be certified by a school board medical examination as capable of going to work before a working certificate will be granted. Payment of wages in bankable currency was required and time checks, store orders and other script prohibited. Loan sharks were hard hit by reducing the maximum interest rate to 3½ per cent a month on all salary or chattel mortgage loans of \$300 or less. The workmen's compensation act was extended to bring all employers within its provision and was supplemented by an appropriation of \$20,000 for an investigation by a health insurance commission of such claims for sickness and death from occupational causes as are not covered by the compensation act.

Agricultural interests were promoted by the pure seed act. Progressive bond issues were submitted to referendum votes providing \$60,000,000 for the systematic construction of roads. Private banks will all be brought under public control if the act of the legislature is ratified by referendum vote at the polls. Collection agencies and cold storage warehouses are placed under state control and taxicab operators under the public utilities commission.

Taxation was increased by some forty-five measures additional to the general appropriation bill. Tax-saving measures include two important reforms, one permitting counties to keep profits now going to the buyers of properties sold for taxes, and another providing for continuous and centralized registration for election, which may save \$500,000 annually in Chicago alone. The commission investigating pensions is continued by the appropriation of \$20,000. It bids fair to provide a scientific basis upon which future pension legislation may be built. Before filing an injunction suit tying up public funds, a taxpayer must hereafter get permission of the court, and state, county and city treasurers are relieved from liability in making payments pending the decision of suits in

case they are not directly enjoined from so doing. These two measures are intended to forefend the administration of public affairs from such serious embarrassment as has recently been suffered by the withholding of funds for state uses and for the salaries of juvenile court officers. Their validity, however, is seriously questioned.

The state is still deprived of much needed legislation for vocational education because of the deadlock which had so long existed among its advocates, who compromised with each other too late to secure enactment. The act reorganizing the Chicago Board of Education, while containing some improvements, has proved to be only a further complication so far in the hands of the city administration's factional exploitation of school management. Membership of boards of education in smaller cities was likewise reduced. Taxes for school purposes in districts under 100,000 population may be increased by referendum vote from 3 mills to 4 mills. Community high school districts are created for townships. Fraternities and sororities are prohibited in high schools. One or more rural communities may establish health, park and recreation districts. Park boards are authorized to acquire land for playground purposes. Chicago is authorized to use its municipal pier for amusement purposes, to build a municipal convention hall on submerged lands recovered from the lake, and by referendum vote to adopt simplified forms of practice and procedure for its municipal court. Joint poor farms may be secured and maintained by counties. The state labor commissioner is authorized to secure employment for discharged prisoners.

While the house killed all "dry" measures, including county option, the senate defeated all "wet" measures, leaving the lines of battle between them just as they have been. Anti-vice laws were stiffened by making it a misdemeanor to present or participate in obscene, immoral or impure dramas, plays, exhibitions, shows or entertainments, still more by defining pandering to be procuring any female person to become an inmate of a house of prostitution, or knowingly taking or accepting any money or other valuable thing from any female person from the earnings of her prostitution, or directly or indirectly taking, receiving or accepting money or other thing of value for providing, procuring or furnishing for another any person for the purpose of illicit sexual intercourse. This bill of the Committee of Fifteen is especially aimed against male panders, but it is expected to operate as effectively against women procurers.

The most far-reaching acts of the session were the resolution providing for the call of a state constitutional con-

vention if ratified by the people at the polls in 1918, and reorganizing the entire state administration by the new civil code which went into operation July 1. It was fully described in the SURVEY for March 10 as consolidating in nine departments no less than 128 boards and commissions and 300 official positions with salaries aggregating \$400,000. It remains to be seen whether some of the value of this far better code may not be seriously qualified both by the weakening of the civil service law and by the exercise of the appointive power. The right of trial upon discharge was denied employes in the classified service except where racial, religious or political reasons are charged by the discharged employe, who may then demand trial. Otherwise discharge by the head of the department is final. All attempts to provide for the extension of the merit system failed, except that which succeeded in placing employes of the Chicago Municipal Tuberculosis Sanitarium in the classified lists.

SOCIAL FORCES IN WAR TIME

(Continued from page 337)

to professional tramping. Now one swallow does not make a summer, and Miss Addams did not attempt to found a child-labor philosophy upon a single incident. What she said in her book was that "through such bitter lessons as these, we learned that good intentions and the charitable impulse do not make for righteousness." This is a profound truth. She implies, as Mr. More says, that to find work for a boy under such circumstances is "cruel and disastrous." So it is. His comment is that "one would suppose that scarcely an honest workman, or prosperous merchant, or successful professional man had ever taken up the burden of a family in youth or childhood." To point out the irrelevance and absurdity of this criticism would be an affront to the intelligence of the reader. One would suppose that the critic considers any club good enough with which to beat a pacifist.

Again, in *The Spirit of Youth and the City Streets*, Miss Addams accounts for a large part of the juvenile delinquency in Chicago as the result of repressing a "wholesome love for excitement" and "desire for adventure." She deprecates compelling children to assume responsibility prematurely and advocates the increase of wholesome recreational facilities. Mr. More's reply is to cite the case of an insane degenerate and to intimate that the sons of the rich are not all virtuous. All that need be said about this is that as to the subject she was discussing Miss Addams is entirely correct. She is speaking from close and competent observation, and her conclusions are supported by the concurring testimony of other experts. Not only the Denver judge, but the Chicago, New York and Boston judges, police and probation officials, reformatory superintendents, teachers, play supervisors, relief workers, settlement residents, and even the boys themselves, when they are not posing as young criminals, support the views which Miss Addams has expressed. Miss Addams was denying neither degeneracy nor original depravity as isolated phenomena. She was explaining the character and the tribulations of boys about whom she had knowledge. She is not seeking "to find a basis of conduct to take the place of the older conception of personal integrity." She is not "drifting," to use another of Mr.

More's epithets. She is probably not engaged in philosophical speculation at all. She is on a voyage of discovery, but it is for the purpose of charting and describing a new world—that of the men and women and children who live together in modern cities. She records her observations and her tentative explanations with a sympathetic understanding, with a power of discrimination, with a candor and sincerity, which literary critics well may emulate.

Mr. More, to his credit, professes to dislike both exaggerated humanitarianism and exaggerated egotism—the doctrines of Jane Addams and the doctrines of Nietzsche; but he considers our danger from the former to be greater than from the latter. He may, of course, take his choice. Another may think the philosophy of brutal force not only more obnoxious but a more imminent danger. Our decision to enter the war on the side of democracy and against absolutism is the nation's answer to this issue—if it is an issue. We are officially told, not that it is a war for establishing aristocratic privilege and caste "prejudice," but that it is to make the world, if possible once for all, safe for democracy. Extremes are certainly objectionable, especially to men of aristocratic and sensitive temperament, but to the list of objectionable, sentimental *isms*, mentioned by Mr. More—pacifism, feminism, socialism, equalitarianism—we may at least add the equally objectionable militarism, imperialism, intellectualism and snobism. We may even respectfully suggest that the labors of Jane Addams and her humanitarian contemporaries, whatever their limitations, are a wholesome antidote for these latter most sentimental and most noxious of poisons.

COMMUNICATIONS

A TELEGRAM

TO THE EDITOR: The National Wholesale Liquor Dealers' Association of America appeals to the press of America to protest against the ruthless confiscation of millions of dollars of lawful property as contemplated by the Cummins' amendment in the United States Senate. Some honorable means should be found by Congress for proper food conservation without involving financial ruin to thousands of banks, distillers, wholesale liquor dealers, bonding companies and thousands of those dependent upon the distilling industry. If such legislation is to pass it should carry with it just compensation for value of the property confiscated.

JOSEPH DEBAR, President.

ALCOHOL AND VICE

TO THE EDITOR: At a meeting of the Committees on Alcohol and Venereal Diseases, under the auspices of the Council of Defense, it was unanimously agreed that the most important teaching to spread widely throughout the land, and particularly to apply to the enlisted men of the army and navy, was that sexual continence is compatible with perfect health, and that all the observations of physiology and clinical medicine point to the advantages of continence for health's sake, aside from all the dangers that result from incontinence as generally indulged in and considered a privilege of man.

There is no difference of opinion among physicians that alcohol is a contributory factor of the first importance in the development of venereal disease, for the reason that self-control, upon which continence must depend, is lost as the result of alcoholic indulgence. The higher attributes of mankind, namely,

self-control (or in physiological terms, inhibition), judgment and discretion, are the most lately acquired attributes of human character, and these are the first to be destroyed on the exhibition of the narcotic drugs, chloroform, ether and alcohol.

The experience of Canadian physicians directly quoted to me, the experience of the dispensaries in New York, with which I am personally familiar, and the case-records of many private physicians with whom I have been in close personal contact, convince me that the figures generally quoted are correct, to the effect that between 75 and 90 per cent of the venereal infections in young men are acquired while they are under the effects of alcoholic indulgence.

There is no question in the minds of any of those responsible for the medical care of the army, or the care of men in civil life, that incontinence is wholly unnecessary and absolutely undesirable, or that the removal of accessibility of alcoholic beverages will enormously reduce the amount of incontinence which results in the spread of venereal disease.

HAVEN EMERSON.

[Commissioner, Department of Health]
New York.

TO SOCIAL WORKERS

TO THE EDITOR: No one will dispute the immediate and dire need of the war-stricken countries, but with all our financial aid and human effort we cannot give back to these people what they have lost. One asks oneself when will this cause and need ever end? The task is beyond human calculation.

All people must see the inhuman and indefensible waste of human life. All the patriotism and material sacrifice cannot atone for this continuous slaughter of our fellowmen. It seems to me that our social workers who are so close in their relations to human society (especially to those who have so little to say and suffer most) could help magnificently by starting a peace propaganda based on humanity absolutely.

Since writing this I noticed an appeal from Lady Aberdeen to American women to save the war babies of England and Ireland, as the death-rate in 1916 was very high (American mothers take notice); also an appeal for American doctors, as 60,000 had been killed. Can the world spare many more?

By coercion, fear and ignorance we are in the last chapter of this world horror. "Good friend, stop and think" how best you may serve.

ANNA C. MARTIN.

Ridgewood, N. J.

THE REMEDY

TO THE EDITOR: A letter from Dr. Albert Bowen, of Rochester, N. Y., in your recent issue [June 23] enunciates a principle which is capable, I think, of being extended far beyond the one field to which he has applied it. Not only the physical deterioration of the workers, but many another social evil for which a governmental palliative is hastily invoked, admits a simpler remedy.

A higher wage, Dr. Bowen wisely suggests, will tend to solve the problem of public health. Quite true; and a higher wage will also tend to alleviate the evils of unemployment, illiteracy, crime, snobbishness, celibacy, lack of patriotism and irreligion.

I invite Dr. Bowen, or if I may, I would urge him with all candor to give his best attention to the one direct method of securing a permanent increase in wages. The method is the socialization of land (and natural resources) through the taxing power; or as commonly but most inappropriately called, the single tax.

If a city lot is heavily taxed, then the owner will be eager to build on it; or eager to sell it (or give it away) to someone who

will build on it. Whoever erects a building employs labor. Whoever holds a city lot vacant checks and prevents the employment of labor. Simple, is it not?

Surely for Dr. Bowen to plead for higher wages, and ignore the question of land tenure and land use, is to give us Hamlet with the prince omitted from the cast.

MALCOLM C. BURKE.

Washington.

TAX EXEMPTION

TO THE EDITOR: You have done a public service in calling attention to the move to legalize the deduction from taxable incomes of gifts to charitable, educational and religious activities. This is one of the most insidious temptations to which social work has ever been subjected. The executive committee of the Cleveland Welfare Federation recently refused to endorse this project.

The most dangerous feature of this proposal is that social agencies are now trying to establish for themselves a financial interest in legislation with no resultant responsibility to government. Such a policy has demoralized social workers and business men alike wherever followed. New York, the last few years, has experienced the result of private agencies sharing irresponsibly in taxes just after collection. Do the supporters of this new proposal think themselves any less immune from demoralization because they would get a portion of taxes just before collection? Special favors by governmental action are as hostile as censorship to free thought and free speech. Nothing has closed the mouths of the good people of Pennsylvania in the face of intolerable government so much as dependence on legislative action for support of private charities.

The social workers of the country should rise *en masse* and disown and oppose this effort to subject them to one of the grossest evils of Pennsylvania politics.

One would think that every rich man would resent being put in a position where others might say as he drops his gift in the collection plate on Sunday morning: "There is the latest device to escape giving full measure to one's country."

ALLEN T. BURNS.

Cleveland.

NEGRO MIGRATION

TO THE EDITOR: Apropos of the discussion upon the subject of the recent Negro migration to the North. I would contribute thereto the following excerpt from a letter, which I received but a short time ago from a social worker in one of the largest cities in Georgia. I believe that this will throw a great deal of light upon a situation which has not received its proper thought and attention. It will also point out the various new problems which would confront both sections of the country were the movement to grow much further.

"... Remember that we northerners need not be holier than thou. New York has its Negro ghetto and race discriminations that are the more cruel because of their refinement. Here the difference in social status is frankly accepted; in the North it is subtly inflicted.

"Indeed, the South wants to keep the Negro. During the recent wholesale exodus to better wages and more human conditions of life, the people down here took extreme measures to prevent by force and misrepresentation the departure of the Negro laborer. Here hundreds were prevented from leaving. They were arrested *en masse* at the railway stations and detained in the police barracks upon no charges whatsoever. Labor agents seeking Negro help were arrested and heavily fined and run out of town. Besides these acts of violence, the newspapers carried on a systematic campaign of lies about

conditions up North. They told of thousands of starving Negroes stranded in the large cities, dying of cold, hunger and disease.

"Some of the reports were no doubt true. Many were brought away by false promises such as the steamship agents will make to ignorant peasants in Europe to induce them to come to America. Many plantation darkeys went North clad in their scanty rags and naturally suffered from cold and exposure. But that is a far cry from icicles hanging from your nose and ears and your breath turning to snow as it is exhaled. Such were the wild tales spread among them to frighten them away from the North.

"I do believe an unregulated and undirected movement of labor from one section of the country to another is wasteful, and economically and socially dangerous. But such a scientific distribution of the national labor supply as I have in mind cannot be accomplished by the methods of our northern labor agencies, or the violence of the southern authorities. No doubt the South did face a great danger in the sudden migration of thousands of manual laborers; and so did the North. Were that movement to have continued and increased, as at first it showed signs of doing, it would have meant a commercial and agricultural depression in the South that would have fallen heavily upon a section that is just beginning to recover from great losses through cotton due to the war. For the North it would have meant a sudden aggravation of the race question and ultimately a fall in wages, in addition to the temporary sufferings of the Negro due to maladjustment.

"And I doubt whether it would have improved the Negro's status in the South. That will take as many years as it will take for the color line to disappear. Does that sound pessimistic? I would call your attention to the fact that the mulatto is increasing faster than the pure black. In other words, in the years to come the American type will be a shade or two darker than it is today.

"Before I close this subject, I want to mention the part our Associated Charities played in the matter. The secretary was informed by the Newark people that many Negroes from our city were there and in dire straits. She immediately let the papers have a lurid account of the general destitution of the Negro in the North. I do not know what the situation in Newark is, but I doubt that it warrants Red Cross relief methods. Such is scientific relief."

CHARLES L. ROSENZWEIG.

New York.

THRIFT

TO THE EDITOR: My conclusions on Thrift (which I have written about in my recent book) are these:

That it is stupid and therefore wrong to drill thrift into the very poor in the sense of hoarding up anything, because they never earn, at the best, more than enough to live on. Anyone whose work brings in less than \$900 a year needs not to save it but to be saved from it.

The very poor who practice saving do it at the expense of the comfort and health of themselves and of their families, and form dehumanizing habits; and become misers, meaner and more grasping than the very rich.

That the middle class, to whom the American Bankers' Association thrift appeals, may save with benefit to their bank accounts, if not to their souls, especially in the way of making a better use of what they have.

That the subject of thrift has a much broader signification than the mere saving of money or commodities.

Saving, to have any great value in these days, must become a social or cooperative function.

BOLTON HALL.

New York.

THE JOYFUL YEARS By F. T. WAWN Net \$1.50

A romance of real human life. Just a love story in fact, but one done by a master hand. Humor, beauty and gladness, these are the keynotes of this simple and exquisite story of the making of a boy and girl into a man and woman, presented with such subtle art that it appears artless. The background is principally laid in the wild and legend-haunted scenery of Northern Cornwall, the country of King Arthur and the Knights of the Round Table.

HELEN OF FOUR GATES

By an Ex-Mill Girl Net \$1.50
An Extraordinary "first book."

A tense study of life in a secluded corner of the countryside away from the restraint and conventions of civilization. The conquest of a woman's undying love over hatred and tyranny, over absence and despair—even over death.

A LOVE TANGLE

By F. E. PENNY Net \$1.50

Set in the wonderful background of its tropical foliage and in the mysterious shadows of its immemorial forests, romance complicated by difference of station and race carries the reader into an atmosphere as strange and foreign as it is enjoyable.

BEHIND THE THICKET

By W. E. B. HENDERSON Net \$1.50

A book of vivid imagination, power and extraordinary originality.

New York Herald:—"The reading public has gained a new novelist of no small ability, and one who is destined to go far in the field of fiction."

PETUNIA

By MRS. GEORGE WEMYSS, author of "Jaunty in Charge." Net \$1.50

New York Sun:—"A story as wholesome as 'Jaunty in Charge,' with a delicate humor and deftly drawn characters."

EL SUPREMO

By EDWARD LUCAS WHITE Net \$1.90
The Most Highly Praised Novel Published in Years.

The Philadelphia Press:—"Found that to open this book is to walk into a picturesque civilization which to all but a few scholars is practically unknown," and "to read it to the end is to enjoy an historical romance of striking merit."

THE WAVE

By ALGERNON BLACKWOOD, author of "Julius Le Vallon." Net \$1.50

The Boston Transcript says:—"Never before has Mr. Blackwood written a novel that comes so close to the real things of life as 'The Wave.' With a skill that is extraordinary he tells a story that is of absorbing psychological interest."

EREWHON

By SAMUEL BUTLER Net \$1.50

Introduction by Francis Hackett. The finest satire since Swift's Gulliver's Travels.

Under the guise of describing the habits and customs of a strange race found in the mountains of New Zealand, the author flays the sbams and inconsistencies of our latter-day civilization.

THE WAY OF ALL FLESH

By SAMUEL BUTLER Net \$1.50
Introduction by Professor William Lyon Phelps of Yale.

Arnold Bennet says:—"It is one of the greatest novels of the world."

ON THE BRANCH

By PIERRE DE COULEVAIN Net \$1.50

New Edition. Just Issued. Translated by Alys Hallard.

The critics call it a splendid piece of analytical writing, fascinating by the sheer interest in the "personality of the woman and her experience . . . really a brilliant novel." The French edition has reached its 135th thousand.

THE MASTER OF THE HILLS

By SARAH JOHNSON COCKE Net \$1.50

Author of "By-Paths in Dixie."

In this sincere story of the adventures of two generations of Georgia folk the author interprets these unknown and misunderstood Americans of the mountains to their fellow countrymen. Ready July 14th

THE ROYAL OUTLAW

By CHARLES B. HUDSON Net \$1.50

A wonderful tale of fighting men laid in the time of King David. A vivid story full of local color and of absorbing interest. Not since Ben Hur has such a novel appeared.

SEEN AND HEARD

By MARY and JANE FINDLATER Net \$1.50

New York Herald:—"The book is a 'war book,' but the crash of cannon and the cry of the wounded are in the far background. Few volumes that are so good have come out of Scotland in a generation; none that is better."

GRAIL FIRE

By ZEPHINE HUMPHREY Net \$1.50

Boston Post says:—"It is a tale of spiritual adventure. A story that challenges comparison from a standpoint of excellence of writing with almost any American novel of many months."

THE GOLDEN ARROW

By MARY WEBB Net \$1.50

Boston Advertiser:—"A story of a lovely mountain glen on the border of Wales. The author has caught the very substance of the quaint atmosphere of this far-away country and given it to us in a way we shall not forget."

THE PURPLE LAND

By W. H. HUDSON Net \$1.50

Author of "Idle Days in Patagonia."

Introduced by Theodore Roosevelt.

James M. Barrie says:—"It is one of the choicest things of our latter day literature."

A CRYSTAL AGE

By W. H. HUDSON Net \$1.50

Author of "Idle Days in Patagonia."

With a critical appreciation by Clifford Smyth.

New York Evening Post says:—"It has the zeal of the open air, kinship with beauty of all sorts and a relieving glint of humor."

THE FEAR OF LIVING

By HENRY BORDEAUX Net \$1.50

New Edition. Just Issued.

Boston Transcript:—"Its message would not be so vivid, but in the plot and characters and the setting each add their share to the artistic triumph of the book. The work was crowned by the Academy and is now in the neighborhood of the hundredth French Edition."

GONE TO EARTH

By MARY WEBB Net \$1.50

The author of "The Golden Arrow" showed in her first book a most unusual understanding and sympathy with the folk of the remote countryside whose lives are lived close to the soil and bounded by the crops, the weather and the herds. In "Gone to Earth," her new story, the same stage is set, but the author shows a growing power—her characters are more concentrated, the fierce love and elemental jealousy that glow somberly and finally break into flame, are drawn with poignant intensity, while the sudden touches of humor are as quaint and incalculable as human nature itself. Ready July 21

A STUDENT IN ARMS By DONALD HANKEY Net \$1.50

"Essentially human, exceedingly vivid and full of optimistic philosophy. One of the few war books that will live."—Prof. Howard T. Lewis, University of Idaho.

SECOND SERIES JUST ISSUED

NET \$1.50

POSTAGE EXTRA AT ALL BOOKSTORES

E. P. DUTTON & CO., 681 Fifth Avenue, New York

**POLITICAL HISTORY
OF
POLAND**
BY
E. H. LEWINSKI-CORWIN

644 plus XVI pages. 236 illustrations. 14 maps. Handsomely bound in cloth \$3.00, by mail \$3.15. Limited DeLuxe Edition \$7.00, by mail \$7.25.

The thrilling story of Poland down to the present day is told in the new book entitled

Political History of Poland

By **E. H. LEWINSKI-CORWIN**

It is accurate, scholarly, yet an intense throbbing expression of Polish national life, of Poland's rights to unfettered existence. Every American voicing President Wilson's ringing plea for "a united, independent and autonomous Poland" should read this splendid book.

SEVEN CENT MEALS

\$1.50 per week per person: 42 meals with recipes and directions for preparing each. 10c or FREE for names of two friends.

AM. SCHOOL HOME ECONOMICS, 519 W. 69th St., Chicago

GEORGE SCHOOL

A HOME SCHOOL IN THE COUNTRY
FOR BOYS AND GIRLS.

Careful supervision. Graduates succeed in college. Special courses. Athletics. 227 acres of woods and open country.

A Quaker school which teaches the high patriotism of good citizenship, the danger of militarism, the virtue of the democratic ideal of peaceful progress by law and order.

GEORGE A. WALTON, Principal
Box 293 GEORGE SCHOOL, PA.

JOTTINGS

PRIZES amounting to \$100 are offered by the Women's Welfare League of Minneapolis for the best home playground fitted up this summer by school children.

THE New York City Consumers' League is the publisher of a new bulletin, Campaigning Against Industrial Evils, to appear every once in a while and give publicity to the efforts of the league to improve conditions of labor. The first number is devoted to the necessity of maintaining industrial standards during wartime.

CLASS work in French conversation for the soldiers in the army encampments of Massachusetts is to be provided by the Department of University Extension of the State Board of Education. Men transferred to posts outside of Massachusetts before completing the course may continue it by correspondence. *L'Opinion Publique*, a French newspaper of Worcester, has offered the services of its editorial staff as teachers.

SINCE the announcement in the SURVEY for June 30 that arrangements to coordinate a nursing course with the regular academic schedule were under way at Presbyterian Hospital, New York city, word has come that more than twenty-eight institutions have agreed to attempt such a correlation. A school of nursing has been opened at Leland Stanford University—the fourth school of nursing in affiliation with a university.

KANSAS CITY may rejoice that the man who put its Board of Public Welfare "on the map" so far as the rest of the country is concerned—L. A. Halbert—is to remain as the board's general superintendent and will not accept the offer from another state which it was generally understood would take him east. He will take a leading part in the entertainment of the National Conference of Social Work at Kansas City next spring.

HAVING as its chief purpose "to give legal aid and advice through attorneys and committees of citizens in all parts of the United States to persons whose rights are invaded under pressure of war," a national Civil Liberties Bureau has been organized under a sub-committee of the American Union against Militarism in New York city. L. Hollingsworth Wood is chairman and Roger N. Baldwin executive. Attorneys who have agreed to act as volunteer counsel for the bureau are announced by name for New York, Boston, Buffalo, Camden, N. J., Canton, O., Chicago, Dayton, Detroit, Evansville, Indianapolis, Kansas City, Madison, Minneapolis, Oakland, Pittsburgh, San Francisco, Seattle, Terre Haute and Toledo.

SWEDISH women ran special candidates during the recent town council elections in Stockholm. The Conservative party, numerically the strongest, returned two women members, Gertrude Tornell, an active member of the board of the Stockholm suffrage society, and Laura Netzell, an anti-suffragist, who is an expert in poor law matters. Women members of the Liberal party returned Emilia Broome, who, as a former member of the town council, was active in starting municipal technical schools, building workmen's houses and demanding better wages for women clerks. Anna Lindhagen,

the candidate of the Socialist party who was defeated, was one of the Swedish delegation at the International Congress of Women at The Hague.

TWO YEARS ago the Boston City Hospital opened its doors to a social service department under the direction of Gertrude L. Farmer backed by a voluntary committee. While this committee has had the friendly support of the trustees and medical staff of the hospital; it has not had support from the hospital funds nor been officially a part of its organization. As in many other hospitals throughout the country, social service entered as a guest, but became a member of the family. This has now taken place at the Boston City Hospital, for an appropriation has been made by the city government sufficient to employ five social workers and these are now starting work. The voluntary committee continues, so that the department is supported partly by private and partly by public funds.

NEWSPAPER stories about the devotion of Irish priests at the British war front coincide with the appearance of the Catholic Social Year Book for 1917, which brings accounts of British Catholic war work among the civil population. Schools for mothers, thrift, temperance, the defective child, agricultural organization, educational improvement and citizenship are among the subjects dealt with. The Catholic Social Guild last year held its annual conference at Oxford, where such subjects as care for soldiers' children, training in citizenship and soldiers' clubs were discussed.

THREE years ago nine woman's organizations in Philadelphia—the Equal Franchise Society, the Women's League for Good Government, the New Century, the Philomusian Club, the Civic Club, the College Club, the Home and School League, the Agnes Irwin Alumnae, and the Jewish Council of Women, Philadelphia section—founded the Monday Conference for the open discussion of public questions. Membership has now grown from nine organizations to eighty, and 380 individual members. It is an important and large body of women keeping in constant touch with questions of social concern. The first ten minutes of each meeting, Monday afternoon throughout the months of January, February, March and April, is given to a quick review by the chairman of the most important legislation, city, state and national, for the past week, and a program follows on some particular phase of government or reform. The first year's program treated merely of legislative subjects, the idea of the founders being to keep women informed of bills concerning educational and political change. The second year the conference grew rapidly in membership and began the study of city administration, prisons, and industrial disturbance. The third season of the conference recently closed with a series of meetings devoted to "home problems in war time," under the cooperation of the Wharton School of Commerce and Finance and the Pennsylvania Rural Progress Association. The Woman on the Farm, Vocational Schools in Rural Communities, a State System of Marketing, the National Food Supply and Increasing Food Production were some of the subjects. No resolutions were passed and no public action is taken by the conference as an organized body, though speakers are free to ask for cooperation of the membership as clubs or as individuals. Mrs. Frank Miles Day is chairman of the conference committee, and Mary A. Burnham, Mary Ingham, Fannie Cochran, Dr. Florence Kraker, and Mrs. Thomas Raeburn White are among its members.

FOREIGN SERVICE DEPARTMENT

IN January the SURVEY called to this new desk Bruno Lasker, recently on the staff of the Mayor's Committee on Unemployment of New York, and previously associated for nine years in social investigations with the English economist and social reformer, B. Seebohm Rowntree.

Mr. Lasker brings to his task unusual technical equipment and acquaintance with men and measures abroad. Born in Germany, he went to England as a young man and was engaged for several years with Mr. Rowntree in his studies of unemployment, poor law reform and social insurance, of land and labor in Belgium, of housing and city planning in England and Germany, and of continuation schools in Germany and Switzerland. He was one of the principal investigators, both in England and on the continent, in connection with Mr. Lloyd George's "land enquiry." Mr. Lasker speaks three languages and reads more and has been identified with the Jewish and Quaker groups, perhaps the most internationally-minded among all peoples.

THE general endeavor of the new department is to aid in the discussion of American social problems by bringing together the results of current foreign experience and the judgments of foreign workers engaged in solving similar problems. More particularly, it will keep socially minded Americans abreast of legislative and administrative measures worked out under pressure of war which may be suggestive in our own development during and after the war.

It will exhibit the work of relief and reconstruction in Europe in its social and practical aspects, so as to provide American generosity with a background of first hand information.

It will interpret the social and constructive aspects of those tidal social movements abroad which, like the Russian Revolution, profoundly affect and influence the forces everywhere which make for progress and democracy.

It will follow those aspects of international negotiation and settlement which have to do with the safeguarding not only of the weaker nations, but of the weaker peoples within the strong nations in their culture, their welfare, and their liberties.

It will interpret the life, labor, aspiration and outlook of the various immigrant groups which enter into the American composition.

YOUR COOPERATION INVITED

THERE is a growing body of social workers who feel that at a time of world changes, affecting every phase of our life and labor, American social movements are challenged to think in broader terms; to see to it that, in the formative years ahead, the social values we have struggled for in American life shall be projected along with our trade expansion or our participation in international policy.

Among all these, this new department of the SURVEY should find friends. The editors are eager for cooperation not merely from present readers but from internationally and socially minded men and women everywhere. Correspondence, reports, monographs, first-hand information and interpretation of conditions and experience are invited.

LIVINGSTON FARRAND

JAMES ALEXANDER MILLER, M.D.

HOMER FOLKS

On the Tb. Firing Line in France

THE International Health Board of the Rockefeller Foundation announces the completion of its preliminary arrangements for the Commission for the Prevention of Tuberculosis in France. The commission will be headed by Dr. Livingston Farrand, president of the University of Colorado and for ten years the organizer and executive secretary of the National Association for the Study and Prevention of Tuberculosis. As associate directors, Dr. Farrand will be accompanied by Dr. James Alexander Miller, of New York; Homer Folks, of New York, and Professor Selskar M. Gunn, of Boston. Herman G. Place is secretary to the director.

Dr. Miller, who will take charge of those phases of the work relating to medical relief, is professor of clinical medicine in Columbia University, director of tuberculosis work of Bellevue Hospital and president of the Association of Tuberculosis Clinics in New York city. He is recognized as standing in the front rank of his profession in the field of tuberculosis.

Homer Folks is the secretary of the New York State Charities Aid Association and has, for many years, been prominent in modern health legislation and its application. He is a member of the Public Health Council of New York state and a former presi-

dent of the National Association for the Study and Prevention of Tuberculosis, as well as of the National Conference of Social Work. In addition to his connection with the commission, Mr. Folks will take charge of the tuberculosis relief work of the American Red Cross in France and thus assure complete cooperation in attacking this problem.

Selskar M. Gunn holds a professorship in the Massachusetts Institute of Technology, is the secretary of the American Public Health Association, and editor of the *American Journal of Public Health*. He has

had long experience in public health administration and in the working out of the new health laws of Massachusetts. His work in France will be specifically to take charge of the educational campaign which the commission proposes to inaugurate.

The high death-rate of France from tuberculosis even in normal times, plus the terrible increase of this disease since the outbreak of war (see the SURVEY, May 5) makes such prompt action of greatest importance. It is reported that fully 150,000 soldiers have been discharged because of tuberculosis; refugees and returned prisoners are breaking down from the same cause. The estimate of 500,000 cases is considered conservative.

SELSKAR M. GUNN

New Business Executives for the Red Cross

TWO new appointments in the American Red Cross have been announced within the past fortnight by Henry P. Davison, chairman of the Red Cross War Council. John D. Ryan, president of the Anaconda Copper Company, succeeds as director-general of military relief Col. Jefferson H. Kean, who is to command the ambulance sections in France. Harvey D. Gibson, president of the Liberty National Bank of New York city, has been named for a new post, that of general manager, made necessary by the pressure of work upon the acting chairman, Eliot Wadsworth. Mr. Gibson has been chairman of the ex-

ecutive committee of the New York county chapter of the Red Cross, and he was head of the committee that went to Europe on the cruiser *Tennessee* to distribute gold to marooned Americans.

As general manager he will be, in effect, an operating field head of the Red Cross, under the acting chairman, for the whole country. He will direct the work of the chapters and it will be his purpose, said Mr. Davison, "to consolidate a great many departments and bureaus which up to this time have been functioning independently and are now to be brought into cooperation and directed toward a definite end."

Zones of Safety

Texas Cantonment Cities Made Safe for Health and Decency

NOT two months ago a man widely experienced in vice conditions in the United States was asked if there were any open red-light districts worse than the one in El Paso.

"Yes," he answered, "there is one. It is in San Antonio."

The letter of Secretary of War Baker warning these Texas cities that they must clean up their moral conditions if they expected to retain troops in their vicinities or to be selected as cantonment sites has acted on local public opinion, to quote one correspondent, "like the wind which sometimes blows the smoke from off a battlefield. It did not create sentiment so much as it uncovered it."

While even a few weeks ago a doctor who pleaded with the county medical society of San Antonio for their support in the elimination of the vice districts met with indifference and even ridicule, the sentiment in favor of such action crystallized into a movement of surprising strength as soon as it became clear that the war department meant what it said.

Three days after the ultimatum was delivered, scarcely a vestige of the old life remained in San Antonio. The windows of the houses of prostitution were boarded up; the segregated district was closed; the neighboring saloons went out of business. In April and May expectation of a large military camp had attracted to this city the worst elements from every part of the state. On April 19, when Fort Worth cleaned up, three car loads of undesirables came to San Antonio. No less than a thousand prostitutes were licensed and permitted to ply their trade both inside and outside the district. An investigator computed that the total number of prostitutes in the city, including those without registration card from the physicians of the health department, was possibly four or five times as great. During the encampments on the border the prevalence of venereal diseases among the troops stationed at San Antonio was greater than at any other camp or army post. Not many weeks ago, from one to two hundred prostitutes were concentrated for treatment at the Poor Farm in tents of Fort Sam Houston.

Here, as at El Paso, the change of heart was largely due to the keen desire to retain the troops and to be selected for cantonment sites. As one citizen expressed it: "Our citizens must choose immediately between the big business of

these women and their exploiters and the big business of 50,000 soldiers. Whom will they serve?" But there has also been a real change of heart on the part of many prominent business men who had previously been inclined to favor the retention of a segregated district. Raymond Fosdick had investigated vice conditions surrounding the soldiers and reported his findings to the secretary of war; M. J. Exner, in the April number of *Social Hygiene*, had published the results of his six weeks' studies on the border; Dr. Coulton had sent his story to the Bureau of Social Hygiene of the Rockefeller Foundation after a week's inquiry in San Antonio—the whole country had become aroused to the danger of these conditions to any large body of young men which might be quartered in their vicinity. It was only natural that so general a condemnation should stimulate to action the best forces in the state itself.

The editor of the *El Paso Herald*, a newspaper which had hitherto acquiesced in the policy of segregation, came out in a strong editorial for the enforcement of the law and urged "that as the segregated area had been established for forty years and had proven a failure, the city give the policy of non-segregation a trial of forty years before deciding against it." So the red-light district was given four days' time to close up, and on Saturday, June 9, the policy went into force and caused every crib and house to be vacated. None of them have been used since for immoral purposes. Already four of the houses have been rented, and "for rent" signs are on dozens of others. Houses which brought \$20 per week when used for immoral purposes are now rented for \$10 a month.

The chief of police at El Paso who, according to one correspondent, has always been opposed to the policy of segregation which he was obliged to administer, entered the new policy with enthusiasm and is working hard with his force to clean up apartment houses, hotels and other places which have been used for immoral purposes. He estimates that three-fourths of the professional prostitutes left the city with the closing of the district and that over half of the remainder have left since.

In the meantime a vigorous promotion of constructive action has been inaugurated in both cities. In El Paso the citizens have taken up the question of providing recreation fa-

cilities and places of amusement for the soldiers. A representative committee of men and women has been appointed by the chamber of commerce and is known as the Soldiers' Welfare Committee. A large public building is being opened to provide indoor amusements, reading and games. The largest park in the city has been made available for all kinds of outdoor sports. Free courses in French are being provided for any soldier who desires to study that language. C. C. North, of the National Playground Association, is cooperating with the local leaders in planning recreational facilities for the soldiers.

In San Antonio, a committee of citizens has organized in thirteen sub-committees: legal, commercial amusements, fraternal, special entertainments, city recreation, home department, religious, refreshments, welfare, civic and social, finance, education and library. The city is rich in scenes of historical interest and natural beauty which the soldiers will be glad to visit. It is rich also in commercial amusement enterprises; and this fact, with proper organization, is proving a great advantage rather than a hindrance to the provision of a varied and innocent program of recreation. Motion-picture theatres, first-class poolrooms, a skating rink, seven sight-seeing cars and other attractions are brought into requisition together with the municipal park system, golf links, tennis courts, baseball diamonds and bathing beach, and with many clubs of various kinds, singing and musical societies, band concerts and dances, the last named organized by the Y. M. C. A. and the Y. W. C. A. A room with six thousand feet of floor space is being fitted up as a "khaki club." A number of saloon keepers are transforming their premises into eating places where soft drinks will be served. The Catholic Women's Association has tendered the use of its pavilion and grounds where dances, moving pictures and musical programs are offered the soldiers.

General James Parker, commanding the southern department, has issued orders to every commander of the department to cooperate with the various committees empowered to work out the recreational features. The 55,000 soldiers in the department have been registered by a card system recording the preferences of each soldier in the way of recreation and amusement and whether he belongs to any church, society, lodge, fraternity or association. One feature which here as in other camps has been introduced with great success and universal appreciation is the so-called triangle scheme of communication between a mother in a distant state and her son in the army through another mother in the town or community where the soldier is stationed.

At a meeting of the San Antonio War Recreation Committee, a report was made of a canvass of Fort Sam Houston and Camp Wilson. It was found that 98 per cent of the soldiers voted that the closing of the segregated district was the best thing that could happen and that they were in favor of the enforcement of the law. Eighty-three per cent of the soldiers when asked, by another canvass, what sort of recreation they preferred when they went to town said "a good show and something good to eat."

The support which Texas is giving to the secretary of war and his commission on training camp activities is typical of similar activity in other states. The governor of California has written a letter to every health officer and chief of police urging complete enforcement of the injunction and abatement law, a vigorous pronouncement which is meeting with response. Key West in Florida closed up its segregated district in June. The legislature of Louisiana has before it a bill for a red-light injunction and abatement law which is likely soon to be passed into law.

Secretary of the Navy Daniels, on June 20, authorized a

statement concerning immoral conditions in the city of Newport, R. I., which he branded as dangerous to the health and morals of the young men gathered there in the great naval training station and the encampment of the naval reserve. In reply to a previous unpublished complaint by the secretary, the governor sent in a report from the mayor of Newport representing that there was no unusual degree of immorality in that city and generally minimizing the situation. A first-hand investigation by the navy department with the assistance of the department of justice revealed details even worse than those given in the complaints upon which it had acted in the first instance, and the governor was furnished with a list of some of the most notorious houses of prostitution and open gambling houses, also with details concerning the extent and methods of illegal sale of liquor to sailors and recruits. The controversy between the federal department on the one side and state and city on the other is not yet closed; in the meantime, the navy has stationed guards outside the worst vice resorts, thus effectively preventing their use by its own men.

Near the navy yard at Brooklyn, N. Y., and at other stations, steps also have been taken to protect the sailors and naval recruits from the lure of vice resorts. Illicit sale of drink, in most cases, is the most prevalent evil to be eradicated. But there has also been a considerable increase in non-commercialized vice which the police authorities are doing their best to suppress.

This is an aspect of the problem which the country is only beginning to realize in its full seriousness. The attraction of the uniform for young girls, the heroic part in which they cast the young fellows about to go across the ocean to defend the country, already have been the cause of many a downfall. The difficulty is that this tendency shows itself not only near the large encampments where it can be provided against by rational opportunities for soldiers to meet the young women of the community, but everywhere where men disport themselves in the admired khaki. Mrs. Elmer Blair, chairman of the General Federation of Women's Clubs, in a letter to the presidents of the state federations, says:

Very soon thousands of our young men will be passing through cities and towns en route to the training camps. In some they will remain a few hours; in others perhaps days. This will happen from the time they are first armed to the end of their term of military service. They will be more or less at liberty in such places. Provision should be made for their welfare and that of the communities they must thus visit. If left to their own devices, the situation is likely to breed vicious conditions, especially in connection with the sale of intoxicants, prostitution (professional and clandestine, particularly the latter), and consequent infection with venereal diseases.

She suggests the formation of state committees to map out ways and means of meeting and overcoming this evil. Such a committee would get to know the stop-off places and confer with its correspondents in these localities, urging the formation of local committees to see to it that soldiers on leave are afforded wholesome hospitality, provided with legitimate attractions and, in general, treated as guests and friends.

"The terrific pull-down of the military camp, as of all similar male group life, cannot easily be exaggerated," says Dr. Hilton Howell Railey in a remarkable series of articles just commenced in the *New York Evening Post*. "When large, heterogeneous bodies of men live under conditions of enforced intimacy as in an army mobilization, an unnatural state exists. There is a psychological tendency of leveling down to the lower element, a factor which greatly increases the moral strain on the recruit. . . . Now that war has removed the barriers of publicity and quickened the question in the public mind, the fight is on for a telling victory before American boys are transported to European battlefields."

THE LATEST HOLD-UP.

A cartoon sent broadcast by one of the publicity bureaus of the liquor interests.

THIS is war time and the great need is united effort. Thinking apart instead of together on burning issues spells weakness. This weakness is what we have seen in the fight on prohibition in the United States Senate, a house divided against itself—so divided that the President, to hasten the passage of the necessary food bill, asked the Anti-Saloon League to retire. They did retire, but the Drys in the Senate refused to retire, and a long and bitter contest seems the process over prohibition.

At such a time it behooves us to see how each part of the country thinks—because the plain fact is that the South and Far West see it all so differently from the East.

The following telegram sent by Senator Vardaman to the Dry leaders in Mississippi gives the Southern note.

The good old ship Prohibition, heavily loaded with the hopes of millions of consecrated women and men for nation-wide prohibition, sailing with fair winds and good prospects to the port of victory, was submarined day before yesterday by the President of the United States beneath about forty fathoms of beer and wine with one whole side knocked out. I am afraid some of the officers of the crew deserted before it went down. Will do my best to save the wreck, but it is my deliberate judgment that no power on earth except the people can raise it.

Capper's Weekly (Kansas), a paper that goes to 250,000 farmers, takes the same ominous note:

The President's intervention to save the brewers and let them continue to waste food grains comes jarringly just before Patriotic Sunday on which pastors were urged to ask all good women to register as food conservers.

The governor, we read, immediately wired Kansas congressmen that Kansas still demanded a bone-dry war.

The defeat is all the harder to bear to the mind of the South and West because even after the intervention of the President complete prohibition was lost only by eight votes. They believe that, up to the time that the President interfered, the Drys predominated.

Quite different is the attitude of the *New Republic* (not of Westerville but of New York). The President did a brave act. Seeing a long wrangle ahead, he took it upon himself to unharness the horse, prohibition, and thus he hoped to expedite the food bill. For the most part, the eastern press agrees. Prohibition is delaying the food bill and it is an outrage committed by a few men, for that is what the *Boston Transcript* calls the drys in the Senate and their vast constituencies in the South and the West, "a few men."

Now here are two great eastern fallacies that, for the sake of united thinking in war time, ought to be erased. The war prohibitionists are not "a few men," they are for the most

part representative of the South, the far West, parts of the middle West and East. Again it was not the wish of the prohibitionists that war prohibition should be a rider or amendment to a food bill. This policy was forced upon them by the very people now blaming them for using an amendment. The eastern press forgets that at the beginning of this war session, the southern and western Democrats in caucus voted to put war prohibition in their program. But the Tammany and Massachusetts Democrats threatened such dire reprisals if this policy were adhered to that the Democrats rescinded their action and promised not to vote for prohibition unless the President recommended it. This, of course, he did not do.

When the papers of New England and New York shriek aloud as they do every day because prohibition is on the food bill, they should give a louder shriek at Tammany and Massachusetts for forcing the bill to be a rider. If the shriek were loud and continuous enough, Tammany and Massachusetts might be forced to take back the promise they forced from the South and West, and we could have a straight war prohibition bill fought out on its merits after other pressing measures were out of the way.

So we bid fair to get a measure that, while it conserves the 39,000,000 bushels of grain going into distilled liquor, does not conserve the 68,000,000 bushels going into malt liquors; moreover, we seem likely to get a measure that does not do the one thing that really reduces wreckage from drink, namely, close the saloons. These will run precisely the same, selling not only beer and wine, but distilled liquor as long as the supply in stock lasts, and it seems probable it would last for many months. Of course the House may hold out for a more drastic measure, but it looks now like a "separate peace for wine and beer" and whiskey to burn, too.

The chief opposition to war prohibition comes from the East—from Illinois, Massachusetts, New York, Pennsylvania. The East is a business world, the kingpin men have the habit of mind of putting business first and general welfare second. Breweries are business; saloons are real estate, banks are lenders, and prohibition means business change.

But if the East did some thinking—and some studying—it would see that in the West business has been better, not worse, with the closing of the saloons. Breweries have not gone into bankruptcy, but have quickly adapted their plants to new and more productive industries. Money released from liquor has increased buying in other directions; hence new business has quickly absorbed the vacated saloons, and as for the working man revolting because his beer is taken away the fact is he comes out for prohibition. This is true of the labor federations of Washington and Colorado. And we read that the Alabama Federation endorsed war prohibition. Nothing holds the working man to the liquor business but fear that his brother, the bartender, may not get a new job. Assure him of that, and he'll vote for prohibition with a will.

Proof is on the side of the West which has prohibition; the sound political economy is there as well as the practical trial of prohibition. Union now means bringing those facts East as soon as possible. What the West and South want, they get (witness Wilson as President). But if we force them to get their present wish, "a dry war," only with a great struggle, we shall weaken our national front.

UNIVERSAL SERVICE AND THE CONSCIENTIOUS OBJECTOR

THE conscientious objector presents a social problem. From one aspect it is of course merely the one presented by any lawbreaker, but there is no more serious social problem than to discover appropriate penalties for lawbreakers of various kinds and educational methods for bringing potential offenders under social control before the irrevocable act has been committed. In another sense also the conscientious objector presents a social rather than an individual problem. He is a phenomenon of a transitional stage. There is no such thing in a nation which has long had universal compulsory military service, and, of course, there is no possibility of such an offense under a system of voluntary or mercenary armies. The conscientious objector appears when a nation, for what it deems adequate reasons, changes from a voluntary to a compulsory system, from an army of paid enlisted soldiers to an army recruited by conscription or selective draft.

Universal military service has an honorable history. In the old Roman Republic military service was a right, a privilege, as well as a duty of the Roman citizen. Under the Empire this service fell into decay. In medieval times the lord and his vassal may have been proud to perform their military obligations, but there was nothing that could be considered a citizen soldiery. The French Revolution from necessity and from an outburst of ardent patriotism rediscovered and applied the principle of universal military service, but later on the practice, if not the theory, fell into disuse. The modern German system owes its origin to the limitation which Napoleon imposed on Prussia's army after Jena in 1806. The army was kept within the stipulated size, but by systematically discharging men as soon as trained and filling their places it soon became the nursery of universal military training. The Swiss Federal Constitution of 1848 declared unequivocally that "every Swiss is bound to do military service, and upon this corner stone the thoroughly representative, economic and adequate military system of Switzerland has been built.

Historically, universal service has been associated with democratic ideals and institutions, as hireling armies have been associated with monarchy, and as a pseudo-universal system which countenances paid substitutes has been associated with aristocracy—or, more accurately, with plutocracy. It is not political theory, however, which has as a matter of fact determined acceptance of conscription. Nor is it considerations of abstract justice or of educational results, though both are urged in justification after the fact. Military necessity is the explanation—the necessity for larger armies than can be secured on any other basis. An orator in the debate on the famous French bill of 1798 expressed it when he declared that the armies of the revolution had no lack of zeal, or of devotion, or of bravery; "what they lack is soldiers."

The United States has decided, as every European country, including at last England, has decided, and as Canada, after a bitter contest, has virtually decided, that there is no other successful method of carrying on modern warfare except on a basis of universal military obligation. The selective draft does not require all to fight, but it does accept the principle of universal military obligation. Having accepted this principle, the nation cannot, of course, allow the exercise of private judgment as to obedience to the national will.

The nation may, however, allow alternative service with great liberality, recognizing that many occupations are of

SOCIAL FORCE

national importance comparable to that of military service itself. Quakers and Seventh-day Adventists may claim exemption under a special clause, but exemption boards are authorized to grant exemption on many grounds, not to classes, but to individuals, and they may appropriately recognize a preference for certain forms of service based upon conscientious scruples, as well as one based upon previous occupation or special skill.

The loyal citizen who responds with alacrity to the call of the nation is not necessarily the one who first and most eagerly seizes the opportunity to enlist in the army. He is rather the one who, with alacrity and hearty good will, accepts the decision of the nation as expressed by the constituted authorities as to where and how he shall serve the nation.

It is sound national policy not to create unnecessary dissatisfaction or to make any number of people feel that they have just grievances. The real slacker, the real traitor or seditious conspirator, are, of course, to be dealt with like other criminals, according to the gravity of their offense and the most effective means of social defense. The problem will be to avoid increasing their apparent number artificially by adding, through arbitrary and unnecessary severity in the interpretation of the laws and the regulations, those who are really patriotic, law-abiding and loyal citizens, but who, whether they derive their sentiments and their convictions from the teachings of Quakers or from the teachings of socialists or from their own inner consciousness, are averse to engaging in military operations. There is no reason to impute any superior morality or extraordinary depth of principle to such conscientious objectors. They will probably be of all degrees of intellectual ability and moral character. They will probably not have more than their proportion of those who in any proper sense possess the international mind or who have the power to participate in the reconstruction of society after the present crisis has passed. There will doubtless be some saints and certainly some sinners among their number. The social problem will be to give them no just grievance, to protect them in their rights, to give them a suitable opportunity for such national service as they can render, to exact from them a full share of the national burden, to avoid both coddling them and persecuting them.

The nonconformist has his honorable place in social progress. As a critic of existing institutions, as a prophet of better things, as a bold experimenter, as a dreamer of dreams, a seer of visions, as an inventor and builder, even as an iconoclastic destroyer, the nonconformist may be one to whom society is in debt beyond calculation. But extreme variations from type are not only biologically, but also from the point of view of economic and social advantage, subject to limitations. Society cannot tolerate the superman who is an exploiter, and society has always to try to redeem or to eliminate the parasitic dependent and the criminal. The conscientious objector belongs, for the most part, among no such extremes. Mild measures conceived in reasonableness and good will should prevent his becoming a serious annoyance. Like other citizens he owes allegiance to the nation, and it is incumbent on the nation to make that allegiance attractive, whatever sacrifice it may involve; or, in the case of the few

in WAR TIME

By Edward T. Devine

who fail utterly in their allegiance, to limit their power for harm by depriving them of every genuine claim of unjust treatment.

THE BISBEE DEPORTATIONS

THE I. W. W., the non-conformist of industry, has suddenly thrust a similar problem on certain western communities and indirectly on the state governments and the federal government. Of the obnoxious features of this organization—refusal to consider any trade agreements as binding, injuring machinery and tools to embarrass the employer, and the declaration of a general strike on every favorable occasion regardless of specific grievances, but with great regard to the degree of embarrassment and injury which will result to employers and to the public—it is the third, the fomenting of strikes simply as strategy in a continuing industrial war, that is of particular importance in a time when the nation is actually at war.

It is this policy, this myth, as their French prophet, George Sorel, called it, of the general strike, that plays into the hands of the enemy whether by direct conspiracy or simply by the general harmony of interests. German money may or may not be supplied to the leaders of this movement. Probably German money is now rather scarce, and probably representative I. W. W. leaders would scorn financial inducements to promote a cause for which they have been ready enough to suffer martyrdom. Nevertheless the fact is plain that agitation to stop mining, mill work, railways or above all farm work—not because particular men have a grievance or a dispute with employers, but for the very sake of crippling industry and bringing confusion and disaster to the nation—is of very great assistance to the enemy and may be an even more serious offense than a refusal to bear arms or agitation against conscription.

Society has a right to protect itself by lawful means against this danger. If the existing laws are not adequate, probably emergency legislation conferring extraordinary powers on federal executives could readily be secured. In the present temper of public opinion no demonstrable danger of this kind is likely to be left unguarded.

The sheriff and citizens of Bisbee, Arizona, have taken another and the wrong course. They have summarily sent out of their town and out of the state hundreds of strikers and their sympathizers, some of whom are said to own houses in Bisbee, some to have been investors in liberty bonds, some well known and reputable citizens. The condemnation of their methods, however, does not rest on these exceptional victims. The deportation, without a hearing or any process of law, of a single striker, or of a single strike-breaker, would equally raise the whole question of law and order. The negroes of East St. Louis and the miners of Bisbee are entitled equally with all other citizens to protection in their lives, their liberties and their civil rights. Inasmuch as the state militia has been called into the federal service, and few of the states have as yet, like Pennsylvania, a constabulary fit to cope with such disturbances, the obligation is obviously on the federal authorities to do what is necessary and insure such protection. Behind this immediate and obvious obligation lies the more

difficult task of stamping out the spirit of violence, and creating a society in which no one shall feel justified in appealing to it for the redress of grievances.

THE ALLIANCE AGAINST TUBERCULOSIS

THE American Red Cross and the Rockefeller Foundation have joined hands in responding to the appeal from France for help in saving the war-scarred remnant of the population from the ravages of tuberculosis. France is a heroic nation, but she is not an empire like Britain, or a rapidly increasing people like Germany or Russia, or one which is attracting immigration like Canada or the United States. Her deaths from battle and from disease will be net losses, to be recovered at best gradually, even under favorable conditions.

A beautiful volume has recently appeared from the press of the society for American Fellowships in French universities, which is intended to be an act of homage to French science, a just tribute eagerly paid to the scholars of France from their American colleagues. The editor of the volume refers to the great place of France in the world of knowledge—the place that she always has held and always will hold. If France is to hold her place, not only in science but in diplomacy, in civilization and in material prosperity, the drain upon her population must speedily be relieved.

Before the war her death-rate from tuberculosis was relatively high and the movement for the prevention of this most fatal of diseases had made less headway than in other leading nations. The war came upon her people with an overwhelming rush—stopped at the Marne, but only by summoning instantly her whole available military strength. There was less than the normal time for the physical examination of recruits. Incipient consumptives are proverbially sanguine, ambitious, unwilling to reveal their condition, frequently unaware of it. They flocked to the colors by the tens of thousands; but they quickly succumbed to the irregularities and hardships of trench life. They infected their comrades, and on their discharge they became foci of a more general infection. All this occurred in other countries also. Canadian training camps have sent many patients to tuberculosis hospitals and sanatoria instead of to France. Hospital trains swing to and fro in Sweden every month carrying moribund consumptives from prison camps in Germany and Russia who are to be allowed to die at home.

But in France and Belgium the conditions have made the danger very serious and justify the extraordinary efforts which are now at last being made, in cooperation with the French civil and military authorities, to check the disease. To Dr. Livingston Farrand, Dr. S. M. Gunn, Dr. James Alexander Miller, Homer Folks and their associates both in the Red Cross and in the Foundation, all physicians and sanitarians, all social workers and public-spirited citizens—all those who love France and those who have faith in American health measures, will bid a god speed and a fervent wish that the seed they sow may bear fruit a hundredfold.

THE editor of this department will welcome questions from readers, and suggestions as to topics which they would like to see discussed in these pages. Information from all parts of the country about conditions due to the war, and consequent developments in social work, will also be appreciated.

COMMON WELFARE

PLANNING FOR PEACE DURING WAR TIME

THE British Reconstruction Committee, originally appointed by Mr. Asquith, was reorganized by the present government in March when Premier Lloyd George himself assumed the chairmanship and, among others representative of different phases of the country's social and industrial life, appointed such well-known reformers as Prof. W. G. S. Adams, B. Seebohm Rowntree, R. R. Clynes, M. P., Mrs. Sidney Webb, and Dr. Marion Phillips.

The appointment, on July 17, of Dr. Christopher Addison, a man of wide social sympathies and great administrative ability, as Minister of Reconstruction promises well for the success of the committee's operations.

In June the executive committee of the Labor Party presented to the prime minister resolutions approved at the Manchester annual conference dealing with demobilization, restoration of trade union conditions, maintenance of the standard of life, legal minimum wage, franchise reforms and other topics. In his reply, Mr. Lloyd George welcomed the various suggestions made and urged an immediate, thoughtful consideration by all the classes affected of the problems which will have to be faced when the war is over, whether that event be soon or remote. He said:

There is no doubt that the present war presents an opportunity for the reconstruction of the industrial and economic conditions of this country such as has never been presented in the life of the world. The whole state of society is more or less molten, and you can stamp upon that molten mass almost anything, so long as you do so with firmness and determination.

There is no time to lose. I firmly believe that what is known as the after-the-war settlement is the settlement that will direct the destinies of all classes for some generations to come. The country will be prepared for bigger things immediately after the war than it will be when it begins to resume the normal clash of selfish interests. I believe the country will be in a more enthusiastic mood, in a more exalted mood, for the time being—in a greater mood for doing things; and unless the opportunity is seized immediately after the war, I believe it will pass away, far beyond either your ken or mine

and, perhaps, beyond our children's. . . .

I am not afraid of the audacity of these proposals. I believe the settlement after the war will succeed in proportion to its audacity. The readier we are to cut away from the past, the better are we likely to succeed. I hope that every class will not be hankering back to pre-war conditions. . . . Think out new ways of dealing with old problems. Don't always be thinking of getting back to where you were before the war; get a really new world.

While electoral reforms are already being shaped by Parliament, the new reconstruction committee has created a number of sub-committees which will report on demobilization, trade union regulations, minimum wage legislation, nationalization of railways, women in industry, taxation and other vital factors in safeguarding the coming peace against disruption in the national life, in combating poverty and in stimulating a healthy industrial progress.

In the meantime, various government departments also are laying elaborate plans, and in some cases are making actual preparations, for meeting the social problems which will arise at the end of the war. Lord Rhondda, president of the Local Government Board, recently received a deputation of the National Housing and Town Planning Council, representing many city, county and rural district councils, which urged that local authorities should be required immediately to meet the shortage of small houses which will arise when the army is demobilized. They proposed a system of grants in aid sufficient to bring the cost of single-family houses down to

the prices at which they could have been built before the war and advocated the concentration of future municipal housing enterprise on model suburbs with ample garden room for each house.

Harold Shawcross, chairman of the council, estimated that to overtake the lack of building during the war and to enable the abolition of slums, it would be necessary to build about 160,000 houses a year for ten years. Hayes Fisher, parliamentary secretary of the board, estimated that the immediate shortage of houses was approximately half a million. He advocated a free grant of money towards the building of houses in addition to the facilities already enjoyed by municipalities for borrowing up to 90 per cent of the capital required from the treasury at the lowest possible rate of interest.

Mr. Munro, secretary for Scotland, intimated that the Housing Committee of the Royal Commission in Scotland also had under consideration far-reaching schemes for increasing the supply of workmen's houses.

TWENTY YEARS' PROGRESS OF JEWISH NATIONALITY

RECENT elections for the American-Jewish Congress to be held in November have shown a large majority in favor of Zionism. Opposition to establishing in Palestine a Jewish state has dwindled as during the three years of war Jews, patriotically shouldering the burdens of their various countries, have found themselves confronting each other across every battle line. Thus the nationalist sentiment was bound to be strengthened even among those who previously were rather inclined to doubt the wisdom of complicating the religious claims of Judaism with national aspirations. But the twentieth annual Zionist convention recently held at Baltimore showed that a Jewish nation, though not a Jewish state, is already in existence.

Its keynote, expressed in speeches by the president, Harry Friedenwald, by Justice Louis D. Brandeis, Horace M. Kallen, one of the leaders of the Zionist movement in the universities of America, Rabbi Stephen S. Wise and others, and

THE SURVEY

Published weekly by

SURVEY ASSOCIATES, INC.

112 East 19 street, New York.

Robert W. de Forest, president; Paul U. Kellogg, editor; Arthur P. Kellogg, secretary; Frank Tucker, treasurer. 10 cents a copy; \$3 a year; foreign postage \$1.50, Canadian 75 cents. Copyright, 1917, by Survey Associates, Inc.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

warmly applauded by the thousand or so delegates, and by the large attendance of Baltimore Jews at the general meetings, was the disparagement of any efforts to ask favors for a Jewish Palestine as for a charity, and emphasis on the view that the future of the Jewish state is a thing that must and can only be settled by the Jews themselves on the broadest basis of democracy. Judge Julian W. Mack, of Chicago, said in his address:

Palestine is not to be the haven of refuge for the oppressed; we do not want a commonwealth in Palestine merely in order to enable the poverty-stricken refugees to find another place toward which to flee. We want Palestine for the Jewish people because the Jews are a people and because every people if it wants to develop itself to its fullest capability and thus make its own contribution to the civilization of the world needs a homeland, and an ancestral homeland, for the continuation of its history, its traditions.

The convention did not discuss in detail the more difficult problems which must inevitably arise before a new state can be created in a land hallowed by so many and various religious traditions. The SURVEY has, however, been informed on good authority that the Zionist solution of the Jewish question has the sympathy of the Roman Catholic Church which will consider its interest in the government of the Holy Land satisfied by some arrangement which would convert the sacred precincts in and around Jerusalem into extra-territorial domains. Such an arrangement is entirely in keeping with the Zionist program.

The question of official support for the Zionist plan brought forth acute dissension at the convention of the United Synagogues of America held at New York on July 2. A resolution was adopted by a narrow majority recommending the election of a delegate to represent the organization at the Jewish congress and expressing "its faith in the fulfilment of our ancient Zionist hope and the early restoration of Palestine as the Jewish home land and as the means for the consummation of the religious ideals of Judaism." Cyrus Adler, re-elected the president the previous day, as a result resigned this office. His objection to the resolution was due to the belief that it would produce the impression that the Jews of the United States were organizing themselves into a nationalistic group.

Recent accounts of the treatment of the Jewish colonists in Palestine differ. While Ambassador Elkus cabled from his sick bed that some of them were exaggerated, reports have been received showing that orders for the evacuation of the principal Zionist colonies south of Jaffa had actually been put into operation, and that total evacuation was only prevented by timely outside inter-

vention. One point of significance is that, in spite of their apprehensions, none of the pioneer colonists have attempted to leave the country. They are holding on to their agricultural holdings and organizations with the confident expectation that when this war is over the persecution from which they now suffer and have suffered so long will end forever.

MORE OF THE MOONEY TRIALS

THE prosecution in the San Francisco bomb trials have at last put on the stand Martin Swanson, the private detective who played so prominent a part in working up the evidence against the defendants. In the SURVEY of July 7, the story was told of the allegation against Swanson, made by two of the defendants, that prior to the Preparedness Day explosion he had offered them each \$5,000 to furnish evidence that Thomas J. Mooney, another defendant, had destroyed with dynamite property belonging to the United Railroads. Although challenged by the attorneys for the defense to let Swanson take the stand to refute this testimony, the district attorney did not call him in either the Billings or the Mooney trials.

Near the close of their introduction of evidence in the trial of Mrs. Rena Mooney, however, the prosecuting attorneys called Swanson to the stand. On cross-examination he denied having offered money to induce either Billings or Weinberg to testify against Mooney. He admitted having had a conversation with Weinberg about the United Railroads dynamite explosion, but he declared that Weinberg began it.

The defense is now having its innings in the Rena Mooney case. The prosecution rested its case early in July without calling as a witness Oxman, the Oregon cattleman whose testimony is regarded as having been the determining factor in convicting Thomas J. Mooney, and who is about to be tried on the charge of subornation of perjury. Since Oxman is the only witness who has ever identified Mrs. Mooney as having been at the scene of the crime, his absence left an important link in the chain of evidence unforged.

New evidence introduced against Mrs. Mooney, that was not presented in the other trials, involve an alleged remark attributed to her when on the roof of the Eilers building, watching the parade, and the alleged purchase of a small quantity of niter. One witness testified that he heard Mrs. Mooney comment on the probable effect of a machine gun if it were directed at the marchers. This story is denied by others who were on the roof at the same time.

A stevedore named Samuels testified that some time prior to the date of the

Preparedness Parade, Mrs. Mooney came to the dock when he was helping to unload a ship and secured from him several pounds of niter, that having been a part of the ship's cargo. The prosecution contends that this was to be used in the making of an explosive in the Mooney apartment.

Samuels' value as a witness was somewhat lessened on cross-examination. He denied that anyone from either the district attorney's office or the police department had talked with him about the case. When it developed later that Assistant District Attorney Ferrari, who is conducting the Rena Mooney prosecution, and Samuels' own brother, who is a patrol-wagon driver, had called upon Samuels and discussed the case with him, he admitted that someone had called, but that he had failed to recognize either the attorney or his brother!

Judge Sewell, after much deliberation, has dealt the prosecution a severe blow by ruling out testimony introduced for the purpose of showing that a conspiracy to use violence against capital and against the government has existed since 1913, and that Mrs. Mooney was a party to the conspiracy. A similar line of testimony was ruled out in the Billings case. It was not offered during the trial of Thomas J. Mooney.

SOCIAL UNIT DISTRICT CHOOSES ITSELF

THE district in which the social unit plan is to be worked out in Cincinnati has selected itself. This plan, to which reference was made in the SURVEY for April 22, aims to develop, in a typical district of a typical city, a democratic organization of citizens to work out for themselves the meeting of their own social needs, with the democratically organized assistance of the respective professions skilled in solving the various problems met. It aims to consolidate, as rapidly as feasible, the various social services of this district; to meet in so far as possible the needs of all of the people, rather than of an indefinite percentage of them, for each of these services, and to place the control of the policies of the unit entirely in the hands of the local citizens, advised by the best skill of the neighborhood, of the city and of the nation.

The choice of Cincinnati as the city in which the idea is to be developed was based chiefly upon the eagerness shown by its citizens to have the plan come to their city and their readiness to work actively in it. Six months have been occupied in winning the understanding and the enthusiastic support of the various groups in the city whose cooperation was essential to success. Leading business men are now associated prominently with the organization; the labor unions have been won over and are officially represented; social agencies

have pledged their support even to the point of agreeing to give up their work in whatever district is chosen whenever the unit is ready to take it over; the medical profession has endorsed the plan through the Academy of Medicine and through local medical organizations; prominent Catholics, Protestants and Jews are associated with the movement, and the city government has given its official sanction to the idea through the acceptance by the mayor of the honorary leadership of the organization; by his appointment of a representative of the city department on the Occupational Council; by the election of a representative of the Council of the city of Cincinnati to serve on the same board; and by the ex-officio membership of city officials on all group committees whose work touches their field.

Following the precedent set in the choosing of Cincinnati as the city in which the social unit experiment should be tried out, the various neighborhoods within the city were given the opportunity to express their interest in the movement. A city-wide referendum was conducted through the public schools to determine the sentiment of the various neighborhoods. Ballots, accompanied by a brief explanatory leaflet drawn up by the advertising experts of the city, were distributed to all the public school children. These ballots were returned by over 5,000 families representing 25,000 people, nine out of ten of them urging the location of the experiment in their neighborhoods and promising their cooperation toward its success.

The citizens of six different districts undertook active campaigns to secure the unit. In one neighborhood resolutions of invitation were passed by twenty-five organizations, including churches, women's clubs, civic organizations and lodges. Seventy letters were written by individuals from this district asking to be allowed to participate in the experiment. Petitions were circulated by local people and were signed by over 1,850 persons. A large delegation of influential citizens of the neighborhood waited on the executive committee to extend an urgent personal invitation. Both in this district and in the city at large the social-unit idea seems to have released latent civic energy and created new social visions.

When the locality has been selected, the first step will be to encourage the organization of a citizens' committee in each block of the district. Each of these committees is to select an executive as representative of its block in the citizens' council of the district. These executives will be paid for the time devoted to their work. Their first task will be to get acquainted with the mother of every baby in their respective blocks and to encourage these mothers to bring their babies

to the clinic which the unit organization will establish.

Following the democratic ideals of the plan, all medical work carried on within the unit will be organized by and under the control of the physicians who practice there. These physicians will be expected to designate the doctors who are to do the work of the clinic as well as their supervisors. Both the supervisors and the clinic physicians are to be paid for their work at rates to be determined by the district doctors. The Cincinnati Academy of Medicine will also appoint special committees to act as an advisory body to the local physicians when so requested.

The form of organization thus developed in connection with work for babies will be followed out in meeting the other needs of the district.

TRACING TYPHOID TO A DAIRY

PRIOR to March of this year, cases of typhoid fever were being reported to the health authorities of St. Louis at the rate of two to four cases a month. But during the early part of March six cases were reported. All of these were in children. One month later seven more cases developed, all in the neighborhood of the Jewish Educational and Charitable Association. As these cases were in children and young people, it seemed most probable that the infection was milk-borne and that they were all from a common source. An investigation which followed proved that all of these families obtained their milk from the same dairy.

When this data, gathered by Dr. Samuel T. Lipsitz, was brought to the attention of the health authorities, the offending dairy, located in the most congested poor district in the city, was closed and an inspection of the entire milk route was made. Thirteen more cases were

brought to light in this simple way.

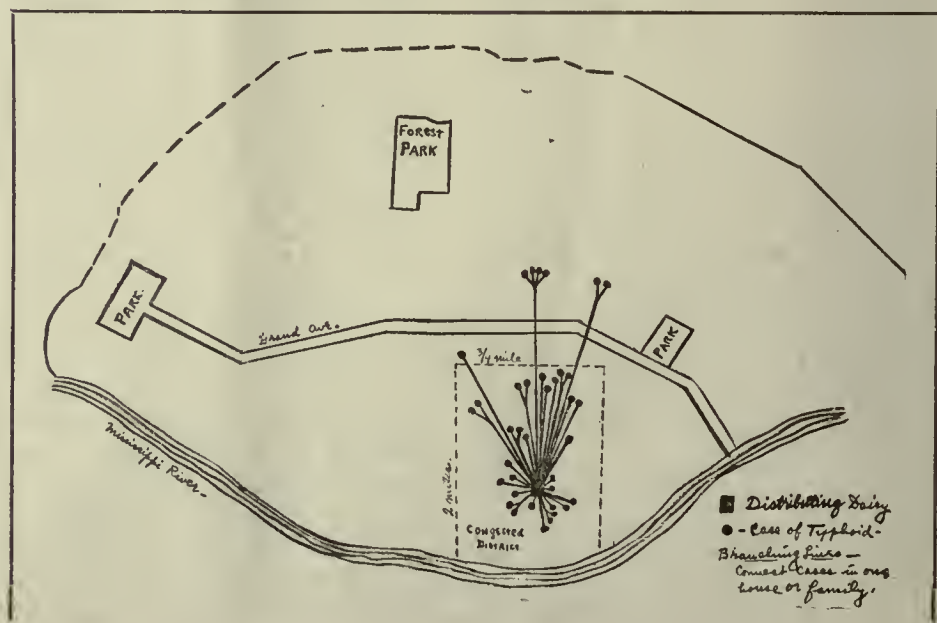

An attempt to locate the ultimate source of infection was made. The local distributing dairy obtained its entire milk supply from a dairyman located in the outskirts of the city. This man supplied milk to two other distributors; but since on neither of their routes were there any cases of typhoid, it was apparent that the suspected dairy itself was at fault. There were no cases of typhoid at any of these dairies nor was there any evidence that typhoid had been there. No typhoid carriers were found.

But there were no provisions for sterilization of bottles nor pasteurization of milk at the local dairy. Hence it must be concluded that the most likely cause of the dissemination of infection was the delivery of milk to a house in which typhoid fever was present. The bottles became infected in some manner, were returned to the dairy, filled with milk or washed together with other bottles, and in this way the infection was spread.

Fortunately, the moment the dairy was closed the outbreak was checked. The only new cases that developed afterwards were those that were incubating at the time.

Thirty-six cases of typhoid in all resulted from this outbreak, 72 per cent of them in children under sixteen. Though typhoid is almost unknown in children under two years of age, one of these cases was in a child one year of age, two were 1½ years old, one was 2½ years old, one 3 years old, two 4 years old, etc. Out of this series, three children died of complications.

To save those in the immediate families and in the neighborhoods from developing typhoid fever, some 1,740 injections of typhoid vaccine were administered by the health authorities. None of those who were vaccinated have developed typhoid fever.

POLITICAL POWER IN THE HANDS OF A WOMAN

AN order signed by Secretary of the Treasury McAdoo on the night of July 9, following a single day's hearing before a departmental committee on the complaints against long hours of work in the Bureau of Engraving and Printing, has restored the eight-hour schedule in that establishment. More than 4,000 employes—a majority of them women—are affected. Tables filed by Director Ralph showed that the bureau's operation had been so managed that large numbers of both men and women had been compelled to work twelve and even thirteen hours a day. While the worst of this overtime had characterized only the past four or five months, overtime work had been going on in the bureau at intervals for several years past, thus contradicting the excuse that the situation was due to press of war work.

Emancipation of the bureau employes from these dangerously long hours of employment is the direct outcome of an announcement by Representative Jeanette Rankin that she had collected evidence of the overwork in the bureau, and that she proposed to seek a congressional inquiry into conditions in the plant. Previous efforts to interest Secretary McAdoo in the situation had been made by the officers of the National Consumers' League, the National American Woman Suffrage Association, and the National Women's Trade Union League. Director Ralph and Secretary McAdoo had withstood their appeals and protests.

Miss Rankin's announcement was made on June 30. On the following day fifty women employes of the bureau called on her at her home, offering to testify as to the hardships of the twelve-hour day in the government's "model printing establishment." Local press support was immediately forthcoming. Within a week, Secretary McAdoo stated that he had named a special committee, comprising an assistant secretary of the treasury, the auditor of the interior department, and the chief clerk of the treasury department, to investigate the basis of the complaints.

When the committee began its work, on the afternoon of July 9, some 200 women from the bureau were present, seeking the opportunity to testify. Forty-six of them were heard in six hours. The committee was impressed both by their statements and by their pale and worn appearance. At the close of the day's hearing it submitted to Secretary McAdoo a preliminary report, stating that the printing of the Liberty Bonds and other matter had imposed a great additional burden upon the bureau, but that "all pressing orders are now well in hand," and recommending an eight-hour day, for six days a week.

"It remains, however," continues this report, "that certain other matters, such as allowances of Saturday half-holidays, revocation of leave of absence and permission to take civil service examinations for employment in other branches of the government service, are yet to be inquired into and made the subject of a supplemental report.

On the following night a mass meeting was held in the dining hall of the bureau, attended by some 500 or more of the employes, to protest against the change to the shorter day, on the ground that the employes were unable to earn sufficient wages in the eight hours, and on the further ground that they desired that the work of the bureau be not "inconvenienced" by any such alteration of its time schedule.

Miss Rankin thereupon declared that she was still unsatisfied, since it was evident that the women should be paid a sufficient rate per hour to make an eight-hour day acceptable to them all and that the present scale of twenty to twenty-eight cents an hour (the same amount is paid for overtime) is not a living wage. She proposes to seek support in Congress for a bill which will establish the eight-hour limit for the employment of women in all government offices and plants, and to follow this with legislation providing a fair wage based on the eight-hour schedule. This proposed legislation will scarcely be taken up before next December, as the House committees are unwilling to grant hearings on any but war measures.

ENFORCEMENT OF THE FEDERAL CHILD-LABOR LAW

AT a hearing to be held in the office of the assistant secretary of labor, July 24, producers, manufacturers, dealers and others will discuss regulations for carrying out the provisions of the federal child-labor law of September 1, 1916.

The child-labor law becomes effective next September. It applies to establishments whose products are shipped in interstate commerce the following restrictions: No child under sixteen can legally be employed in any mine or quarry at any time; no child under fourteen can legally be employed at any time and no child under sixteen more than eight hours in any workday, more than six days in any week, or before six a. m. or after seven p. m. in any mill, cannery, workshop, factory, or manufacturing establishment.

The regulations under discussion, which have been drafted in tentative form, are concerned with proof of age, the conditions under which state employment certificates will be accepted by the federal authorities, the form of the producer's guaranty by which a dealer can protect himself from prosecution, and other details of administration. In a

preliminary statement issued by the advisory committee to the board named in the act for making and publishing uniform rules and regulations, it is made clear that enforcement of the law will depend largely upon preventing the issuance of false certificates of age.

Grace Abbott, who has been placed in direct charge of the enforcement of the act by Julia Lathrop, chief of the Children's Bureau, gives this opinion as to the number of children affected and the present outlook for enforcement:

It is impossible to say with accuracy how many children will be taken out of industry by the United States Child Labor Law. It affects, of course, only the mines, quarries, mills, canneries, workshops, factories and manufacturing establishments which ship in interstate or foreign commerce. In many states the standards of age and hours of work set by the state laws are as high as the requirements of the federal act, a few state standards are higher; in a larger number they are below the federal standard. On the basis of the figures of the Thirteenth Census, which are now more than seven years old, we can say that the 27,023 children under fourteen years of age who were employed in manufacturing and mechanical establishments will be released; that the 17,667 children under sixteen years of age who were reported working in mines and quarries will no longer do that dangerous work. How many of the children between fourteen and sixteen who have been employed for ten, eleven and even twelve hours a day in the past will not be employed when their legal day is cut to eight hours, no one can say. There were, in 1910, 119,690 of these children between fourteen and sixteen employed in states where they were not protected by an eight-hour law. These figures do not include the large numbers of young children that have worked during the busy months of August and September in canneries. The federal law specifically includes canneries, while in such states as Maryland, Delaware, Virginia, Michigan, and Indiana they were exempted under the state Child Labor Laws. Vacation and poverty exemptions cannot be used under the federal law.

Apparently the only demand for the suspension of the law comes from those who were interested opponents to its passage. English testimony as to the mistakes made in sacrificing the children is apparently convincing proof to the American public that the war must not be won at the cost of the children. The fact that child labor or compulsory education laws were strengthened in states as widely separated as Arkansas, Illinois, Kansas, Oklahoma, Tennessee, Texas, and Vermont during the confused months that have just passed is indicative that the American public is ready to listen to the warning which English experience has given us and will refuse to sacrifice the children under sixteen.

Inquiries are coming from all over the country as to the provisions of the law, and there is every indication that employers are preparing to observe it. The provision that dealers may protect themselves from prosecution by securing from manufacturers and producers a guaranty that the goods they purchase have been produced in establishments in which the standards laid down by the federal child-labor law have been followed will be an aid in enforcement. Wholesale dealers everywhere are already, as a matter of self-protection, requiring contracts for fall delivery to contain such a guaranty. State inspectors expect that the alternative opportunity which they now have of bringing offenders before the federal courts will

make for much greater uniformity in enforcement.

In some states compulsory education laws are still to be passed, and in others good laws go unenforced. In some states something approaching adequate provision is made for these unfortunate groups of children who because of the death or the poverty of their parents should be supported until they are physically and mentally prepared for self-support. In a larger number of states no such far-sighted view of the welfare of the state has been taken. . . . We are hearing much of the expansion of nationalism at this time. It can express itself in no better way than in giving to the children of all parts of the country something approaching an equal opportunity to become strong, intelligent, and independent citizens.

PROTEST AGAINST A MUZZLED PRESS

NEWSPAPERS and magazines containing any statement or suggestion hostile to what Postmaster-General Burleson or the postmasters of the country believe to be national interests protected by the espionage act will be denied the use of the mails. Specifications as to what will be held by the postmasters, or their chief, to be in violation of this law, will not be given in advance of the suppression. Any publication feeling itself injured may seek from the courts an injunction against the postal authorities.

This, in substance, is reported to be the stand of the postmaster-general by members of a committee which called

upon him on July 16. By it he justified the holding up of one or more editions each of some fifteen Socialist publications, including the *American Socialist*, *International Socialist Review*, *The Masses*, *Cleveland Socialist News*, *Michigan Socialist*, *St. Louis Labor*, *Social Revolution* and *Texas Rebel*. During the three hours of his debate with this committee of protest, the editor of the *Cleveland Socialist News* was answering the first summons from the department to show cause why his paper should not be denied the second-class mailing privilege. Similar summons has been sent to the *American Socialist*, official national organ of the party. Mr. Burleson declined to discuss this phase of the dispute, on the ground that it must be taken up with the third assistant postmaster-general.

Morris Hillquit, of New York; Clarence Darrow and Seymour Stedman, of Chicago, and Frank P. Walsh, of Kansas City, appeared as counsel for the Socialist party organization and its press. Amos Pinchot spoke for the Civil Liberties Bureau of the American Anti-Militarist League. Editors of many of the suppressed publications were also present.

Mr. Walsh and Mr. Pinchot especially urged the social menace in the attempt to prevent free expression of political views in the United States at this period of our national development. Mr. Walsh declared to the postmaster-

general that no suppression of the printed word would stifle thinking, or prevent the rapid transmission of the ideas of men and women denied the legal right to speak as freely as their neighbors.

Similar protest was made by the committee at the Department of Justice, where Assistant Attorney-General Heron met them. He indicated that the Department of Justice would probably issue a statement which would serve as a guide to publications and to writers criticising the officials and acts of the government, by pointing out the illegality of certain statements already published and held up at the postoffices in various cities.

Solicitor Lamar, of the Post Office Department, who has been in direct charge of the suppression of offensive publications, was not present at either of these interviews. His position has been that outlined by the postmaster-general, except that he has also, according to report, threatened prosecution of the individuals who have written the articles upon which suppression of the issues of these papers has been based. Like Mr. Burleson, he declines to specify the exact point at which the law has been violated. To individual inquirers he has declared that the general tone of certain publications has been in violation of the espionage act, as tending to retard voluntary enlistments in the army.

Socialist editors present at Monday's conferences stated that because they had been unable to secure permission to use the mails, at least three of the papers affected would cease publication. Others would await for a few weeks the development of possible protest in Congress and throughout the country. It was stated as certain that a group of senators would raise the issue in Congress, in order that the rights of publishers during the remainder of the war period might promptly be defined.

The great newspapers of the country were strong enough to defeat the censorship provisions of the espionage bill, as originally drafted, which would have clamped down on opinion as well as military facts. What was resisted in the case of the large journals has been attempted in the case of the small, through the Post Office Department, including not only the Socialist press, but such militant pacifist periodicals as *Four Lights*. Yet the same machinery could be employed with respect to the mail editions of the metropolitan press; and it remains to be seen whether, as a matter of ultimate self-interest as well as of equal rights, they take up the cause of the banned periodicals.

One of the most serious criticisms lodged against the whole proceeding is that censorship is susceptible to abuses at best when vested in some responsible tribune, but here it is practically put in the hands of hundreds of postmasters the country over.

Cesare, in the New York Evening Post

Book Reviews

CENTRAL EUROPE

By Friedrich Naumann. Alfred A. Knopf. 351 pp. Price \$3; by mail of the SURVEY, \$3.16.

By dwelling upon the writings of Treitschke, Bernhardt and other writers no longer living, many American interpreters of German aspirations have overlooked the much greater present influence of contemporary publicists such as Rohrbach, Kochler, Franz von Liszt, Lamprecht, Harden, and the former pastor,

Friedrich Naumann. The last named, as a member of the Reichstag, editor of *Die Hilfe*, founder and leader of the *Deutsche Volkspartei*, is one of the greatest powers in the Germany of today. Starting from intense interest in legislative, social and fiscal reform, he did not, like Bryan in this country, and Lloyd George in England, take for granted the stability of his country's foreign relationships but for long included in the objects of his political activity far-reaching aims of external economic and imperialist expansion. His *Neudeutsche Wirtschaftspolitik*, published about ten years ago, was one of the most widely read expositions of the policy of pan-Germanism applied to the economic and diplomatic fields.

Naumann is gifted with the typical German intellectual adaptiveness to new conditions; and we are not surprised to find that in this new work, while in essentials maintaining his previous position, he has toned down considerably his leanings towards racialism in order to expound the need for a new political entity not limited by racial bounds. His book, while it carefully avoids to name the child of his desire, is propaganda for a greater German empire, taking in the whole of Austria and Hungary and their dependent states—with a distant view to incorporation of Denmark, Holland, Switzerland, the Kurland provinces of Russia, the Flemish half of Belgium, Luxembourg, of course, and possibly Poland, an empire loosely knit as was the Holy Roman Empire of the German nation, yet dominated by the political ideals and actual control of Prussia. He is careful not to call his "Mid-European" an empire; but it is clear from his detailed considerations of necessary future developments that he has in mind a constellation at least as coherent and as centralized as is the British empire with its vast self-governing dominions beyond the seas.

No one who believes in world-empires or who accepts as a fact the assertion that the future progress of civilization is bound up with the maintenance of an equilibrium between two or more large and politically compact groups of nations, can logically dispute the soundness of Naumann's argument that the security of Germany lies in the renaissance of that greater Germany which Bismarck tried to create until he realized that a nationalized lesser Germany, if it could be formed without detriment to the grander idea, was an aim of more immediate promise. Now, a closer reunion with Austria would seem both an economic and a military necessity—would seem, in this

contention the author makes a number of assumptions which cannot be granted as valid beyond dispute.

One of them is that "after the experiences of the present war no isolated country can remain unintrenched"; that Austria and Germany, no matter what their present political relations, must face the alternatives of cancelling their separate foreign offices and making a joint cause in every external issue affecting them both, or of entrenching their respective frontiers on the ridges of the Erzgebirge, the Riesengebirge and the Boehmerwald. He will admit of no other form of effective military preparedness.

This argument is unconvincing so long as the outcome of the present war is uncertain. We do not yet know whether, as the author asserts, France would have been impregnable if it had protected its whole northern frontier from Belfort to Dunkirk with trenches; nor is it at all certain that "after the war, frontier trenches will be made everywhere where there is any possibility of fighting. There will be a fresh system of Roman and Chinese walls made out of earth and barbed wire."

Looked at from this distance, it would seem at least equally possible that a great many frontier fortifications will be dismantled, that the channel tunnel will be dug at last to link the British isles to the continent, that in the Balkans and elsewhere frontier defences, at least between racially and politically kindred peoples, will fall into decay and increased communication and friendliness take their place.

Economically, the advantages to be gained from the creation of a new great mid-European free-trade territory strongly fortified by tariff frontiers against external trade, are at least equally problematical. The author admits Austria's precarious financial position, and, since his argument excludes a full utilization of Austrian credit resources after the war to establish a vigorous international exchange, he is obliged to propose a very heavy taxation as the means of surmounting the financial congestion of the dual monarchy. Whether Austria, and even more Hungary, which in all fiscal matters has

jealously guarded her independence and which, prior to the war, has made strenuous efforts to attract foreign capital for the exploitation of her natural resources and the development of her industries, will accede to such a proposal is quite another question.

Nor is it certain that Hungary, however favorable to the military alliance with Germany at present, will view with much delight the huge storage of food supplies for the defence of central Europe recommended by the author as an essential part of future preparedness measures. Considering that there is not even during the war a joint economic policy, that there is a long tradition of commercial jealousy between Hungarians and Austrian Germans, it is difficult to see why the former should agree to an arrangement so manifestly in the interest of those who, with the aid of prohibitive tariffs, will deprive them of the markets for their agricultural products and, at the same time, control the prices for all the industrial products which they are obliged to buy.

There are other flaws in Naumann's reasoning which we cannot here discuss, but which show in spite of every effort at concealment that the aggrandizement of Prussia and all that Prussia stands for is behind his propaganda, which seemingly is in the interest of a European equilibrium and general opportunities for economic and political development. There is no safeguard that the proposed mid-European federation may not, like the Austrian, change into a centralized empire, more dangerous to the separate interests of its constituent nationalities even than Hapsburg rule by virtue of its greater military power. The eastward trend, with the aid of an enfeebled Ottoman empire, an empire in nothing but name, because it would financially be in the grips of its stronger neighbor, would be all in the interest of Prussia.

If the war ends with the creation of mid-Europe as planned by Naumann—federation, super-state, military and economic alliance, or whatever name may disguise its essentially imperial structure the fate of the smaller nationalities of Europe will be sealed. The tragedy of Bohemia, of Poland, of Bosnia, of Alsace-Lorraine, of Schleswig—of every territory inhabited by freedom-loving peoples with cultural and political ideas of their own—will be re-enacted on an even larger scale. For the concentration of power in central Europe must also lead to a similar centralization in the rest of the world, threatening once more the political autonomy now almost assured for Ireland and the constituent nationalities of Russia.

BRUNO LASKER.

THE RUSSIANS: AN INTERPRETATION

By Richardson Wright. Frederick A. Stokes Co. 288 pp. Price \$1.50; by mail of the SURVEY, \$1.65.

The first year of the great war meant an awakening appreciation of Russia by England; the last few weeks point to a discovery of Russia by our own country. Since the revolution last March, a number of books on Russia have been published, some of them hurriedly written, others collections of essays previously printed on various Russian topics, all intended to meet the popular demand for information about Russia. The Russians, an Interpretation, by Richardson Wright, belongs doubtless in both of these categories. It is nevertheless a volume which busy persons desiring an insight into Russian life, government and art will find worth reading.

Mr. Wright opens his book with the statement that foreigners in Russia "become either obsessed with enthusiasm for all things Russ or embittered with suspicion and hatred." The reader is not left long in doubt as to Mr. Wright's position between these two extremes, though he tells us he has tried to

THE BOOKS

NAUMANN:	<i>Central Europe</i>
WRIGHT:	<i>The Russians</i>
LATOURETTE:	<i>Development of China</i>
MARCOSSON:	<i>The War After the War</i>
THWING:	<i>The Training of Men for the World's Future</i>
BRANDES:	<i>The World at War</i>
PATTEN:	<i>Advent Songs</i>
HITSCHMANN:	<i>Freud's Theories</i>
ADLER:	<i>The Neurotic Constitution</i>
WHITE:	<i>Character Formation</i>
FANNING:	<i>Capital Punishment</i>
DE WITT:	<i>The Man in Court</i>
GOLDMAN:	<i>The Public Defender</i>

steer a middle course. The Russian moujik in the author's hands becomes a human, lovable individual in spite of his disorderliness. In fact, one finds the peasant class playing the most important part in Mr. Wright's efforts to interpret the Russian, which is as it should be in a country where the peasant class so largely predominates.

This interpretation of the Russian peasant is especially timely in view of the prominence given to the Committee of Workmen's and Soldiers' Delegates by our newspapers, a committee in which the peasant is represented only by the soldiers who are but recently mobilized from the farms. There is throughout the volume much interesting and valuable information about Russia and things Russian which has apparently been secured through personal studies of the country and its people. There are enlightening discussions of Russian literature and industry.

Mr. Wright feels as one who has been in Russia frequently does, that: You cannot understand Russia by the intelligence; you cannot measure her by the ordinary foot-rule; she has her own peculiar conformation; you can only believe in Russia.

WALTER PETTIT.

THE DEVELOPMENT OF CHINA

By Kenneth Scott Latourette. Houghton Mifflin Co. 274 pp. Price \$1.75; by mail of the SURVEY, \$1.89.

CHINA INSIDE OUT

By George A. Miller. The Abingdon Press. 180 pp. Price \$1; by mail of the SURVEY, \$1.10.

Mr. Latourette has produced a valuable and a scholarly work, written from a fullness of knowledge and a sense of impartiality worthy of the highest praise. He is fair to the Japanese, fair to the British about the so-called opium war, fair to the missionaries and entirely appreciative of all that is best in China's glorious past. By far the best part of his book is that which deals with present-day problems. This is so good and suggestive that one would readily sacrifice the seventy pages in which the history of China is outlined up to 1840 in order to get more of it.

All the hopeful and the disheartening elements that confront a nation attempting to transform a patriarchal monarchy into a modern democratic republic are set out with commendable lack of any kind of bias. One realizes as possibly never before how immensely more difficult is China's task today than that which Japan so triumphantly accomplished some two generations ago. We shall hope to hear more of this author as a writer on far-eastern affairs.

Mr. Miller writes of China from the point of view of Methodist missions in a sort of Billy Sunday vernacular. Very rightly he condemns hasty, ignorant and wholesale denunciation of missionaries, but at the same time seems rather to lay himself open to the retort that had he been longer in the Far East he might have been satisfied with a less absolutely sweeping denunciation of the mercantile communities of the treaty ports.

IAN C. HANNAH.

THE WAR AFTER THE WAR

By Isaac F. Marcossion. John Lane Company. 272 pp. Price \$1.25; by mail of the SURVEY, \$1.35.

From an outline of the essentially commercial nature of the present European struggle, Isaac F. Marcossion in his *War After the War* passes to demonstrate the inevitability of the "coming war," the most gigantic mobilization of financial and industrial resources ever seen on earth. He has chapters on England's awakening, American Business in France, the New France, the Price of Glory, and closes with a wonderful panegyric on "the man Lloyd George."

What it all means for America runs on a single thread throughout.

Much might be said of the Northcliffean portions dealing with the new efficiency and self-sufficiency policy of Great Britain. To those who know how heavily the industrial struggle still weighs upon the workers, the naïveté of the quotation from a "member of the British Cabinet" is almost refreshing. "After the war, capital will be ungrudging in its remuneration to labour; and labour in turn must be ungrudging in its output."

Mr. Marcossion is most interesting when he deals with matters of finance, and it is significant that he renounces the theory of economic exhaustion which he previously held and is now convinced that "the extents to which financial credit can be expended in the countries at war seem to be almost without limit," that "man power—beef, not gold—will win."

NANNIE YOUNG.

THE TRAINING OF MEN FOR THE WORLD'S FUTURE

By Charles Franklin Thwing. Platt & Peck Company. 89 pp. Price, \$1.25; by mail of the SURVEY, \$1.32.

This volume adds to the long series of essays on college subjects, written by President Thwing of Western Reserve University. The essay is developed in three parts. Part I briefly depicts *The Destruction of the World*, through the present war and lists as the constructive forces by

which men, after the war, can build the "Gentle-state" out of the wastages of war: the family; the church; the civil government; business; literature, including the press; education.

Part II, *The Construction*, the main body of the essay, outlines ways in which colleges and universities may affect, permanently and intimately, the family, the church, the government, business and literature, and hence aid in building the new world. It is argued that the university may promote the coming of the Gentle-state of the future, "by illustrating in the cosmopolitan character of its students the unity of races" (p. 36); by helping to "transmute men into man" (p. 38); by being "the inspiring force in scientific investigations" (p. 42); by training men for attainment of "the richest, broadest and highest idealism" (p. 43); by "training men for freedom, for social and sociological individuality and not for mere conformity," and thus "for real leadership in humanity's crisis and in humanity's common day" (p. 51); by cultivating the full riches of personality (pp. 53 to 58); by laying emphasis on national and international ethics (p. 59); and finally, by teaching a proper conception of religion, of the "common denomination of religious beliefs, . . . a religion of which the concrete words are Faith, Hope and Love."

The remaining twenty pages of this second part present six historical parallels in the development of religion and of education, the parallels of their emancipation; their ultimate basis of authority; their social emphasis; their progressive emphasis on the practical; their commanding personalities and their common goal—the search after truth for life's sake.

Part III, *The University Itself*, opens with a three-page criticism of "the ecclesiastical and the academic priesthood," taken from F. S. Oliver's *Ordeal by Battle*. The substance of this criticism as applied on the academic side seems to be: Preserve us from the professors. In answer to this criticism, Presi-

dent Thwing states that the university seeks no unworthy influence but seeks to find and to teach the truth, which alone, incarnated, will reconstruct the world.

The essay closes with a tribute to the virtues of the youthful student body, saying in part that the university "represents and uses the spirit of youth. . . Youth has enthusiasm, courage, initiative, love of fair play, idealism, loyalty to persons, a sense of liberty and a sense of progressiveness. Such forces in the mind and heart and will of the college student are the forces that conquer the world and conquer it for peace."

There are blemishes in this essay such as the omission of Judaism in the listing of religions, a bad break in the thought connection on page 25, occasional apparent straining for the rhetorically effective, and the elaboration of parallelism in the development of religion and education, worth while in itself, perhaps, but a lengthy aside from the main theme. The essay is mainly a summarization, sincere and often well-phrased, but containing little that is new, of the ways in which an institution of higher learning may serve the world.

WALTER E. CLARK.

THE WORLD AT WAR

By Georg Brandes. Macmillan Company. 272 pp. Price, \$1.50; by mail of the SURVEY, \$1.62.

Georg Brandes is a pessimistic pacifist. Most pacifists are pessimists these days. Brandes was pessimistic before the war. Thirty-six years ago he wrote: The love of liberty is to be found in Germany only among men of the generation which within ten years will have disappeared.

And when that time comes, Germany will lie alone, isolated, hated by the neighboring countries: a stronghold of conservatism in the center of Europe. Around it, in Italy, in France, in Russia, in the north, there will arise a generation imbued with international ideas and eager to carry them out in life. But Germany will lie there, old and half stifled in her coat of mail, armed to the teeth, and protected by all the weapons of murder and defense which science can invent. And there will come great struggles and greater wars.

The man who had so prophetic a vision in 1881 is worth listening to today. *The World at War* collects some of his war essays, from the *Foreboding of 1881* to his *Letters to William Archer*, in 1915 and 1916.

Brandes is a neutral, and he does not see the advantage of continuing the war. He believes "it would be best if the war were to end without either side being too deeply humiliated." "Security is only to be had when the difficulty is resolved in a way which both parties consider just."

That is sometimes an impossibility, and Brandes suggests no solution for such *impasses*. He is the foremost literary critic of Europe; and his political polemics are equally tinged with the viewpoint of an appraiser. He is not a builder. He analyzes—brilliantly, keenly, cuttngly, yet not unkindly; he does not construct. But it is a relief to read one book on the war which does not propose a final solution of the problem of war. Brandes comes nearest to it when he preaches the gospel of free trade.

Germans call Brandes pro-ally. Clemenceau and Archer berate him for refusing to admit the idealistic single-mindedness of the allies. He persists in looking at the war as a Dane and a Jew naturally looks at the

war—detachedly, with a bit of a sob and a bit of a sneer for both sides. Several of the papers in the volume rage at the old Russia; others attack his old friends the Poles for their wartime anti-Semitism. Another reveals the history of British opposition to the Bagdad railway; still another bares the ugly history of Persia, which he calls "the Asiatic Belgium." Others reveal the canker in the heart of Germany; others glow for France.

What does he prophesy now? Talk of this as "the last war" he calls "an imbecile refrain." "Humanity does not want and does not dare to look truth in the eye." Yet he finds hope and comfort in the disappearance of the dueling system. Here are two of his looks into the future:

"We see the white race destroying its prestige in the eyes of the black, brown and yellow races. It has called upon their aid and has rewarded them for murdering the whites. How can that but avenge itself? Europe is committing hari-kari for the benefit of Japan, and the adaptable and clever Asiatic people, with an eye on the future, undoubtedly look on Europe's suicidal mania with considerable astonishment and not little satisfaction."

The second dates from June, 1916:

"If the war is to end by an overwhelming victory for one side it will probably have to last two years more at least. By that time the miserable serfs who in time of peace sweat in the factories, and who, in times of war, by means of the highly praised instrument of oppression called compulsory military service, are sent into the fire like slaves, will have arrived at such a frenzied state of exaltation and despair that the social revolution, of which there has been so much talk, will become a reality and the few remnants of a higher intellectual civilization which the war may have spared will be levelled to the ground with as little mercy as the beautiful churches and halls are destroyed in the north of France today."

Nine months later came the Russian revolution. What will another year bring?

LEWIS STILES GANNETT.

ADVENT SONGS

By Simon N. Patten. B. W. Huesch. 76 pp. Price \$1; by mail of the SURVEY \$1.07.

Despite the very interesting and suggestive essay on "modernizing the song," which prefaces the collection, Dr. Patten's book cannot be said to fulfil the high social aim of the reviser of old hymns and the author of these new songs. Indeed, the revisions of such historic tones of the Church as Luther's A Mighty Fortress Is Our God, Newman's Lead, Kindly Light, Heber's From Greenland's Icy Mountains, Perronet's All Hail the Power of Jesus' Name, Wesley's Hark, the Herald Angels Sing, and Jesus Lover of My Soul, can scarcely fail to strike the reader, much more the singer, as anachronistic as would the reconstruction of a cathedral into a concert hall, or the appearance of Abraham and Moses looking like Thomas Huxley or Moody and Sankey. With few exceptions, the original "songs of America" and "songs of sympathy and brother love" ring, if at all, with the mechanism whereby they were made. They were not the spontaneous outgrowths either of great events, great movements or great experiences. The greatest hymns were irrepressible expressions.

Still, as the author humbly says, "When I set to work, the difficulties of the task became apparent and have remained only too evident. But my hymns will at least break ground and may help others to do what is beyond my powers." This prompting, however, is far more likely to come from the author's brilliant essay than from the faulty exemplifications of its high points. G. T.

FREUD'S THEORIES OF THE NEUROSES

By Dr. Eduard Hirschmann. Moffat, Yard & Co. 257 pp. Price \$2; by mail of the SURVEY, \$2.12.

THE NEUROTIC CONSTITUTION

By Dr. Alfred Adler. Moffat, Yard & Co. 456 pp. Price 3; by mail of the SURVEY, \$3.16.

MECHANISMS OF CHARACTER FORMATION

By William A. White. Macmillan Company. 342 pp. Price \$1.75; by mail of the SURVEY, \$1.86.

What may be called the orthodox or strict Freudian conception of neurotic conditions, briefly set forth by Hirschmann, holds that the neuroses originate in the sex life of the individual, the form of the nervous disturbance differing in accordance with the strain that the sex life has undergone. There are "true neurasthenia" types resulting: (1) from masturbation; (2) the "anxiety neurosis" from sexual excitement without adequate gratification—because of abstinence or precautions against conception; (3) "hysteria" from the suppression of sex tendencies—a suppression dating originally from childhood and only partially successful inasmuch as the suppressed tendency remains unconsciously active and breaks out in unexpected ways as the symptoms of hysteria; and (4) the "obsessional neurosis," resulting from a suppressed sex tendency that has attached itself to some innocent idea and has lent that idea a baleful significance and compulsiveness.

Freud's "psychoanalytic" method of treating these conditions is explained and a chapter is devoted to his views regarding prophylaxis. A rational sex education may help the individual, but the important thing, according to Freud, is to ameliorate the social and industrial conditions which, by delaying marriage or making it impossible for many, and by vexatious interferences with conception, make a normal and natural sex life impossible and are thus the underlying causes of the prevalence of nervous conditions.

Dr. Adler, starting as a pupil of Freud, has now been disowned by the master because of the diminished emphasis laid by Adler on the sexual element. The neuroses grow, according to Adler, from a sense of inferiority, due itself to some actual or imagined bodily infirmity. The neurotic individual, even as a child, feels himself inferior and his position and outlook insecure; this feeling, not acquiesced in, leads to a self-assertion (the "masculine protest") that seeks fictitious and strained means of expression, while at the same time shrinking from the real tests of life. The various neurotic symptoms, accordingly, are devices of the neurotic individual either for asserting and reassuring himself, or for avoiding situations with which he fears to cope.

Dr. White, while adhering pretty closely to Freud, maintains a receptive attitude towards the divergent branches of the psychoanalytic school. His book, on the whole, is less an introduction than a discussion for those who already possess some knowledge of the subject. Its teaching is rather obscured than clarified by the vague philosophy of life and of the universe which the author, in common with many of the school, delights in spinning about the facts of their practice. A rational self-empowerment of the youth from the ties of home is envisaged as the greatest achievement in the formation of character, and as the critical point where failure leads to the neuroses.

R. S. WOODWORTH.

SELECTED ARTICLES ON CAPITAL PUNISHMENT

By C. E. Fanning. H. W. Wilson Company. 299 pp. Price \$1.25; by mail of the SURVEY, \$1.35.

Since the arguments about capital punishment "have undergone no material change in three years," as the note to this third edition says, the present version of this valuable handbook differs from the second chiefly in having a more up-to-date bibliography and in including new articles, some of which are not found in the average library.

THE MAN IN COURT

By Frederick De Witt. G. P. Putnam's Sons. 283 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

To make intelligible to the average man and woman the maze of procedure in our civil and criminal courts is the object of *The Man in Court*. It is written from the viewpoint of a spectator in the court-room, observing what passes before him. The author-judge sits at his elbow, explaining and commenting. The book is simple, descriptive, full of color and illustration, and entirely devoid of statistics or technicalities. It takes the reader through court procedure with a wealth of humor and comment which makes it as easy to read as fiction.

Judge Wells deals both with the criminal and civil procedure. The final chapter discusses our present court system from the point of view of a college graduating thesis in 1947, at which time apparently our entire system of civil courts will be replaced by "judicial corporations," handling all disputes on a business basis as business matters.

While the book is intended for the uninitiated, it is mighty useful reading for the average social worker, even those who are familiar with court procedure.

R. N. BALDWIN.

THE PUBLIC DEFENDER

By Mayer C. Goldman. G. P. Putnam's Sons. 96 pp. Price \$1; by mail of the SURVEY, \$1.06.

Of what value is it for the state to "presume the innocence" of an offender, and then to appoint an attorney to prosecute him without also appointing one to defend? Mr. Goldman, who is a New York attorney and who has written the first book on the subject of the public defender, says that the theory of this office is based on two principles: (1) "That it is as much the function of the state to shield the innocent as to convict the guilty; (2) That the 'presumption of innocence' requires the state to defend as well as to prosecute accused persons."

The function of the public defender is to represent indigent accused persons. The first official to be given that name in this country was appointed in 1912 by Kate Barnard when she was commissioner of charities and correction for Oklahoma. The following year Los Angeles county, California, created the office in its charter. Since then, other communities have established it; and the history of legislation affecting the office, and of important support given the idea, requires ten pages of chronology in Mr. Goldman's book. Twenty-five states have given serious consideration to the proposal.

"If the ascertainment of the truth be the purpose of a judicial investigation," says Mr. Goldman, "the conduct of a criminal trial necessitates the production of all the pertinent law and facts; the accused and accuser should have the same opportunity

and resources to present their respective contentions; a trial should be an impartial judicial inquiry, rather than the waging of an unequal contest between the people on the one hand, represented by an able, experienced and powerful prosecutor, and the individual defendant, dependent upon such legal aid or skill as he may be able to get. The greatest triumph of the judicial system would be to secure equal justice to all persons, the rich and the poor, the strong and the weak, the accuser and the accused."

Mr. Goldman's arguments are strongly concurred in by Justice Wesley O. Howard, of the Appellate Division of the New York Supreme Court, who writes the foreword to this book. "The poor man thrown into prison," says Justice Howard, "no matter how innocent, is helpless and hopeless. He cannot cry out to justice, for nobody hears his cry. He is the prey of the policeman, the

captive of the jailor, the butt of other prisoners, the plaything of young lawyers. . . . He walks to the courthouse fettered to brutes and degenerates. . . . As he is arraigned before the judge, he stares about the courtroom, but he sees no friend—no hope. Every technicality and delay and defense and avenue of escape known to the cunning of lawyers are available to the rich man indicted for crime. The poor man under indictment is permitted to go through the forms and appearances of a trial; but such a trial is only a mockery."

The public defender idea has met opposition from bar associations, judges, newspapers and others who have believed that accused persons are sufficiently protected in our courts under existing safeguards. Meanwhile, it has won increasing attention from the public generally.

INCOME SOCIALLY EMPLOYED

TO THE EDITOR:

Don't muzzle the ox that treadeth out the corn. Tax luxury and extravagance, not generosity and public service. If we conscript income as well as men to safeguard democracy it is necessary to have the same regard for what the dollars are doing when conscripted as for what the men are doing. If it seems wise to say to men who are already employed at what they can do best to meet the nation's supreme needs in making munitions or producing food, "You are needed more where you are than in the national army," so it would seem wise to say of the dollars now voluntarily employed in the education and training of officers for the army and navy, for leadership in the great tasks of civil life, for the relief of suffering and for the dynamic moral forces of the nation, that they are needed more where they are than in the national treasury.

Allen T. Burns, in his communication on Tax Exemption in your issue of July 14, shows a curious social astigmatism in supposing that the proposal which the Senate is asked to incorporate in the war revenue act to allow deductions from taxable income of gifts for educational, charitable and religious purposes, bears any analogy to a request for a special favor or for a subsidy. It is nothing of the sort. Social workers of the country should rise *en masse*, and are doing so, in indignant protest that the government, in taking its greatly increased toll of income, does not first take all excess war profits, and apply its maximum rates of income tax to that portion of income which is spent for luxury and extravagance before it touches a farthing of the dollars now socially employed in education and humanitarian work.

The Hollis amendment to the war revenue act is a demand for an act of social justice as a matter of right. It is a protest against what in fact amounts to double taxation. It follows precedents derived from the larger experience of Great Britain and Australia in enforcing the strictest application of the principles of the conscription of income. It is good public policy to let socially employed income alone until all that is now expended in luxury, waste and extravagance has been conscripted.

New York.

SAMUEL McCUNE LINDSAY.

A MEETING AT LEEDS

TO THE EDITOR:

I hope you will like to use the enclosed in the SURVEY. Though the Leeds meeting is not very recent, all news is so impeded that I think this is still of immediate interest. It is from a letter from a friend in England, a member of the Union of Democratic Control:

"There was a wonderful gathering at Leeds last Sunday. I went to see it. Seventeen hundred delegates were present from different labor and democratic organizations. It was to hail the Russian revolution, press for the restatement of allied policy in harmony with Russian aims, demand the restoration of civil liberties, and set up a Council of Workmen's and Soldiers' Delegates in this country. It was a very great historic event. I will have some papers sent to you, by preference the most Tory, as that shows how even those papers gave good reports. Morning and evening sessions were opened by the singing of The Red Flag. The conference was held

Communications

CONSERVATION OF MINDS

TO THE EDITOR: War as a "Time for Thinking" appeared in the SURVEY for May 19, on page 171, just below a design for a model settlement for discharged British soldiers. This is a very happy juxtaposition. In this time of national excitement and restlessness, more than ever must we conserve the thinking of mankind, increase as we can the efficiency of our minds as well as our bodies.

Morton Prince has already written a book on the Psychosis of the Kaiser; and, indeed, as pointed out also by Bernard Shaw in the early days of the war, all war itself may be regarded as international insanity.

How much the more, then, should we strive for improvement in our thoughts and in what we think with—namely, our minds. War is a great and ruthless destruction. Not only those in the trenches suffer—they suffer death, physical and often mental torture, and will represent a vast congregation of wrecks that must be repaired and readapted when peace again rests on the world; but those that remain in America, those who stay at home, those who keep the country itself together, must look well to themselves. They must build and build fast, for destructive forces are unleashed in war time that were held in check before. Just as tuberculosis has grown almost to be a plague in France, so may other diseases gain their majority in a short time. And the most serious of these are those that menace our minds.

Provision is being made for the conservation of food and for the improvement of economic efficiency. But until now no great national awareness has arisen as to the need for national conservation of minds, for national mental hygiene.

Now is the opportunity, while there is yet time, to throttle that great social parasite, feeble-mindedness. We know that the feeble-minded procreate rapidly and promiscuously, and that a large majority of their offspring are feeble-minded. And yet, for obvious and necessary reasons, the government subsidizes them. Those people are not subject to draft who are "idiots, imbeciles or those convicted of infamous crimes"—most of whom are in truth feeble-minded. While the perfect specimens of our manhood are off at the front, getting maimed or killed, the

feeble-minded are at home living on the efforts of other people and procreating ever-increasing numbers of their own kind. Now is the time to settle this question—either in segregated colonies where their labor will be utilized to the greatest advantage or else by a law for sterilization (not castration), which is the only alternative.

Excitement breeds excitement. Let us take thought. Monthly, almost weekly, hospital staffs are being organized and sent abroad, fully equipped hospitals arranged for here. Among these are psychopathic hospitals, the foremost that of the New York Psychiatric Unit. But these hospitals care only for the outstanding—the far-gone cases.

The great numbers of people are forever outside of these hospital walls, but there is need for each one to take part in conserving the universal mentality. Let there be organized in each state a mental hygiene society whose sole duty is to further the mental welfare of those within its borders. Then let these mental hygiene societies be assisted in their "drive" by each member of the community.

CHARLES B. THOMPSON, M. D.
[Executive Secretary Mental Hygiene Society
of Maryland]
Baltimore.

THE ENEMY IN CAMP

TO THE EDITOR:

I have read with interest the article, The Rape of Girlhood, on page 256 of the SURVEY for June 16.

War has its "hell" more surely than in the field of battle. It comes most fiendish when the soldier is in the camp during idle hours. You have hit the truth much more fully in this story than most realize, and this result of war requires the deep study and action of all people inclined to aid in social welfare.

The writer was a soldier in the late Spanish-American war, and service was spent in many of the United States camps, forts, garrisons, and in the field as well as in the islands of the Pacific. My experience has been only that of all soldiers, but no one who has never been in the service has even a remote idea of the dangers that come to the girl who enters the soldier camps and garrisons without proper escort in the day-

in the Coliseum, a great theatre, and all the floor of the hall and first balcony was packed with delegates, while visitors were in the second balcony. J. Ramsay Macdonald, Philip Snowden, Mr. Anderson and many others spoke splendidly. The whole audience was simply seething with enthusiasm. Red ribbons were everywhere. It was a particularly unanimous audience, too—save for one or two slight episodes—and any confusion was caused by the anxiety of delegates to support the resolutions. I shall never forget the experience. People in America are not premature in holding conferences to demand terms of peace. They can't begin too soon."

B.

AN INTERNATIONAL RECONSTRUCTION CORPS

TO THE EDITOR:

It is proposed to form an International Reconstruction Corps of "men of conscriptable age unwilling to take life but unafraid of hard work or danger in the service of their country and of mankind, who pledge themselves to continuous service in the corps for the period of the war and at least one year thereafter."

The purpose is to provide an opportunity for service for men who cannot conscientiously do military or naval service but are not cowards, slackers or loafers.

There are in the United States several thousand young men who will refuse to fight if drafted. No one knows what will be done with them. The war department is unable to give any definite answer. There is a rumor that they will be interned.

Most of these young men would like to do something, but they don't know just what to do. They cannot conscientiously go into any service which is organized primarily for military ends. Furthermore, they want to make their protest against war and enforced military service clear.

If a group of young men who are conscientious objectors to war offer themselves for work which is constructive and international, it would seem a foolish waste of youthful idealism to refuse to grant them that opportunity. If, at the same time, they state that they will continue in such service for at least a year after the close of the war, they may convince some of the scoffers that some at least of the conscientious objectors are conscientious as well as objectors, and perhaps set a few to thinking about the justice of their position.

The definite opportunity presents itself in the reconstruction work in Europe. Millions are homeless in the areas over which the battle-tide has surged. There are districts without children; others where thin-faced children have forgotten how to play. Women and old men have lost faith and courage to rebuild. Youth is needed.

When the war is over such work must begin on a grand scale, and in it all the nations must cooperate. Perhaps a little international army of young men and women giving themselves to this task will develop, and out of it might well grow a spirit of international cooperation which would transplant itself into other fields. While hostile armies march on conquered territory, the scope of such work is limited. But a beginning must be made; and the need is infinitely greater than the supply of workers. The nations are giving their primary attention to war.

Already the Quakers, whose traditional opposition to war has been recognized in their exemption from military service, have organized a unit of one hundred men for such reconstructive service. In the same work other conscientious objectors to war whose protest is not yet recognized by law might find the opportunity for service which

would not lose them their own self-respect. In such work they might find their Moral Equivalent of War.

The Quaker unit is organized under the civilian Red Cross, which has undertaken this relief work and has promised to set aside funds for this purpose. There seems to be no good reason why another unit should not be organized of young men who if drafted must otherwise go to jail.

The plan is to form an advisory committee of men of standing who are in sympathy with the general purpose; and an executive committee of men willing to serve in the corps or help actively in its organization.

The first need is to know how many men are ready to volunteer for such service. Men interested are asked to write to

L. S. GANNETT.

27 West Forty-fourth Street,
New York City.

THE State Industrial Commission of Wisconsin holds that typhoid fever contracted by an employe as the result of drinking a polluted water-supply, furnished by the employer, is a personal injury within the meaning of the compensation act. Over \$5,000 is therefore awarded to workmen whose cases have been under debate since 1914.

THE June issue of the *Modern Hospital* contains articles on the subject of occupational therapy in hospitals. A history of the occupational therapy movement, remunerative occupations for the handicapped, value of such work in hospitals for the tuberculous and the insane, are some of the subjects discussed.

THE provincial legislature of Ontario has passed an "act respecting surveys and plans of land in or near urban municipalities" which contains far-reaching city planning powers. Ample provision is made for securing the cooperation of land-owners and avoiding injustice to them, for avoiding the conflicting authority of adjoining towns, and for securing the highest degree of engineering efficiency and advice in the planning.

THE Texas legislature appropriated \$70,000 for the work of a Bureau of Rural Sanitation in the State Board of Health. The Rockefeller Foundation has given a similar amount for this work, it is announced, through its International Health Board. The new bureau will be in charge of Dr. Platt W. Covington, professor of preventive medicine at the University of Texas.

A DELEGATION of French working-women recently visited England to compare factory conditions there with those at home. One of the results of their visit was a strong recommendation for the introduction of British methods of securing the comfort and welfare of women workers, especially by the appointment of lady superintendents. The ministries of labor and munitions have promised the *Conseil National des Femmes* to support them in their efforts to bring about this innovation, which has as yet only been introduced in very few plants. A school for the training of women educationally equipped for such posts has been opened in Paris. A three months' course is considered essen-

tial, including in addition to practical subjects a knowledge of law in so far as it relates to the home and to labor conditions.

A FELLOWSHIP in world politics to stimulate international understanding has been established at Stanford University under the department of history. The fellowship has been made possible through the generosity of Mary and Helen Seabury, of New Bedford, Mass., for long friends of peace. The work will consist of scientific investigations and reports, largely directed by Prof. Edward Krehbiel, head of the history department. No propaganda is to be fostered.

DANBURY hatters are to keep their homes. D. E. Lowe & Co., who were awarded in the federal courts a judgment of \$252,130 against the hatters' union, for a boycott of the product of their factory in 1903, have come to a settlement. The American Federation of Labor raised by voluntary contributions from members a fund of more than \$150,000 to protect the hatters from loss. The hatters themselves paid over nearly \$80,000. The plaintiffs accepted this sum of \$230,000, so that the sale by foreclosure of the 140 defendants' homes was averted.

YET another proof of the value of registration laws properly enforced comes from Virginia. The Bureau of Vital Statistics in the State Board of Health was besieged for records of birth to prove military age. But as the registration laws of the state were inadequate until 1912, the anxious inquirers had to turn elsewhere for their information. "As the cities were about as remiss as the state," says Registrar Plecker, "it is almost impossible for nine out of ten adults to prove their ages from official records." Marriage records have also been sought after. To make these more accessible it has been recommended that all loose documents be forwarded to the Bureau of Vital Statistics for indexing.

IN dismissing proceedings against the New York carpenters' unions, the Supreme Court has held that injunctions against labor unions under the Sherman anti-trust law can be obtained only by governments and not by private persons. "Open-shop" woodwork manufacturers attempted to restrain New York carpenters' unions and others from refusing to work on their products. They charged a nation-wide conspiracy in restraint of trade through a union rule against carpenters working on "open-shop" or "unfair" mill work and trim. They argued that the Clayton act, passed after their suit was begun, operated in prohibiting anti-union injunctions only in suits between employers and employes and not between individuals and unions. The unions contended that the embargo was confined to New York and that the plaintiffs had not been specially injured by it nor were the subjects of special discrimination.

A NOVEL method of interesting college girls in social work was recently employed by the Women's Educational and Industrial Union of Boston. Following commencement week at the colleges, twenty young women from Vassar, Bryn Mawr, Wellesley, Mt. Holyoke, Smith, Radcliffe, and the Women's College of Brown University, came to Boston as guests of the union and of a number of social settlements. Four days were spent in a survey of the city and its social work. After a consideration of problems of housing, industry, and recreation through a trip about the city, a number of visits were made to settlements, family agencies, children's so-

INFORMATION DESK

The following national bodies will gladly and freely supply information and advise reading on the subjects named by each and on related subjects. Members are kept closely in touch with the work which each organization is doing, but membership is not required of those seeking information. Correspondence is invited. Nominal charges are sometimes made for publications and pamphlets. Always enclose postage for reply.

Health

cities and social-service departments at dispensaries and hospitals. Talks by social workers, supplemented by conferences of a more informal character, helped to interpret what was seen, and to give an idea of the possibilities of social work as a profession for college women. The visiting students were divided between seniors, just graduated, and juniors. Plans for the visit were developed by the union in cooperation with a social advisory committee representative of different fields of effort in Boston. Much of its success was due to the close connection as vocational counsellor for a number of colleges in New England held by Miss Florence Jackson, executive secretary of the union.

PROPORTIONAL representation has been defeated by the British House of Commons, although passed by a majority vote at the recent speakers' conference at which all parties were represented. It shared the fate of the enfranchisement of women, not having been included in the official legislative program of the government, a circumstance which, to many minds, relegated it into the class of "academic" propositions. The suffrage measure was, it is true, passed by the Commons, but Lord Curzon announced that it would not be made part of the government measure. In other words, the Lords, left to vote on it as they please, are likely to defeat it. The principal opponents of proportional representation are those who look upon the traditional two-party system which gives commanding authority to the party in office as superior to a system in which a number of minorities may find adequate representation and necessitate the bargaining between party leaders more familiar in continental politics. Mr. Asquith, during the recent discussions, was won over from a former mild interest in proportional representation into the ranks of its strong supporters. This appears to be due, primarily, to his fear of the possible consequences of adding eight million women to an electorate which must be expected for some time to be swayed by emotional appeals to a much greater extent than has been the case in the last few decades.

TEN complete sawmill units are being dispatched from New England to France to help meet the fuel shortage there. The first unit set off from New Hampshire—woodsmen, horses, sawmill operators—100 men and thirty horses. The officers of the State Forestry Department and the Society for the Protection of New Hampshire Forests have called the attention of the State Food Production Committee to domestic aspects of the situation. The high prices for coal have exhausted the supply of dry cord-wood in New England. Next winter the small cities and towns are likely to suffer more than the large cities for lack of coal, and they will have to burn green wood if wood lots are not cut over this summer in the free time between seed time and harvest. The advice of the foresters is offered to farmers so as to prevent damage to future wood production, and the committee is asked to appoint a responsible citizen in each of the larger villages and smaller cities to act as fuel agent, open woodyards and take any other steps to see that seasoned wood is accumulated and conserved for household use.

That the community as well as the war and forestry aspects of the situation are thus so clearly visualized is due possibly to the fact that the forester of the New Hampshire society is an old-time social worker—Philip W. Ayres, who was one of the pioneer executives in charity organization work in Cincinnati, Chicago, Brooklyn and New York.

SEX EDUCATION—New York Social Hygiene Society, Formerly Society of Sanitary and Moral Prophylaxis, 105 West 40th Street, New York City. Dr. James Pedersen, Secretary. Seven educational pamphlets, 10c. each. Four reprints, 5c each. Dues—Active \$2.00; Contributing \$5.00; Sustaining \$10.00. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

CANCER—American Society for the Control of Cancer, 25 West 45th St., New York City. Curtis E. Lakeman, Exec. Secy. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

COMMITTEE ON PROVISION FOR THE FEEBLE-MINDED—Objects: To disseminate knowledge concerning the extent and menace of feeble-mindedness and to suggest and initiate methods for its control and ultimate eradication from the American people. General Offices, Empire Bldg., Phila., Pa. For information, literature, etc., address Joseph P. Byers, Exec. Secy.

MENTAL HYGIENE—National Committee for Mental Hygiene, 50 Union Square, New York City, Clifford W. Beers, Secy. Write for pamphlets on mental hygiene, prevention of insanity and mental deficiency, care of insane and feeble-minded, surveys, social service in mental hygiene, State Societies for Mental Hygiene. Official quarterly magazine, *Mental Hygiene*, \$2.00 per year.

NATIONAL HEALTH—Committee of One Hundred on National Health. E. F. Robbins, Exec. Secy., 203 E. 27th St., New York. To unite all government health agencies into a National Department of Health to inform the people how to prevent disease.

TUBERCULOSIS—National Association for the Study and Prevention of Tuberculosis, 105 East 22nd St., New York. Charles J. Hatfield, M. D., Exec. Secy. Reports, pamphlets, etc., sent upon request. Annual transactions and other publications free to members.

THE AMERICAN SOCIAL HYGIENE ASSOCIATION publishes an illustrated book, *The Way Life Begins*, for parents, teachers and others, price \$1.25. Also *Social Hygiene*, a quarterly magazine, \$2.00 per year, and a monthly Bulletin \$1.25 per year. Annual membership \$5.00; sustaining \$10.00. Information upon request. William F. Snow, M. D., General Secretary, 105 West Fortieth Street, New York.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING. Object: to stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Publications: *Public Health Nurse Quarterly*, \$1.00 per year; bulletins sent to members. Address Ella Phillips Crandall, R. N., Executive Secretary, 600 Lexington Ave., New York City.

THE AMERICAN RED CROSS—Through its Town and Country Nursing Service, maintains a staff of specially prepared visiting nurses for appointment to small towns and rural districts. Pamphlets supplied on organization and administration of visiting nurse associations; personal assistance and exhibits available for local use. Apply to Superintendent, Red Cross Town and Country Nursing Service, Washington, D. C.

PUBLIC HEALTH—American Public Health Assn. Pres., William A. Evans, M.D., Chicago; Secy., Prof. S. M. Gunn, Boston. Object "To protect and promote public and personal health." Seven Sections: Laboratory, Sanitary Engineering, Vital Statistics, Sociological, Public Health Administration, Industrial Hygiene, Food and Drugs. Official monthly organ, *American Journal of Public Health*; \$3.00 per year. 3 mos. trial subscription (to Survey readers 4 mos.) 50c. Address 126 Mass. Ave., Boston, Mass.

EUGENICS' REGISTRY.—Board of Registration: Chancellor David Star Jordan, Pres.; Dr. J. H. Kellogg, Secy; Prof. Irving Fisher, Dr. Chas. B. Davenport, Luther Burbank, Prof. O. C. Glaser, Exec. Secy. A Public Service conducted by the Race Betterment Foundation and Eugenics' Record Office for knowledge about human inheritance and eugenics. Literature free. Registration blanks for those who desire an inventory, and wherever possible, an estimate of their hereditary possibilities. Address Eugenics' Registry, Battle Creek, Mich.

PREVENTION OF BLINDNESS—National Committee for. Objects: To furnish information for Associations, Commissions and persons working to conserve vision; to publish literature of movement; to furnish exhibits, lantern slides, lectures. Printed matter: samples free; quantities at cost. Invites membership. Field, United States. Includes N. Y. State Com. Edward M. Van Cleave, Managing Director; Gordon L. Berry, Field Secretary; Mrs. Winifred Hathaway, Secretary. Address, 130 E. 22d St., N. Y. C.

Racial Problems

NEGRO YEAR BOOK—Meets the demand for concise information concerning the condition and progress of the Negro Race. Extended bibliographies. Full index. Price, 25c. By mail, 35c. Negro Year Book Company, Tuskegee Institute, Alabama.

In addition to information in Negro Year Book, Tuskegee Institute will furnish other data on the conditions and progress of the Negro race.

HAMPTON INSTITUTE, HAMPTON, VA.—Trains Negro and Indian youth. "Great educational experiment station." Neither a State nor a Government school. Supported by voluntary contributions. H. B. Frissell, Principal; F. K. Rogers, Treasurer; W. H. Scoville, Secretary. Free literature on race adjustment, Hampton aims and methods. *Southern Workman*, illustrated, monthly, \$1 a year; free to donors.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE. 70 Fifth Ave., New York. Proposes to make 10,000,000 Americans physically free from poeage, mentally free from ignorance, politically free from disfranchisement, and socially free from insult. Membership 8,600, with 70 branches. Official organ, *The Crisis*, 38,000 monthly. Pres., Moorfield Storey; Chairman, Board of Directors, Dr. J. E. Spingarn; Treas., Oswald Garrison Villard; Director of Publications and Research, Dr. W. E. B. Du Bois; Secy., Roy Nash.

THE JOURNAL OF NEGRO HISTORY—A quarterly publication concerned with facts, not with opinions. The organ of the Association for the Study of Negro Life and History. To popularize the movement of unearthing the Negro and his contribution to civilization that he may not become a negligible factor in the thought of the world. Carter G. Woodson, Director of Research and Editor. Subscription \$1.00 a year. Foreign subscription 25 cents extra. Address, 1216 You St., N. W., Washington, D. C.

Libraries

AMERICAN LIBRARY ASSOCIATION—Furnishes information about organizing libraries, planning library buildings, training librarians, cataloging libraries, etc. *A. L. A. Booklist*, a monthly annotated magazine on book selection, is a valuable guide to the best new books. List of publications on request. George B. Utley, Executive Secretary, 78 E. Washington St., Chicago.

Recreation

PLAYGROUND DIRECTORS AND WORKERS in planning their summer programs will want to keep in mind the Athletic Badge Tests for increasing the physical efficiency of boys and girls. Pamphlets describing the tests and the bronze badges awarded those successful in reaching certain standards may be secured from the Playground and Recreation Association of America, 1 Madison Avenue, New York City.

Organized Charity

ORGANIZED CHARITY AND CO-ORDINATED SOCIAL WORK—American Association of Societies for Organizing Charity. Mrs. W. H. Lothrop, chairman Executive Committee; Francis H. McLean, gen'l sec'y, 130 East 22d St., New York City. To promote the extension and development of Associated Charities and to further the proper co-ordinations and alignments in the social work of communities, including the making of community plans.

Children

CHILD LABOR—National Child Labor Committee, 105 East 22nd St., New York. Owen R. Lovejoy, Sec'y, 25 State Branches. Where does your state stand? How can you help? List of pamphlets and reports, free. Membership fee nominal.

CONSERVATION OF INFANT LIFE—American Assoc. for Study and Prevention of Infant Mortality, 1211 Cathedral St., Baltimore. Gertrude B. Knipp, Exec. Sec'y. Literature on request. Traveling Exhibit. Urges prenatal instruction; adequate obstetrical care; birth registration; maternal nursing; infant welfare consultations.

EDUCATIONAL HEALTH POSTERS COVERING CARE OF BABIES AND CHILDREN—Second edition of Parcel Post Exhibit. Photographic reproductions in color with simple, easily understood legends, attractively illustrated from original paintings; 25 posters (18" x 28") in set. Further information regarding these and other exhibits on request, illustrated booklets on Baby and Child Care. Lantern slides. National Child Welfare Exhibit Association, Inc., 70 Fifth Ave., New York City.

NATIONAL KINDERGARTEN ASSOCIATION—250 Madison Ave., New York. Object: To have the kindergarten established in every public school. Four million children in the United States are now without this training. Furnishes Bulletins, Exhibits, Lecturers, Advice and Information. Works for adequate legislation and for a wider interest in this method of increasing intelligence and reducing crime. Supported by voluntary contributions.

Women

WOMEN IN INDUSTRY—National Consumers' League, 289 Fourth Ave., New York. Mrs. Florence Kelley, Gen'l Sec'y, 87 branch leagues. Reports, pamphlets sent on request. Minimum membership fee \$2.00, includes current pamphlets. Minimum wages boards, protection of women workers, sweat-shops, etc.

WORKING WOMEN—National Women's Trade Union League stands for self-government in the work shop through organization and also for the enactment of protective legislation. Information given. "Life and Labor," working women's monthly magazine, 5c. a copy. Mrs. Raymond Robins, Pres.; Mrs. Amy Walker Field, Editor, 166 West Washington St., Chicago

EVENING CLUBS FOR GIRLS—National League of Women Workers, 35 East 30th St., New York. Organizing Sec'y, Jean Hamilton. Recreation and instruction in self-governing and self-supporting groups for girls over working age. Monthly magazine, "The Club Worker," Thirty cents, 1 year.

HOME AND INSTITUTIONAL ECONOMICS—American Home Economics Association, for Home, Institution, and School. Publishes Journal of Home Economics. 12 issues a year, \$2.00. Next meeting: University of Minnesota, August 22-28, 1917. Address 1211 Cathedral St., Baltimore, Md.

Settlements

SETTLEMENTS—National Federation of Settlements. Develops broad forms of comparative study and concerted action in city, state, and nation, for meeting the fundamental problems disclosed by settlement work; seeks the higher and more democratic organization of neighborhood life. Robert A. Woods, Sec'y, 20 Union Park, Boston, Mass.

Aid for Travelers

AID FOR TRAVELERS—The Travelers' Aid Society provides advice, guidance and protection to travelers, especially women and girls, who need assistance. It is non-sectarian and its services are free irrespective of race, creed, class or sex. For literature, address Orin C. Baker, Gen. Sec'y, 465 Lexington Ave., New York City.

Civic Problems

MUNICIPAL PROBLEMS—National Municipal League, North American Bldg., Philadelphia. Lawson Purdy, Pres.; Clinton Rogers Woodruff, Sec'y. Charters, commission government, taxation, police, liquor, electoral reform, finances, accounting, efficiency, civic education, franchises, school extension. Publishes *National Municipal Review*.

SHORT BALLOT AND COMMISSION GOVERNMENT—The Short Ballot Organization, 383 Fourth Ave., N. Y. City. Woodrow Wilson, Pres.; Richard S. Childs, Sec'y. National clearing house for information on these subjects. Pamphlets free. Publish *Beard's Loose-Leaf Digest of Short Ballot Charters*.

PROPORTIONAL REPRESENTATION. Adopted by Ashtabula, O., and Calgary, Alberta. In "Home Rule" Act for Ireland. Recommended unanimously by official commission, 1917, for part of Commons of England. A rational and fundamental reform. Headquarters, American P. R. League, Pres., William Dudley Foulke; Sec.-Treas., C. G. Hoag, 802 Franklin Bank Bldg., Phila. P. R. Review (quarterly) 40c a year, Leaflets free. Several pamphlets, 25c. \$1 entitles subscriber to all publications for a year—and to membership if desired.

Church and Community

THE CHURCH AND SOCIAL SERVICE—The Federal Council of the Churches of Christ in America operates through its Commission on the Church and Social Service. "A Year Book of the Church and Social Service." (Paper, 30c.; Cloth, 50c.), gives full information regarding social movements in all the churches. For literature and service address the Secretary, Rev. Charles S. Macfarland, 105 E. 22nd St., New York.

EPISCOPAL SOCIAL SERVICE—The Joint Commission on Social Service of the Protestant Episcopal Church. For literature and other information, address the Executive Secretary, Rev. F. M. Crouch, Church Missions House, 281 Fourth Avenue, New York City.

UNITARIAN SOCIAL ADVANCE—The American Unitarian Association through its Department of Social and Public Service. Reports and Bulletins free. Lecture Bureau. Social Service Committees. Elmer S. Forbes, Secretary of the Department, 25 Beacon St., Boston.

General

SOCIAL WORK: GENERAL PROBLEMS, PRACTICAL TECHNIQUE—National Conference of Social Work, 315 Plymouth Ct., Chicago. Robert A. Woods (Boston), Pres.; W. T. Cross (Chicago), Gen. Sec. Proceedings carefully indexed all fields social work. Monthly bulletin and misc. publications. Conducts information bureau. 45th annual meeting Kansas City 1918, probably June. Membership \$3.

SOCIAL DIAGNOSIS—A new and important book, by Mary E. Richmond, for all who must make decisions affecting the welfare of individuals, whether in courts, hospitals, schools, workshops, or in public and private social agencies. Cloth, 511 pp., \$2.00 net; postpaid, \$2.10. Order of Publication Department, RUSSELL SAGE FOUNDATION, 130 E. 22d St., New York City.

AMERICAN INSTITUTE OF SOCIAL SERVICE, Bible House, Astor Place, New York City. Founded by Dr. Josiah Strong. Nathaniel M. Pratt, General Secretary. Edward W. Bemis, Robert A. Woods, department directors. Welcomes inquiries as to all matters of community organization and progress. Members of its staff glad to enter into consultation by correspondence about given conditions or particular projects. Assists in bringing to individual new undertakings the combined results and lessons of the best productive achievement. Ready to aid in securing publications, speakers, temporary or permanent leadership. Particular attention given to requests from communities in which all such effort is at an early stage. Seeks to bring about better co-operation among specialized national organizations, toward securing the more comprehensive local application of their types of service. Promotes the fullest extension of principles and methods which on a limited scale have conclusively shown their power for the upbuilding of the nation.

Immigration

NATIONAL LIBERAL IMMIGRATION LEAGUE—Advocates selection, distribution and Americanization and opposes indiscriminate restriction. Summarized arguments and catalog of publications on request. Minimum membership (\$1) includes all available pamphlets desired, and current publications. Address Educational Dept., National Liberal Immigration League, Sun Bldg., N. Y.

IMMIGRANT GIRLS—Council of Jewish Women (National), Department of Immigrant Aid, with headquarters at 242 E. Broadway, New York City—Miss Helen Winkler, chairman—gives friendly aid to immigrant girls; meets, visits, advises, guides; has international system of safeguarding. Invites membership.

CALENDAR OF CONFERENCES

Items for the next calendar should reach the SURVEY before August 8.

JULY AND AUGUST

BUILDING AND LOAN ASSOCIATIONS, United States League of Local, Boston, July 25-26. Sec'y, H. F. Cellarius, Station A, Cincinnati, O.

HOME ECONOMICS ASSOCIATION, American, Minneapolis, Minn., August 22-28. Sec'y, Mrs. Alice P. Norton, 1326 East 58 street, Chicago.

MUNICIPALITIES, League of Michigan, Grand Rapids, July 26-27. Sec'y, Charles A. Sink, Ann Arbor, Mich.

MUNICIPALITIES, League of Wisconsin, Racine, August 15-17. Sec'y, Ford H. MacGregor, Madison, Wis.

MUNICIPALITIES, Union of Canadian, London, Ontario, August 27-29. Sec'y, W. D. Lightall, Westmount, Quebec.

SOCIOLOGICAL CONGRESS, Southern, Blue Ridge, N. C., July 29-31. Sec'y, J. E. McCulloch, 508 McLachlen bldg., Washington, D. C.

Y. W. C. A. Summer conferences. Southern city conference, Blue Ridge, N. C., July 20-30; Central City, Lake Geneva, Wis., August 10-20; Eastern City, Silver Bay, N. Y., July 17-27; Central Student (second section), Lake Geneva, Wis., August 21-31; Town and Country, Conference Point, Lake Geneva, Wis., August 21-31; Pacific Coast Student, Asilomar, Cal., August 1-10; Pacific Coast City, Asilomar, Cal., August 21-31.

NATIONAL

BAR ASSOCIATION, American, Saratoga Springs, N. Y., September 4-6. Sec'y, George Whitlock, 1416 Munsey building, Baltimore.

CIVIC ASSOCIATION, American, St. Louis, October 22-24. Sec'y, Richard B. Watrous, 914 Union Trust building, Washington, D. C.

CRIMINAL LAW AND CRIMINOLOGY, American Institute of, Saratoga, N. Y., September 3-4. Sec'y, Edwin M. Abbott, Land Title building, Philadelphia.

HOUSING ASSOCIATION, National, Chicago, October 15-17. Headquarters, Hotel La Salle. Sec'y, Lawrence Veiller, 105 East 22 street, New York City.

INTERCHURCH FEDERATION, The Purpose and Methods of. Called by the Federal Council of the Churches of Christ in America. Pittsburgh, October 1-4. Sec'y, Rev. Roy B. Guild, 105 East 22 street, New York City.

INTERCOLLEGIATE SOCIALIST SOCIETY, Bellport, L. I., Sept. 18-24. Sec'y, Harry W. Laidler, 70 Fifth avenue, New York City.

MUNICIPALITIES, League of American, Gary, Ind., Sept. 5-8. Sec'y, Robert E. Lee, Baltimore.

RECREATION CONGRESS OF THE PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA, Milwaukee, Wis., November 20-23. Sec'y, H. S. Braucher, 1 Madison avenue, New York City.

SAFETY AND SANITATION, National Exposition of, New York, Sept. 10-15. Sec'y, W. C. Cameron, Continental and Commercial Bank building, Chicago, Ill.

STATE AND LOCAL

CHARITIES AND CORRECTION, Canadian Conference of, Ottawa, September 23-25. Sec'y, Arthur H. Burnett, City Hall, Toronto, Canada.

CHARITIES AND CORRECTION, South Carolina Conference of, Aiken, S. C., November. Pres., Rev. K. G. Finlay, Columbia, S. C.

MUNICIPALITIES, League of California, Santa Rosa, September 24-29. Sec'y, Wm. J. Locke, Pacific building, San Francisco.

MUNICIPALITIES, League of Virginia, Lynchburg, Va., September 18-20. Sec'y, L. C. Brinson, Portsmouth, Va.

Sargent's Handbook Series

AMERICAN PRIVATE SCHOOLS, 1917

Third Edition, revised and enlarged, new features.

A Guidebook for Parents.

A Compendium for Educators.

An Annual Survey of Education in the U. S. outside the Public Schools and Colleges.

A critical and discriminating account of the Private Schools as they are, written without fear or favor. Indispensable for Parents, Educators, College Officials interested in Secondary Education.

New Introductory Chapters: "Educational Advance in 1916;" "Educational Literature of 1916;" "Measuring Intelligence," by Prof. R. M. Yerkes, of Harvard University; "Choosing a Camp," by Morton Snyder, of Newark Academy; "Vocational Guidance," by Francis Call Woodman, of Morristown School.

672 pages, round corners, crimson silk cloth, gold stamped, \$2.50.

A HANDBOOK OF NEW ENGLAND, 1917

An Annual Survey—Industrial, Social, Economic, as well as Geographical and Historical.

Descriptive of Town and Country along the Routes of Automobile Travel. A Humanized Baedeker, a Year Book, a Gazetteer, a Guide Book. The only book that presents New England as a whole.

Introductory Chapters on Geology, Flora, Architecture, etc. Directories and Appendices. New 1917 Edition enlarged and improved.

Nine hundred pages, with illustrations and maps. Round corners, crimson silk cloth, gold stamped, \$2.50. Limp crimson leather, \$3.00.

Circulars and Sample Pages on Request.

PORTER E. SARGENT, 50 Congress St., Boston, Mass.

As a journal of constructive philanthropy, the SURVEY endeavors to get at the facts of social conditions and to put those facts before people in ways that will count.

As an educational enterprise, with circulation not yet large enough, nor advertising yet sufficient, jointly to meet publication expenses, much less journalistic research, the SURVEY must look to contributions to make its larger work possible.

We seek and accept contributions to our educational work in the same way that a college or museum would seek or accept contributions—namely, to carry out certain well-defined functions:

- As an even-handed chronicle of events and happenings in our field.
- As a pooling place for social experience, experiment, practice.
- As a forum for the discussion of issues within our field by those who come at them from various angles.
- As an interpreter of various groups in the community to each other.
- As an investigator and exhibitor of the results of social research.

As an adventure in cooperative journalism, 1200 contributors of \$10 or more make up the active membership of SURVEY ASSOCIATES, INC. This wide-spread, democratic backing comes not only from those of means, but from the rank and file of social workers, heads of settlements, teachers, probation officers, lawyers, ministers, physicians, etc., and socially-minded citizens generally.

Why not be one of them—a \$10 cooperating subscriber?

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travels, Real Estate, twenty cents per line.

"Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19 St., New York City.

HELP WANTED

A RESIDENT kindergartner for the very work of a Jewish Neighborhood House near New York City. Address 2538 SURVEY.

WANTED by local Charity Organization Society, a Social Worker for a town of 10,000 inhabitants. The position pays \$1000. If interested please address MISS SALLY KIRBY, Goldsboro, N. C.

COLLEGE WOMAN, trained charity visitor preferred, for permanent position, fine opportunities for advancement. Address ASSOCIATED CHARITIES, Jacksonville, Fla.

WANTED: Experienced woman to have charge of welfare and sociological work at large industrial plant in the East. Address 2543 SURVEY.

WANTED by September 1st—house-keeper at the Jewish Orphan Asylum, Cleveland, Ohio. Please address communications to SIMON PEISER, Supt.

SOCIAL WORKER WANTED—Young woman with training and experience as relief worker to take charge of progressive relief department of Jewish Federation in large city. Must know Yiddish. Fair salary, pleasant surroundings. Address 2544 SURVEY, mentioning education and experience.

WANTED—For Middle West city of 50,000 inhabitants, a trained case worker. Prefer young woman of 25 to 35 years of age. Give references and experience. Address JACKSON ORGANIZED CHARITIES, Jackson, Michigan.

SITUATIONS WANTED

YOUNG WOMAN, now employed, with several years' experience in social work desires position in a settlement as neighborhood visitor. Address 2546 SURVEY.

GRADUATE NURSE wishes position in public health work. Has had several years' experience and special training. References given. Address 2545 SURVEY.

YOUNG MAN thoroughly trained in responsible investigative and executive work wishes an opportunity where initiative and constructive organizing are required. Address 2547 SURVEY.

FOR THE HOME

SEVEN CENT MEALS

\$1.50 per week per person: 42 meals with recipes and directions for preparing each. 10c or FREE for names of two friends.

THE PRICE

YESTERDAY:

One hanging high, bound fast to cross of pain,
Breathed blessing on the angry crowd and cried
"Forgive, they know not what they do!" and died
To draw a world within his tender reign.
One after one the prophet souls have birth,
Hold high their flaming torch, speak daring word,
Perish by torturing hate or cruel sword,
To win at last the altar-shrines of earth.
Oh, glorious company! These make it clear
What all mankind must be—august, divine.
But on what sodden crowds their faces shine,
How long before the few their message hear!
What miracle shall make the sullen, weak,
More quick to answer when the prophets speak?

TODAY:

A million crosses on a thousand fields,
Hiding unnumbered dead 'neath blasted soil;
The gifted youth—the simple man of toil—
Such as each generation's harvest yields.
These, slain by those who did not wish to slay;
These few, who knew their homes must be kept free;
These more, who died for Kings they could not see;
These most, blind spoilers of Life's hoard, each day,
In lands they had not meant to rob;—these Dead;—
Shall their most bitter cross no blessing bring?
Shall their black winter know no blooming spring
To presage harvests from their famine fed?
Forbid it, Justice, that from tyrants' power
Hath, age on age, wrung Freedom's richer dower!

TOMORROW:

Oh, can it be that time has come at last
For thrones to topple and for Kings to go?
For Greed to loose its hold; for Power to flow
Supreme through humblest ways; for learning fast
That in the "fabric of the world," not fair
And gilded broidery of its famed and great,
Is Sovereignty divine? That not the rare
And mighty few, but warp and woof strange Fate
Weaves into destiny sublime for all the race
Is utmost promise of the Good; to last
When pride of wealth and dazzling lie of caste,
And even lonely prophet's gift of grace,
Shall show but pictured hint of Common Life
Shot through with splendor, born of Love and Strife?

MEANWHILE:

Meanwhile, on earth, Spring's flower-waking feet
Find not a place to rest; and sky and sea
Are desecrate by monsters grim that flée
And dive with Death; and chaos, only meet
For devil's realm, destroys the garnered gain
Of ages long. Justice, is this thy plan,
To claim such price for this new gift to man,
This gift of Common Life, cleansed free of stain
Of slavery and fear? Oh, Wisdom, teach
Thy Comrade thriftier ways! Behold the Price
Is paid, long since, by prophets brave; paid thrice
By these new dead whom praises cannot reach.
Call Love to heal hate's wounds! Great Wisdom, lead
Mankind by better paths to Freedom's need!

ANNA GARLIN SPENCER.

Social Aspects of War Taxes

By Samuel McCune Lindsey

PROFESSOR OF SOCIAL LEGISLATION, COLUMBIA UNIVERSITY

THE first war revenue act [which is the greatest emergency revenue measure that has ever been proposed in the American Congress] is not yet a law, although it passed the House of Representatives two months ago. The Senate Finance Committee reported it to the Senate on July 3 and recommended many important changes in the House bill, but the Senate has now recommitted it for further consideration in the light of the food administration bill. The liquor control features of the latter as well as many other proposed radical departures in policy affecting sources and yield of current revenues have made it necessary for the Finance Committee to revise its work. It is not likely, however, to change greatly the general principles upon which it proposes to begin the financing the war.

The House and Senate bills differ in important particulars, but rather in the details of application than in the essential principles of taxation and the social policies which those principles imply. We are here not so much concerned with the variation in the rates of the income tax as between the Senate and House bills or in the fact that the one proposes to double the federal estate tax while the other leaves it as at present, or in the details of the levy of the excess war profits tax, as we are in the fact that both bills propose to raise by immediate taxation from fifteen to eighteen hundred million dollars and to do this through doubling the normal income tax, reducing the minimum incomes exempted and increasing greatly the surtax, which begins with incomes in excess of five thousand dollars and reaches higher levels for the larger incomes than have been attained in any other country. This means a four per cent normal income tax on incomes over \$1,000-\$2,000, and from 1 to 50 per cent graduated surtax on incomes over \$5,000.

The task of raising revenue to defray war expenses is not to be a light one in any event, whether the huge sums that will be required are financed, first, directly from taxation with temporary reliance on loans, or secondly, wholly from loans with partial reliance upon taxation for the purpose of carrying interest charges, which has been our traditional policy in this country, or, thirdly, a combination of taxation and loans in relatively equal propositions. Professor O. M. W. Sprague in an article in the *New Republic* of February 24, 1917, set forth a "pay-as-you-go" policy and advocated what he called the conscription of income, having important analogies to the conscription of men, as the method for making it effective. The same policy was advocated in a memorial

to Congress on April 23 entitled, Memorial of Economists Regarding War Finance, signed by a number of prominent college and university teachers of political economy and finance. It was given greater prominence and pushed to a greater extreme as a theory of financing the war, by the American Committee on War Finance led by Amos Pinchot. It has won very considerable public support and has undoubtedly seriously influenced the general policy underlying the House and Senate bills. In a referendum submitted by the editor of *Equity* to the members of the American Economic Association, American Political Science Association, and the American Sociological Society, over one thousand votes were cast. As summarized in *Equity* for July, about one-third of these voters expressed themselves in favor of conscripting income in excess of necessity or reasonable comfort or "customary standard of life" as the chief reliance for meeting expenses of the war. Approximately one-third more voted for income conscription and also for other forms of taxation, while a fifth of the total vote indicated that it was favorable to the principle of conscription of income in the sense above indicated, though not recorded affirmatively in either of the two groups just mentioned. This left the general result practically five to one for conscription of income which a majority of the voters probably understood to mean the confiscation of incomes over one hundred or two hundred thousand dollars.

Prof. E. R. A. Seligman, of Columbia University, and Prof. Charles J. Bullock, of Harvard, have criticized severely the postulates of the conscription theory and the extreme application of the pay-as-you-go policy. (See Columbia War Papers, Nos. 7 and 16, for Professor Seligman's views, and *North American Review* for June for Professor Bullock's.) Still more recently, Prof. T. N. Carver has defended the conscription theory in the *New York Tribune* for June 24, 1917 [Some Must Fight; Shall Not All the Others Pay?], in which he says: "The real question, stripped of all verbiage and claptrap, is simply this: Shall we who stay at home pay for this war as far as possible as we go along, or shall we ask the government to borrow the money in order that we be not too much disturbed or disarranged, and that they who go to the front and do the fighting may help to pay for it after they return home—if they do return home?" Professor Seligman makes a spirited reply in the *Tribune* for July 15.

As a matter of fact, the financial policy upon which we are

clearly embarked in the bills now pending in Congress is one of reliance upon taxes *and* loans, perhaps not in the proportion of fifty-fifty, suggested by Secretary McAdoo, but in the proportion of the maximum load that can be put upon taxation without endangering the productivity of capital or lessening the production of wealth to be taxed. This means the conscription of income in at least one very legitimate meaning of that term. It does not mean the confiscation of any incomes however large or the taking of that part of incomes necessary for making good the wastage of capital, but merely that part which can be saved or economized in personal expenditure. To tax luxury, extravagance, waste, uneconomic consumption, miserly hoarding and every species of personal use of income or property which can be economized, saved or done without, is of the essence of this policy, not necessarily to pay-as-we-go but to put the maximum load upon taxation that the traffic will bear.

Professor Seligman thinks that this maximum load will be for the first year just about what Congress has set out to raise by taxation, viz.: Fifteen to eighteen hundred millions and that this amount should be doubled during the second year of the war. The balance of perhaps ten billions required in each year will have to be met from loans. Even this somewhat more moderate policy than the American Committee on War Finance advocates involves a very real concession to new forces of democracy and to the views that the committee has advocated. It also involves a greater tax burden than any of the fighting nations of Europe after several years of war have yet assumed or even thought of undertaking. It means a tax burden and a test of patriotism for the stay-at-homes as well as for those who go to the front.

Excess war profits upon a reasonable base of calculation can be and should be the chief reliance for the increased revenue from taxation during the first year. It is one of the two chief reliances of the Senate and House bills, but both incline rather to the increased income tax as the chief reliance. There is good authority for the assertion that with a little more elasticity in determining the base upon which the excess is to be calculated, one thousand million dollars, or two-thirds of the revenue to be derived from taxation in the first year, could be obtained from excess war profits, which might be taxed 60 to 80 per cent on a revised base, giving a choice of any three of the five years 1911-15 inclusive, without seriously disturbing the economic investment and productivity of capital. Those who profit most as a direct result of the war are those who are best able and should be most willing to contribute most in taxation. Incomes which now yield about two hundred and fifty million in taxes under the existing income tax law in the United States could be made to yield three to four times that amount without putting any greater burden upon them than Great Britain has done with her relatively smaller social income. We ought to have regard for the necessary implications of any radical variation or increase in the rates, and for the considerations which determine that part of income that is made taxable. Selective conscription, to which we are already committed, means having regard for what the dollars are doing when we propose to take a part of them as a compulsory contribution to the war chest. It is perhaps reasonable to say that at least one thousand dollars of income is necessary for single persons and two thousand for married persons or heads

of households as an exemption to cover the maintenance of a decent standard of living or to guarantee physical efficiency.

It may be reasonable and necessary to allow as deductions from gross income in getting at net income subject to tax the direct and necessary expenses for carrying on business, losses sustained, bad debts, etc., and on the principle of avoidance of double taxation, the deduction of all taxes paid to local, state or national governments, as the present law provides, and if so, it is equally necessary and socially expedient to allow as the Hollis amendment, now pending in the Senate, proposes to do: the deduction of gifts and contributions for charitable, educational and religious purposes. For administrative reasons, to safeguard it from abuse such a deduction might be limited to 20 per cent of any individual's otherwise taxable income for the year on the theory that probably 90 per cent of donors do not contribute more than 20 per cent of their income for such purposes. This is an essentially just and fair proposal and is not subject to the ordinary objections that attach to government subsidies or to special and class favors as ordinarily sought in legislation. It is neither the one nor the other any more than the fixing of the rate of the surtax at 24 per cent per annum upon the amount by which the total net income exceeds \$200,000, and does not exceed \$250,000, as prescribed in the Senate bill, means that that class of persons who have incomes between two hundred and two hundred and fifty thousand dollars receive a subsidy or favor because the rate was not 30 per cent as originally determined in the House bill. Whether 24 or 30 per cent, the rate presumably is the maximum for that particular class, the imposition of which will disturb least the productive and social uses to which such incomes are put and will take the maximum of the proportion of such incomes that now goes for luxuries, extravagance and personal consumption that can be economized. In like manner, the Hollis amendment assumes that any rate of tax upon that portion of income within any income group now voluntarily contributed as a sort of self-imposed tax to the quasi-public and vitally essential works of education, charity and religion would tend to discourage or possibly disrupt agencies of the common welfare which the government does not wish to take over and administer.

The exemption from the federal estate tax of legacies and bequests for educational, charitable and religious purposes which is proposed in the Myers amendment rests essentially upon the same grounds and is in complete harmony with the traditional policy of the nation and the states. The Hollis amendment has in principle excellent precedents in the legislation of Australia and in pending legislation in Great Britain, both of which countries apply in the strictest manner possible the principles of income tax legislation as part of their war revenue policy.

The war revenue bills propose no departure from our usual policy in the matter of taxation upon consumption which is intended to get at most directly the sources of expenditure for luxuries. It may be deemed desirable to increase the rates in many cases, but all present indications point to the probability that this form of taxation will be of diminishing importance in the methods relied upon to secure the revenue necessary for the vigorous prosecution of the war and for the enormous new tasks of government which we have already assumed.

Notable Books by Women

THE CITY WORKER'S WORLD

By Mary Kingsbury Simkhovitch. The Macmillan Co. 235 pp. Price \$1.25; by mail of the SURVEY, \$1.33.

Through Settlement Windows

As a rule those who have had the inner experience of life at a settlement house regard it as an inseparable part of what makes them contemporary. At last we have a book which actually precipitates the realities that come of this special attitude toward people and affairs.

The settlement has been something of a guild of mysteries. Its chief treasures could never be disclosed to the uninitiated; it was like Mme. Humbert's cabinet, always going to be opened, the fitting circumstances never coming about. Mrs. Simkhovitch even gives us a bit of a shock by making some things so plain.

You can see all the manifold ways of neighborhood acquaintance and have before you, in a little manual of doorstep and stove-side wisdom, the factored-out result. You are made better acquainted than ever before with what the different immigrant groups in action express themselves to be. There is a characterization of Irish dignity and worth that would almost by itself justify the book. You are accredited into the society circles of the tenements and given a participating sense of their codes and of their ranking events.

You are privileged to sit at the settlement board among the humanitarians, the altruists, the quasi-bohemians, the doctrinaires, the special reformers and the solid nucleus of those who are well shaken down into the situation.

And you have a freshly minted impression of the manifold revelation, the new avenues of community growth and power, the successive steps in broad projects of social construction, which can come of the downright approach of such a group to its neighborhood. In this case it means much that both the leadership in the actual drama and the shaping of this epitome of it are the work of a woman who, a true citizen of the world, with something of that "careless independence of spirit" which she praises, has gone through all the cardinal experiences of woman's life.

The author is clearly accustomed to being blown upon by all the winds of economic and philosophic doctrine, but she gives a telling exposition, within its compass, of working-class human facts as leading to far-reaching indications for statesmanship. Her treatment is quite beyond the mere inculcation of certain views sustained here and there with modern instances. As a sketch of the right method of approach to community issues, it is a fresh and genuine contribution. To a great supporting circle of volunteers, contributors, kindred spirits, and to all the apprentices of social work, this book is among the few indispensable. Read with intervals of reflection, it will be like a professional course of the waters to many practiced members of the craft.

The underlying point of view is American, even to the extent of being Yankee. "The American public is intent upon main-

taining the American standard of living, both through motives of democratic conviction and through desire to excel." Every Americanizing purpose must return to this issue, whose distinguishing note must be a reasonable degree of economic security. Up to this point, as our author reads the human nature about her, the finer moral judgments must be in abeyance—"materialism proper does not emerge," and the choices of life which give it variety and power and lead to its fulfilment, are barely possible. Even discontent hardly manifests itself, for this presupposes strength and hope.

While social legislation and progressive municipal administration are to some extent adding to range of existence, they are not coming definitely at the issue of the income standard. Hence the importance to American civilization of the organization of labor and of taxation reform must be more and more apparent.

The book does not enter into the precise bearing of settlement experience on these fundamental reforms. It is truly said that "the women of the industrial family are full of wisdom, responsibility and realism." The wives have the economic sagacity, so far as possible, to get the whole of their husbands' weekly wages in their hands before any division is made. What of the increasing power of association which they are gaining through the settlement toward creating a front for their economic protection? How can the woman employe solve her wage problem, especially if there be competition with men, without a comparison of her interests with that of the housewife?

Suggestive note is taken at many points of instinctive capacity for group action on the basis of the great working-class quality of loyalty. But we find no reference to what the settlement has done and can do in unfolding, through long drill and practice, the mystery and skill of associated action, which working people so grievously need

to learn. How can much further progress be made in marking up income and adjusting economic burdens without it?

A decade or two hence, when Mrs. Simkhovitch, or some disciple of hers, writes a similar book, there may be within sight a universal compulsory system of vocational education, with high emphasis upon the spirited training and discipline of the whole new generation in democratic collective action. To this end, a greater degree of confidence in certain phases of settlement experience would be of service in bringing about a new era of humanized, and therefore vastly increased, production, which would mean more for the better social order than any redistribution of the present product.

With her discerning appreciation of spiritual worth at the poverty line, it may well be that a further period of such intimacy as she has had will give new significance to potencies now hidden and apparently stifled by economic pressure. There is a tendency afoot in the guise of psychology—of which this book at many points shows the marks—toward eliciting the loyal response of the inner man from everyone however restricted in the present scheme of life. Some of the motives of the pre-economic period will reappear in more organic form. The moral reserve in the life of the poor will again be recognized as it merges into some instinctive rising of the neighbors. The settlement coming to its full estate as an organ of democracy will have that true quality of religion which sees in even the most hampered personality a potential and essential factor in the new creative synthesis.

ROBERT A. WOODS.

THE MENTALITY OF THE CRIMINAL WOMAN
By Jean Weidensall. Warwick & York, Inc. 332 pp. Price \$1.75; by mail of the SURVEY, \$1.90.

A Bedford Study

Dr. Weidensall's book, *The Mentality of the Criminal Woman*, offers some results of her five years of work in connection with the Laboratory of Social Hygiene at the Bedford Hills, N. Y., Reformatory for Women. The general purpose of the study as stated by the author was to find some

means of determining the reformability of the women convicted and committed to this correctional institution. The specific problem that was felt to be most urgent was the securing of a body of mental tests whereby one might differentiate from among the group those having sufficient capacity to benefit by training.

An introduction by Dr. Katharine Bement Davis gives an account of the history and purpose of the laboratory, and a brief statement regarding the institution as a whole, the type of women committed there, some of the questions that arise concerning them and the light which it is hoped scientific study may cast upon the solution of these questions.

The main body of the book contains first a discussion of the criteria which led to the adoption in the laboratory of certain

tests and a certain procedure in giving them. The general aim was to find and to apply such tests as would answer certain very definite questions: Had the given individual sufficient ability to learn a trade? Was she potentially capable of becoming industrially self-supporting. Was she stable enough to adapt herself to social conditions? If she could meet these requirements, she was to be considered reformable. The task, then, became that of discovering the help science could offer in this very practical situation.

The general method adopted by Dr. Weidensall was that of a comparative study. Since no psychological tests that were available were considered sufficiently standardized with these particular points in mind, and hence could not be interpreted sufficiently well to offer safe diagnoses, it was felt wise to compare these criminal women with a group of law-abiding working-women or girls.

Naturally, it would be difficult to find a group exactly parallel to the Bedford women in all details except that they had not come in conflict with the law. An exact check group would involve similar age, nationality, educational opportunities and environmental conditions of upbringing, not to mention more complex aspects of family life. The best group for comparative purposes that could be found was one being studied by Dr. Helen Thompson Woolley, then director of the Bureau of Vocational Guidance in Cincinnati. The girls there studied—only records of girls are used in Dr. Weidensall's comparative study—were younger than the reformatory women, all must have completed at least the fifth grade, all were native born, and they were an unselected group of those leaving school at fourteen years.

It can be seen at once that there are several vital respects in which this group differed from the group of criminal women. The latter were not only older, but not all were native born, nor had all of them completed the first five grades of school. Indeed, 9 per cent had never attended any school. Further, they were of course a selected group of criminal women, those within certain age limits committed to a correctional institution of a certain type and for certain groups of offenses. In spite of these differences in conditions, the comparison of the two groups is exceedingly interesting and likewise very valuable if one keeps in mind the distinctions as well as the similarities which characterize the working girls and these delinquent women.

Noting results as a whole, it was found that the main distinguishing characteristic of the Bedford women was the slowness of their reactions. Frequently there was a greater difference in the time they required to perform a task than in the accuracy of the final result. Their slowness in understanding was found disproportionate to their ability ultimately to do. The Bedford group, consisting of eighty-eight women, was found to divide itself into two smaller groups, one in which ability was quite comparable to the Cincinnati working girls; the other notably poorer in endowment. The author summarizes her findings in the following statement: "Approximately 40 per cent of the Bedford women are decidedly less efficient in whatever these tests measure than the average Cincinnati working girl of fifteen years; 60 per cent parallel the working-girl group in range and distribution of records, and 33.3 per cent are at least as intelligent in whatever these tests measure as is the average Cincinnati working girl of fifteen. Approximately one-third of the group test up to the median record of the college maids in the tests which were given to both groups."

A few other findings may be briefly cited. The records of physical examination indicate,

according to the author, that the Bedford women are unusually healthy. The social and industrial records show a great amount of school retardation, a general dislike of school which seems to have failed signally to hold the interest of these women, irregularity in periods of working, and long periods of idleness. As characteristics of the group are mentioned: lack of discrimination in the selection of work, thoughtlessness, reckless manner of leaving jobs for trivial reasons, little sense of the value of service or money, little foresight, and an uncritical attitude toward experiences of every sort.

None of the data gathered are evaluated in any way from the standpoint of causation of delinquency. The author does not purport to attack at all the problems of genesis of these delinquent careers. Her interest was much more largely centered in determining the mental status of these women offenders as indicated by results on a certain group of tests and evaluated in the light of her comparisons. The final conclusion reached is that two-thirds of these criminal women are tractable and responsive, and that an appreciable number of them at least, other things being equal, may be trained to be efficient and taught a reasonable measure of self-control. Of course, this conclusion rests only on the basis of this study of eighty-eight Bedford women, and the title, *The Mentality of the Criminal Woman*, must, therefore, be properly interpreted. No one could be certain that these findings are true of a group of women committed to institutions of different types, for other offenses and of other ages.

AUGUSTA L. BRONNER, M.D.

ARMENIAN POEMS

Translated by Alice Stone Blackwell. Robert Chambers, Boston. 295 pp. Price \$1.50; by mail of the SURVEY, \$1.59.

Seldom can one read with pleasure and interest the poems and lore of his birthplace translated into another language. But the Armenians are reading this book over and over again with pleasure even though they know the contents in their own language. Miss Blackwell should be highly congratulated; for *Armenian Poems* is not merely a translation, but rather a collection of exquisite portraits of peaceful life in a quaint village in one corner of the Garden of Eden, and the Virgin love of youth or maiden, or chants of the sorrows of a down-trodden race yearning for liberty.

Most of the poems are modern; for during the various periods of devastation by Asiatic hordes all the ancient literature was destroyed except some of the religious chants which form part of the Armenian church service. The discovery of any of the songs of Miss Blackwell's collection would have led their possessor to prison and their author to the gallows; for they are the expression of a time when the race was subject to an oppressive government—a handful of people surrounded on all sides by people antagonistic economically, socially, religiously and politically. Yet how tenaciously they clung to their Christianity and preserved their denomination, Miss Blackwell's admirable interpretation clearly shows, especially in such poems as *The Martyrs of Avarair*, and *The Lily of Shavarshaw*, though at any time since the second century, during Persian tyranny and during recent massacres, an Armenian might have saved his life by renouncing Christianity and accepting the Mohammedan faith.

The poems, *Let Us Live Armenians*, and *The Complaint to Europe*, show vividly the

highest type of patriotism, fostered through six hundred years of persecution, inherited from a long line of ancestors, both warriors and kings. The *Song of Liberty* shows the love and pride in their land whose topography has created in their hearts so peculiar a sense of freedom uttered in this song, called by European literary critics the best song of liberty ever written.

That Miss Blackwell knows thoroughly the rural life of the country is evident from such poems as *The Young Wife's Dream*, and others, in which the morality of the race is shown, and their sincere love and devotion to relatives and friends. This is held one of the greatest assets of the people.

The Armenians owe a debt of gratitude to Miss Blackwell for digging up these jewels from the Turkish mire. She has been a sincere friend of Armenia for many years. Twenty years ago people wondered why she should spend hours with her Armenian gardener in her library, when he should have been busy in the garden. Here is the answer: He was trying with his limited English vocabulary to give verbal translations of some of the poems, and to describe some phases of Armenian life to his patient and painstaking teacher.

Y. M. KAREKIN.

THE SEXES IN SCIENCE AND HISTORY

By Eliza Burt Gamble. G. P. Putnam's Sons. 407 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

This revised edition of the volume, published in 1894 under the title *The Evolution of Woman*, is written to bring down to date the disclosures of later investigations which the author finds to be "in strict accord not only with the facts set forth in, but with the conclusions arrived at," in her earlier work. Even the outcome of the present war is fearlessly forecast to be as strictly in line with the author's avowed purpose to refute "the dogma of woman's inferiority to man" as the historical facts and the assumptions of prehistoric conditions, which she cites with an advocate's zeal that offsets such scientific knowledge as the volume contains.

Valuable as are the facts cited from a wide range of reading, yet the author's historical interpretations and assumptions are as open to challenge as are her ventures into prophecy. However one may appreciate the qualities of women that essentially supplement or are superior to those of men, such a "conclusion" as follows halts rather than advances progress toward a goal described in quite such sweeping terms as these:

"When the principles of equality and liberty which were established by early organized society gave place to a system founded on force and the control of the many by the few, and when through the subjection of women the natural checks to the disruptive tendencies developed in the male were withdrawn, the conditions now existing in so-called civilized society were foreshadowed. The war which is now devastating Europe, and which will doubtless spread over the entire earth, is the beginning of the end. . . ."

"The excessive male energy which has in the past been required for the development of our present civilization has become not only useless, but an actual hindrance to further progress. As this enormous power is no longer needed for useful purposes, it has been turned into channels of wantonness and destruction. . . ."

"The constructive element developed in human society is again to assume command over the destructive forces which have been

in control since the beginning of the historic period. As this element has been confided to women and as it is by them transmitted to offspring it is not difficult to forecast the position which the women of the future will occupy. The institution of marriage as it now exists will disappear. Only the most robust among women will propagate the race. These women, as did the women under early organized society, will choose their mates. They will exercise absolute control over the sex functions. Thus will be avoided the terrible consequences which have resulted from the present form of marriage."

The ascendancy of The Sex thus predicted is more autocratic than anything yet experienced at least in the so-called decadent "historic period." Yet the authoress hopefully assures us that "the philosophy of history proves to the earnest seeker after truth that the door of the future is not wholly closed"—presumably to mere men.

G. T.

SOCIAL RULE

By Elsie Clews Parsons. G. P. Putnam's Sons. 150 pp. Price \$1; by mail of the SURVEY \$1.09.

This book is a vigorous plea for greater social freedom—*i. e.*, for tolerance of individual variations, for collective ownership, industrial democracy, the disappearance of exaggerated nationalism and national wars. Its method consists in showing how social rule is based largely upon standardizations and arbitrary social classifications. Its solution of the problem is to divert energies now spent in ruling others and meddling with them into new outlets for effort and ambition, notably into science—*i. e.*, control over nature.

Much of this ground has already been plowed over by Sumner, Ross, Lippmann and others. Indeed, the implied thesis is Sumner's familiar dictum that the greatest social art is the art of minding one's own business.

Taken as a satirical essay and not as a scientific monograph, the book is interesting and even provocative. But it constantly annoys by its sheer wilfulness and cynicism. It is nihilistic, with scarcely a single constructive suggestion. So many examples occur of unwarranted pressing of the thesis and of questionable generalizations that one suspects the author of enjoying the rôle of *l'enfant terrible*. Moreover, the materials are not by any means always relevant. The chapter on delinquents and defectives, for example, is altogether superficial and unconvincing. The interpretation of racial assimilation as mere will-to-rule is, to say the least, and perhaps even avowedly, one-sided. The public is warned against the social worker and particularly the propagandist social reformer, who masks the will-to-power under a show of benevolent intentions. "Modern mechanisms of war might be but petty horrors compared to the undertakings of social reformers, rampant in attempts to control people 'scientifically,' to control birth and death, to regulate mating, to control feeling and thought and will, personality itself. The tyranny of traditional morality might be insignificant compared with that of the morality of eugenics. With the will-to-power of the social reformer unrestrained, his zeal for scientific management untempered, many of the subject classes would be re-victimized—children, women, the defectives and the criminal, 'backward' peoples."

This brief quotation may be taken as a sample of the flavor of the book and its

point of view. We doubt if it will add anything to the author's reputation. At any rate, it in no way measures up to the high level of her earlier work.

A. J. TODD.

TRUANCY AND NON-ATTENDANCE IN THE CHICAGO SCHOOLS

By Edith Abbott and Sophonisba P. Breckinridge. University of Chicago Press. 472 pp. Price \$2; by mail of the SURVEY \$2.16.

The present volume is a continuation of the study by the same authors of the effects of poverty and lacking community intelligence in Chicago, which bear so heavily and unjustifiably upon large classes of children. The earlier studies are those of the Housing Problem in Chicago, which appeared in the *American Journal of Sociology*, Vol. XVII, and those upon the Delinquent Child and the Home, published by the Russell Sage Foundation, 1912. Closely associated with these as a source and inspiration of this study are Florence Kelley's reports as factory inspector in Illinois.

In the first and shorter part of the book, the authors trace the history of the development in Illinois of the sentiment and demand for free and compulsory (terms which still sound strange together) education. It is a story competently told with adequate documentation, not essentially different from that which could be presented for most parts of the country during the same periods. It cannot be read without a sense of the profound difference between the attitudes of the political and social historian on the one hand and that of the social reformer and administrator on the other. From the standpoint of the past, each one of our institutions and each advance in their development is an achievement that fills the reader with satisfaction. From the standpoint of reform and the future, we regard them with disapproving eyes as always conceived at first with too niggardly an estimate of their uses and too slight a recognition of their functions. Free education came somewhat as grudgingly, almost as a gift. It was not so much with a sense of responsibility as with that of generosity that the state contemplated its schools and the children who attended them. It is not easy to induce either an individual or a community to admit that, instead of having been a benefactor, he or they have been unfaithful stewards. This is not the only instance in our more recent history in which this change of attitude has been necessary to our social advance. Especially has the condition of the immigrant in the American city and country suffered from this ego-centric predicament of ours. Having conferred such privileges upon him by receiving him into our midst, by what right can we be accused of having exploited him? It is easier to correct the false perspectives of our vices than those of our virtues. With this task it is the second part of the volume is concerned.

Here the plot thickens. We see that the child's education and child labor are inextricably entangled with each other, that the state cannot give, much less compel, the one without very carefully restricting the other. And this again involves a shift in moral attitude difficult to make. It is an attitude most admirably brought out in the quotation from the decision of Sir James Fitzjames Stephens in the case of a little Eng-

lish girl to whom the school authorities sought to give her slight modicum of education when her home claimed the support of her wages. Sir James said, "She has been discharging the honorable duty of helping her parents, and, for my own part, before I held that these facts did not afford a reasonable excuse for her non-attendance at school, I should require to see the very plainest words to the contrary in the act. I might add that there is nothing that I should read with greater reluctance in any act of Parliament than that a child was bound to postpone the direct necessity of her family to the advantage of getting a little more education for herself." As the learned and moral judge took away from her the only schooling she could ever get in her life and sent her out to service, he patted her on the head and told her what a good child she was to prefer helping her parents to getting this insignificant piece of education.

In the same frame of mind, the community of Illinois and more especially of the great city of Chicago has too frequently considered the meagre wage which an untrained twelve- to sixteen-year-old child could get in industry of more worth than the education with which the state has undertaken to endow all its children. It seems strange that a state can give with one hand and, while by taking away with the other, can minimize its own bequest. It is profoundly depressing to realize that matters of such great moment as the social and intellectual training of the next generation are thwarted by attitudes of mind so seemingly harmless and even trivial that people cannot be got to consider them. If the community could only have been induced to regard the few years of schooling that were compulsory as priceless to the children, if they could only have therefore viewed the housing, food, the labor and health of the child from the standpoint of their bearing on this priceless education, how vastly different would have been the history not only of the schools in our whole country, but the life of the children in hundreds of thousands of families. Because the American community has been able to combine a somewhat grandiloquent attitude toward its whole system of public education with a somewhat contemptuous attitude toward schoolmasters and especially school-mistresses and toward the content of the required curriculum of the elementary school, it has never seriously faced the meaning of education to its children or considered the waste involved in destroying by impossible social conditions what it has expensively given in the school room.

It is this picture which is drawn in this study of truancy and non-attendance in the Chicago schools. The losses that result from the system of transfers are very considerable. There are others due to the utterly antiquated and stupid system of keeping and using the records. Still more serious are the losses from non-attendance due to the failure of the schools to face frankly the social problem that is involved in all public education. The employment of visiting teachers would increase the value of what the schools give, by enormous percentages. But even the business sense of the American community does not rise to so simple an application of its own methods. An admirable parental school brings about excellent results, but the community does not follow up these results into the homes from which these boys come to see what steps it could take to secure returns upon its great expense or to combat the causes of truancy at their source; for truancy has proved to be the expression not of boyish depravity but of broken-down homes. It is safe to assume that the average citizen of Chicago thinks that the truant officer is chasing mis-

chievous, unruly boys. The parental school is as much or even more needed for boys between the ages of fourteen and sixteen, but the slight enabling legislation cannot be obtained.

The schools should unquestionably have all children between these two years; but the community does not raise the age limit, though the results which are obtained at huge expense are reduced by the fact that children leave without completing even the minimum of the elementary course, and though the change of our whole system of industry has revolutionized the method of training those who enter it.

The accomplishment of this book is to take public schooling out of its antiquated and still somewhat academic atmosphere, and out of the outworn but persistent habits and concepts of the earlier American community, to present it in the light of the social background in which it belongs today, and compel the reader to realize that the education of the children of our great cities demands consistent thinking and courageous following up of its implications and honest common sense in administration.

GEO. H. MEAD.

THE CHURCH AND THE HOUR

Papers by a Socialist Churchwoman. By Vida D. Scudder. E. P. Dutton & Co. 133 pp. Price \$1; by mail of the SURVEY \$1.10.

Professor Scudder's Reflections of a Socialist Churchwoman are chiefly interesting in showing the reactions of her socialism and churchmanship upon each other. This motif is cleared from complications by her disavowal of any propagandist intent, although she "does not see how an intelligent

Christian can help being a Socialist," and sees "no reason why Socialists should not care for spiritual values." In defending the church from being held responsible for economic and industrial evils, "as though it were a separate body responsible for converting state and society," she maintains a mystical view of the church as "an interpenetrating force," whose "business is with life on the higher level, the life regenerate," whose Christian folk "can be appealed to *en masse* to act on a supernatural level, where private interests will yield instinctively and as a matter of course to the general good."

While claiming that "the Church as Church has no relation at all" with the struggle for better wages and hours or for political independence because this is "on the lower range of human action, on the range of the natural life," yet she insists that individual church members are in duty bound to sympathize with it and engage in it and have a right to the church's guidance in their efforts to "express their conversion in social action." The author gives some token of the confusion of her readers in trying vitally to connect individuals who are in the turmoil of this struggle with the church which "as Church" has nothing to do with it, although they themselves constitute the church itself. This dilemma led even to the concession that "there is much to be said in favor of an old custom by which the Church meant just Peter and nobody else," that is, the clergy without the laity, although it is admitted that this custom is justly obsolete "among us." Nevertheless, the only hope for social justice is held to be the individual's practical application of the church's righteousness at a personal self-sacrifice which

applies the church's sacrificial salvation. Thus only "in the mystical depths of dogma" can be found the "tremendous impetus to bold social action" that can rescue the modern social movement from the "half-deserved reproach of putting the body above the soul and losing sight of the eternal in the things of time."

Thus only can the church meet the social emergency by having within her a large group "who draw their social radicalism from the Catholic faith in its wholeness."

But both at its heights of social hope and its depths of religious idealism this volume lacks a practical hold on the unity of a human life. It fails to show just how the church, which cannot be regarded as a separate body, can yet be so separate from the people constituting it that it can dwell apart on a higher level while they themselves must so largely live and labor on the "lower range of the natural life."

It is admitted that men have looked to the church in vain "for any statesman-like attempt to evolve justice between nations or classes by the application of the law of Christ," yet in the light of such expressions of social faith as the Federal Council of the Churches of Christ has elicited, the author holds the church's distinctive contribution to the present crisis is not new economic theories or the approval of specific programs, but the insistence that her children "sift theories uncompromisingly in the light of Christian idealism" and "offer the incentive which shall draw all men to try the Great Adventure of Christian living in terms of the new age."

GRAHAM TAYLOR.

OUR MINNESOTA

By Hester M. Pollock. E. P. Dutton & Co. 373 pp. \$1.60; by mail of the SURVEY, \$1.75.

There is a thrill in the story of a great state. If chauvinism does not throw too much the veil of romance and destiny over the crude forces at work, the student can value the streams of influence which have shaped its ends. Here is democracy brought to full bloom by some magic

spell of the genii; compressed in less than a century are the kaleidoscopic stages of that growth; heroisms and hair-breadth escapes to fire a schoolboy's heart, intrigue and crafty manipulation, the clash of sordid interests, hardships and privations which sound strangely out of the past.

In Our Minnesota, which is a history of the state written for children, Miss Pollock catches something of this spirit of adventure. Simple yet vivid are her descriptions of the Indians, their ceremonies, games and methods of warfare. Many of the early incidents which have almost become tradition have been given a faithful presentation. There is the story of the grasshopper plague and the day of prayer appointed by Governor Pillsbury, and his famous statement, "And the very next night it turned cold and froze every grasshopper in the state stiff; froze 'em right all solid, sir. Well, sir, that was over twenty years ago, and grasshoppers don't appear to have been bothering us very much since."

Conceding the value of such a book for presenting in concrete, readable way the development of a great commonwealth, the book is somewhat marred for the reviewer by the author's naive assumption that all the acts of the early pioneers were virtuous, and

that the Indian was cruel and crafty in opposing the seizure of his land. As far as the reader could ascertain in his perusal of the book, only those incidents which present the growth of the state in a favorable light are presented. Although the growth of industries is dwelt upon, no mention, as far as could be found, was made of the passing of the wonderful resources of the state, its virgin timber and its mines, into the hands of the few. There are sordid chapters in the history of a great state which it would not be wise for the young mind to dwell upon.

On the whole, however, the book is an interesting and faithful presentation of the life story of Minnesota.

PAUL L. BENJAMIN.

SELECTED ARTICLES ON NATIONAL DEFENSE, INCLUDING COMPULSORY MILITARY SERVICE

By Agnes Van Valkenburgh. H. W. Wilson Co. 204 pp. Price, \$1.25; by mail of the SURVEY, \$1.35.

A late publication of the Debaters' Hand Book Series, of which thirty-six volumes have appeared, is National Defense, including Compulsory Military Service, compiled by Agnes Van Valkenburgh, and published by H. W. Wilson & Co.

It contains a directory of organizations working for and against national defense, a brief admirably adapted to the purposes of high-school and college debating societies and an extensive bibliography. Indeed, if there are people in a quandary about the subject who wish to procure a clearer decision of view by process of reason they need seek no further.

The fairly selected articles of the text fill 200 pages and are taken from sources not earlier than December, 1915. They are drawn from government records and the more serious magazines and are technical rather than popular.

The loose speech and even looser argument of the campaign stump are not found among them, so that the book is a desirable addition to the table of readers who wish to hear both sides of a first-class social question and keep abreast of the deeper current of daily events.

W. E. K.

A SEASONAL INDUSTRY

By Mary Van Kleeck. Russell Sage Foundation. 276 pp. Price, \$1.50; by mail of the SURVEY, \$1.60.

In none of the painstaking industrial studies which Mary Van Kleeck has conducted for the Russell Sage Foundation have more difficulties been encountered—and conquered—than in this survey of the New York millinery trade.

The competition of the hand worker who conducts her own business with the factory employe, wholesale and retail; the wide variety in conditions among shops that are scattered from the lower East Side to upper Fifth avenue; the difference in processes on expensive handmade hats and hats turned out in the same pattern by hundreds; the fluctuation in wages; the apprenticeship system—these and many other intricacies of the trade are handicaps to a comprehensive, conclusive investigation.

Yet with really marvelous precision Miss Van Kleeck has sifted this confusing mass of material, correlated her data and penetrated to the one all-affecting aspect of the industry—its "appalling irregularity."

The buying and consequently the making of hats is concentrated into a period of approximately three months in spring and three months in the autumn. On an average for slightly less than half the year, therefore, the force in the shops investigated was equal to three-quarters or more of the maximum number employed in the busy season. Less than three in every hundred girls whose names were found on payrolls were employed in one position for fifty-two weeks in the year.

Naturally this violent fluctuation in work has its effect on wages. Rates of pay in millinery were found to vary widely from fifty cents or nothing a week for learners to \$150 for designers. The median for week workers and piece workers, as shown by payrolls, was \$9.69. Fifty-three per cent of milliners earned less than \$10 a week, as compared with 70 per cent of women in department stores, 85.15 per cent of the paper-box makers and 93 per cent of the candy makers—women workers in occupations investigated by the State Factory Commission of New York.

But these fairly high wages must be considered in the light of the fact that some 252 workers interviewed by the investigators reported an average loss of nine weeks' income in the year or 17 per cent of the normal working period. Although the earning capacity of these girls should have yielded through steady work an annual income of about \$500, the actual median earnings a year from all positions in all occupations were but \$365, or about \$7.00 a week, instead of over \$9.50. This wage is far below the \$9.00 set by the factory commission as the very lowest sum upon which a working-woman can decently maintain herself in New York.

In view of this constant depression upon wages by unemployment, the keen competition of a trade attracting a tremendous supply of labor, and the unorganized state of the industry (some slight attempt to unionize the workers is now being made), Miss Van Kleeck urges public control of the industry through the establishment of a minimum wage board and describes the beneficial results of such a system in Victoria.

Around the central fact of the seasonal character of the millinery trade Miss Van Kleeck groups many interesting and valuable details. She considers the dangers of trade-school training that does not select girls with special aptitude or inform them as to trade conditions; she describes the workers and their standards of living; she shows that overtime, while prevalent to some extent, especially in the East Side shops on Saturday night, is not a pressing evil of the industry.

Throughout the study, comments by the workers themselves and pictures of their struggle to make both ends meet illuminate "dry-as-dust" statistics.

Criticism of the book may be directed against its delay in publication. Part of the study was begun as early as 1908, when the Committee on Women's Work was connected with the Alliance Employment Bureau. Later when the committee became a department of the Russell Sage Foundation it directed the inquiry into the millinery trade for the Factory Investigating Commission of New York. Although the material has apparently been brought down to date, the interviews with employers and employes were held between 1908 and 1912, and the payroll study was made in 1914. Delays in getting the data into print somewhat invalidates the use of the statistics for present quotation.

M. C.

SELECTED ARTICLES ON MINIMUM WAGE
Compiled by Mary Katharine Reely. The
H. W. Wilson Company. 202 pp. Price
\$1.25; by mail of the SURVEY, \$1.35.

Even though the constitutionality of minimum wage laws in this country has been established once and for all by the recent supreme court decision, controversial questions regarding their practical value still remain, and the subject will doubtless continue for some time to come an issue for social legislators and a popular topic for college debates. Miss Reely's handbook is intended primarily for debaters, but others interested in the question will also find of value its well-chosen bibliography, the brief which makes available in concise form the leading arguments, pro and con, and the articles selected from the mass of literature and fact bearing on the question of minimum wage legislation.

HENRIETTA WALTERS.

WOMEN IN MODERN INDUSTRY

By B. L. Hutchins. Bell & Co., London. 315 pp. Price \$1.00; by mail of the SURVEY, \$1.09.

WOMEN WORKERS AND SOCIETY

By Annie M. McLean. A. C. McClurg & Co. 135 pp. Price \$.50; by mail of the SURVEY, \$.55.

The writing of the first of these books was interrupted by the outbreak of the war. The interruption was a significant commentary on the author's previous decision to write a description of the effects of the industrial revolution "taking industrial revolution in its broader sense, not as an event of the late eighteenth century, but as a continuous process still actively at work." Realizing that the war would bring a new phase of the industrial revolution, Miss Hutchins at first contemplated a revision of her manuscript to reflect a new point of view, but wisely decided to leave the earlier chapters unchanged for its later historical interest as a description written just before the great upheaval. The effects of the war on women in industry, as they appeared in 1915, are outlined in a separate chapter.

The aim of the book is to set forth the facts rather than to discuss theory, but it is by no means lacking in thoughtful interpretation of the conditions described. Written before the investigations by the Health of Munitions Workers' Committee, it is prophetic of their findings in its conclusion that "the national wealth, or indeed the output of war material, would be much greater if it were produced under more humane and more reasonable conditions, with a scientific disposition of hours of work and the use of appropriate means of keeping up the workers' health and strength." A new spirit is beginning to dawn among working women, and on the whole the tendency seems to be toward greater independence. The domestic system of olden days is not pictured as a golden age from which women in industry have now fallen. The disadvantages of the past were great and the hopes of the present are many, with new methods of protection through such means as wages boards and health insurance. Trade unionism, too,

though making headway with difficulty among women, nevertheless can show gains.

As a somewhat rare combination of historical material and current information, reflecting an intimate knowledge of present conditions, the book is a valuable contribution to our knowledge of the difficult and increasingly important problems of women's work.

To arouse general public interest in wage-earning women is the purpose of Miss McLean's book. It offers in compact form a summary of current discussion of the problems of women in industry. The emphasis is on manufacturing pursuits and trade and transportation. The author describes this transition to modern industry, the effects of working conditions on the home, the share of women in industrial conflicts, health and housing, education and recreation, legislative remedies and the need for a better social conscience in industry.

The discussion is sometimes marked by a tendency to repeat common impressions without criticism, as in the statement that the women in domestic and personal service present no new problems; or that "the married woman is not a factor of importance in industry in the United States." Nevertheless, the book is useful as a clear, brief statement in a convenient form for that elusive reader known as "people at large."

MARY VAN KLEECK.

MOTHERHOOD

By C. Gasquoine Hartley. Dodd, Mead & Co. 402 pp. Price \$2.50; by mail of the SURVEY \$2.65.

Feminists will disagree with Mrs. Hartley because she demands recognition of woman primarily as a mother. Moralists will be shocked at her suggestion that extra-conjugal relations have legal recognition, and that all responsible parenthood be considered worthy parenthood. Persons who agree with Charlotte Perkins Gilman that trained specialists are better fitted to care for children than their own mothers, will think her reactionary.

However these things may be, child welfare workers who believe that "the welfare of the child is the one consideration that matters," will find much to interest them in this volume, especially the discussion of infant mortality, its relation to the employment of mothers and other prenatal conditions.

"The question has never been, Could women do this, or do that, kind of work? Rather it is, What work is most worth while for them to do?" Mrs. Hartley fears that with the present opportunities for women in industry, and women's desire for "freedom," "the things which matter most to life will be lost," and that they will forget that "motherhood, with the care of a little child and all the duties it should entail, is the ultimate joy, for the denial of which no personal freedom or success in work can compensate. As a worker, she has at all times occupied a secondary place; as a woman, she is supreme."

Mrs. Hartley pleads for greater frankness and honesty concerning the facts of sexual association, for honesty in teaching children the biological facts of reproduction, for recognition of the fundamental differences between the functions of men and women and for education of adolescent girls adapted to their needs.

There is an interesting account of the position of women before the great war and their position as affected by the war.

Mrs. Hartley does not claim to have solved the problems of sex and love and marriage, but her frankness in dealing with the problems and her earnest search for truth will help in the solution.

BERTHA F. JOHNSON, M.D.

A MODERN MOTHER'S EXPERIENCE

By Belle Israels Moskowitz. A. Malsin. 166 pp. Price \$1; by mail of the SURVEY, \$1.03.

This tiny book contains in a nutshell the essentials every woman should know of the care necessary to safeguard the life and health of the mother and her infant. We have here unusually clear, simple and yet scientifically sound advice. However, in this day of the long feeding interval, we

are surprised to find two and two and one-half-hour feedings up to the third month advocated by a writer otherwise quite up-to-date.

The make-up of the book is charming, affording a pleasing gift as well as most profitable reading for the expectant mother.

DOROTHY REED MENDENHALL, M.D.

THE PSYCHOLOGY OF SPECIAL ABILITIES AND DISABILITIES

By Augusta F. Bronner, M.D. Little, Brown & Co. 269 pp. Price \$1.75; by mail of the SURVEY, \$1.87.

The zest with which psychometrics has been developed since the ingenious venture of Binet has its most natural chances for rewards in the psychology of special abilities and disabilities. Schools and vocational life have their misfits, and yet most misfits when carefully studied have their

positive assets which are apt to be wasted. Hence the call for the study of the individual with special defect and the subnormal with special ability.

Dr. Bronner discusses the methods of diagnosis and the differential diagnosis, i.e., the means of determination and discrimination of the facts. After a chapter on some present educational tendencies pointing out the need of attention to the individual variations in abilities and reviewing several investigations, the author takes up special defects in number work (pp. 50-74), in language ability (pp. 75-117), in separate mental processes (such as memory, inner visual functions, work with concrete material, speed of reactions, perceptual abilities, higher mental processes), defects in mental control, and finally special abilities with general mental subnormality (pp. 196-219). An appendix (pp. 229-264) contains a survey of the tests and a report of the full examination of each of the 46 cases quoted in the text, excellently condensed.

The book is very carefully worked out; the conscientious accounts of the work by others are more than mere references, and the theoretical discussion and the actual case-records go clearly hand in hand. A careful study of this book gives one the comfort that instead of the usual mass of generalities dealt out in books on education we have at last solid ground for sensible and well directed constructive work.

ADOLPH MEYER, M.D.

THE BUILDING OF CITIES

By Harlean James. The Macmillan Company. 201 pp. Price \$40; by mail of the SURVEY \$46.

Impatient with a normal rate of progress, American reformers often attempt to further the object of their enthusiasm by foisting it as an additional subject upon a school curriculum already sadly overcrowded. This is the frankly avowed object of this contribution to *Everychild's Series*.

Of course, there are two aspects of city building which are part of any thorough teaching of geography: the history of the locality in which the children grow up and the history of city growth in general. But any effort to imbue children with a knowledge of the technical tasks of modern city planning is not only useless but mischievous. It is emphatically not true that all cities, even all growing cities, face identical problems.

The present volume has the further defects of confusing essential with non-essential considerations, and permanent with occasional and transient tasks. The illustrations are for the most part uninforming. Most healthy boys and girls will dislike the writing down to their supposed intellectual level which induces the author to clothe the whole book in an inane conversation between Every-boy, Everygirl, Past, Present, and Future.

B. L.

SELECTED ARTICLES ON MILITARY TRAINING IN SCHOOLS AND COLLEGES, INCLUDING MILITARY CAMPS

By Agnes Van Valkenburgh. The H. W. Wilson Company. 208 pp. Price \$1.25; by mail of the SURVEY, \$1.34.

Two years ago it would have been about as easy to compile a debaters' handbook on military training in the schools in this country as to compile one on the merits of foot-binding as practiced among the Chinese. There was then a practical absence of material. Now the problem is chiefly one of determining what to exclude. Miss Van Valkenburgh's bibliography alone covers thirty-one pages, and she lists twenty-six organizations working for or against national defense. Her selection of material covers a wide range, from publications of the United States War College to educational journals and soldiers' notes. It seems to be a trifle weak on suggestions of methods for getting the good of military training without the bad, that is, on a strong program of physical education.

W. D. L.

HENRY FORD'S OWN STORY

By Rose Wilder Lane. Ellis O. Jones. 184 pp. Price \$1.00; by mail of the SURVEY, \$1.08.

No matter what one's estimate of Henry Ford's greatness, it must be admitted that he is one of the most striking figures among America's present industrial leaders, and his career is a matter of interest and curiosity to the public at large. Miss Lane has written a readable account of Mr. Ford's

"own story" of his life from its very beginning up to the present. It is the story of a farmer who had a passion for mechanics, a passion strong enough to bring him to the

city and there to work out the fortune which has made him known the world over as the man who can pay a minimum wage of \$5.00 for an eight-hour day and still roll in profits by the million. If sympathy with one's subject is the *sine qua non* of biographers this should be the perfect biography. Miss Lane's enthusiasm for her subject colors the entire book and surrounds him with a halo of glory.

HENRIETTA WALTERS.

"MADEMOISELLE MISS"

Letters from an American Nurse serving in a French army hospital at the front. Preface by Dr. Richard C. Cabot. W. A. Butterfield, Boston, for the American Fund for French Wounded. 102 pp. Price, \$50; by mail of the SURVEY, \$55.

Dr. Cabot finds in these letters "some fragment of true atonement for the huge sin and blunder of the war." Written with the utmost simplicity and obviously without a thought of possible publication, they convey the atmosphere of that lone frontier station of life amid a man-made wil-

derness more impressively than any lengthy description could have rendered it. It is a record of service, inventiveness, cheerfulness which does credit not only to the author but to the many other American women as well who belong to this great new aristocracy of service. Here, at the very door of the great mad slaughter-house, death becomes beautiful and holy; jesting words come to lips about to close forever; spiritual life is intensified many-fold by pure devotion.

B. L.

THE IMMIGRANT AND THE COMMUNITY

By Grace Abbott, Director of the Immigrants' Protective League, Chicago. The Century Co. 303 pp. Price \$1.50; by mail of the SURVEY \$1.65.

National guardsmen have had to be called in on July 15 to quell the disturbances in the lead-mining area near Flat River, Missouri, where American-born miners are forcibly ejecting their comrades of alien origin. There is no war sentiment at the bottom of this fracas; the thousand or so foreigners

who have been obliged to leave the district are of many nationalities. The grievance is against foreigners as foreigners. "We want only a chance to go to work and support our families without being thrown out to make room for foreigners." Though the native workers protested that they had no ill feeling against the aliens other than that of competitors for jobs and that they would use no violence, Major Stepp on a tour of inspection found that two hundred homes of foreign-born miners had been pillaged, that women and children were without food, and that the native born expropriated their cows and other property at a nominal price.

This instance is the most recent illustration of many which could be given of the popular resentment against the alien workman which is undiminished, apparently, by the decrease of immigration during the last two or three years and by the exceptional demand for labor in almost every trade and industry. The immigrant is held respon-

sible for low wages and low standards of life. If a popular referendum were taken, it is not impossible that the people of this country would vote for a complete exclusion of foreign labor, no matter of what race or nationality.

Is it not time to ask ourselves whether there is any need, not only for this injury to American standards but to the havoc, the debasement, the wreckage of the immigrant's own standard of life, of work and of moral culture which he brings with him? Is the alien workman really an unmitigated nuisance and a charge instead of an asset to the national weal, or is it our carelessness, our stubborn indifference to his needs, our lust of exploitation, our unreasonable enmity which make him so? Truly, the damage done is not all on one side. It is here that Grace Abbott, from her eight years' intimate daily contact with the immigrants of Chicago, comes with a call to which, we doubt not, the nation must and will sooner or later respond.

The almost criminal folly with which those who arrive here to make a home and a living are left to find their way about as best they can, with which they are exposed to fraud, temptations, pitfalls, told, as it is in this book, by many stories of personal adventure, would make a sorrowful reading, were it not accompanied by the most precise, the most detailed, and the most convincing program of practical reforms in the administration of immigrant legislation and its supplementation, in court practice, education, and many other respects.

Is it believable that, merely to ensure some equitable distribution of profits on their transportation, "in the year ending June 30, 1916, immigrants were sent by nine different routes from New York to Chicago, but nearly three times as many were sent around by Norfolk, Virginia, as by any other single route?" In Chicago, we hear, a large receiving station for immigrants, provided by federal law and equipped with dormitories, bathrooms, laundry rooms, etc., has been standing empty for two years, for no other reason than that the administrative department of the government chose to consider its use impracticable.

Is it generally known that the government is making a profit from the head tax imposed on immigrants over and above the cost of the immigration service, amounting to over nine million dollars up to the end of the fiscal year 1915, and that in spite of this the new immigration bill, passed over the President's veto, has increased this tax for adults from four to eight dollars? Do our economists appreciate the fact that in the distribution and placement of immi-

grants the assumption is frequently made that a person who cannot speak English, whatever his previous education or trade training, must of necessity be an unskilled laborer—and this in spite of the insatiable demand of industry and agriculture, at most times, for skilled workers? Do they realize that there would be no shortage of farm labor now if even a slight effort had been made in recent years to turn farmers and farm laborers arriving in this country to work on the land—that, in fact, 283,053, over 42 per cent of all men and boys over fourteen who were admitted in 1914, gave these as their occupations in Europe?

Do the trade unionists know that of the Polish, Lithuanian, and Russian girls whose large number depresses the standard of wages in Chicago factories and stockyards, more than one-half have been engaged in farm work at home and, with a little organization of the right kind, could help to build up an immensely valuable rural industry in the western states? Have our legal lights ever noticed the absurdity of a law which excludes a person if an inspector decides that he will not be self-supporting, but excludes him also if he brings the best possible evidence of his ability to be so, namely the offer of a job?

Allowance must probably be made for the fact that the examples and personal histories quoted by Miss Abbott, having the purpose of illustrating certain hardships, inconsistencies, and evils, naturally give her picture an unduly sombre hue. Indeed, in spite of her indictment, which is severe, we do get glimpses here and there in her recital of facts which show that the task of adjustment is by no means hopeless or beyond immediate practical possibility, glimpses of neighborly kindness, of efficient case work by such organizations as that with which the author herself is connected, of a ready ability of the immigrants themselves to overcome difficulties and adapt themselves to unforeseen situations; above all, of their intense earnestness and eagerness for the good of their children.

We are glad to find Miss Abbott strongly in agreement with the point recently emphasized by Prof. Israel Friedlaender (the SURVEY, May 5), that those who would help the immigrants in our midst in an intimate way to solve their personal problems of life and labor must know their language and be acquainted with the historical, racial, and cultural background of the country from which they come. That a more or less mechanical process of Americanization, so-called, by teaching the English language and American subjects, is doomed to failure, she is able to prove from personal knowledge of

such efforts. "We should long have recognized that much of the opportunity for education which is offered the adult immigrants should be in their native language."

The only disappointing chapter of the book is that which deals with the immigrant and the public health. It leaves undiscussed such important questions as the possible connection between racial predisposition and relative immunity; the effect of climatic change and changes in habit, living conditions, and methods of work.

We heartily endorse Miss Abbott's conclusion that "the immigration problem is not so much a problem in assimilation as in adjustment. To assist in such adjustments, we must take account, first, of those traditions and characteristics which belong to the immigrants by reason of their race and early environment, and, second, of the peculiar difficulties which they encounter here." How this may be effected, the reader must find in the book itself.

B. L.

FOOD FOR THE WORKER

By Frances Stern and Gertrude T. Spitz. Whitcomb & Barrows. 131 pp. Price \$1.00; by mail of the SURVEY, \$1.06.

The authors of this book have made a direct contribution to the literature of both social service and home economics. Fully to appreciate the value of this contribution one must perhaps date back to the days when neither of the above activities was quite sure that it needed the other. The authors pre-

sent in small compass clear and scientific material that will be invaluable for anyone who is responsible for the feeding of families who through force of circumstances must keep to a limited food allowance. Considerable work has been done with low-cost dietaries, and the need for low-cost dietaries that present a healthful variety of food has been a crying one. Miss Stern and Miss Spitz have done much to fill this need. It would perhaps be carping to say that the protein allowance in their dietaries is lower than seems advisable for under-fed families, since the authors themselves recognize the necessary limitations. This is a book for the trained worker, but the untrained may find in it much to shed light upon their pathways.

WINIFRED S. GIBBS.

IN LITTLE SYRIA OF MANHATTAN

—"that great city, Babylon"—

By Harry Douglas Robins

THE narrow street with children swarms, at play
Beneath a scorching sun that makes the pave
Seem but a sun-crack in the blistered hide
Of some great obscene monster of a nether world,
Teeming with crawling parasites of human kind.

The fruit-man from a pushcart bawls his wares
Of many colors and all climes, o'er-ripe
And tainted with the poisoned feet of flies.
The ice-cream vender blows his raucous horn
And ladles stingy cones of painted sweet
From out the clammy depths within a can
Full deep enough of fraud to franchise Hell.

And as the ice-man drags across the street
Befouled with dirt and dung, a block of ice,
The children scramble for the broken bits
Left in its wake across the cobbled pave.
A mother bears a child upon her arm
And still another trundles in a "pram"
Before her through the crowd that fills the street;
And somewhere deep in trench or high on wall
I know a father toils that these may live.

Tall structures eastward pierce the heaven-floor,
Their roots entwined about great vaults of steel
That hold within their all-engulfing grasp
Enough of wealth to set a people free.

COORDINATION OF SOCIAL AGENCIES

SEVERAL members of the National Conference of Social Work, including some who favored and some who opposed the exemption of gifts to charitable institutions from the war income tax, united in asking the Council of National Defense to initiate measures for the better coordination of social agencies throughout the country.

The national council, expressing its sympathy, entrusted the carrying out of this idea to its Committee on Labor, acting in cooperation with Director Gifford of the national council. The Committee on Labor, in accepting this responsibility, instructed its Committee on Publicity, of which the editor of this department of the SURVEY is chairman, to secure the necessary information and to make such plans as would accomplish the purpose which the social workers in the national conference had in view. The name of the Committee on Publicity was modified to include these new responsibilities.

Accordingly the editor will be gratified to receive on behalf of the Committee on Labor full information concerning any plans which have been devised to coordinate social work, to conserve the resources of social agencies, and to adapt these agencies to the special conditions created by the war, and concerning new agencies created for present emergencies.

WHAT IS YOUR CITY DOING?

THE following questions will suggest the scope of the information desired:

I. How are existing agencies planning to extend and coordinate their work?

II. Give the following information as to special organizations created to deal with war problems:

1. Name and object.
2. How financed and managed.
3. Immediate program.
4. Executive officer.

III. How is your community planning to meet the food problems that arise?

IV. How is your community planning to cope with health problems produced by the war?

V. What special action has been taken toward caring for the moral and physical well-being of soldiers on duty in your vicinity?

VI. What special action has been taken toward controlling juvenile delinquency, intoxication, the social evil and other probable consequences of the extraordinary conditions which we are about to encounter?

VII. How has the removal of men from industry for military service affected labor problems?

VIII. How is your community organizing to deal with civilian relief?

IX. How is your community organizing to care for wounded and disabled soldiers and for re-education and re-employment of partially disabled soldiers?

X. Any other information about your own community, or any information you may have about other cities will be appreciated.

A similar questionnaire had been sent to some seventy cities by the Red Cross of Rochester, previous to the undertaking of the inquiry by authority of the Council of National Defense. Replies which have been received from half this number indicate that serious attempts at coordination have already been made in many cities. It is hoped that this department may be a medium for the interchange of information and experience about these developments.

SOCIAL FORCES

Any reader of the SURVEY who can answer the above questions about his own city will confer a favor by sending the information. Or a group might combine their information—appropriately, since it is a question of “social organization”—and choose one of their number to co-ordinate it and forward it.

MINNEAPOLIS, in cooperation with the local representatives of the International Y. M. C. A., the National Playground and Recreation Association, and the Bureau of Social Hygiene, has increased its special park police in the large park near Fort Snelling, and has added two policewomen. The Public Safety Committee has closed all saloons in one section of the city and has forbidden any saloons or questionable places of amusement in the neighborhood of the fort. It also requires an early closing hour in all saloons and cafés and forbids the selling of liquor to men in uniform, to women, or to men in the company of women. A part-time director of Civilian Relief has been appointed, and a training class for volunteers organized, under the Red Cross.

DOCTORS of Buffalo have organized to meet the situation caused by withdrawal of a large number of doctors for service with the Buffalo base hospital, and to give special attention to all medical problems arising from the war.

ROCHESTER is having a one-month study course for fifty volunteers, conducted by Robert C. Dexter, of the Montreal Charity Organization Society, under the auspices of the committee of the Monroe County Home Defense Committee on relief for dependents of families of soldiers and sailors. All who are enrolled have agreed to give definite time during the fall and winter to friendly visiting.

CINCINNATI'S War Council has a social service department which is making an inventory of the social service forces of the community. The replies are tabulated and the exact territory of each agency is outlined on a map.

The endorsement committee of the war council is issuing a card to *bona fide* solicitors for reputable war charities, and informing the public, through newspapers and circulars, that gifts for war purposes should be made only to a solicitor bearing the card. The endorsement committee of the Cincinnati Council of Social Agencies is also issuing an endorsement card for the representatives of regular social agencies. In this way it is expected that fraudulent or unauthorized canvassing will cease.

THE Babies Welfare Association of Philadelphia, by way of mobilization, has almost completed a census of all kinds of agencies for the care of children under six years.

REPRESENTATIVES of twenty-eight societies of Bridgeport, Connecticut, have chosen a Committee of Eleven, to formulate a plan for extending the activities and increasing the cooperation of all. Up to date the committee has worked on the elimination of duplication of effort, cooperation with the Red Cross and plans for emergency relief. By this careful planning, the existing agencies expect to be able to meet any need arising out of the war.

COOPERATION is rife in Columbus, Ohio. The Ohio branch of the Council of National Defense, the State Indus-

in WAR TIME

By Edward T. Devine

trial Commission, the Social Service Bureau of the Chamber of Commerce and the Columbus Associated Charities have helped to transform the state labor exchange into a State-City Labor Exchange, doubling, it is said, its efficiency. The Social Service Bureau of the Chamber of Commerce is the center for the Red Cross membership campaign and the collection of war funds.

THE United Charities Association of Pulaski County, Arkansas (headquarters Little Rock), has issued a pamphlet reminding its members that the experience of England and Canada has proved the importance of increased attention to local social work.

THE Bureau of Associated Charities of Newark (N. J.) has added to its staff a dietitian for propaganda regarding food conservation. The Board of Education has opened four of the high schools for summer courses to the general public in household economy, including the purchase and preparation of food, but with special emphasis on food conservation. A committee of the Mayor's Committee of National Defense is also interested in the conservation propaganda. The children's agencies, including the institutions, the Children's Aid Society, the S. P. C. C. and the day nurseries, have organized for the better consideration of their common problems, and the hospitals, too, have formed an association.

THE federal Department of Labor is organizing a "United States Public Service Reserve," made up of men who are ready to be called upon for paid or volunteer service in connection with the various branches of the government.

VIGOROUS assistance in recruiting is reported by the Bracc Memorial Newsboys' House of the New York Children's Aid Society. In addition to feeding and housing young men who were waiting for consent to enlist, procuring drill-masters for other centers, and organizing a committee to stimulate recruiting, every boy in the house has been drilling two nights a week. Since the declaration of war three hundred boys have been helped to get into the army and navy, half of whom had first to get their first papers. Forty boys have joined the National Guard and State Militia. It is said that two hundred boys who wanted to enlist were refused because of physical disability.

ENGLAND'S REGISTRY OF APPEALS FOR WAR FUNDS

A YEAR or more ago England began to see a serious danger in war charity. Persons of prominence allowed their names to be used freely, almost recklessly, in promoting schemes for war relief of which they knew very little, and consequently many fraudulent appeals were issued. In May, 1916, the secretary of state for the home department appointed a committee of eight to investigate and advise measures of control for war funds in the public interest. Testimony was secured from men and women of experience in dealing with public appeals for charity. The committee agreed that appeals for war funds should be placed under some system of control, and they recommended that it be made illegal to appeal to the public for any war charity unless the appeal be registered. The plan proposed was that a committee of three should be empowered to pass on persons

or groups desiring to register, and that failure to register an appeal should be punishable by fine. After careful consideration it was agreed that local authorities rather than the national government should undertake the registry, County Councils or Councils of Boroughs being the registering authorities, with power to appoint as members of the committee men or women who have special knowledge of charitable work. Appeals in behalf of allied nations would require the approval of the diplomatic representative in London of the nation concerned. The plan provides for a central index in London, under the Charity Commission, of all funds registered with local authorities as well as of all appeals for which registration had been refused.

DEAFENED SOLDIERS

AN interesting letter comes from a lady in Saint Louis whose husband lost his hearing in the Civil War and who, having learned lip-reading to help him, has been teaching others and helping them "to retain their usefulness." She fears that the deafened soldier may be in danger of being overlooked, and suggests that instruction in lip-reading should be included as part of the provision for his educational and industrial readjustment, and that it might begin in the hospital in the case of those who are crippled as well as deafened, while they are recovering from their operations.

A DISSENTER

. . . Surely, if there were anything which could quench the entusiasm of some of our foremost social workers, it would be the insistent repetition that social work has become chiefly a means of organizing the nation for war. I am certain they do not all believe that "To win the war is . . . more important than industrial standards or safety in factories; and more important than security of property or of human life on sea or land." Nor would they admit that "The first task is to win the war. The second is to preserve what is good in the nation." What could it profit a nation to win a war and lose what was good in itself? Doubtless the writer will explain that he thinks what is good in the nation cannot be preserved without winning the war, an idea which, to my mind, indicates a highly exaggerated estimate of what military victory can accomplish for good or ill.

Nowadays a government may have to choose definitely, as never before, between winning a war and preserving what is good in the nation. There is something fascinating in the picture of a vast, comprehensive national organization which will promptly and unflinchingly fill the gaps made by war in every department of national life. At first glance it appears to reduce damage and suffering to the minimum. But may it not prove a great danger under the guise of security? Such an organization makes it possible to drain the property, strength, intellect and lives of all our men, women, and children into one central channel, through which they can be poured into the bottomless pit of War as long as they hold out.

The unorganized nation was like a gambler who must stop playing when he had emptied his pockets; the organized is like a gambler enabled by an elaborate financial system to stake all his present possessions and his future prospects. The former might lose all he could lay his hand on, yet perforce give up the game before he was entirely ruined; the latter can play until he is actually beggared.

A fight to a finish, between nations perfectly organized after the modern plan and at all evenly matched, must mean for the vanquished such utter exhaustion as we dare not imagine, and for the victor a ruin little less complete.

REBEKAH G. HENSHAW.

Wickford, R. I.

THE editor of this department will welcome questions from readers, and suggestions as to topics which they would like to see discussed in these pages. Information from all parts of the country about conditions due to the war, and consequent developments in social work, will also be appreciated.

COMMON WELFARE

STAVING OFF STARVATION IN TURKEY

FORMER Ambassador Abram I. Elkus, in an interview last week with a member of the SURVEY staff, confirmed the rumors which at intervals during the last few months have reached this country concerning the appalling economic pressure of the war upon the people of Turkey. Not only the Christian and Jewish populations of the Ottoman empire, but the Moslem subjects as well, are suffering from a destitution and prevalence of epidemic diseases such as for long had been unknown even in this poverty-stricken country. Mr. Elkus himself contracted typhus last April when attending the opening of the first charitable soup kitchen of the government, established in imitation of several kitchens previously maintained by philanthropy. Some six thousand persons were fed at this kitchen on the first day.

The extreme poverty of the people is in spite of the fact that practically the whole female population has entered wage-earning occupations and in field and factory is doing the work of men who have been conscripted up to the age of forty-five and even fifty. Not only are their wages extremely low and separation allowances little more than an earnest of good intentions, but the value of the paper lira, the Turkish pound, has decreased in a comparatively short time, about a year, to little more than a third of its former value.

The principal form of relief is the issue of identification cards which enable the people to buy bread at less than the commercial price. American relief has taken the form of outright money grants to deserving families known to the missionaries and other agents, of the distribution of uncooked food bought wholesale at reasonable prices by the committees in charge, and of soup kitchens in the large cities where persons judged deserving after investigation are given portions of hot meat and vegetable soup to take home to their families.

The war has not interrupted American efforts on behalf of the subject peoples of Turkey which, according to the most recent dispatches, are more ur-

gently needed than ever. W. W. Peet, an agent of the American Committee for Armenian and Syrian Relief, until recently in Constantinople, cabled from Berne, Switzerland, on July 17, that he estimates the number of deported, destitute Armenians, Syrians and Greeks now in Asia Minor, Syria and Palestine at one and a half millions. Nearly all of them were self-supporting before the war, but conscription and deportation of their breadwinners, loss through destruction and government requisition have deprived them of property valued at millions of dollars. American and Swiss missionaries have remained on the field, but their funds in Constantinople have become exhausted.

During the period of reconstruction after the war, the former ambassador expects even larger demands upon American philanthropy, since the majority of those deported will have to be rehoused and supplied with farming tools and with operating capital. In this work of rehabilitation he expects that the young Moslems of good family who have passed through the American colleges at Constantinople and been imbued with American ideas and ideals will take a prominent part. While as yet the number of Turkish young men and women who have come under this influence is not great, they will act as levers in the democratization of this most autocratic of near-eastern countries. The finance minister whom Mr. Elkus conducted over the Girls' College at Constantinople last March was greatly impressed with the value of its work and expressed his gratitude for it to the

United States. Most of the teachers have stayed at their posts and expect to take up their usual courses after the summer vacations.

The chief obstacle to reforms is that Turkey has not so far developed an educated and influential middle class. Nearly all the storekeepers and business men are foreigners or of one of the despised subject races. Politics are dominated by organized religion to an extent unknown in other countries. Under present conditions, there is no end in sight to religious and racial persecution. In spite of this, Mr. Elkus is making a strong appeal for continued American support of the charities maintained in Turkey, not only among Christians and Jews, but also to aid the Moslem population. He holds that the good-will now shown to a suffering people, which has no part in the politics and actions of its autocratic rulers, is bound to bear good fruit in the future.

MAKING CITIES SAFE FOR SOLDIERS

SECRETARY of the Navy Daniels has entrusted to Raymond Fosdick, chairman of the Commission on Training Camp Activities, created some time ago by Secretary of War Baker, the chairmanship of a similar commission which will safeguard moral conditions and promote athletic contests and social activities in the naval and marine training camps. Taken together, these commissions are now either "cleaning up" or policing as to certain moral conditions nearly a hundred camp locations throughout the country.

Mr. Fosdick and his associates have the hearty co-operation of the War and Navy Department chiefs in carrying out the first two items in their program: removal of prostitution from anywhere within five miles of any camp or cantonment, and removal of all retailing of liquor from a zone at least a mile broad, around each camp. Local authorities are expected to enforce these rules, and to enforce the federal law forbidding the sale of liquor to anyone in military uniform. Failure of the police to so enforce the law and the regulations will be met, according to the cir-

Robert W. de Forest, president; Paul U. Kellogg, editor; Arthur P. Kellogg, secretary; Frank Tucker, treasurer. 10 cents a copy; \$3 a year; foreign postage \$1.50, Canadian 75 cents. Copyright, 1917, by Survey Associates, Inc.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

cumstances, either by removal of the camp to a law-abiding community or the vigorous enforcement of the law by the military authorities.

The commissions are by no means satisfied that the transformation desired in various cities where army or national guard or naval training camps have been located will be a simple matter. They anticipate difficulty, in certain cases, in persuading local authorities that saloons are really to be banned from the one-mile zone, and that prostitution is to be eliminated. Nevertheless the willingness of the heads of the War and Navy Departments to back up the findings of the commissions, even to the point of removal of the camps, is expected to have its effect.

The five-mile limit will not be enforced against saloons because the issuance of such an order would impose "dry" conditions upon many cities where the sentiment of the majority is averse to prohibition, and where local authorities are wholly out of sympathy with its enforcement so long as the voters have not outlawed the saloons. The one-mile zone is considered sufficient to guard the interests of the camps, when the soldiers and sailors are themselves forbidden to purchase liquor.

Aside from these measures of social sanitation, the commissions are responsible for the formation of numerous clubs—athletic, dramatic, musical and literary—and the organizing of general athletic contests and games among the men in the camps. They are sending special men to each camp to take hold of the formation of the groups which will promote these activities during the period of training.

No other nation in the war has attempted anything similar to the work of the Commissions on Training Camp Activities. Nothing ever attempted in this country, in similar lines, has approached this plan in magnitude or in completeness of detail. While the chief immediate object is the safeguarding of the physical and moral health of the young men entering the nation's military service for the period of the war, its promoters hope for it a permanent influence upon the point of view of every soldier and sailor as to his own responsibility to the community.

MINIMUM WAGE FOR ENGLISH FARM LABOR

THE corn production bill adopted this week by the British House of Commons embodies a section which, three years ago one of the chief weapons in Lloyd George's fighting arsenal, has since become a matter of common agreement—the provision of a legal minimum wage for agricultural laborers. The bill provides for the establishment of wage boards similar to those

which determine minimum wages in the sweated industries, but with the proviso that in no case shall the wage be fixed at less than twenty-five shillings (\$6.25) per week, including value of perquisites.

Critics of the government contend that this is not a living wage at present prices, and that a minimum of at least thirty shillings (\$7.50) is necessary to carry out the intention originally avowed by the government of making it a real living wage. The government replied that nothing in the bill will prevent a wage board from fixing a higher minimum for the area it serves and that anyhow the minimum provided for in the bill is immensely higher than the wage now received by the great majority of laborers. Since, under the bill, the government makes itself responsible to the farmers for loss incurred by the higher wage expenditure, the difference of five shillings a week might assume an annual net loss to the taxpayers of £40,000,000 (\$160,000,000).

FIXING WAGES FOR WOMEN

THE Supreme Court decision of April 9, upholding the constitutionality of the Oregon minimum-wage law, has given impetus to the enforcement of state minimum-wage legislation that has been awaiting federal judgment.

The Arkansas Supreme Court has upheld the Arkansas minimum-wage law providing a flat rate of recompense for inexperienced women employes of not less than \$1 and for those employed over six months of not less than \$1.25 for a day of nine hours.

"The strength, intelligence and virtue of each generation," declared the court, "depends to a great extent upon the mothers. Therefore, the health and morals of the women are a matter of grave concern to the public, and consequently to the state itself."

More recently still the State Indus-

trial Welfare Commission of California has announced a revised wage schedule for women employed in mercantile establishments. It provides that no experienced woman shall be employed in any mercantile industry of the state at a wage less than \$10 a week, or \$43.33 a month.

A lower wage is set for learners, starting with a minimum of \$6 a week for girl learners under eighteen years of age, and a minimum of \$8 a week for girls starting to work between eighteen and twenty years. In each case the wages will be automatically increased fifty cents a week every six months until the minimum wage of \$10 a week for experienced workers is reached. Learners starting work at twenty years or over begin at a minimum of \$8 a week and receive an automatic increase of fifty cents every six months until \$10 is reached.

The regulation stipulates that no woman or minor will be allowed to work in a mercantile industry more than eight hours in any one day or forty-eight hours in any one week.

AMERICAN AID TO RUMANIA

RUMANIA, partly perhaps owing to her autocratic form of government and social organization and partly owing to her treatment of her Jewish citizens, can hardly be said to share the warm friendship which the people of America feel for others of their Allies. Nevertheless, the suffering of her great submerged peasantry is making an irresistible appeal to American generosity. And to Rumania the American Red Cross has dispatched its third relief commission.

This commission is headed by Henry Watkins Anderson, a Richmond, Va., lawyer; the other members are Arthur Graham Glasgow, a leading engineer from Washington, D. C.; Dr. Francis W. Peabody, of Boston, recently returned from an investigation of health conditions in China; Bernard Flexner, of Louisville and Chicago, whose constructive studies of juvenile courts and child dependency have served all social workers in social; Dr. H. Gideon Wells, professor of pathology at the University of Chicago; Dr. Robert C. Bryan, of Richmond, Va., and Dr. Roger Griswold Perkins, professor of hygiene at Western Reserve University, Cleveland. The medical unit accompanying the commission consists of thirteen doctors and twelve nurses. A special emergency appropriation of \$200,000 has been voted to defray initial expenses, including that of medical supplies, serums, vaccines, and foodstuffs urgently needed in Rumania.

The first object of the commission on reaching Rumania will be to investigate conditions of health and sanitation; but it will be necessary also immediately to

[Chapin, in the St. Louis Republic]

IN THE NAME OF HUMANITY

begin actual relief work among the large number of refugees from the sections occupied by the enemy. Henry P. Davison, chairman of the Red Cross War Council, in announcing the dispatch of this commission, dwelt upon the patriotism and disinterestedness of the professional men who, in some cases at great personal inconvenience and loss and always with no inconsiderable risk, have responded to the call of humanity.

RELIEF ADMINISTRATION IN WINNIPEG

ON May 1, last, Canada's first Social Welfare Commission commenced operations in Winnipeg. The commission is the direct outgrowth of the Social Welfare Association of Winnipeg which, since 1909, a year after its inception as an associated charities, has been the agent for administration of city relief. The new commission, which is constituted by civic by-laws and authorized by the province through an addition to the city charter, has now taken over the entire staff of the association, with its secretary, J. Howard T. Falk. It is independent of the City Council as an executive body, but dependent upon it for its operating funds.

Under a by-law, the commission is composed of eight aldermen and six citizens appointed by the City Council.

The association continues as an auxiliary and will place funds for extraordinary purposes at the disposal of the commission. It is expected that next fall it will raise the money to pay for the services of a visiting housekeeper, a most helpful adjunct to relief work, delayed in the past through lack of money. Having proved the value of her service, the association will ask the commission to assume the responsibility of her salary.

The present responsibilities of the Social Welfare Commission are to give aid and service to dependent families and homeless men; to investigate for hospital treatment in public wards; to investigate for admission at the expense of the city to the Home for Incurables and homes for the aged and convalescent sick; to investigate and supervise mothers in the city of Winnipeg under the Manitoba mothers' allowances act, and to initiate measures with a view to the prevention of poverty, sickness and crime.

During the years that the Social Welfare Association has administered public relief, much opposition has been encountered to placing some \$12,000 of taxpayers' money every year in the hands of a private organization. That the association was able to weather the storms of protest and to progress almost in advance of public opinion was due in large part to its first president, J. S. Woodsworth, a man of rare tact and wisdom, who had the confidence of the best as well as the most influential of Winnipeg's citizens.

THE REICHSTAG AND PEACE

THE so-called Reichstag peace resolution was drafted before the resignation of the Chancellor who, from the beginning of the war, had shaped Germany's foreign policy. It was passed last week by a vote of 214 to 116 immediately after his successor, a man of unknown caliber and convictions, had made his maiden speech. It was the first and apparently independent act of a new block of parties which before long may stand together in open opposition to the government—centrist, progressive and socialist.

THE REICHSTAG RESOLUTION

"As on August 4, 1914, so on the threshold of the fourth year of the war, the German people stand upon the assurance of the speech from the Throne—'We are driven by no lust of conquest.'

"Germany took up arms in defense of its liberty and independence and for the integrity of its territories. The Reichstag labors for peace and a mutual understanding and lasting reconciliation among the nations. Forced acquisitions of territory and political, economic, and financial violations are incompatible with such a peace.

"The Reichstag rejects all plans aiming at an economic blockade and the stirring up of enmity among the peoples after the war. The freedom of the seas must be assured. Only an economic peace can prepare the ground for the friendly association of the peoples.

"The Reichstag will energetically promote the creation of international juridical organizations. So long, however, as the enemy governments do not accept such a peace, so long as they threaten Germany and her allies with conquest and violation, the German people will stand together as one man, hold out unshaken, and fight until the rights of Germany and its allies to life and development are secured. The German nation united is unconquerable.

"The Reichstag knows that in this announcement it is at one with the men who are defending the Fatherland; in the heroic struggles they are sure of the undying thanks of the whole people."

The seconder of the resolution, Deputy Fehrenbach, expressly defended its supporters against the criticism of playing into the enemy's hands by advocating a new peace offer. It was nothing more, he said, than an honest expression of an overwhelming majority of the German people for a peace of reconciliation, without annexation and compensation. Conservative and militarist opposition to the resolution took the now usual form of insinuating that it was due to clever suggestion and machination from without the empire. The *Koelnische Zeitung*, which takes this view, says there is no genuine demand within the empire for democratization. "Let us be sober. What England and America—warlike imperialism and tyrannical oligarchy—are using as a catchword and a trap, our people are taking in dead earnest."

Very different is the opposition to the resolution on the part of the radical socialist minority. Deputy Hugo Haase, who presented its views in a lengthy speech just before the resolution was passed, denounced every reform offered by the government or asked for by the majority, including participation of the Reichstag in the control of foreign policy. His party, he said, stood for immediate peace and for a social republic.

Chancellor Michaelis's pronouncement on the resolution, read in conjunction with previous utterances of the government, implied, though it does not definitely embody, hostility to its demands:

"Germany did not desire the war in order to make violent conquests, and, therefore, will not continue the war a day longer merely for the sake of such conquests, if it could obtain an honorable peace.

"The Germans wish to conclude peace as combatants who have successfully accomplished their purpose and proved themselves invincible first. A condition of peace is the inviolability of Germany's territory. No parley is possible with the enemy demanding the cession of German soil.

"We must, by means of understanding (*Verständigung*) and in a spirit of give and take (*Ausgleich*), guarantee conditions of the existence of the German Empire upon the continent and overseas.

"We must, as expressed in your resolution, prevent nations from being plunged into further enmity through economic blockades and provide a safeguard that the league in arms of our opponents does not develop into an economic offensive alliance against us.

"These aims may be attained within the limits of your resolution as I interpret it. We cannot again offer peace. We have loyally stretched out our hands once. It met no response, but with the entire nation and the army and its leaders in accord with this declaration the government feels that, if our enemies abandon their lust for conquest and their aims at subjugation and wish to enter into negotiations, we shall listen honestly and readily to what they have to say to us. Until then we must hold out calmly and patiently."

REGULATION OF POOL HALLS IN KANSAS

AN ordinance has been adopted by the City Council of Kansas City, placing the licensing and regulation of pool halls under the recreation department of the Board of Public Welfare.

This action on the part of the council, together with ordinances already in existence, makes a very comprehensive system of control of commercial recreations in Kansas City. All dance halls and skating rinks have to have permits from the Board of Public Welfare to operate and are carefully inspected, and rules are enforced in regard to their conduct. All motion picture films exhibited in Kansas City are censored likewise in the Department of Recreation.

In the first week of pool-room inspection seven or eight halls were closed, and the board established strict rules besides those contained in the ordinance. No

liquor can be sold now or dispensed at a pool hall; no gambling of any kind is allowed; minors are not allowed to frequent or play in the pool hall; no screens obstructing the view are permitted; and the presence of a lookout is considered sufficient cause for revoking a permit. The ordinance also provides that the possession of a federal license to dispense liquor is prima facie evidence of intention to violate the ordinance and sufficient ground for revoking the permit.

While large numbers of halls will be closed, the desire of the Board of Public Welfare is to exercise reasonable regulation over the pool halls and not to interfere with them as a legitimate form of amusement.

Its avowed program is to make all forms of commercial amusement in Kansas City subject to licensing and supervision under its recreation department.

MUNICIPAL INSURANCE FOR CANADIAN SOLDIERS

HOW certain localities in Canada have, ever since the war began, protected the families of enlisted men by life-insurance policies and have paid the premiums on these policies themselves, is told by S. Herbert Wolfe, an actuary of New York City, in a report to the Children's Bureau of the U. S. Department of Labor just issued. Captain Wolfe is cooperating also with the section appointed recently by the Committee on Labor of the Council of National Defense, of which Judge Julian W. Mack is chairman and which was formed to draft legislation providing compensation for soldiers and sailors and their dependents.

His report deals with the whole question of assigned pay, separation allowances, aid by the Canadian Patriotic Fund, and other forms of relief for enlisted men and their families.

The most interesting form of insurance issued is that in Toronto, where the city itself has entered the insurance business and has created a special bureau for that purpose. Every officer or enlisted man residing within the city limits who has volunteered for overseas service since the war began has been protected by a life-insurance policy of \$1,000, the protection running from the day of his enlistment to his death or six months after discharge or resignation. The amount of insurance so issued up to May, 1917, was over \$32,000,000, while that issued by private companies in Toronto was only \$10,000,000.

To meet the cost of this insurance Toronto has issued \$2,000,000 of bonds for war purposes. The charge of principal and interest on these bonds is a charge upon the general taxpayers of the city. Originally the city planned to obtain all of its coverage from duly organ-

Winsor McCay, in the New York American

ized insurance carriers, but the mortality experience led the companies to decline to continue coverage on the same basis as theretofore and so the city entered the insurance business itself. It had paid \$930,000 in death claims up to May 14.

"It is interesting to note," says Captain Wolfe, "that while at first the city paid the principal sum to the beneficiary in one sum, it soon became evident that such a course was inadvisable and led to extravagant and ill-considered disbursements. At the present time, therefore, an investigation of the circumstances of the dependents is made by a committee of officials which recommends how the amount should be paid; in most cases the amount is paid in monthly installments of \$30 each, and the city allows interest at the rate of 4½ per cent per annum on the unpaid balance. In exceptional cases, however, this rule is modified, and if the beneficiary require the principal sum to pay off or reduce a mortgage or to enable her to be placed in funds to start in business the entire amount is paid at once.

"So far only one action has been brought against the city. This was the case of a soldier who worked in the city but who did not live within its limits. Although the policy had been issued, the city claimed . . . that no contractual relations existed, as it was not the intention . . . to accept non-residents. . . . The court sustained the contention of the city officials and no appeal has been taken."

Other Canadian municipalities have bought policies from companies domiciled in the United States. Different methods have been followed by these in the distribution of benefits. In some places the proceeds have been payable at once to the beneficiaries of the deceased or to his estate without regard to their necessities, while in others the proceeds have been pooled and divided among those beneficiaries who needed the protection.

WAR INSURANCE FOR SOLDIERS AND THEIR KIN

THE most specific statement yet made of government policy with respect to insuring the lives of soldiers and providing for their dependent rela-

tives was issued on Monday at the office of the Treasury Department in Washington:

"The plan has not yet assumed definite form," said the statement, "but when it has been worked out in all its fundamentals and details, Secretary McAdoo will present it to the President for his approval, and if approved, the recommendation will be submitted to Congress at an early date for its consideration.

"The whole proposition is based on the fundamental idea that the government should, as a matter of justice and humanity, adequately protect its fighting men on land and sea and their dependent families.

"Under the plan discussed, it is suggested that provision be made for the support of dependents of soldiers and sailors by giving them an allotment out of the pay of the men and also an allowance by the government: that officers and men be indemnified against death or total or partial disability; that a system of rehabilitation and reeducation of disabled men be inaugurated and that the government insure the lives of sailors and soldiers on their application at rates of premium based upon ordinary risks.

" . . . The amount of the government allowance would depend upon the size of the family and, as to others than the wife and children, upon the actual dependency upon the men. The family allowance would be made only if the sailor or soldier makes an allotment for his dependents out of his pay.

"The risk of death or total disability would be compensated for somewhat on the analogy of workmen's compensation acts, with the compensation measured by the men's services, the size of the families and the loss to the family. Partial disabilities would be compensated for upon a percentage of the compensation for total disability. The cost of this compensation naturally must be paid wholly by the government.

"In working out the new system it is deemed essential that a system for reeducation and rehabilitation be established, so that injured men may be fitted as far as possible for lives of usefulness either in their former or some other vocations."

Insurance policies, it is understood, would, under this plan, run from \$1,000 to \$10,000, the government paying any costs above those of peace-time rates. The statement concluded by saying that the subject would probably be considered during the present session of Congress.

JOTTINGS

ACCORDING to an Italian paper, the Red Cross of Rome and the Red Cross of Vienna have arranged to exchange all war prisoners who have tuberculosis, at whatever stage of the disease.

AN anti-injunction bill similar to that enacted in Minnesota was "pocket vetoed" by Governor Stephens of California. The bill was passed by both houses of the legislature after a sensational contest between labor men and anti-union employers, but the governor failed to sign the bill within the time prescribed by law.

THE French minister of the interior has created a committee of fifteen members, the *Commission Consultative des Marchés et des Stocks*, to take charge of the purchase of materials for the provisional and final reconstruction and restocking of the invaded districts of France. State Councillor Ogier, one of the ablest and best-known officers of the ministry, has been appointed chairman of the committee.

ON June 15, 1917, occurred the marriage of Helen Glenn, supervisor of mothers' pensions for Pennsylvania, to Francis D. Tyson, professor of social economy of the University of Pittsburgh. Dr. Tyson is a member of the summer school faculty of the University of Minnesota and has been engaged by the Pennsylvania Department of Labor and Industry to investigate and study the present negro migration from the south.

THE American Federation of Labor's executive council has declined the invitation to have American trade unionism represented at "an international conference of trade unions" on September 17, in Switzerland, to discuss "the demands of peace of the trade unions." This conference was agreed to at a meeting on June 8, in Stockholm, of Dutch, Danish, Norwegian, Swedish, Finnish, German, Austrian, Hungarian and Bulgarian trade unionists. In declining the invitation President Gompers cabled that the council of the American federation had decided such conferences to be "premature and untimely" and leading to no good purpose.

JEANNETTE RANKIN, congresswoman from Montana, introduced in the House on July 10 a bill appropriating \$5,000,000 for separation allowances to the dependent families of enlisted soldiers and sailors during this war. Under its provisions not more than \$75 a month can be paid to a single family, nor more than the man's average

earnings before enlistment, provided: that a wife or dependent mother shall receive not less than \$30; a wife with one child not less than \$45; a wife with two children not less than \$60, and a wife with more than two children, \$75. If the wife dies, each dependent child is entitled to receive \$15 a month, and all children above the age of sixteen years who are physically or mentally incapacitated are entitled to support. The bill has been referred to the House Committee on Military Affairs.

THOSE 60,000 DOCTORS

TO THE EDITOR:

In your issue of July 14, page 344, appears a communication from Ridgewood, N. J., entitled "Seventy Social Workers," in which the writer refers to a statement that 60,000 doctors had been killed.

Whether these wild, exaggerated statements of mortality in various branches of service are inspired by pro-Germans and pacifists or not, they obviously do not help enlistment and are discouraging. It is believed that these stories are deliberate German propaganda. At any rate, they should not pass unrebuked.

In the first place, there are probably not 60,000 physicians in the whole of England. It is some question whether there are that many in the British Empire. And as to the mortality among them, the highest figure I have seen is 958. In the *American Medical Journal* a statement appears that the mortality among physicians on the western front is 195 killed, and I think less than 100 wounded.

Pittsburgh.

EDWARD A. WOODS.

For Labor's Defense

TO READERS OF THE SURVEY—

Anyone wishing to contribute to the fund for giving Mrs. Rena Mooney and the others who are under accusation a fair trial is invited to send the money to the International Workers Defense League, 210 Russ Building, San Francisco.

ALICE STONE BLACKWELL writes:

"The prosecution is backed by unlimited money. The defense is almost penniless. Unless means are supplied, there is grave danger of a serious miscarriage of justice, and the judicial murder of several innocent persons. The effect in embittering feeling among the workers, and alienating the sympathy of Russia from the United States may be imagined."

SURVEY PRINTS SERVICE SERIES

To begin in the August 4th issue of the SURVEY.

THE WARTIME RELIEF PROBLEM—as localized in every city and rural district from which soldiers with dependents leave for training camp or overseas service; the adjustment of individual workers and organizations to the Red Cross, state and government agencies, etc.

THE WARTIME HEALTH PROBLEM—as localized in every city and rural district in which incipient cases of tuberculosis, neurasthenia or other preventable and curable ills are revealed by the recruiting examinations; the utilization of government and private medical institutions and resources to prevent these cases from becoming chronic, to prevent spread of infection, etc.; their utilization in connection with the army and Red Cross medical service here and abroad; their subsequent utilization in the case of invalidated men.

THE WARTIME RECREATION PROBLEM—as localized especially in the great camp centers; the utilization under the War Department of national social service agencies—the Y. M. C. A., American Playground Association, National Social Hygiene Association, etc.; the development of recreational facilities and health community activities in garrison towns, etc.

THE WARTIME CHILD WELFARE PROBLEM—as localized in every state legislature where ill-considered movements are on foot to break down child labor and compulsory education laws; and as localized in every schoolhouse and every agricultural district where social workers and educators can give direction to the training and conservation of childhood.

THE WARTIME LABOR CONSERVATION PROBLEM—as localized in every factory and industrial district, where, if English experience and the counsel of the leading national agencies in this field are to be heeded (such as the Consumers' League, the American Association for Labor Legislation and the Russell Sage Foundation), greater efficiency and greater output go with the conservation of scientific health standards.

THE WARTIME PROBLEM OF NEIGHBORHOOD RELATIONS—as localized in every tenement and industrial district, where immigrants of the different warring races are in residence and where new and delicate tasks of leadership and interpretation, in tolerance, fellowship and common understanding, fall to settlements, district offices and community centers.

THE WARTIME FOOD PROBLEM—as localized in every city and town; what the community and its leaders can do to aid the national legislative measures, soon to be enacted, to regulate the production, distribution and consumption of food stuffs, whether through actual participation in the administration of these measures, through local organizations, or through the creation of public opinion.

To be reprinted in pamphlet form.

EVERYMAN'S LIBRARY

Makes the Best Books for
VACATION READING

Summer is a good time to catch up in your reading. Out of the 732 volumes of the world's greatest books, don't forget to provide a sufficient number to help you pass the time pleasantly. Pack in your trunk a dozen or more volumes of Everyman's Library, the great novels you have meant to read or re-read, books of Travel, Essays, Poetry, etc. They will be a delight to you and your friends, will cost but little

Matthew Arnold

and will give you many days of the best reading the world affords. They are handy to carry with you anywhere—slip in the pocket easily. Just the books you want for the camp, the boat, the hammock or the touring car. The ideal library for the country home.

EVERYMAN'S LIBRARY FOR THE YOUNG FOLKS

Everyman's Library includes among its 732 volumes, books written expressly for Boys and Girls. A selection from these books will give the boy or girl a fine start on a complete library because all the books are beautifully printed and bound alike. Start your boy or girl right in making the foundation of a library for future years.

EVERYMAN'S LIBRARY FOR COLLEGES AND SCHOOLS

Everyman's Library was arranged with college needs in mind. Volumes have been added only after consultation with teachers in every section of this country. This has made the series one of the great educational forces of our times.

Secondary schools are discovering a wealth of available material in Everyman. Practically all of the required reading for college entrance examinations is there. The authorized list of high school books in many states specify this edition for great numbers of required texts.

EVERYMAN'S LIBRARY FOR SOLDIERS AND SAILORS

Handy to carry, slip in the pocket easily, buy a copy at once.

732 volumes to choose from—the great books in every department of literature at the uniform price of 50c. per volume net in the regular cloth binding, 60c. per volume net in reinforced binding that will stand a remarkable amount of hard class room service, and \$1 per volume net in a beautiful soft red leather binding.

EVERYMAN'S ENCYCLOPAEDIA

John Ruskin

A genuine Encyclopaedia in twelve volumes occupying one foot of shelf room, for the volumes are of the same dimension as the Everyman Library. A set of this complete, new, accurate Encyclopaedia, all bound in cloth binding, for the astounding low figure of \$8, or in full leather for \$15. Send for it. Own it. Use it every day of your busy life. You will find its information so accurate, so concise, and all in such small compass that it will be of the greatest help personally, and without hesitation you can recommend its use.

Write now for a circular describing this wonderful set. You will never regret it.

EVERYMAN'S ATLAS

- Vol. 1—Europe. Designating clearly its famous battlefields.
- Vol. 2—America. Vol. 3—Asia.
- Vol. 4—Africa and Vol. 5—Classical Australasia. Geography.

(Prices and size same as Everyman's Library.)

THE SURVEY

THE FIRST OF THE SURVEY'S
WAR TIME SERVICE SERIES

Making the War Safe for Childhood

By *Winthrop D. Lane*

A youthful Harold Bauer, whose education in an experimental school may be interrupted by the war

I. The Case for Conservation

IN 1212 A. D., when all Europe was torn by its failure to wrest Palestine from the hands of Mohammedan conquerors, and Pope Innocent III was exhorting the nations of Christendom to engage in another great expedition against the barbarians, there occurred those extraordinary uprisings that have since been called the children's crusades.

Thousands of boys and girls in France, and other thousands in Germany, gathered together as if by magic and

marched from town to town, singing songs of religious triumph wherever they went. The lad Stephen led the French children, Nicholas the German. At every village the numbers of the marchers increased. Youths left their ploughs and herds to join and even men and women yielded to the spell. Mothers with babes at their breasts trudged along behind. Townspeople gave the marchers food and encouragement as they passed, and apparently believed that in the pure hearts of these children lay the power that would at last restore

Christ's tomb and holy places to their rightful possessors. Witnesses declared that the children were inspired by God or had come together in answer to messages received from angels.

No record exists that the children ever reached Palestine. A number of them, arriving at Genoa, broke up into groups and tried to embark at different points. One shipowner tried to monopolize the passage of the children and other practical spirits of the time did their best to turn the enthusiasm and needs of the children into money for their own pockets. According to one report, seven hundred were shipwrecked on an island in the Aegean. All seem to have become at last discouraged. "Many perished," we read, "of hardships, hunger and thirst in the forests and waste places; many were despoiled by the Lombards, many were sold into slavery in divers places."¹

It was only then that the scales fell from men's eyes. Popular feeling underwent a quick revulsion. Such of the youthful adventurers as reached home were described as coming back in humiliation and disgrace; young girls who had gone forth as virgins returned in shame. Divine inspiration was no longer cited as the cause of the uprising. With failure came the explanation that the whole movement was "the work of the devil." We must remember that child life was then understood even less perfectly than now and that children were apt to be regarded with superstition or treated with neglect. What remorse was felt by the adults who had encouraged the children is not recorded, though there is evidence that some intelligent observers felt keenly the loss both to the young folk and their families. At any rate, the crusades did no good to the cause that called them forth and great harm to the children who took part in them. The whole enterprise seems clearly to have been one of those fruitless sacrifices of childhood to a passionate cause that only an age of ignorance or fervor can produce.

Today we are in danger of repeating this sacrifice. To be sure, we are not sending child crusaders against a far enemy. But nations are fighting nations as peoples, not as armies, and the children are not exempt. We are confronted with proposals in many quarters which would strip children of some of the protections that civilization has slowly thrown about them. In the first months of war emergency measures have been advocated which would do nothing less than undermine their health, stunt their growth, interfere with their education, make them laborers before their time and set them on the paths of wrong conduct. For all of this we have neither superstition nor ignorance as our excuse.

Child life is not an unopened book to us. We know something of both its nature and its needs. It is no longer regarded as a span of years to be bridged as chance directs. It is a period of growth and of delicately adjusted training. Child life calls for nourishment, for pure milk, clean homes and health in mothers. It demands extraordinary protection against disease at a time when our mode of living puts new strains upon young bodies. These bodies need to be made supple and hardy, fit vessels for courage and independence. Childhood is sensitive also and quick to respond; a mere word may change its outlook on life. It needs, therefore, education and wise leadership. It requires a complex equipment of material objects: schools, devices for play, laboratories, gymnasiums, whatever will make for physical strength and mental alertness. To control and direct this equipment it needs a

staff from the older generation: men and women skilled in childhood's ways, physicians and nurses who have studied child hygiene, teachers, play leaders, persons fitted to build up moral strength. It needs, too, an enriching study of the arts, of music, of coloring and of form. To obtain all these is a task as essential as it is difficult, for children must face life whole when they grow up and their ability to do so depends primarily upon the preparatory years.

The evils that come from depriving children of these things are irreparable. Increased infant mortality; anæmic and undernourished youth; a generation of spindlings, illiterates and poor producers; juvenile and adult delinquents; bad parentage for the coming generation—these are some of the effects of neglect and exploitation. Such effects cut at the root of democratic life. The first requisites of success in self-government are sound physique and trained intelligence. Without them, we cannot progress or help the rest of the world toward democracy. Nor can we hope readily to repair our neglect of these things, for once denied they show their evil fruitage only when it is too late to make amends.

England is learning this lesson well in the present war. Like us, her military strength had to be made available quickly. In the first rush, the children were forgotten. Wasted human stock, grim economy, the policy of making every institution and service bear the burden alike, have in three swift years brought their recoil. Today the nation is concerned as never before in the preparation of her future citizens. Provision for the physical care of mothers and infants has increased, the government has asked for the largest addition to its educational budget ever voted, and committees are studying the training of children from a dozen viewpoints. An official recommendation has just been made for a compulsory national system of education for all children between five and eighteen years of age.

English experience is beginning to be duplicated in this country. We had been less than three months in the war when some of us were in full stampede against childhood. When Dr. Baker, chief of the division of child hygiene of the New York Department of Health, tried recently to interest an audience of women in the care of children, she was met with the question, "Is this meeting called to discuss the feeding of children or preparations for war?" "What can we do for our country?" asked another woman. "I want to nurse wounded soldiers," said a third.

No one would propose letting wounded soldiers go without nursing, but that need not preclude an intelligent distribution of our health resources. Already nurses' associations, social settlements and others are expressing concern over the indiscriminating shift of personnel from civil to military duties. Nurses and doctors skilled in children's diseases are leaving their practice for what seems to them a more patriotic or adventurous service elsewhere. Similarly, an unconsidered diversion of boy club leaders, educators and play leaders is likely to take place.

Throughout the spring legislatures and other official bodies waived restrictions and lowered standards affecting the health, education and labor of women and children in a number of states. Governors have been given arbitrary power to set aside safeguards, newly created commissions have been armed with authority to do anything that "public safety" demands, and commissioners of education, state boards of education and local education authorities have themselves in some instances led in shortening school terms and arranging for children of tender age to leave school for farm and factory work.

(1) The Children's Crusades, by D. C. Munro, *Am. Hist. Review*, Vol. 19, pages 522-23.

For all of this arguments of military necessity have been urged. We have been told that food is short, labor scarce, that the country is in the throes of a crisis, and that children must do their part. The basic facts in the situation are one thing, their needful and competent bearing on young folk another, and not the least of the patriotic responsibilities in the midst of this new, tremendous business of war is for keen watchfulness by those who in the past have resisted the encroachment upon child life of congestion, industrialism and other manifestations of adult stress. Already American agencies concerned with the welfare of children, alive to that experience abroad which should make the repetition of European mistakes needless are themselves putting forth programs for

conserving the health and education of the children of the war years.

It is to serve these efforts that the present articles are written. For ultimate solutions and measures of improvement the good sense and resourcefulness of the American people will have to answer. Only a reportorial service is attempted here: to set forth something of what foreign experience may have ready for our hands, to discover pitfalls and needs at home, and to gather together from various American communities and social workers what they have to offer for the service of all, in the way of methods by which we can preserve without loss of present national efficiency our care of the coming generation.

II. Schooling and Child Labor

WHEN a French writer asked, nine months after the beginning of hostilities, "Where is the school?" he was compelled to answer: "It is in a store, in a gymnasium, in a labor hall, in the hall of the Conseil Général, in the crypt of a church, in a courthouse, in a museum, in a public library."

This picture of school buildings given over to barracks and hospitals, while children hunt classroom space in whatever out-of-the-way spot they can find it, is, of course, not so likely to be seen in this country as in those nearer the conflict. Nevertheless, there are interferences with education that we shall not readily escape. Some of these have already overtaken us. A number of cities have listened to the plea that school need not keep in war time, and some state legislatures have vied with each other in releasing boys and girls from school discipline for war time work.

The war was not five weeks old when Connecticut, New Hampshire and Vermont gave some official or commission the power to suspend laws during war time. In Connecticut and New Hampshire it is the governor who was given power to set aside labor laws if requested by the Council of National Defense. Vermont gave its commissioner of industries, acting with the approval of the governor, power to suspend the law regulating hours of labor of women and children.

Other states were not slow to follow. Massachusetts created a commission of five persons with power to suspend any law licensing or regulating labor or the employment of labor, or any law affecting in any manner the conditions of labor. This power can be exercised only upon the application of an employer who declares that a law of the sort described interferes with work that he is doing and that it is required by an emergency arising out of the war. The law applies, moreover, only for the duration of the war and six months thereafter.

New York, after hearings at which the objections were fully presented by officials of the state labor and health departments and by private individuals, gave to the state education authority power to suspend the compulsory education law from April 1 to November 1 each year. California took similar action. There the legislature granted power to the state board of education to reduce the school term to six months "when necessary for agricultural or horticultural purposes." The term is now legally six months but is actually much longer in many places.

In Minnesota a newly created Public Service Commission was given authority to "do anything necessary for public safety, protection of life, public or private property," and also anything necessary that "military, civil and industrial resources" may be most efficiently applied toward the defense

of state and nation. Governor Burnquist has interpreted this to mean that the commission "might have power to suspend laws relating to the hours of labor and similar laws," but the state department of labor and industries is contending that no such power has been given to the commission.

These are the specific acts of legislatures. In several states relaxation has occurred without legislation. The Pennsylvania State Board of Education decreed that farm and garden work should be valid excuse for absence from school, and that children in good standing over twelve years of age might be credited with such work in lieu of school attendance. A similar plan made headway in New Jersey, except that there an age limit of fourteen is put upon boys who are excused.

In an open letter to school officials the superintendent of schools of Baltimore County, Maryland, authorized an elaborate system of employment for boys and girls who are "old enough to be of real productive value." This reads like a chapter from those by-laws which progressive Englishmen recognize as the chief disgrace in their antiquated educational system. According to this letter, children over thirteen who have attended school for 100 days in the year may be employed without permits; those who have attended less must have permits. A permit may be issued, moreover, to a child under thirteen if the child is not "too immature." The permits are good for twenty school days or less and may be renewed on the application of parents. On days when children are not employed they are required to attend school.

In North Dakota the attorney general has interpreted the law exempting children from school attendance "in case of necessity" to apply to children of school age who are actually at work tilling the soil.

Probably these instances do not exhaust the list of states that have relaxed their standards or made relaxation possible since war began in April. What states will follow and how far the process will go in those that take such action cannot be foretold. We know that in England early in the war conservative estimates placed the number at well over 100,000 of boys and girls of eleven, twelve and thirteen years of age who had been prematurely excused from school for work upon farms and in factories. This and other acts of relaxation and economy caused an exasperated educator in Parliament to declare that the school system of the country was "like the ruins of Louvain."² One cause of the radical change in English policy, only now bearing fruit, was the report of the Health of Munition Workers' Committee, which investigated conditions of labor and the effect of premature entrance into industry

² For a fuller statement of English experience see *The Children's Bit in the War*, by the same author, the *SURVEY*, February 3, 1917, page 520.

on children and reported that the children "are drawing on their strength." The committee sounded this further warning:

At the present time when war is destroying so much of its best manhood, the nation is under special obligation to secure that the rising generation grows up strong and hardy, both in body and character. It is necessary to guard not only against immediate breakdown, but also against the imposition of strains that may stunt future growth and development.

As already indicated, the English have awakened for the time being from their traditional apathy toward education. Government committees are studying the subject, newspapers are discussing it, the people themselves are excited about it. In all this interest the question most frequently asked is: What is going to happen to education after the war? A departmental committee formed last year to consider juvenile education in relation to post-bellum employment has just made a series of recommendations that shows the new trend of thought.

The committee declared that the solution to the problem lies in a

complete change of temper and outlook on the part of the people of this country as to what they mean . . . to make of their boys and girls.

It asks:

Can the conception of the juvenile as primarily a little wage-earner be replaced by the conception of the juvenile as primarily the workman and the citizen in training? Can it be established that the educational purpose is to be the dominating one, without as well as within the school doors, during those formative years between 12 and 18? If not, clearly no remedies at all are possible in the absence of the will by which alone they could be rendered effective.³

The two main reforms recommended by the committee are a uniform school-leaving-age of fourteen throughout England and the abolition of all exemptions from attendance below that age; second, the establishment of day continuation classes for children between fourteen and eighteen with compulsory attendance not less than eight hours a week or 320 hours a year. Shortly after the appearance of this report, the new president of the British Board of Education, Herbert Fisher, in his maiden speech before the House of Commons, asked for the largest increase in the educational budget that Parliament has ever been asked to grant. No less than £3,829,000 over last year's sum was requested by Mr. Fisher. The vote in 1915-16 was slightly over £15,000,000 so that the increase asked for amounts to 25 per cent. This amazing request was actually applauded by members of the House. Speeches on education usually serve to scatter that historic body but Mr. Fisher was listened to with eagerness. Cheers greeted his statement that the amount spent on education must be taken "in the general context of national expenditure," and sympathetic laughter burst forth when he said that the total sum so spent now is only eight times England's annual importation of oranges and bananas.

Other countries, also, have seen the error of early policies. France, after almost two years of exemptions, has restored her prohibition against night-work for girls under eighteen and has provided that other night workers shall be subject to medical supervision. She now has under consideration a bill to establish a system of continuation schools, and to require part-time attendance during working hours by all children under seventeen years of age. This proposal has the endorsement of the Minister of Commerce and of business men throughout the country. In Italy the Central Committee on Industrial Mobilization has taken steps to protect the health of the workers, and in Russia a movement was under way one

year before the revolution to raise the age limit for children in industry.

Our own conditions differ vastly, of course, from those of England and the other countries at war. Education has been more highly prized among us than among most peoples. The "highway" to our universities has been broader and more travelled, and we have been before others in providing free education for all children. Nevertheless, we are far from having a "compulsory national system," such as is now demanded in England, for every child between five and eighteen. In many states school attendance laws are poorly enforced or make only mild demands upon children, while three states allow local option in attendance and one—Mississippi—has no compulsory provision whatever. In eleven states, all told, children are permitted to leave school before fourteen and in thirty the educational requirement for children leaving school for work is lower than the fifth grade. Three-fourths of all children entering the first grade leave at the age of fourteen or fifteen, while only 28 per cent reach the high school, only 11 per cent graduate, and only 1.4 per cent complete a college course.

How We Stand

PROVISIONS respecting the employment of children need strengthening also. The federal child labor law, passed last year, left 1,850,000 working children unaffected. Moreover:

- 28 states have no regulation of street trades and 20 states have poor regulation.
- 23 states need night messenger laws.
- 28 states permit children under 16 to work more than 8 hours a day in stores or other local establishments.
- 19 states permit children under 16 to work at night in stores or other local establishments.
- 26 states do not require medical examination of children for work permits.
- 12 states have no educational requirements whatever for work permits.⁴

The rural school term in some of our states is only 20 or 30 days. Farm children on the whole have a term 46 days shorter than urban children and the average daily attendance in rural schools is 11.7 per cent lower than that in city schools. "I believe," says Commissioner Claxton, "no other great nation of the world has so short an average school term for its rural schools."

These are but a few of the conditions that warn us against an easygoing attitude toward existing standards, to say nothing of panicky efforts to break them down. When legislators propose to weaken the fabric of education provided for our children still further, we are justified in asking why this must be done. Standards once lowered are not quick to be restored, and the phrase "for the duration of the war," by which our fears are sought to be allayed, is easily forgotten. Moreover, many of the measures now proposed, have little to do with war and are in no wise essential to the success of our arms.

Against the proposals to release school children for work on farms and elsewhere, the National Child Labor Committee has set a constructive program. This divides children at the age of fourteen, and proposes rigid supervision over the employment of all above that limit who may be legally put to work. For children under fourteen the committee urges that teachers, boy scout leaders, playground directors and others interested in child welfare be organized into summer agricultural faculties and that such children be allowed to do only home and school gardening under the supervision of these groups. The committee urges that there be no exemption from school attendance.

³ Final report of the Departmental Committee on Juvenile Education in Relation to Employment After the War, Vol. I, T. Fisher Unwin, Ltd., London, W. C. Price 6d. net (Cd. 8512).

⁴ The Next Chapter in Child Labor Reform, a bulletin of the National Child Labor Committee, November, 1916; page 142

Congress has appropriated \$150,000 for the administration of the federal child labor law; this law becomes effective September 1. To see that it is enforced in every state and small community in the union is now the imperative task of the friends of children. Meanwhile, President Wilson recently appointed the members of the Federal Board for Vocational Education, which is to administer the Smith-Hughes act. This act grants money to the states from the federal treasury for teaching vocational subjects in the public schools; twenty-nine states have accepted its provisions so far. To see that the technical training that it is possible to provide under this law is held to high educational standards and that it does not subordinate real training in character and technique to the ends of mere wage-earning is the duty of people in every state where it may be tried.

A third measure with an important bearing on education is now pending in Congress. This is the act to grant federal aid to states for elementary education. The appropriations are divided into three sums: one for the elimination of illiteracy, one for the Americanization of immigrants, and the third for improving rural education. The act would appropriate fifty millions the first year and increase this by \$10,000,000 annually until \$100,000,000 is reached, which is to remain the yearly appropriation thereafter. The aim of the bill is to stimulate, not to control, local education. For every dollar to be granted by the federal government the state or community would have to spend one dollar. The administering board, which would be the same as that of the Smith-Hughes act, would have to approve all plans for education to be carried on under it. The measure has been opposed on the ground that education ought to be regarded as a local function, a point met by John Dewey when he said that as "the results . . . of bad education cannot be confined to any particular locality" the kind of education provided cannot be regarded as an exclusively local problem. The chief arguments in support of the measure are the unequal ability of the states to provide adequate educational facilities, the advantage of stimulation by the federal government and the immediate need of improvement for the sake of the nation and the children as a whole.

Shut-up Schools

IT HAS been a popular cry since war was declared that schools and colleges should close early and open late in order that students might devote themselves to work of a military or military-industrial nature. The men students of one state university in the middle west were suddenly notified some time before the normal ending of the term last spring that all classes would be closed to them for the remainder of the year. Even high schools and elementary schools felt the impulse to shut up shop and let the children go home, or go anywhere.

This cry runs counter to one of the most potent developments in education in the past decade. That is the movement to lengthen the school year. Although few communities have so far achieved a really all-year school, many have taken steps in that direction and both parents and teachers appear to be gratified. Summer sessions have become more numerous and vacation schools in which dull pupils make up lost work and bright pupils gain a grade are now common throughout the country.

The cry is opposed, moreover, to the spirit of President Wilson's recent letter to Commissioner Redfield, which favored keeping vocational schools open throughout the summer. Such a program would be both industrially helpful to the nation and good for the pupils themselves, the President held.

Apparently we need to be encouraged to take a solid stand upon our belief that education is strength and not weakness. We should not allow ourselves to be pushed from this belief by the ghosts of unfounded fears. No enemy is likely to prove so immediately menacing that we must stop educating our youth to grapple with him. Moreover, every day of education that is gained is so much added preparation for the struggle, in whatever form and at whatever time it may come. We could probably do nothing that would better please any nation hostile to us—whether that hostility is economic, racial or military—than to close our schools and neglect the training of our children. Let us not give this aid and comfort to our enemies. "There is something in your school board education after all," wrote a naval officer to an English school inspector not long ago. His verdict may need repetition here. If education is good, it is good as long as there are children to profit by it.

"When the war is over," Commissioner Claxton points out, "there will be such demands upon this country for men and women of scientific knowledge, technical skill, and general culture as have never before come to any country." He thinks, therefore, that the number of students in our schools and colleges ought to be "much larger than usual," and urges every boy and girl who graduated from a high school in the spring to enter some higher institution of learning this fall. Only one in seventy-one of those who enter the public schools do so now. He advises all schools of whatever grade to keep their full quota of officers and teachers and thinks that with respect to some kinds of schools, such as kindergartens, there will be need of a greater number than before. Evening continuation classes should be formed for boys and girls who cannot attend the day sessions of high schools, and every city should conduct evening classes for its adults. More and better normal schools will be required also, for "in few states is the supply of well-trained teachers equal to the demand" and the coming of peace will but intensify this lack. Finally, the federal commissioner believes that high schools should give greater attention than usual to chemistry, physics and biology, as well as to industrial, civic and social subjects, and that every opportunity should be afforded for intensive laboratory instruction in engineering and other technical and professional branches.

One of the fields in which there has been a marked increase of interest in this country in recent years is that of experiment in education. Ever since Professor Dewey founded his school of education at Chicago University in 1902, schools for developing this and that idea in educational theory have been the vogue. The Bureau of Educational Experiments has compiled a list of twenty-seven that now exist, though this number is not presumed to be complete. Most of the experiments are the private efforts of teachers who have felt varying degrees of rebellion against traditional methods. Occasionally experiments have been conducted in public schools, such as William Wirt's work-study-play program at Gary and Miss Barnum's more recent effort to give full expression to the impulses of children in West Orange, N. J. While large fortunes have been placed at the disposal of a few experimenters, by far the greater number have had the handicap of extremely modest means and not a few have faced almost insuperable difficulties in obtaining support. Nearly all of the experiments have aimed by one method or another to free the child from the rigors of formal discipline and to set him at liberty to develop his own initiative, talents and resources. The conclusions of psychology have been drawn upon and an effort has been made to apply whatever elements of workable truth there may be in the scientific study

of education. However one may judge particular experiments and experimenters, there can be little doubt that much good comes from allowing a considerable latitude to such inquiries. Nearly everything that is valuable in our present methods owes its origin to the once obscure teachings or demonstration of some Herbart, Pestalozzi or Froebel.

A far-reaching proposal was made in the 1916 report of the United States Commissioner of Education, by Florence C. Fox, a government specialist in educational systems. In so far as the movement in experimentation is spasmodic and intermittent, there is an element of danger, she thinks, to the children experimented upon. She suggests, therefore, that general supervision over experiments be given to a board of experts and that stations be established throughout the country where investigations can be carried on for periods of years. This would secure to the movement what it now lacks—"balance, coherence and continuity." Whether such a board, unless many-sided in its views and exceptionally free from bias, would not prevent the freedom and diversity of method essential to experiment in any field, is a question. Meanwhile, it seems clear that the attitude most helpful from the public will be one of sympathy and broad faith—a willingness to see temporarily fruitless efforts continue for the good that is sure

to be in them, and a general disinclination to heed unreasonable demands for economy and for results that show today.

A promising and less formal step toward coordination lies in the Bureau of Educational Experiments, formed recently by people who have themselves had first-hand experience in this field. The bureau's purpose is not only to support so far as it is able present experiments, but to initiate new ones and to collect and make available for public use information about the whole subject. It believes that a broader view of education and a large number of teachers experimentally minded have already emerged from the efforts that have been made. One of the tasks ahead is to sort out experiments that give promise of permanent usefulness, to secure closer cooperation among experimenters and some comprehensive plan for utilizing results.

What is to be the effect of the war upon this pioneering? At best those who engage in it are compelled to struggle against heavy odds of custom and inertia. A desire for small economies and preoccupation with national affairs will interfere seriously with their work if that part of the public that is interested does not keep an eye to their welfare. The interruption and cessation of such experiments now may mean years of loss to educational progress.

BOY FARMERS FROM CAMP RUN BY PHILADELPHIA SCHOOL MOBILIZATION COMMITTEE NEAR PHOENIXVILLE

III. Boys and Farms

THE most definite service for older boys that has yet been suggested as a war measure is work upon farms. In nearly every state in the union boys and even girls aged fourteen or sixteen and over have been encouraged to engage in food production as a patriotic service. In many states school officials have taken the lead in this movement and have granted credits for work performed on farms. "Your country needs you" has become almost as familiar in manifestoes issuing from state departments of education as it has in recruiting posters.

Shortage of agricultural labor and the challenge to America to help feed the world are the chief reasons advanced for this call to youth. How far such a shortage actually exists, in what parts of the country it is most serious and how far juvenile labor can be efficiently utilized to make it good, are questions that have not been answered with any degree of precision. Dean Hunt, head of the Agricultural Experiment Station at the University of California, says that "belief in a shortage of farm labor is a chronic state of mind on the part of many producers." On the one hand, a farm census taken at the end of April by the school children of New York state showed that there were 84 per cent as many hired men on

farms then as last year, "when there was also a shortage." Similar conditions were reported in other states, especially states in the east.

On the other hand, the director of the Delaware College Agricultural Experiment Station declared that a sufficiency of farm labor exists in that region; and similar reports come from officials in both Kansas and Oklahoma. No uniform condition has seemed to prevail.

Aside from shortage of labor as a reason for sending boys to the farm, it is advanced that the work there will prove good for them or that they will benefit from some form of service to their country.

Meanwhile, the farmer himself has not always been taken into account. Does he want the labor of untrained boys from the cities, or will he use it if he can get it? To these questions both yes and no have been answered. Owen R. Lovejoy, general secretary of the National Child Labor Committee, declares that replies to a questionnaire sent by him to officers of granges and farmers in thirty-two states showed that farmers neither require nor want the help of city children. "Inexperienced help from the cities," says *Wallace's Farmer*, "is much more bother than it is worth" and adds

that "a great deal of hysteria has been shown in this whole matter." In some localities farmers have welcomed the help of city boys, especially when these have been supervised by trained leaders and the farmer has been relieved of their board.

A plan to house boys in camps under proper supervision and with due regard to the moral and educational influences surrounding them, and to send them from this camp to neighboring farms for work, was submitted by the Bureau of Educational Experiments to agricultural experts in many states. The opinions received varied. In general, eastern opinions favored the plan, while middle western ones were skeptical and those farther west were against it. The reason for this seems to be that in the east farms are small, the distances to be traveled from camp to work and back again are short, and much of the work, such as fruit picking and small vegetable picking, can readily be done by boys who have had little or no experience. In the west, on the other hand, farms are large and the task of conveying boys is correspondingly difficult. Moreover, the work is radically different, consisting largely of handling machinery and caring for live stock, for which city boys were declared by those consulted to be unsuited or to require training before they could become of value.

In this country, as in England, no competent answer can

work upon farms. The long working day, the onerousness of many of the tasks, the absence of any recognized standard of compensation, and the difficulty of effective supervision, particularly where children live and work with individual farmers—all these create excellent opportunities for overwork and underpay. Few farmers, moreover, have either the time or the desire to teach children the technique of farming; many, of course, lack the ability to do so. As a rule the farmer understands little of the nature or shortcomings of childhood; if he as a boy happened to be compelled to work and to forego schooling, too often he sees no reason why other children should not do the same. Doubtless there is a growing number of farmers who are capable of taking a real interest in their youthful "hands," but for the most part they have neither the training nor the outlook to make such interest possible or effective when it exists.

Several attempts have been made since the United States entered the war to overcome these difficulties and to make the labor of untrained boys useful in the production of food and educationally valuable to the boys themselves. One of the most ambitious of these is now in operation in Massachusetts under the Department of Mobilization of Boys for Farm Service, which was formed in April at the request of

A DETAIL FROM CAMP THOMAS, MASS., AT WORK ON A 25-ACRE ASPARAGUS FIELD

be made to the question whether boys are needed for farm work until adequate wages are paid to adult help. In Scotland and the north of England, where wages are highest, there has been the least demand for boy labor since the war began. By paying better they have got the adult labor needed. Another sidelight is thrown by the experience in Norfolk, where under an agreement overtime by adults has to be paid for at the rate of 6d. an hour. Almost no overtime has been worked, but only one other county has employed so many children in agriculture. These facts seem to show that a close relation exists between the demand for boy labor and the rate of wages for men. In July England adopted a legal minimum wage for farm laborers; wage boards were established for various areas and no board is to be allowed to make a minimum of less than \$6.25 a week. Whether the shortage of farm help in this country can be met by a similar device, or by farmers voluntarily raising wages, bears directly upon the justification of employing boys. It is one thing to call them out as the only recourse in a food emergency; another to draft them as cheap labor which will keep down agricultural pay and ultimately increase the shortage by accentuating the movement away from the country of adults.

Unquestionably few forms of labor offer such excellent opportunities for the exploitation and abuse of children as

the Massachusetts Public Safety Commission. The management is closely tied up to the state's educational machinery, most of the members of the central and advisory committees being public school men or members of the staff of the state agricultural college.

The plan comprises the establishment of camps in which boys live under supervision and from which they go to neighboring farms to work. On June 1, nine camps had been established; since then nine others have been projected or set up. Boys between sixteen and eighteen years from high schools, and over sixteen from state-aided vocational schools, are eligible to join. On June 14 Mr. Hamilton wrote:

The number in a camp depends entirely on the number of boys who can be employed in the vicinity. We do not send out camp units except to places where a minimum of 20 can be employed within a short time. The camp in North Falmouth may run up to 100. About 400 are now in camp. . . .

Boys as a rule are employed by a number of different men in the vicinity of the camp. They use bicycles in one camp [for transportation to and from work], a Ford truck was donated, and in another camp the supervisor is using his car. Some of the boys are near enough to their work to walk. Probably two-thirds of the boys are getting their dinners with the farmers, but have the other meals at the camp.

The State Board of Health is inspecting the sanitary and hygienic surroundings, and looking after the water. Most of our boys have been inoculated for typhoid before they left home.

A minimum wage schedule has been adopted by the Department of Mobilization. This calls for \$2 expense money, but no wage for the first week; for not less than \$4 a week and board thereafter for a boy living on the farm on which he works; and not less than \$6 a week for a boy living at home and working elsewhere. A week is to be six days, though "there may be emergency work when a boy will be required to work on Sunday." The decision in emergency cases rests between the employer and the supervisor.

The money for tent floors and equipment was secured by private subscription; \$8,000 was raised for this purpose. The state militia loaned 300 white duck tents of a kind not now answering military requirements. Cots and mattresses were made for one of the camps by students in manual training and sewing classes.

The kind of supervision over camp life that is sought by the department is shown in these extracts from its book of instructions:

The head supervisor should usually be the superintendent of schools, or the principal of the high school. In some instances it may be desirable for the superintendent to appoint some other man as head supervisor. In any event, he should be a man of strong executive ability, one who knows boys, and one who will take a genuine interest in this project.

Photo by Central News Photo Service

LONG ISLAND "FARM CADETS" AT MILITARY DRILL

The head supervisor may act as a supervisor of boys, but when 25 are enlisted he should have the assistance of one supervisor. An additional supervisor should be appointed when the number of enlisted boys materially exceeds 25. For a unit of 50 boys there should be a head supervisor and two supervisors, etc. . . .

The supervisor should be a man who knows the individual boys assigned him. He need not perform farm labor, but, acting under directions of the head supervisor, he is responsible for his detail of boys. He must make sure that both the employer and the boys get "a square deal." The department holds the head supervisor responsible for knowing through the supervisor that the moral and physical surroundings of the detailed boys are suitable for boys sixteen to eighteen years old.

In the opinion of Mr. Hamilton, the success of this plan depends upon keeping the patriotic motive strongly in the boy's mind. To that end the labor of the boy is recognized by a bronze badge suitably inscribed and by an "honorable discharge" signed by the governor. In addition, his work is to count scholastically. Every New England college except Harvard, says Mr. Hamilton, has agreed that any high school senior who was in good standing when he left school will, upon presenting his honorable discharge, be admitted to college for a trial term on the recommendation of the high school principal, without further examination or certification.

Another experiment of the same general kind is the "farm cadet camps" on Long Island, originally planned by the Long

Island Food Reserve Battalion, organized last spring to increase food production. It has turned over the entire organization, equipment and financing of its camps to the Young Men's Christian Association of Nassau and Suffolk counties, and the supervision of the boys, as well as their recreation and life in camp, is in the hands of Young Men's Christian Association officials. The camps have been endorsed by the Military Training Commission of the state as providing vocational education that may be accepted in lieu of military training.

By early summer five camps had been established. Each of these was planned to house forty-nine boys, divided into seven squads. The boys must be sixteen years old or older and physically able to do a day's work. A leader is in charge of each squad. He must be eighteen years old and have had some farm experience. Each camp has also a director and assistant director, making nine officers in all. The director is expected to have had experience in camping and to have been successful in boy leadership; it is also regarded as desirable that he should have had some military training. As the boys, or cadets, as they are called, become proficient they are promoted to be leaders of squads. Two cooks are stationed at each camp.

The boys work on the farms in squads, rarely singly. They

are accompanied by their leaders, who supervise them while they work. Only tasks actually contributing to food production may be assigned them. On one occasion, when several boys were found mowing a lawn, they were withdrawn until the employer agreed to give them no more work of that sort. When a boy is new he is paid \$1.50 a day by the farmer and is called a second-class cadet. At the end of the first week, if he is satisfactory, he is promoted to a first-class cadet and receives \$2 a day. The boy pays \$5 a week for board and buys his own uniform. Many of the boys are said to be saving money. On June 30, when one camp had been in operation six weeks and the others varying periods of a month or less, they had furnished 1,350 work days to Long Island farmers.

The camps are organized on a semi-military basis. Here is the daily program:

- 5:00 a. m. Reveille (followed by raising flag).
- 5:30 a. m. Setting up exercise.
- 6:00 a. m. Breakfast.
- 6:30 a. m. Chapel and roll call.
- 7:00 a. m. Farm squads leave.
(Camp duties for cadets in camp.)
- 8:00-11:00 a. m. School or garden practice.
- 11:30 a. m. Inspection of tents.
- 12:00 m. Dinner.

1:15- 2:15 p. m. Free time.
 2:30 p. m. Detail leaves for beach; organized sports.
 5:00 p. m. Evening drill and parade.
 6:00 p. m. Supper.
 6:30 p. m. Sundown. Retreat and flag lowering.
 7:00 p. m. Campfire and evening callover.
 8:45 p. m. First bed call.
 9:00 p. m. Taps.

Much attention has been paid to making camp life educational and attractive. In addition to supervised sports, there are talks on agriculture that bear a relation to the tasks of the day. Moving pictures have been provided in some of the camps. Opportunity is given to the boys to attend nearby churches and special services have occasionally been held in the camps themselves. Liquor, tobacco and firearms are prohibited. The health conditions of the camps are supervised by the state sanitary inspector. The persons in charge of this experiment are planning to continue it for three years.

A far different picture from either the Massachusetts or Long Island experiments is presented in other localities. New Jersey is one of these. As already related, a Junior Industrial Army has been created in that state, with three divisions: Agriculture, Home Gardens and Girls' Service. The Agricultural division is open to any boy of fourteen or over who

having been closed two weeks early to facilitate this arrangement. Work had not proved to be as plentiful as expected and many of the boys were found mowing lawns, pruning trees and trimming shrubs on nearby estates—tasks no doubt needing to be done but having little relation to food production and "hardly satisfactory substitutes," in Miss Folks's opinion, "for school work." Eight boys were pulling weeds from city roads.

Lack of supervision was the chief evil where boys worked on individual farms. The possibility of overwork and underpay was illustrated by a fifteen-year-old lad on a truck farm in Hunterdon county. This boy, slight in build, weighing only 113 pounds, had had no previous farm experience; nevertheless, he was employed from five o'clock in the morning until eight at night, with an hour and a half out at noon. His work consisted of doing chores and picking strawberries. His pay, in addition to his board, amounted to \$2 a month, or \$.002 an hour. Supervision failed also in respect to the twenty boys who were under fourteen. Of six boys who worked individually in one county, three had either changed their work or dropped it entirely without the knowledge of the supervisor in charge.

The work of all these boys was accepted with full credit

ORGANIZED ATHLETICS IS PART OF THE CAMP LIFE AT BAYSHORE, L. I.

is in good physical condition and has the permission of his parents. Such a boy receives full credit for the school work that he would have done. At the end of May the assistant commissioner of education reported that 6,332 boys had begun farm work and 2,722 were available. Only eight counties had reported to the state office at that time. An examination of their reports was made by a special agent of the National Child Labor Committee, Gertrude H. Folks.

Miss Folks found that of 821 boys from these counties, 258, or 31.5 per cent, were over sixteen years of age; 17.4 per cent were just sixteen, and 51.1 per cent were below that age. Of those below, 2.4 per cent were under fourteen, though the regulations strictly forbade the employment of boys so young.

Three plans were followed in organizing the work of the boys: the establishment of a group of boys on an estate or large plot of ground, there to live and work; the organization of "camps" from which the boys go daily to farms in the vicinity, and the employment of individual boys by individual farmers.

The first plan, as far as Miss Folks discovered, worked well enough. The second plan did not work so well. A "camp" of fifty boys visited by her at Bernardsville was found to be located in the high school building, the term

by the schools, yet Miss Folks found that no restriction was imposed upon the grade of the child leaving and no recognition of the quality of his work on the farm. Of 561 boys sixteen years old or younger, 54 per cent were below the grade in which children of their age should be; 39 per cent were in the normal grade, and 6.1 per cent above grade.

In other words, farm labor as a patriotic service in New Jersey is proving a refuge for the retarded; in all probability is actually swelling their ranks. To grant school credit in such circumstances is an educational farce. Miss Folks found that a number of boys had begged to be allowed to do this work because it was the easiest way to gain school credits. As one farmer remarked to her: "It helps a lot of boys to graduate."

Agents of the National Child Labor Committee have conducted investigations in other states also. These are not yet completed and no detailed statement is possible; none may ever be, for officials in many states do not know what has happened. In Kansas, the superintendent issued a letter in which he specified no age limit for children leaving school. He made no restrictions of any sort upon the departure of children except that they should have a "passing grade"—and a passing grade, of course, may mean anything the local superintendent desires it to mean. No means of supervision was

provided for the children who should leave; in fact, nothing was done to prevent a wholesale exodus from both the elementary and high school grades. Almost the only fact that is known today in regard to what has happened is that the majority of those who left were country children—precisely the ones who most need to be protected in their education.

In Missouri there has been an equal lack of system. There an age limit of fourteen is imposed, but no other restrictions. Credit is given for work done on the farm, and each county superintendent is left to decide whether such work is satisfactorily performed and whether it is of benefit to the children. The state superintendent admitted that one school has been completely depopulated; how many children had left in all he could not even guess.

Indiana must be awarded the palm, however, for disregarding her children's welfare. The appeal to patriotism in that state was made openly in the name of the canning industries. These industries have always been covetous of the labor of children; indeed, the fight that for two decades has been waged to save boys and girls from premature exploitation by industry has been thickest in the very communities where canneries exist. Nevertheless, the Indiana superintendent of public instruction, Horace Ellis, issued a letter on April 17 to county superintendents in which he said:

The Department of Public Instruction wishes to recommend for your favorable consideration the suggestion made to the department by representatives of the Indiana canning factories that the school authorities, or those situated in communities where canning factories are operated, postpone for two or three weeks the opening of the schools next autumn in order that the school boys and girls of suitable age ["suitable age" is left undefined] may assist in caring for the great vegetable and fruit crop which our farmers shall this year grow.

"It is as important," Mr. Ellis said, "for the canning factories to run full time as for our cannon factories to operate extra shifts." With this official sanction, it is small wonder that the representatives of the canning factories grew bolder in their next request. A delegation waited upon the state factory inspector and asked that children be permitted to work for them after six o'clock in the evening. No permission of the sort was granted. Indeed, tardy disapproval of the action of the superintendent of schools has been voiced and steps have been taken that will, it is hoped, lessen somewhat the consequence of his action.

Clearly, children are going to pay in neglect and exploitation for half-baked projects and hasty official action the country over. It is as if we had to begin anew to build up the safeguards that are the results of years of effort and public devotion. The evils will manifest themselves locally and at

the start; the remedy must, therefore, be locally applied. Individuals and agencies interested in child welfare must stir their communities in defense of children. Nor is their obligation merely to resist encroachments upon childhood. They have an opportunity to control this spasmodic energy for the national welfare. Undirected, it may result in taking children out of the schoolroom and setting them to mowing lawns, to doing chores for fifteen hours a day or working in a cannery at night. Directed, it may in time become a motive force in building up childhood, no less than food production, under spur of the same patriotic impulse.

One fact seems to stand out clearly from the ragged experience of last spring that should serve us this fall and winter. If work of any sort is to be encouraged for children who would otherwise be in school, it must be conducted as a supplement rather than as a rival to their education. Whether the best method of securing this is to put boys who enlist in farm labor into camps, where experienced leaders will insist that they live a life of mental stimulus as well as of physical exertion, where their health is looked after and their strength watched, some of this summer's experiments now in progress ought to go far to determine. Certainly these are better than an unregulated freeing of children for whatever jobs they can find. The securing of competent leaders for this work—in the numbers, at any rate, that they will be wanted—will undoubtedly be a difficult task, and should be recognized as patriotic service.

It seems reasonable also that the work in which young people are allowed to engage will have to be organized with some degree of permanency, and not as a temporary measure or makeshift. The need that must be met ultimately is the children's need, their need for growth, for sound bodies and for as rich an intellectual experience as possible. Indeed, the permanent economic value of the young people to the agricultural life of the country will be increased in the long run if the work is made as educative as it can be. Boys can become good farmers or good farmers' helpers only by receiving the greatest amount of intensive training that is practicable. They must have this training if they themselves are not to lose valuable years in the development of their own characters and powers.

There is a very real danger that the sudden transfer of boys to new surroundings and the taste of freedom and independence that go with playing the role of men will make school routine seem, to many of them, dull indeed on their return. They may drop out of school in larger numbers, and drop out earlier than heretofore. If this is accepted, we shall be losing ground educationally. If it comes as a challenge to enrich schooling and school equipment, so that these will be related to the active life processes of the community and will catch the imagination of youth, then it will be a gain.

More immediately, there is danger of increased retardation, due to broken schooling; and the value of a boy's food production in spring and fall would neither compensate the state for putting him through the same grade twice, nor compensate him for a working year lost later on. The issuing of school credits for farm work if badly handled will only gloss over this waste. Such credits presuppose some gain in knowledge, experience or skill. This gain can come only if those who are charged with the responsibility for it, namely, the duly selected school officers of a community, make it their business to see that it does come from whatever work boys do.

In other words, we are dealing with a makeshift—an alternative to education or an interruption to it—and we are dealing at the same time with something that might conceiv-

Photo by Central News Photo Service

LONG ISLAND CADETS WORKING UNDER SUPERVISION OF FARMER AND GROUP LEADER

ably become education itself. If the farm could be put into the school, no less than the boy onto the farm—if we could bring in camp life and husbandry and the whole of outdoors into the physical and vocational training of American youth, as result of this emergency call to turn the school out of doors—we should be turning defeat into victory. It would mean transmitting this sudden public sense of the value of

boy labor and girl labor—one of the most primitive instincts and one lending itself to menacing abuses—into a permanent sense of the value of boys and girls.

Succeeding instalments of Mr. Lane's quick Survey of Child Welfare in War Time will be published during August. These, with additional material, will be brought out in pamphlet form, with directory of national agencies and bibliography, as the first of the SURVEY's War-Time Service Prints.

War's Heretics

A Plea for the Conscientious Objector

By *Norman M. Thomas*

CHAIRMAN OF THE AMERICAN PARISH, NEW YORK

ANY effort to think intelligently about a war avowedly waged for human liberty brings one face to face with the problem of the conscientious objector. Undoubtedly he is an irritant to the whole-souled patriot. His very existence seems a piece of inconsiderate egotism and annoyingly interrupts us in the midst of our enthusiasms for a war fought "by no compulsion of the unwilling" "to make the world safe for democracy." So newspapers, orators and Colonel Roosevelt call him slacker, coward or pro-German; philosophers gravely pronounce him anti-social, and scientists like Dr. Paton analyze him from a study chair with a truly Teutonic subjectivity and heaviness. Meanwhile his defenders and comrades are a bit embarrassed because he is not of one type or philosophy, but of many. Even the name "conscientious objector" is most unwelcome to some moderns among them to whom the phrase has an "archaic flavor," an objective quality, "like a godly grandmother," which hardly fits into their scheme of life. They are not, then, overly sympathetic with the defense which is entirely satisfactory to the man to whom conscience is the real norm of life and "thou shalt not kill" a complete statement of its law.

Therefore, it is with some diffidence that I, a conscientious objector, undertake to speak for my brethren and to appeal even in the heat of war for some measure of understanding—not so much for our own sakes as in the interest of sound public policy and ultimately of democracy itself.

As a starting point we can define conscientious objectors as men who are absolutely persuaded that enforced participation in this war is so opposed to their deepest convictions of right and wrong for themselves or for society that they must refuse conscription at least for combatant service. If they know themselves they will hold this position whatever it may cost. This attitude springs from no insufferable priggishness. The objector does not primarily seek to judge others; he may heartily admire the heroism which leads his friends into battle, he may admit the idealism of their ends, only he cannot agree with them as to the method they use.

How many such folk there are in the United States no one knows. Naturally, the government will not permit an aggressive attempt to discover and organize all conscientious objectors. There are, however, many societies, local and national, whose members are avowed conscientious objectors, and there are many more unorganized individuals who hold such convictions. Again, it is uncertain how many of the thousands of objectors will be drawn in the first group called to report under the draft law.

It is natural to think of conscientious objectors as essen-

tially religious, and the government showed a certain deference to religious liberty in exempting from combatant service members of well-recognized religious organizations whose creed or principles are opposed to war. Of course this is illogical in theory, for conscience is an individual and not a corporate matter. Not all conscientious objection is avowedly religious, nor is religious conscientious objection confined to the relatively small sects which have incorporated it in their creeds. Within the last generation there has been a wide growth of peace sentiment in the churches not all of which is as amenable to conversion to war as the average ecclesiastical organization or that erstwhile prophet of the Prince of Peace, William J. Bryan. You have to reckon with it. Then you have young idealists among the intellectuals to whom humanity is a reality never served by the stupid horrors of war, and the very much larger group of workingmen who have learned too well the doctrine of the solidarity of the working class to believe that the organized destruction of their brethren who march under a different national banner will hasten the dawn of real liberty and fraternity.

In short, conscientious objectors include Christians, Jews, agnostics and atheists; economic conservatists and radicals; philosophic anarchists and orthodox socialists.

It is not fair, therefore, to think of the conscientious objector simply as a man who with a somewhat dramatic gesture would save his own soul though liberty perish and his country be laid in ruins. I speak with personal knowledge when I say that such an attitude is rare. Rightly or wrongly, the conscientious objector believes that his religion or his social theory in the end can save what is precious in the world far better without than with this stupendously destructive war. He is a pacifist but not a passivist.

Even John Dewey seems to me to be dealing with only one phase of conscientious objection, and that not the most important, when, in a recent article on Conscience and Compulsion, he speaks critically of conscience "whose main concern is to maintain itself unspotted from within" or "whose search is for a fixed antecedent rule of justification." Doubtless this point of view exists; something of a case might be made for it; but it cannot be too strongly insisted that the majority of conscientious objectors, even of this type, believe that the same course of action which keeps one's self "unspotted from within" will ultimately prove the only safe means for establishing a worthy social system. They quite agree with Professor Dewey in the necessity of search for "the machinery for maintaining peace"; but they remember Edward T. Devine's sober and terrible indictment of

war in his report at the recent Conference of Charities and Corrections, or they recall that a great Christian denomination in its very declaration of hearty support for the government's war policy declared war to be "irrational, inhuman and unchristian." So they feel that the burden of proof is decidedly on the shoulders of anyone who finds in the world-wide denials of humanity and democracy involved in this struggle a valuable part of that machinery of peace or the way for saving mankind.

We grant that our unity is to be found in our common denial of the righteousness or efficacy of our personal participation in the world war. Our positive philosophy, as I have already indicated, varies as does the philosophy of the larger pacifist movement, of which we are a part. At one extreme of our ranks is the Tolstoian non-resistant, at the other the man whose objection is to participation in *this* war.

Perhaps the extreme non-resistant gets the most understanding and respect for his consistency if not for his brains. The name "non-resistant," however, scarcely does justice to his convictions. He is persuaded that the supreme force in the world is Love and that Love can only win by its own weapons, which are never the weapons of violence. He is accused of ethical optimism, but he is too much of an ethical realist to preach to great armies the modern doctrine that they go out to kill each other with bayonets, bombs, big Berthas and poisonous gas in a spirit of love. He may believe in *dying* for one's country, or for ideals; but not in *killing* for them. And his objection is by no means only to killing, but to the essential autocracy, the lies, the contempt for personality, the stark barbarism of war which knows no crime but defeat. He is convinced that victory of those great ideals of democracy so eloquently phrased by the President will never be won, no matter what nation is victorious, till love is the animating principle of life.

The Religious Objector

NOT ALL of this group are such extreme non-resistants as to deny the validity of police force. Such force can be organized and regulated, it can be applied to the real criminals and that for the purpose of their redemption in a way that is never true of the indiscriminate and all-inclusive violence of war.

The God of the religious conscientious objector, Jewish or Christian, is both stronger and more loving than the being recently discovered by H. G. Wells. He does not have to save Himself and His causes by using the devil's means. Rather He waits for men to try His ways. We Christian conscientious objectors do not base our case on implicit obedience to one text even in that most revolutionary of documents, the Sermon on the Mount, but on the whole character and work of Jesus, who has conquered and is to conquer not by any might save Love and Truth. Churchmen nowadays say much of the "soldier's Calvary" and "salvation through suffering." If by sheer weight of agony the world is to be saved, long ago would salvation have come upon us. It is the spirit that counts, and the sublime sufferer on Calvary whose love and courage triumphed over shame and death did not receive His crown of martyrdom as an unfortunate incident in the attempt to kill as many of his enemies as possible. Singularly enough the world outside the church, despite the eloquent—and usually sincere—casuistry of her priests and ministers, appreciates the essential impossibility of denying that Jesus of Nazareth is the supreme inspiration to conscientious objection. Hence many an ardent pagan or worshiper at the shrine of the superman scorns him

for his slave morality, and many an opportunist wistfully rejects him as an impossible idealist, but thousands of the humble hunger and thirst after him who find scant comfort in his church.

Because the phrase "religious liberty" has come to have meaning and value to mankind we religious conscientious objectors get a measure of consideration denied to our brothers who base their objection on grounds of humanity, respect for personality, economic considerations of the capitalistic exploitation at the root of all wars, whose guilt all great nations share, or "common sense" observation of that failure of war as an efficient means of progress to which this tragedy gives agonizing witness. Some of these objectors are more opposed to militarism than to war and their objection is to war's denials of democracy even more than to its inhumanity.

It is here that we find our point of contact with one distinct class of conscientious objectors—those who will not declare that no wars have ever been justified or that under no conceivable circumstances would they fight, but who feel that the ghastly horrors of this conflict will not win the liberty they seek. The public gives little sympathy to these men, yet there is no doubt that their sense of right and wrong forbids them to engage in the struggle as certainly as does the conscience of the objector to all war. The man who believes that we can win *now* by negotiation about as satisfactory a peace as in the indefinite future, and start on the long road of reconstruction without further ruin may have genuinely conscientious objection to engaging in this brutalizing war whose concrete ends he considers to be so ill-defined. Perhaps it is to this class that a great many radicals belong who are opposed to international wars but who in extreme cases would support violence in social revolution. I am not concerned to justify these men but only to argue that such a position can be conscientious. Among the possessing classes, especially if they are good churchmen, many men profess abhorrence of violence *per se* in labor struggles who are hearty believers in the violence of war. Now as a matter of fact, as radicals recognize, the violence of revolution is really less indiscriminate and more clearly directed to remedying specific injustice than modern international war. Furthermore, it is far less likely to perpetuate itself in great armies and a militaristic philosophy. The Russian revolution gives dramatic proof of this fact and of the impotence of autocracy buttressed by force and fear to withstand the might of great ideas.

Another group of objectors to participation in this war who might fairly be given generous consideration are certain Americans of German antecedents who, though in no sense disloyal to America, more on sentimental than on rational grounds, cannot bring themselves to join in the actual slaughter of their brethren. They might, on the other hand, be willing to render non-combatant service. They do not command popular sympathy, but it is fair to ask why a government which has consented to debarring *all* German-Americans from Red Cross work in France should insist on drafting some of them for the unspeakably bitter task of fighting in the trenches against their kin. Such methods may possibly conquer Prussia but never Prussianism.

Apart from these German-Americans—how numerous I do not know—whose feelings cannot be exorcised by coercion, conscientious objectors are overwhelmingly anti-Prussian. That system incarnates what they hate most. Their sin, if sin it be, is not in loving Prussianism but in the belief that Prussianism cannot be most effectually conquered in or out of Germany by Prussianizing America.

If the wide difference among conscientious objectors seems to discredit their cause it should be remembered that between no two of them is there a wider gulf fixed than, let us say, between William English Walling and the *New York Sun*, or those famous colonels, Bryan and Roosevelt, all of whom are backing the war. Indeed one argument for letting us objectors live is that liberals and radicals temporarily in another camp may find in our conviction that ideas are to be fought by ideas and not by jails or bullets, a strong tower of defense in the quarrels that will surely come between them and their present allies.

It is interesting to see how genuinely educational we find our comradeship in conscientious objection. Many a Christian pacifist is learning some profound lessons as to the economic roots of war and is coming to a sense of the futility of a doctrine of the power of good will and brotherhood which only functions in the sphere of international wars and does not cut down deep into the heart of social injustice; while certain economic radicals are learning a new respect for the "unscientific" idealist and occasionally find themselves speaking his language with real eloquence and perhaps some new emphasis on love rather than hate as the energizing force in the struggle for justice. Indeed it should be made clear that the division between conscientious objectors on religious or rational grounds is not absolute and exclusive. Many of us, for example, find our religious objections strongly confirmed by rational considerations.

Three Types

BESIDES the underlying differences of philosophy which divide conscientious objectors, there is a fairly sharp practical division in their relation to national service. Along this line they fall in three classes:

1. Those whose objection is merely to personal participation in battle. Their objection is sincere but illogical and is based either on an emotional abhorrence of the ugly business of killing or a very narrowly literalistic interpretation of the command "Thou shalt not kill." Such men would accept almost any kind of *non-combatant* service.

2. Men who would not only reject combatant service but also most forms of non-combatant service which minister primarily and directly to military operations, such as making military roads or munitions. They might, however, accept *alternative* service in the reconstruction of devastated districts or in socially useful tasks, even though these like all useful work in war times indirectly add to the nation's war strength. They would prefer to show their devotion in voluntary work; they are fearful of the principle of conscription in war time, but so great is their desire to serve mankind that they might accept some tasks even under conscription, as thousands of sincere conscientious objectors have done in England.

3. The "absolutists," as they have been called in England, argue that any compulsory change of occupation in war time is war service, and that the highest social duty of the conscientious objector is to bear witness to his abhorrence of war and of the conscription principle. In England these men have proved their courage and sincerity by withstanding all sorts of brutality, imprisonment and the threat of death. It is important to remember that our present law, unlike the British, makes no provision for exemption for any of these classes.

I have dwelt on this statement of the types of conscientious objection and the philosophy behind them because in an understanding of these matters is the best answer to most of the uninformed criticism heaped upon us. It would

be more amusing than profitable to point out how utterly contradictory are some of the charges brought against us. For example, in a recent amazing letter Prof. Stewart Paton accuses objectors of Hamlet's indecision of character and then calls them "rapturous sentimentalists," many of whom are ready to die for their convictions! As for cowardice, genuine conscientious objectors in America have already proved moral courage by their resistance both to the terrific social pressure of war time and to the organized appeal to fear which does so much to make war possible. If necessary they will prove their willingness to sacrifice comfort and liberty for their convictions as have thousands of their brethren in England.

I suppose we should, most of us, have to plead guilty to believing in principles rather than opportunism. Even the eloquent (and very romantic) "realism" of the *New Republic* seems to us to give elusive and unstable guidance in the present crisis. We have a feeling that certain of our ideals or principles are more satisfactory even from a pragmatic standpoint.—Does this mean that we are a danger to democracy?

The charge that our position is essentially anti-social or parasitical deserves more extended answer. Very often it is put in a singularly inconsistent form by our critics. For instance, the other day an estimable gentleman assured some of us (1) that conscientious objection was a denial of democracy because "the people had spoken" and (2) that pacifists who advocated direct referendum on war or conscription were absurd or worse, because these were matters on which the people could not decide by direct vote!

Men and newspapers who are most concerned for the "anti-social" quality of conscientious objection are often violently opposed to what they call "conscription of wealth" even in so moderate a form as Amos Pinchot's proposal, because "business can't be run on patriotism." In order to defend our economic system they are rampant individualists and more tender in their treatment of money and profit; which have no conscience, than of the deepest convictions of men. As a matter of fact, conscription of wealth can be justified long before conscription of life, by any philosophy, social or individualistic. The most individualistic among us favor increased social control of property precisely because our present system of private property is a chief foe of the free development of personality. It makes both rich and poor slaves to *things* and denies to little children the chance for free development. These facts make us resent the charge of a selfish individualism from many of our critics as a peculiarly irritating piece of hypocrisy. Perhaps its most conclusive answer would be a challenge to find among an equal number of supporters of war more men and women who are rendering steady and unselfish service to society in philanthropy, education and the fighting of ancient abuses than there are among conscientious objectors. The records of the Quakers, of American abolitionists, of the newly formed Fellowship of Reconciliation, give conspicuous but not unique proof of this fact.

Yet sometimes the charge is brought by men who honestly believe that these services cannot socially justify our refusal to yield to the state absolute obedience despite our personal judgment in time of war. Let them remember that we are conscientious objectors because to us war is supremely anti-social. It imperils for us far more than it can save. We have asked no man to defend us while we sat at ease; rather we advocated a different way whose risks we were willing to accept. Now that the nation has chosen the way of war we emphatically prefer her cause to Germany's. Our opposition to war is not on the plane of political obstruction or

friendship for the Kaiser, but rather of supreme loyalty to certain convictions of right and wrong.

Democracy and Compulsion

WE ARE lovers of America because we believe she still strives for democracy. It is the essence of democracy to believe that the state exists for the wellbeing of individuals; it is the essence of Prussianism to believe that individuals exist for the service of some unreal metaphysical entity called the state. True, the individual exists and finds his complete self-realization only in society—an immeasurably greater concept than the state. Democracy means, of course, mutual accommodation of individuals and social control. In proportion as the state is the effective agent of such control its power should grow but never should it grow to a control over men's convictions. It then becomes as dangerous to society as to the individual. When the state seeks to compel a man who believes that war is wrong, not merely to abstain from actual sedition, as is its right, but to participate in battle, it inevitably compels him, however deep his love of country, to raise once more the cry, "we ought to obey God rather than men." He acknowledges with Romain Rolland that he is the citizen of two fatherlands and his supreme loyalty is to the City of God of which he is a builder. Some conscientious objectors may substitute mankind or humanity for God, but their conviction remains the same; only the free spirit can finally determine for a man the highest service he can render. Compulsory service rendered against one's conscience is genuinely anti-social. The deep principles which guide a man's life are not formed or suddenly altered by any act of Congress whatsoever. There is a region in human life where the commandment of the state does not run. On this very issue Christianity long withstood the whole might of the Roman empire, and wherever she is strong it is because of her assertion of the responsibility of conscience to God. In the long run that state is most secure which recognizes this truth.

We are not now pleading that our critics recognize that conscientious objectors are right in their opposition to war. We are not claiming a monopoly of idealism for ourselves or denying that men may seek our name from unworthy motives. Our interest is deeper than securing justice for ourselves. We are pleading for recognition of the social value of heresy. Every movement worth while began with a minority. Democracy degenerates into mobocracy unless the rights of the minority are respected. The church of the Middle Ages made the sincerest, most magnificent effort in history to coerce the individual's conscience for the sake not only of the eternal welfare of his soul, but of the church universal. At last she recognized her failure, but not until she had done incalculable damage. Her own sons rejoice in that failure. Now the state, less universal in its outlook, less definite in its dogma, sets itself up as a secular deity and demands not the outward conformity which usually satisfied the church, but active participation in doing that which is to its heretic sons the supreme denial of their sense of righteousness. It deliberately thinks it can save democracy by this final act of autocracy.

Gone is our belief in the power of ideas, in the might of right. America, founded by exiles for conscience's sake, their refuge in all generations, gives her sons the option of service in the trenches or imprisonment and thereby wounds her very soul as no outward victory of Prussian power can do. The heretic may be very irritating, he may be decidedly wrong, but the attempt to choke heresy or dissent from the dominant opinion by coercing the conscience is an incalculable danger to society. If war makes it necessary, it is the last count in the indictment against war.

I have chosen to dwell on the recognition of conscientious objection as a matter of democratic right rather than a matter of expediency or of sound public policy because this aspect is the more fundamental and because a nation that sees the importance of the issue involved will discover the statesmanship to give justice expression in law.

In point of fact we might make a case on the question of policy. The conscientious objector in prison adds no strength to the nation, nor does he commend our brand of democracy to the German people for whose freedom we are fighting. If the conscientious objector is cowardly enough to be intimidated into the ranks he is the last man to help win the war. This is no time for the government to indulge in a petty fit of exasperation at the conscientious objector who oftentimes is quite willing to give some real non-military service to his country. The problem of giving effect to a policy of fair treatment for conscientious objectors is not without its difficulties. Real freedom of conscience is impossible under conscription partly because of the practical difficulty of framing an exemption clause and partly because some coercion upon the unformed conscience inconsistent with genuine liberty is inevitable in any system of conscription of young men. This is one of the reasons why so many lovers of liberty were steadfast opponents of the passage of the draft law.

But even under our present system exemption can be granted on the basis of the individual, as in England, and he can be at least allowed to take alternative service which may not violate his conscience. It is entirely possible to copy the general principles of the British system and avoid certain of its stupid brutalities of administration.¹

But behind any change in the law or its administration must lie the far more fundamental matter of a public opinion not swayed by false and prejudiced statements against conscientious objectors but informed as to their real position and attitude, and above all aroused to the desperate urgency that, in a war for democracy, America shall not kill at home that "privilege of men everywhere to choose their way of life and obedience" which she seeks to secure for the world. If this is indeed a people's war for freedom the people can be trusted to see it through, without any coercion of conscience. To deny this is either to distrust democracy or to doubt the validity of war as its instrument. Justice to the conscientious objector secures, not imperils, the safety of the democratic state.

¹ The Civil Liberties Bureau has developed careful suggestions for the best possible administration of the present law and for its amendment in accordance with the principles just indicated. Roger Baldwin, director of the bureau, 70 Fifth Avenue, will welcome correspondence on this matter and on the general subject of fair treatment for the objector.

SOCIAL ASPECTS OF MOBILIZATION

This is one of several articles taking up the social aspects of mobilization. Announcement can be made of an article by a member of the headquarters staff of the War Department, interpreting selective conscription as a social procedure, and the national army as a democratic form of emergent public service.

BANDAGES—AND SOME HUMOR, WHERE POSSIBLE—ARE APPLIED TO THE TOMMIES IN FRANK BRANGWYN'S RED CROSS POSTER

The Art of War

Some Allied Drawings That Have Drawn War Loans and Relief Funds

By Herman T. Radin, M. D.

FRENCH FRANCS FOR VICTORY

MY interest in artistic war posters was awakened when I learned, about two years ago, that that enlightened patron of the art of the placard, the London Underground Railway, had commissioned the brilliant and versatile artist, Frank Brangwyn, to make a recruiting poster for its own display in tube stations and trains. While I had long collected prints and other art objects, I had never thought of collecting posters—an interesting but inconvenient specialty, by reason of their great size and difficulty of preservation. I managed to secure a copy of the Brangwyn poster from the Underground Railway, however, and finding it to be, as I expected, a surpassing work of art (the SURVEY reproduced it long ago), my

A PEOPLE WHOSE CUP BRIMS WITH MISERY

The genius of Lieutenant G. Spenser Pryse, an English artist, has aided Belgian relief

enthusiasm was so aroused that I began the fascinating and unremitting hunt for artistic war posters of the allies.

At first only British work was accessible, most of it by Brangwyn and another accomplished artist, Lieut. G. Spenser Pryse. I must, however, mention two other posters, both reproduced herewith—the striking one for the London Polish

Relief Fund, by a distinguished Franco-British artist, Emile Verpilleux, and the one for the Belgian Relief Committee by the already immortal Raemaekers. Most of these designs were made for various war relief or Red Cross organizations, through whom I obtained the greater part of my collection. Many of the early posters are now quite scarce.

Of course, there were, and are, many other British posters for recruiting and relief purposes, but the main interest of the majority lies in the directness of their appeal, rather than in their artistic qualities. While all of these will be of historic value, I personally am attracted only to those which combine high artistry with utility.

When we come to France, the case is somewhat different, for France has always been, *par excellence*, the home of the beautiful poster. In England, Brangwyn, Pryse and Verpillieux were isolated names; in France distinguished artists had for many years before the war not scorned to devote their time to the designing of posters for various purposes. Such names as Chérét, Grassét, Steinlen, Forain, Toulouse-Lautrec (now dead), Léandre, Willette, had long been famous in this field. A poster by any one of them was often a greater work of art than the latest Academy sensation. When the war came such distinguished painters and many others who had never before designed posters placed their great talents, equally with their lives, at the service of their beloved France. A great artist, Levy-Dhurmer, made a charming poster for a tuberculosis fund, which the SURVEY showed its readers not long ago. Some men have brought established reputations to this work—Maurice Chabas, Paul Rénouard, Friant, and the cartoonist, "Sem." Others, as in the case of the obscure Dutch cartoonist, Raemaekers, the war has made famous. In France such are Poulbot, Fouguey, Naudin and Abel Faivre, whose great talent met an untimely end on that most modern of all battlefields the air.

It was at the first and only comprehensive New York exhibition of French war posters, two winters ago, that I first became acquainted with their charm and human interest. They had just been brought from Paris, and were inaccessible here. After a while they appeared for sale at the leading booksellers. Later, however, I found it just as simple and much cheaper to order posters directly from a Paris bookseller.

There are also Russian and Italian posters of a high order of merit, but such as I have been able to see or obtain have all been war-loan posters, and not of social appeal. However, I do not doubt but that both Italian and Russian artists have provided good posters for the various relief funds.

REFUGEES

By Louis Raemaekers

ALTHOUGH the works of the famous Dutch cartoonist are now familiar to many Americans, this Belgian relief poster has never been exhibited in the United States. Half German himself, Raemaekers makes Kaiserdom and Prussianism the chief enemies of his pen. But in his indictment he brings out more vividly than any other artist the horror and the cruelty, the thirst and hunger of war itself. Raemaekers has just arrived in the United States, because, as he expresses it, he wants to be "at the center of gravity of the war," a pivotal point formerly held by England.

Entirely apart from their artistic merit, these war posters as "human documents" are of enormous historic and sociologic value. They show us both sides of war—the heroism, devotion and self-sacrifice, as well as the seamy side, the tragedy and misery of it all. Among the many important historic and graphic records of the world cataclysm, these posters will surely not rank lowest.

In conclusion, it is worthy of remark that only one of the allies has so far absolutely failed to realize the artistic possibilities inherent in the war poster—I mean, of course, our own United States. Such posters as have been produced hitherto, for recruiting, Red Cross, war relief or Liberty Loan purposes, have been barren in imagination and wooden in treatment. I can think of only three exceptions—the posters of Albert Sterner, Boardman Robinson and Adolph Treidler.

Perhaps our artists and illustrators have had no opportunity to see examples of the wonderful work produced in England and France. Perhaps many of them do not yet possess the "poster instinct," a very special sense. But certainly, if we have no Steinlens, Chéréts or Forains, we have artists in abundance who at least should be able to follow in the wake of Brangwyn and Pryse, Levy-Dhurmer, Roll and Chabas, and to provide us with a "war art" commensurate in its rank and dignity with the high purposes it is designed to serve.

THRIFT AND SAVING

GOOD FRIDAY of this year, 1917, the day on which the United States of America entered the war of the nations, marked a new era in many aspects of the national life. Among the virtues subject to revaluation on the threshold of the new era none stands out more conspicuously than that of public and personal thrift.

For several years this particular virtue, so much prized by our ancestors, had been with many of us at a discount. Those who urged the simple old-fashioned habit of saving had discovered that they were engaged in an unpopular and losing cause. They were not in tune with the new ideas of liberal spending, high standards of living, high prices, high wages, high taxes. Public provision for all kinds of individual needs for which the individual cannot easily meet the expense on his own account had been the order of the day. Especially unhappy was the fate of those who strove to inculcate saving habits among the poor; who urged that something should be put by from the week's wage for the proverbial rainy day, for sickness, unemployment and old age. The doctrine had been widely promulgated and widely accepted that the industrial wage earner has no legitimate margin of saving; that all his meagre and it may be irregular income should be diverted to his own and his children's physical and spiritual welfare, with chief emphasis on the former.

The present writer acknowledges his share in this attempt of many years to correct the unbalanced emphasis of the old economy on saving as a virtue to be enjoined especially on the poor and on wage earners. To achieve and maintain a higher standard of living is a primary obligation, universal and paramount. To sacrifice health, education or independence for a few dollars in the stocking, or even to make sure that the saver will not have to apply in an emergency to a charitable agency, may be reprehensible. Collective methods of providing against sickness, unemployment and old-age dependence are cheaper and better than individual methods and are perfectly consistent with strength of character and sound social organization.

Nevertheless, the old teaching about thrift and saving was sound at heart. The searching criticism to which it has been subjected has only shown the need for discrimination and for impartiality in its application. It has not touched the sound heart of the doctrine. Now that war has brought us face to face with those elementary decisions which men and women of our generation in other countries have been facing for three years, this neglected virtue of rigorous economy, saving with discrimination, the consistent practice of thrift, has rightly been revived and reaffirmed as one to be accepted and practiced by rich and poor in their personal expenditures, by the nation in the national expenditures, and by institutions of every kind in their institutional finance.

It can never come back precisely in its old form. The considerations to which attention has been called in the recent discussions of standards of living and social justice must now be taken into account. Naïve maxims of a bread and butter philosophy will have a very limited application. We shall have to think the matter through in the light of all the new social instincts and especially in the light of the new situation caused by the war.

THE first consideration of all is that the wealth of the whole world is not increasing at the usual rate, if indeed it is not actually diminishing. Whatever the compensations, we are using up large parts of our capital. We are not invest-

SOCIAL FORCE

ing it, but devoting it to unproductive and destructive forms of consumption. We are sending ships and cargoes to the bottom of the sea; putting the explosive spark to the machine guns with a resulting destruction not only of ammunition, but of the men and property who are the seen or unseen targets. We are wearing out buildings, roads, railways and rolling stock, horses, trucks and uniforms, in ways that will, we hope, conserve national purposes in the end, but certainly do not directly produce material wealth. We are diverting huge supplies of food to the necessary and vital needs of army and navy. All this represents unavoidable, but none the less irreparable, loss of just so much wealth. No doubt some soldiers and sailors would be idle or unproductively occupied in peace, but in war they are actively engaged in destructive processes. War is the best occupation in which men could be engaged under the circumstances in which America now finds herself, but this does not change the elementary fact that it is the reverse of productive industry; and that to meet its expense we must do without things which we might otherwise enjoy.

THE second consideration is that saving and thrift, even under the conditions of war, do not mean solely, or even principally, doing without things. Fundamentally they mean a wise and disciplined judgment as to expenditures. In war, as in peace, economy means doing without certain things in order to have others. It means balancing future against present goods, both future and present goods being represented by present purchases or investments. It means what economists sometimes call serial or saving choices as distinct from direct and expensive choices. The economical or saving man and nation in the long run do not do without things which the extravagant man and nation enjoy, except in so far as they prefer to do so for the sake of other things to which they attach a higher value. The economical man and nation are therefore not to be pitied even from the standpoint of the enjoyment of wealth. At the same time no man or nation would ever get far on the road to economy if the dominant motive were saving for luxury, saving for a brief time merely to spend more for exactly the same kind of thing which might be purchased for present consumption. The contrast is more fundamental. It involves character and the scale of values. The economical man and nation are those who habitually prefer the choices which saving makes possible to those which are satisfied by the immediate expenditure of available income.

PRODUCERS of wealth may be distributed roughly along the scale of expenditure with the careful saver and the free spender at the two extremes. Those who are found at the saving end of the scale have saving instincts which they have inherited or cultivated. Their possessions may be great or small, but their habits are the same. Every dollar of income is expended on a plan carefully considered in advance. Future needs are clearly visualized. Present impulses are checked. Deliberate choices are made. Investment is preferred, other things being equal, to expenditure. The distinction between capital and income is never forgotten. The flow of income into capital is made easy and natural. The

in WAR TIME

By Edward T. Devine

reverse flow which depletes capital to increase current expenditure is made difficult. A railway official once said that the financial organization of his system had been devised in such a way as to make it exceedingly easy for the railroad to receive money and exceedingly difficult to pay it out. Whether true or not, the description admirably suggests the process by which capital is accumulated.

The free spender has a contrasting set of instincts and habits. He may or may not be generous. He may or may not be a good judge of food, dress, music, or art. He may, because his ancestors were saving, be so fortunate as to have a large income, or he may be living from hand to mouth. The essential thing is that he does not exercise deliberate and disciplined judgment about his expenditures. He is an "easy mark." He acts upon impulse. He is incapable of making a plan of life and carrying it out. He has no clear conception of an economic goal and no power, or no desire, to forecast future possibilities.

Society is made up of these savers and spenders with all conceivable intermediate grades—saving, which is at zero at one end of the scale, becoming a dominant passion at the other; and careless spending, which is negligible at the far end, gradually increasing until it reaches the spendthrift stage, where saving is at zero. There is one clear and inexorable economic relation between the two classes. *The spenders pay the savers to do the saving for them.* Herein lies the reward of the saving class and the penalty on the non-saving. Capital is as necessary under modern conditions of industry as natural resources or labor. If the capital is furnished by a class, that class will exact a tribute from others. The true economic revolution will result from such changes of habits, instincts and institutions as would ensure that present nonsavers shall do their own saving instead of paying large sums to a special class to do their saving. The war, in the mysterious ways of Providence, may be the very means to this end. Economic and political institutions thrown into war's crucible come out marvelously changed. National habits are changed. "Nothing will be the same after the war" has passed into a proverb in England, and it will be as true in every other country.

IF, then, saving will be the more necessary, now and hereafter, because of the present enormous destruction of wealth; if saving is not so much deprivation as it is merely more rational expenditure; if saving is a democratic conception as a means of escape from class bondage, and the war creates conditions in which this social and democratic ideal of thrift may be realized—the next question is how to bring it about.

Evidently the right way to begin is to begin. We begin with the table. White bread is extravagant because it uses only 72 per cent of the wheat grain. We, therefore, use whole-wheat bread or graham. Let dealers furnish this cheaper bread at a lower instead of a higher price, as they can as soon as it is in greater demand. Let millers furnish only the more economical and more nutritious kind of flour; or at least let them furnish only so much white flour as may be required for delicate stomachs and let this be furnished

on prescription through the druggist. Let us continue to reduce the production both of alcohol and of fermented drinks. Let our Irish deliver themselves from the tyranny of the white potatoes; our Italians from macaroni, and our natives from meat. Let us increase our consumption of maize and rice. Let us greatly increase the variety of fish, vegetables and fruits that we find palatable and acceptable, choosing those that can be produced and brought to market most economically. Every new and cheap dish which we can learn to like helps by just so much to make us freer men and a freer nation. We have all soils, all climates, all instruments of agricultural production. We should apply our national ingenuity and good nature to achieving independence of the danger of a food famine and of higher prices.

The danger of a sheer shortage of the world's food supply is still great. The agricultural and transportation problems presented by this danger are urgent. Partly, however, it is a problem of economy on the part of the ultimate consumer. Food riots will not solve that problem. Neither will angry letters to the newspapers. Boycotts and even riots may be useful as educational measures, but the solution lies in dietary changes which will make a more economical use of land, a fuller use of the existing plant foods in the soil. A better system of markets and of distribution generally is most desirable and, it is fortunate that this aspect of the food problem is receiving attention. Primarily, however, it can be met only by a better adjustment of demand to supply. This means increasing the supply and modifying the demand.

The food problem thus becomes largely one of home economics, of saving in its best sense, of thrift. Housekeepers of shrewd common sense do not need to wait for food experts to tell them what changes of diet are desirable. Each may experiment and find out for herself means of saving. This process is, in fact, going on. Extraordinary ingenuity is shown in many a tenement household in meeting the situation which the high cost of food has created. This is the natural method of meeting it, for which we shall not speedily substitute bureaucratic control. It assumes, however, that there shall be devised ways and means of exchanging experiences, of finding out what economies are really advantageous and what apparent economies are fallacious. Educational propaganda on behalf of approved changes, demonstrations in small classes, housewives' meetings for informal discussion, are needed as incentives to the needed readjustments.

Public opinion may rightly demand that such readjustments should not be confined to the families in which a restricted income makes them absolutely necessary. The waste in hotels and restaurants and in wealthy families will have to be reduced either voluntarily or compulsorily. The food ticket system of Germany has been open to serious objection, but it is democratic in principle and something like it will seem essential unless, as part of a great voluntary and national movement for economy in the use of food, it can be anticipated and made unnecessary. The time to push such a movement energetically is now; the ones to begin it are those whose present diet is in excess of their physical needs and out of harmony with the agricultural productivity of the nation—that is to say, practically all of us. The better off we are, the more we can afford to experiment, and the greater our duty to find out how our dietaries should be modified.

Food is only the most pressing, not necessarily the most important, of the items of our family budgets in which readjustments are necessary. Clothing, furniture, books, travel, amusements and rent all need to be reconsidered from the same point of view. The general principle is that we are

to give up extravagant habits into which we may perhaps have drifted unconsciously; we are to purchase those things which, other things being equal, most economically supply elementary human needs, and for the rest those things which satisfy higher rather than lower, essential rather than passing, social rather than selfishly personal demands. What these things are, what demands are higher, more essential, more social, each must, of course, until the nation by law, or society by the pressure of public opinion intervenes, decide for himself. The present crisis brings home to us the moral obligation to decide consciously and deliberately, and gives us the advantage, as we are all affected by the same great national experience, of mutual aid and support in policies which are reasonable but which in ordinary times might seem quixotic.

IN the readjustment of personal and family expenditures questions arise as to which particular forms of savings are especially advantageous from a social or national standpoint. In England the National War Savings Committee has been giving attention to this subject. This committee discovered that, for the prosecution of the war, some kinds of saving are much better than others. Certain commodities, such as rubber and gasoline, are imperatively needed by the government for military purposes or for some purpose more or less connected with the war. Obviously, it is especially advantageous that civilians should abstain from purchasing such commodities, except for use in some industry as essential to the national welfare as the war itself. To abstain from any expenditure for commodities directly needed by the nation represents the maximum efficiency of economy from the point of view of the national welfare. To invest money so saved in a national loan, or to pay it over in taxation directly to the nation, logically completes this maximum service.

To dismiss a servant who cannot find other employment, or to abstain from purchases which result in throwing out of useful employment people who are not in demand elsewhere, would be far less desirable. This consideration, however, although much emphasized in England, has little application in this country, where the urgent demand for labor at present absorbs quickly any such surplus.

Still, various kinds of saving do have varying degrees of value for the nation, according to their effect on the possible dislocation of labor, whether an article is imported, or even carried from a distant part of our own country, or whether the articles produced at home are produced under conditions of increasing or decreasing returns, and so on. The factors involved in some cases become too complicated for any save the trained economists, and perhaps even for them. The principle, however, is clear enough and may frequently be followed to a practical conclusion: that those forms of saving should be preferred which, if adopted generally, will tend to make prices lower, supplies more abundant and release goods more freely for the vital national needs. Economy in fuel, in food, in imported articles, in luxuries of all kinds, will all be desirable unless for very exceptional reasons, and the burden of proof will always rest upon those who claim an exception. When in doubt as to whether one economy or another is more advantageous, it will be a good rule to make both.

FACILITIES for the encouragement and safeguarding of savings are now more abundant than in earlier days, and what we need is not so much to increase their number or variety as to make them known, and in some instances to adapt them to the special needs of small depositors. The savings banks, with their eleven million depositors and five

billions on deposit, have a just place among the institutions of this kind. Next come the building and loan associations, with three million members and assets of one and a quarter billion. Professor Fetter, in *Modern Economic Problems*, points out that the relative influence of these associations in educating and encouraging to thrift is doubtless much greater than these figures indicate. "There are more than three times as many of them as of reported savings banks, their management is much more democratic than is that of the banks, and many of their members attend and participate in the meetings and understand how they are conducted. Moreover, the savings made through these associations are constantly passing on into the houses that are fully paid for and which continue to yield their incomes to their owners. Each year these associations collect from their members as dues and in repayment of loans (made to build houses) the sum of over half a billion dollars, which is twice as much as the annual increase in the deposits of the reported savings banks." Even when actual building is interrupted by the high cost of labor and materials, the educational influence of the building and loan associations continues.

The federal government by the establishment of a Postal Savings System in 1910, in the face of an opposition from bankers which reflected no credit on either their public spirit or their business judgment, took a long stride ahead in the encouragement of small savings. The Postal Savings Banks are especially useful in safeguarding the deposits of immigrants, who, accustomed to the security of the Postal Savings of their own country, are often at a loss to know how to choose among private banks and are frequently victimized by fraudulent or irresponsible private bankers.

The Postal Savings Service, however, would be far more useful if there were sustained and persistent effort, either official or voluntary, to instruct possible depositors in its use, if deposits could be made of less than a dollar, and if stamps were sold in other amounts than ten cents. The Penny Provident Fund of New York city, which accepted deposits of any amount—even one cent—could not compete with the home savings banks, department stores and Postal Savings, as it did not pay interest, and has been discontinued. Its trustees had long favored a Postal Savings Bank, and they did not withdraw until after this service had been established, but its distinctive educational work in the encouragement of the smallest savings by children as well as by adults has not been, possibly could not be, carried into the Postal Savings. The question fairly arises whether a national committee with local branches in all parts of the country should not be formed to cooperate with the Postal Savings Service to facilitate the collection of small and fractional sums, and especially to make known everywhere the facilities offered by the Post Office Department. Such a thrift campaign would be opportune now that there are new and demonstrable reasons for conserving to the utmost even the most modest savings.

The rural credits act and certain features of the federal reserve act are noteworthy contributions to the national facilities for saving, and such national and local committees as have been suggested in connection with the Postal Savings Service might include the education of the public in these features also within the scope of their activity.

THE shrinkage of capital will probably lead to a substantial and possibly long-continued rise in the rate of interest. The problem is not that of an ordinary commercial crisis. It is something for which the world's history affords

no precedent. There have been floods, fires, earthquakes and wars. But since the last glacial submergence, or at least since Noah's flood, there has been no disaster comparable to that which was precipitated by Austria's ultimatum to Serbia in 1914, and in which we are now involved. Even if there had been wars as extensive, destruction of property as great, the calamity at any earlier epoch would have been less than at present, when the slaughter and the devastation have overwhelmed a delicate international organization built upon the assumption that peace and not warfare is the normal relation among nations.

This waste must be replaced; capital reestablished; commerce and industry restored. The economic problem for the time after the war takes many forms, but none of its aspects is more serious than that as to how the new wealth shall be distributed as it is produced. In an era of high interest, is the saving to be done by a favored class or by an industrial democracy? Upon the habits, instincts and institutions created during the war the answer largely depends. If the people as a whole become capable of thrift, of that development of character which makes one capable of restraint, of wise judgment, of thrift, the advantages of capitalism will be retained by society and will be distributed democratically.

Thrift is not parsimoniousness. It is fundamentally strength of character. The war will test it, as it tests many other qualities, in a fiery furnace. The nation which survives in war and in the contests after the war will be the nation which most fully learns and practices this most ancient of virtues.

TEACHING THRIFT IN GLOUCESTER

TO get a change of habit will require a tremendous campaign here, as it did in England, and as presumably it did not in Germany. Mrs. Elizabeth Tilton, the energetic and resourceful changer of national habits, sends us interesting details of a local program in a New England fishing village. It starts with the principle that patriotism means, as Sydney Webb says, not business as usual or dinner as usual, but bare necessities bought and eaten, and no baubles or entrées allowed.

Women are neighborhood creatures and do not respond to figures of national food shortage or even to the appeals of women miles away. They act on local color supplied by local leaders, being in this respect much like children and men. And so Gloucester by the sea has organized the children into a distributing brigade. That is a good local touch, for what the children distribute the mothers will read. One of the handbills says in black type that what Gloucester wastes would feed 2,000 persons annually. Then follow in smaller type five incriminating lists—an enumeration of what was thrown away from five private homes "in one day last week." The bread and potatoes in these garbage pails were weighed, the onions counted, even the potato peelings taken into account and the miscellaneous cake, beans, strawberries, put down for the confusion of housewives. Any of these homes, the handbill says, may have been yours; and many a conscience-stricken mother no doubt felt that house No. 2 or No. 5 might indeed have been hers.

Equally effective is the large display poster for hotels and throughout the town, declaring that the war will be won not by the last bullet but by the last crust. It puts behind the call of the government the demand of the conservation leaders of Gloucester that citizens shall do their share in this respect by eating one wheatless and one meatless meal every day.

On the initiative of Elliot C. Rogers, the local food conservation enthusiast, a survey was made and it was found that Gloucester, with its 25,000 inhabitants, consumes in a year at least:

125,000 doz. eggs
100,000 lbs. butter
100,000 qts. beans
25,000 bu. potatoes
3,000 bu. carrots
5,000 bbls. cabbages
1,000 bbls. squash
1,000 bu. beets
2,000 bu. turnips
1,000 bbls. sweet potatoes
5,000 bu. other vegetables
18,000 bbls. flour

Of the above a very small part is raised in Gloucester or the vicinity. The rest is brought by railways and other conveyances. The situation of the town on a branch line, the congestion of railways with war materials and the already existing scarcity of food and prevailing high prices are skillfully utilized to give effect to the inquiries as to whether the one to whom the circular is sent will plant a garden, if so, of what size; what experience he has had, what he will plant, and how many in the family will assist.

The point of all this is that food conservation is less a national than a home-town campaign. Local surveys are not very expensive, especially if food comes in mainly through a few channels, and if there are many willing volunteer hands. Large national facts must be translated, as Mrs. Tilton says, into local truths. For the 100,000,000 bushels that corncake for breakfast can save the nation, we may substitute the 5,000 barrels of wheat flour that the women of any town of 25,000 can save by turning their backs on wheat for breakfast. "Serve by saving" will thus become fact.

INCREASING INSTITUTIONAL PRODUCTION IN INDIANA

IN keeping with the enviable reputation of Indiana's Board of State Charities was the initiation early in the spring of a plan to have the state and local institutions raise more produce, including live stock and animal products. Governor Goodrich, at the board's suggestion, urged more extensive cropping and more intensive cultivation of the farms and gardens connected with the state institutions and the ninety-two county poor asylums. The acreage was increased by the lease of more than two thousand acres by the state prison and nearly six hundred acres by the state reformatory, and by other leases and purchases. The Board of State Charities reports a general response, with the natural result that the institutions are able to substitute their own products for more expensive and perhaps less desirable foods.

THE editor of this department will welcome questions from readers, and suggestions as to topics which they would like to see discussed in these pages. Information from all parts of the country about conditions due to the war, and consequent developments in social work, will also be appreciated.

IN ALL the twenty years of close contacts here in Chicago Commons, I have never touched the depths of men's hearts as in these past twenty days of daily contact with the 6,000 men with whom I am dealing. I write out of the heart of the real tragedy which is impressing Chicago,

and I presume every other place, as nothing else I have ever witnessed. Beneath the mechanism of the draft, wonderful as that is, one senses the profound human experience to which it is subjecting the vast majority of the nation's young men and their families—in comparison with whom conscientious objectors are like the fray of the fringe. Tragic as their experience is, it should not be made to overshadow, much less to minimize or eliminate that of the thousands who are uncomplainingly, silently and most manfully standing in their lot at the country's call.

The draft has been a national achievement which has subjected both the official and volunteer resources of the country to a sudden and severe test. The draft law and regulations are notably clear, definite and considerate. They were worked out and have been followed up with promptness and precision. It was, of course, impossible to frame the same scheme and procedure so as to apply equally well to the smaller and more homogeneous communities and to the larger divisions, including not only as many thousands as there were hundreds elsewhere, but also a serious complication of languages and racial distinctions. It was impossible in such divisions for the registered men to find their "new numbers" on any "posted" list, as they were expected to do according to law. It was likewise impracticable for the local boards to renumber the registration cards without regard either to alphabetical order or to the order of the precincts where the cards were registered. How could the names ever have been found, on call for the number, in divisions such as the one for which the writer is responsible that numbers over six thousand men, speaking many languages and including single precincts containing six hundred or more names? Rearrange the cards for the board's own use, it may be suggested, but this is more easily said than done. For this tremendous task of matching, correcting, renumbering, and listing twelve thousand cards for six thousand men, and then giving out the new serial numbers on incessant demand all day and evening for a fortnight, was requested and expected to be undertaken by volunteers.

How largely it was thus cheerfully and cheaply done is evidenced in Chicago. The clerk of the election commissioners average the cost of this work to be less than five cents a name for the 314,210 registered men, whereas the cost of the last supplemental registration of voters, prior to the aldermanic election last spring, rose to the amazing average

The Draft

A Great Human Experience

By Graham Taylor

of \$13.90 for each of the few additional names then enrolled. To this outrageously excessive expense is due the new law in Illinois providing for the continuous and centralized registration of voters, which will keep the lists of registered voters up to date. It was a pitiful waste of time and energy to keep

lines of men a block long waiting for hours to take their turn to apply for their numbers.

And it was quite as unjust to the volunteer group to be forced to inspect and reinspect the lists and cards, sometimes a half an hour to find a single name, all for the lack of a government grant of postal cards on which all registered men could have been informed far more promptly and intelligently.

On the whole, the country over, the work has been done with a fair degree of efficiency and as soon as could have been expected, under very varying conditions and under the strain of entirely new procedure. While it could be done better another time, yet it is an achievement in which the nation may take some pride and feel little or no shame.

The registration and numbering for the draft may be considered still greater as a human experience. Only a few instances have come to notice where members of local boards were so human as to lose their patience in wrestling with the impossible. One Chicago doctor on a local board whose office was besieged by hundreds of men awaiting their numbers, was reported to have driven them away by appearing at the window with a shotgun. Another is said to have scattered his besiegers by the professional device of hanging out a warning sign, "Diphtheria here." But there were scarcely enough exceptions to prove the rule of inexhaustible patience, good-natured consideration and high patriotic loyalty upon the part both of the local boards and the thousands upon thousands of young men with whom they dealt. Indeed the willing compliance with the law, the entire lack of resentment, opposition or even criticism, and the fine, manly, patriotic spirit shown by the young manhood of the nation are both reassuring and inspiring. This is especially true of the most cosmopolitan and densely populated industrial centers, notably at Chicago, where any antagonism was only vaguely rumored but nowhere encountered. Much to the credit of our foreign-born fellow citizens and neighbors is this loyal attitude. For it costs such people who have fled from the militarism of Europe far more to be loyal in meeting the first "selective draft" in the land of their hope than those to the manner born who have had no such experience.

This human experience will be more varied, but may be no less impressive as it grows more intense, while the draft and exemption become counterpoints in the great personal and national tragedy.

NEWER SONS OF AMERICA

[Written by the son of an Italian immigrant, for the last four years a member of the English staff at the University of Pittsburgh]

AMERICA! our hour has too arrived,
And we who are your sons, if not in blood,
No less your sons in spirit and in soul,
With pride and loving eyes lift up our gaze
Unto your face. No parting love we know;
No love but pure and filial love for you—

Our great devotion to your great ideals.
Our fathers braved the perils of a sea,
And humble came upon your friendly shores;
For you have stood, and beauteous shall you stand,
A beacon light upon a mighty rock,
And signal to the people of the earth.
No narrow mission of a race is yours.

You know no East nor West, nor strife of creeds,
Nor lost traditions—but one mighty call
Of Freedom! . . . Now you have arisen, fair
Yet terrible. Again lift up your torch!
And in your name we stand your loyal sons,
And dying, sing in praise your flaming soul,
America! . . . JOHN VALENTE.

COMMON WELFARE

A MISSIONARY RELIEF EXPEDITION TO ARMENIA

LIKE an old story of missionary adventure and exploration reads the plan of the eight stalwarts, five men and three women, who left San Francisco on July 19 to bring relief to the Armenian refugees—probably there are a quarter of million of them—who have fled into the mountain fastnesses of the Russian Caucasus. The American Board of Commissioners for Foreign Missions did not wish to take the risk of having its emissaries stopped before reaching their destination; hence it adopted the somewhat unusual travel route via Japan and the Trans-Siberian railroad.

The object of the mission is to distribute funds and rations, to organize and administer relief industries among the refugees, to care for fatherless children, to organize repatriation of those for whom it is safe to return to their homesteads—and that involves stocking of farms with cattle and implements, development of new home industries, repair of damaged and dilapidated buildings. Equally important is the spiritual aid which the ministry of this little group of Americans will bring to a people stricken by irreparable losses of life and property, by fear bordering upon panic, of oppressors who have not only maltreated but deceived them.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

A NEGRO'S MARCH WITH MUFFLED DRUMS

“WE Are Maligned as Lazy and Murdered When We Work,” read one of the banners carried in a procession of some eight thousand colored men, women and children down Fifth avenue last Saturday. The procession was organized as “a silent protest against acts of discrimination and oppression” in this country and in other parts of the world. Another twenty thousand Negroes lined the street and aided in a remarkable demonstration. There was no disorder and no outbursts of passion, though some of the banners might have been feared to be inflammatory. The police objected to only one of them which was readily withdrawn

before the parade moved. It represented a Negro woman kneeling before President Wilson and appealing to him to make America safe for Democracy before trying to do this for Europe.

Other banners read: India Is Abolishing Caste, America Is Adopting It; Memphis and Waco—Centres of American Culture: Your Hands Are Full of Blood; Thou Shalt Not Kill; Cain, Where Is Abel, Thy Brother? Leaflets distributed on the sidewalks gave the reasons for the march, among them:

“We march because by the grace of God and the force of truth the dangerous, hampering walls of prejudice and inhuman injustices must fall.

We march because we want to make impossible a repetition of Waco, Memphis, and East St. Louis by arousing the conscience of the country, and to bring the murderers of our brothers, sisters and innocent children to justice.

We march because we deem it a crime to be silent in the face of such barbaric acts.

We march because we are thoroughly opposed to Jim Crow cars, etc., segregation, discrimination, disfranchisement, lynching, and the host of evils that are forced on us. It is time that the spirit of Christ should be manifested in the making and execution of laws.

We march because we want our children to live in a better land and enjoy fairer conditions than have fallen to our lot.

We march in memory of our butchered

dead, the massacre of honest toilers who were removing the reproach of laziness and thriftlessness hurled at the entire race. They died to prove our worthiness to live. We live in spite of death shadowing us and ours. We prosper in the face of the most unwarranted and illegal oppression.

We march because the growing consciousness and solidarity of race, coupled with sorrow and discrimination, have made us one; a union that may never be dissolved in spite of shallow-brained agitators, scheming pundits and political tricksters who secure a fleeting popularity and uncertain financial support by promoting the disunion of a people who ought to consider themselves as one.

At the time when this peaceful protest, the quietest parade of the size held in recent times, according to the police, was made, race riots continued at Chester, Pa. In Columbus, at a meeting of public-spirited white citizens and representative Negroes, an Ohio Federation for Uplift Among Colored People was formed last week with the special aim of preventing race prejudice. Assimilation of Negroes coming from the South is the principal immediate practical objective of the organization.

THE PHYSICIAN'S "BIT" AT FRONT AND AT HOME

At least 24,000 of the 90,000 physicians of military age in the United States, Alaska, Hawaii and Porto Rico will be needed for war service, according to official announcement at Washington. Of the doctors between the ages of 22 and 55 years, fully 12,000 must be enrolled by October 1, to go into camp with the conscript army and the regular troops.

Training camps for army medical officers have been established at Fort Riley, Kan., Fort Benjamin Harrison, Ind., and Fort Oglethorpe, Ga., with a capacity at each camp of 1,000 student medical officers and 1,800 enlisted men. There are also, at each camp, four ambulance companies, four field hospitals and one evacuation hospital. At Fort Des Moines, Ia., a smaller training camp for colored medical officers attending colored troops has been established. It has 550 officers and enlisted men in training. For the ambulance service a camp for 4,500 officers and men is in operation at Allentown, Pa.

Training camp courses for medical officers last three months. In the first month the officers are taught the duties of the enlisted men, in order that they may in turn teach them. The second month covers the theory of the officer's duties, and the third month their practical application under field conditions. Following the basic course, classes of specially qualified medical officers are given a more complete preparation for some special service, such for example as camp sanitation and military hygiene, or radiography, or laboratory work in bacteriology.

SWORDS AND PLOUGHSHARES

PLOUGHSHARES throw back the soil to the left and right; swords have two cutting edges. The trouble with our American ploughshare during the first two and a half years of the European war is that, as a national policy, we only used one edge of it. We kept to the flat blade of neutrality; we kept down rank growths of social hate; we did well negatively; but we never threw the whole force and weight of the United States affirmatively into breaking through the crusts of inertia and menacing purpose, into turning up fresh soil from the war-trodden civil life of the European peoples.

The President had at length made a beginning in this very direction in his identic note to the Powers, and in his address to the Senate with its broad social principles, when the ruthless resumption of the U-boat campaign blocked it. We have been hammering our ploughshares into swords ever since. Let us profit by our experience with ploughshares. Let us see that our sword of war has two edges. One, the efficient projection of military force to resist Prussian aggression, to drive back its invading armies from France and Belgium and to strike at the threat of pan-German dominance over the free peoples of Europe. Nothing would do more to uphold the autocratic clique at Berlin than for this New World democracy to be dull and inept in its execution.

But let us not forget the other cutting edge. If we merely project men and munitions into the war zone, and if the German government convince the German people that our practical goal, whatever we may say, is to crush the German people, then our entry into the war will merely serve to stimulate counter-resistance throughout all Germany to these new conquerors. It will fortify the Junkers in their control over the democratic and liberal forces of Central Europe. The basis of that control has been the spread of the idea that the people of the Fatherland were fighting in self-defense, against annihilation. Let us cut the roots of that dread. Let us not only by our own statements, but by the statements we elicit from the allies, make it unalterably clear that ours is not a war of conquest, and that the terms we are fighting for jointly and severally are not the accumulated demands of competing imperialisms. Such assurance would release the democratic forces of mid-Europe from their war-long dread and free them to reckon vigorously with their governments both on questions of internal democratic reform and in their frontage on peace.

This is why the world turns with new hope to the conference to re-examine war aims, called for by the Russian Republic and announced by Lloyd George. Witness the challenge made the same day last month by two great minority leaders—Borah in the American Senate, Asquith in the English House—for a fresh statement of terms in the name of Russian strength and allied unity.

Let us parallel our military operations with social statemanship. Let us have two edges to our sword.

PAUL U. KELLOGG.

ENGLISH INTERNATIONALISTS ON TERMS

THE Executive Committee of the English Union of Democratic Control has issued "suggestions for terms of a peace settlement" which affords Americans a cross-section of advanced English opinion. The significance of this brief document consists in the concreteness of its proposals and in the names of its signatories—labor leaders, radicals and exponents of international politics—Norman Angell, Charles Roden Buxton, J. A. Hobson, F. W. Joivett, M.P.; F. W. Pethick Lawrence, J. Ramsay MacDonald, M.P.; E. D. Morel, Arthur Ponsonby, M.P.; Philip Snowden, M.P.; H. M. Swanwick, Charles Trevelyan, M.P., and I. Cooper-Willis.

After recalling the Russian, British, American and German pronouncements in favor of a peace without annexations, the committee suggests that the terms of peace settlement are bound to be imperfect in view of the complicated nature of many of the issues, and that the stability of peace will depend quite as much on the provision of international machinery for meeting international difficulties in the future as on immediate agreements satisfactory to all belligerents.

Assuming a policy of "no annexations" as the basis for discussion, the following suggestions are made: For Belgium, complete re-establishment of sovereign independence and integrity and economic restoration; for France, evacuation of the invaded districts; for Serbia, Montenegro and Rumania, evacuation and restoration of independence.

As regards Alsace-Lorraine, a decision by plebiscite or by some other means of ascertaining the wishes of the population under the supervision of an impartial International Commission and free from the interference of occupying armies is proposed, and it is pointed out that the decision need not be the allocation of both provinces either to Germany or to France and does not exclude the policy of autonomy. The proposal does not reckon with the fact that the provinces have been deliberately colonized during the forty-seven years of German occupation.

The claims of Italy to Trentino or other unredeemed districts, under this plan, are to be decided by the same process, but in another part of the document the Italian claim to non-Italian Dalmatia is ruled out on principle as representing annexation. Russia's former claim to Constantinople and the German demand for a revision of strategic frontiers in Belgium and elsewhere are ruled out in the same way, though, of course, mutually satisfactory frontier revisions between neighboring countries may be in perfect conformity with the basic principle.

Russian Poland is to be free and independent; but the populations of Austrian and Prussian Polish districts are to decide for themselves whether they desire to become part of the new Poland.

The union urges that the "unfortunate impression" created by the allied note to President Wilson of January 10 that it is the fixed determination of the allies to break up the Austro-Hungarian empire should be explicitly repudiated by all the allies, as it has been by the Russian Republic. The claim of the empire's component nationalities for self-government is, under its proposal, to be left outside the subject matter of peace negotiations, as are also the similar claims of Finland and Ireland.

The committee frankly admits that it has no final solution for the Turkish dilemma, other than immediate neutralization of the city of Constantinople and the Straits and extension of the policy of international control over the Ottoman empire "so as to provide full security for the Christian peoples and freedom of development for other races under the suzerainty of the Sultan."

The assignment of sovereign rights in Africa made by the conference of Berlin in 1885 and the distribution of colonial sovereignty in the Pacific islands is to be entirely reconsidered with a view to effecting a mutually satisfactory redistribution of territory and rights and, if possible, a great extension of international control and free trade in tropical Africa. An international commission, after the restoration of peace, would also have to settle other complicated questions which cannot be settled by conquest, such as the Polish claim to Dantzic, Bulgaria's claim to Macedonia, Rumania's claim to Transylvania, and the future status of Persia.

Among the committee's guarantees of a general nature, without which an early peace would carry no prospect of a durable settlement, are a league of nations—sketched on familiar lines—reciprocal equality of commercial opportunity in the dependencies of the great powers, international prohibition of secret treaties, as large as possible a measure of disarmament, and freedom of the seas in peace and war.

As regards indemnities, the committee insists on the justice of Belgium's claim to special relief from Germany owing to the circumstances under which she was forced into the war. For indemnities in the nature of payments to recover war expenses, it wishes to see substituted a common fund provided by all the belligerent nations and administered by an international commission to rehabilitate the areas most seriously devastated by the war, under whatever sovereignty they may happen to be.

Four of the signatories to this document, Trevelyan, Ponsonby, Snowden and MacDonald, with one other mem-

Answering the Nation's Call

IN this "supreme test" of the nation, private interests must be subordinated to the Government's need. This is as true of the telephone as of all other instrumentalities of service.

The draft for war service which has been made upon the Bell System is summarized in a recent Government report.

Government messages are given precedence over commercial messages by means of 12,000 specially drilled long distance operators all over the country.

The long distance telephone facilities out of Washington have been more than doubled.

Special connections have been established between all military headquarters, army posts, naval

stations and mobilization camps throughout the United States.

More than 10,000 miles of special systems of communication have been installed for the exclusive use of Government departments.

Active assistance has been given the Government by the Bell System in providing telephone communications at approximately one hundred lighthouses and two hundred coast guard stations.

Communication has been provided for the National Guard at railroad points, bridges and water supply systems.

A comprehensive system of war communication will be ready at the call of the Chief Signal Officer, and extensive plans for co-operation with the Navy have been put into effect with brilliant success.

ber of the liberal-socialist minority in the House of Commons, Hastings B. Lees-Smith, succeeded on July 26 in securing a whole evening session for the discussion of their plans, and to draw out the leaders both of the government and of the orthodox opposition. The ostensible matter for discussion was a resolution introduced by the pacifists declaring that the German Reichstag resolution of July 19 (see the SURVEY for July 28) expressed the principles for which the allies were fighting and calling upon the government to secure a restatement of

their peace terms by the allies which would make clear their conformity to the Reichstag terms. The resolution was defeated by a vote of 148 to 19.

Mr. Trevelyan thought the House of Commons might fittingly neglect to take account of the vague utterances of the German Chancellor other than take note that he did not oppose the resolution and reply to the Reichstag as one representative parliament to another. Former Prime Minister Asquith had no difficulty in showing that, considering the parliamentary situation in Germany, the

Reichstag resolution really had less significance than the passage of a similar resolution would have in the British Parliament, and that the Imperial government clearly was not prepared as yet to give to Belgium, Serbia and Greece a status which would free them from the menace of military coercion or dynastic intrigue. He did, however, welcome the news announced for the government that a conference of the allies would, at the invitation of Russia, be held early in the autumn to restate the allies war aims in terms to conform to the present dominant note of democracy in the allied forces.

LAND SETTLEMENT IN CALIFORNIA

FACT and fiction have about an equal share in the publications of the average state land department or commission which administers public lands, homestead acts, or various laws passed to promote rural settlement. In methods of attracting settlers some of these bodies are wonderfully efficient. But in recent years a new competition has sprung up between the different states in efforts to keep their rural residents after they have got them and to make their genuine success as farmers the main advertisement of the state to the outside world. This effort involves cooperation with chambers of commerce, railroads, banks, and especially with state departments of agriculture and with agricultural colleges.

In this new solicitude for the new settler, back of the former wasteful "boosting" operations, California takes a leading place. By the land settlement

act, passed on June 1, she has gone even further and provided what may be called a charter for the landless laborer whom few states, so far, have taken the trouble to secure as a potential asset to the rural community.

The laborer and the farmer of very small means, under the new act, are ensured not only an honest bargain in the purchase of public land—in itself a considerable advance on the practice of not so very long ago—but are provided with every conceivable aid in securing complete self-support and independence, free from an everlasting overhanging burden of debt.

A state land settlement board, created by the act, and consisting of five members appointed by the governor, will have power to acquire, on behalf of the state, agricultural lands susceptible of intensive cultivation and suitable for small

farming, to a maximum extent of ten thousand acres and at a cost not exceeding a quarter of a million dollars. From the area acquired, the board is to set aside whatever acreage may be needed for roads, schools, churches, or other public purposes, and to divide the rest into farms up to \$15,000 in value and farm laborers' allotments up to \$400 in value, not counting the cost of improvements.

The board is instructed to prepare land, where necessary, for irrigation and cultivation, to seed, plant or fence it and to have houses and outbuildings erected on it—in short, to carry out any improvement which will render each allotment habitable and productive, at a cost not exceeding \$1,500. The combined cost of building and providing a domestic water supply, in the case of cottages for farm laborers, must not be more than \$800. An applicant is not allowed to buy more than one holding, and to secure this he must first satisfy the board that he is a fit and proper person. In fact, if he neglects the place or fails to cultivate it to the best of his ability, he may be dispossessed. He may not transfer or sublet any part of it for five years and must actually reside on his holding for at least eight months in each of the first ten calendar years of occupancy.

Having thus ensured that the land purchase will really help bona fide agricultural settlers, the act makes the most liberal financial provisions for them. They need only pay a cash deposit of 5 per cent of the sale price of the land and 10 per cent of the cost of any improvement on it. Unless one-half of the purchase price is paid in cash, the applicant must enter into an agreement to apply for a loan from the federal farm loan bank to cover at least 50 per cent of the appraised value of the land and 20 per cent of the value of the improvement. The payment of whatever balance there is may be extended by the board over a period not exceeding forty years.

That Civilian Relief Worker Friend of Yours

who through wartime service is possibly getting her first contact with social work, would enjoy *The Survey*.

Dr. Devine's "Social Forces in War Time"; the series of staff articles on wartime problems and programs; and constant service of news and opinion on the wartime phases of social work and the social phases of war work, would guide that friend to more effective efforts, inspired with a growing consciousness of the depth and breadth of social work.

The cost of *The Survey's* service to your friend would be slight—but one dollar for four months. Send it now, so the friend may miss none of the good things *The Survey* has.

The selling prices are to be fixed so as to cover actual cost, including expenses and payment of interest, and so as to render the different allotments as nearly as possible equally attractive. The board is empowered to lend approved settlers operating capital secured by mortgages on stock and farm implements not exceeding, together with money spent on improvements, a maximum of \$3,000 on any one farm allotment.

Another function of the board is that of investigating land settlement conditions in California generally and of submitting recommendations for such additional legislation as it may deem desirable or necessary.

SAGAMORE SOCIOLOGISTS IN WARTIME

FROM the sand dunes of Sagamore Beach, down on old Cape Cod, where a gentle breeze, fragrant with the scent of wild roses, sweet fern and bayberry, freshens even the most sultry of days, it is a far cry to the parching heat, the bloody sweat and the awful suffering of war-ridden Europe. Yet the war and its horrors proved to be the one gripping subject at the tenth Sagamore Sociological Conference which convened in this remote corner of Massachusetts the three last days of June.

Although Democracy and Business was the advertised subject of the meetings—the intention being to deal with the conservation, in normal times, of human resources and the development of a higher efficiency in every department of industry—the conference inevitably found itself considering the wartime aspects of all these matters. Indeed, the meeting which struck the most fire was an entirely impromptu one called to consider terms of peace. What it actually did consider was everybody's inmost convictions concerning America in this war.

This meeting had several dramatic moments; one when the youngest host of the conference, a rich man's son who, as a college graduate, is turning the energies of a great many other college men into valuable fields of social service, rose and said with deep feeling, "I am of draft age; I shall have to go to war. Can't you people here whom I know and respect let me feel that I have you behind me as I go out to serve my country?" And again, when a brisk little gray-haired woman declared in a voice choked with emotion, "I have four boys, all of draft age. If they must go, they must; but I beg you men and women who care about these things to see that they are not ruined body and soul at our training camps before ever they get into service."

Two very intimate outpourings of the heart, these, from the sociologists assembled at Sagamore Beach as guests of George W. Coleman and his fellow

PLATFORM OF THE SAGAMORE CONFERENCE

THE Sagamore Sociological Conference of 1917 meets at a time when world affairs present a challenge to the forces of democracy unparalleled in history. The conferences in past years have been peculiarly sensitive to every movement which promotes justice, conserves human life and human well being.

Our country has entered a world war for the avowed purpose of conserving and extending democracy. These conferences have always championed this great cause. We hope that the present war will advance democracy not only in the United States but in the world. We therefore believe that it rests upon us as friends of democracy to give the war our unstinted support so long as it serves this avowed purpose.

The problems raised by the war are so novel and perplexing in their moral, social and political aspects that we feel a solemn need for specific education to enlighten present and future citizens in the meaning of sane patriotism. We therefore call upon the church, the public school, the open forum and all other appropriate agencies to mobilize their resources of brains, experience, equipment and leadership to foster the right conception of duty in the present juncture, to clarify our national aims, and to guard our national development after the war ends along lines of safe and constructive social progress.

This conference stands, both in times of war and peace, for the conservation and the fulfilment of human life. We place ourselves on record against the suspension of protective legislation affecting the safety, health and well-being of the workers. On the contrary, we urge the strengthening and extension of such legislation to meet the increasing perils of new and dangerous industrial occupations arising from the prosecution of war.

In particular we advocate an expert study of the waste incident to unnecessary fatigue, and the proper and effective correlation of federal, state and local employment agencies under national supervision to the end that men and women may easily find opportunities for work.

In view of the danger of a world food shortage, we urge the elimination of every possible source of waste in the production and distribution of foodstuffs. We therefore condemn the use of grain in the production of malt and spirituous liquors; we urge attention to the excessive cost of distribution of food and other commodities; and call for government aid in securing cooperation between producer and consumer, and the elimination of multiple profits.

In conclusion, we recognize the great value of this conference composed, as it is, of men and women of many occupations, many interests and many minds, but all devoted to the right solution of the complex problems arising out of a rapidly changing world order.

hosts to discuss Democracy and Business. But the less pressing topic was discussed, too. William H. Ingersoll, the market manager of the watch company "which made the dollar famous," had been assigned Distribution and Democracy as his topic, and at any time the company of business men and sociologists assembled to listen to him, and to the speakers which followed him, would have been greatly interested in the crisp criticisms of existing trade conditions which, through favoritism and discriminatory practices, make democracy in distribution an impossibility. The wage-earner, Mr. Ingersoll pointed out, is more widely exploited as a consumer than as a producer. Two-thirds of what he pays for his necessities has been expended upon distribution.

Agnes Nestor, president of the Women's Trade Union League of Chicago, in her talk on Conserving Our Human Resources, emphasized the great need now on us of putting *humanity first* in our mad rush to make munitions and become "prepared." Of what use, she asked, is a saved America if we have wasted our human resources in the process? Very appropriately, after that, came Prof. Harry F. Ward's paper on The Service Motive in the Business World with its appeal that we force "profiteering" to disappear from industry to the end that every one of us be moved by the single desire to serve our day and generation. Dr. James P. Warbasse held that we might save ourselves a great deal of nervous strain, as well as a great deal of money, if we had cooperative buying in America. And Mrs. Gilman admitted frankly that she was using the war need of releasing women for service to "put over" an idea which she has long cherished, i. e., that it is an enormous waste for a hundred women in every little community, each to be spending several hours every day preparing a hundred separately cooked dinners for a hundred wage-earning husbands who ought not to afford any such expensive form of individual service when one kitchen and perhaps five cooks could do it all and do it better.

RIVAL WAR-TIME LABOR BODIES

THE first constituent assembly of the People's Council of America will be held in Minneapolis, September 1. Each of the ninety local branches and clubs and societies affiliated with the council will send to the conference one delegate for the first fifty members, one more for each additional thousand or major fraction thereof, with a limit of three in order that no one body can dominate.

Those in attendance will represent such varied elements as single-taxers, labor unions, women's clubs, church bodies, socialists, and educators. They will

try to bring before the country the program of the People's Council for a concrete statement of America's war aims, and an early peace with no forcible annexations, no punitive indemnities, freedom of development for all nations, and organization to maintain world peace. They will appeal to all members to work to repeal the conscription laws, to enforce democratic control of foreign policy and diplomacy, and establish the principle of a referendum vote on peace and war questions.

The People's Council was launched at the First American Conference for Democracy and Terms of Peace, New York, May 30 (see the SURVEY, June 9). Since then local branches have been established in some eighteen states, from New York and Massachusetts to California and Oregon, and gatherings have been held in Chicago, San Francisco, Los Angeles and Pittsburg.

At the beginning many labor unions joined the People's Council. Now, however, a Workmen's Council is organized as a separate national unit. It is affiliated with the parent body as is any other association or branch, having the right to send delegates to the Minneapolis conference. In New York city the Workmen's Council embraces the United Hebrew Trades, numbering 250,000 men and women, each affiliated with the American Federation of Labor, together with some sixty-four local unions, among them the International Ladies' Garment Workers' Union, with a membership of 180,000, painters, carpenters, jewelry makers and bakers' unions. In Boston about 100 locals have joined. According to Jacob Panken, chairman, branches are being established in every large city in the United States to secure the endorsement of the People's Council program by the working people and to function to maintain labor standards.

To counter the movement and to assure the government that American labor will carry out its pledge of March 12, "in stress or in storm to stand unreservedly by the standards of liberty and the safety and preservation of the ideals of our Republic," thirty labor leaders gathered in New York city, July 28, and formed the American Alliance for Labor and Democracy, with Samuel Gompers, president of the American Federation of Labor, at its head. Frank Morrison, secretary of the American Federation of Labor, was made vice-chairman of the alliance; Robert Maisel was made director of publicity, and the advisory commission includes such men as Ernest Bohm, James P. Holland, president of the New York State Federation of Labor; Hugh Frayne, general organizer of the A. F. of L., and Chester M. Wright, former editor of the New York Call. Offices will be opened at 280 Broadway this week and immediately the work of

The HOUSE behind the BOOK

OUR firm had its beginning in New York more than three quarters of a century ago and is therefore one of the very oldest American publishing houses.

Our first book-shop away down-town was very small when compared to our present 11-story up-town building.

After a long experience in educational publishing we resolved to meet the need for a general reference work "made in America for Americans" but covering the entire world.

That work, begun in 1885, has now developed into

The New International Encyclopaedia ^{24 Volumes,} ^{80,000 Articles}

SECOND EDITION; RECENTLY COMPLETED

Revised, Rewritten and Reset from A to Z; Printed Throughout from New Plates; Number of Volumes Increased; Size of Page Enlarged

Editors: FRANK MOORE COLBY, M. A., TALCOTT WILLIAMS, LL. D., L.H.D. Litt.D.
More than 500 contributors and office-editors

STRONG POINTS

1. **Accuracy:** All important articles written by specialists.
2. **Authority:** can be quoted on any subject without fear of successful contradiction.
3. **Comprehensiveness:** covers a wider field than any other general reference work. It contains 80,000 articles—30,000 more than any other encyclopaedia.
4. **Lucidity:** written in language so plain that even the young folks can understand.
5. **Illustrations and Maps:** carefully prepared to illuminate and explain the text.
6. **Convenience:** printed on thin paper—not too thin but easy to handle and to leaf.
7. **Arrangement:** all subjects alphabetically arranged and easy to find.
8. **Pronunciation:** all except the most common words made clear by a simple phonetic system. Derivations also indicated.
9. **Bibliography:** every important subject supplemented by a full list of books that may be consulted.
10. **Courses of Reading and Study:** afford specialized help toward self-instruction in leading branches of knowledge.
11. **Research Bureau Service:** provides subscribers the free privilege of information from our Editors on any encyclopaedic subject.
12. **Attractiveness:** monthly prizes stimulate use of volumes, thus increasing their interest and value.

From first to last our best ability and the best outside aids in every field of endeavor have been brought to the upbuilding and perfection of THE NEW INTERNATIONAL making it

A reference work that really helps

Our House has stood behind the Book from start to finish.

Other encyclopaedias have come and gone but THE NEW INTERNATIONAL remains a monument to conscientious effort and unstinted expense.

Our best reward is found in the fact that the American public has stood behind us and so stands today more loyally than ever for more sets of THE NEW INTERNATIONAL have been sold thus far this year than during any like period since the work was originally published.

That's because it is considered well-nigh invaluable in every home, not only for the grown-ups but to help the young folks in their studies.

'Tis yours; this easy way

Send in the Coupon at right and we will forward free our 80-page Book about the new knowledge, showing Specimen pages, Illustrations, Color-Plates, Maps, etc., with the reasonable price and easy terms on which THE NEW INTERNATIONAL can just now be secured. We will also send you our Monthly

List of Prize-Questions, by which you can easily win a new volume each month.

FOOD FACTS

The Metropolitan Life Insurance Company announces the publication of a new booklet—

FOOD FACTS

The following table of contents indicates its scope:

- CHAPTER I.—Where to Buy.**
CHAPTER II.—How to Buy Cheaply.
CHAPTER III.—Clean Food and Disease Prevention.
CHAPTER IV.—Wise Food and Health.
CHAPTER V.—Cooking Foods.
CHAPTER VI.—Good Food Habits.

In this booklet Dr. Donald B. Armstrong, the author, brings out in simple language the fundamental facts in regard to the purchase, preparation and use of foods.

This publication is a contribution on the part of the Company to the present war preparation of the Country. Individual copies or limited supplies may be secured through the Metropolitan Representative in your city or by application to the

Welfare Division

Metropolitan Life Insurance Co.

No. 1 Madison Avenue, New York City

organizing branches of the alliance all over the country will be begun.

The formation of the alliance may bring a split, it is predicted in the ranks of organized labor. Among the organizations which have allied themselves with the Workmen's Council are those unions which have consistently fought the leadership of Mr. Gompers as head of the American Federation of Labor. Moreover, Mr. Panken charges President Gompers, as head of the Labor Committee of the Council of National Defense, with having been a party to the letting of contracts that would suspend labor laws and trades-union regulations.

On the other hand, the alliance asserts that success of the socialistic propaganda already under way in the United States, dating from the St. Louis anti-war resolutions, will work to the benefit of the enemies of the nation. The alliance will combat this propaganda, promote harmony between employers and employes during the war and seek in other ways to keep the industrial strength of the nation at the maximum.

SIR HORACE PLUNKETT IN THE CHAIR

A MERICAN social workers hail the election of Sir Horace Plunkett to the chairmanship of the great Irish convention now held in Trinity College, Dublin. While the two great parties of Irishmen and rival factions within them have been fighting for a brand of home rule which would satisfy their political aspirations, Sir Horace and the members of the Irish Agricultural Organization Society created by him in 1889 have laid a material and imperishable foundation for the prosperity of a new and greater Ireland. Though belonging to one of the oldest families of the country and in spite of frequent absences in this country, where he owns cattle ranches in whose management he takes a personal interest, and in England, where, in the House of Commons, he represented a Dublin constituency for nine years, the chief energies of his busy life have been devoted to the practical task of organizing the people of his country into an economic commonwealth.

Plunkett always has been a realist in politics. Through sympathetic study of the common man and his needs, in town and country, and in every nook and corner of Ireland, not through theoretical reasoning, he arrived at a policy of organization from within which, though so far only applied in a comparatively small sector of the national life, already has borne much fruit. If a spirit of fairness and practical common sense, tinged with the romance of historical reverence and with the optimism of a steadfast look into the future, is needed by the convention, to achieve what all Irishmen and friends of Ireland desire—unity and a national purpose—those gifts the chairman will bring to it.

We Believe—

THAT home-making should be regarded as a profession.

THAT right living should be the fourth "R" in education.

THAT health is the business of the individual, illness of the physician.

THAT the spending of money is as important as the earning of the money.

THAT the upbringing of children demands more study than the raising of chickens.

THAT the home-maker should be as alert to make progress in her life work as the business or professional man.

—American School of Home Economics.

If you agree, send for the 100-page illustrated handbook, "The Profession of Home-Making," giving details of home-study, domestic science courses, etc. It's FREE. Address postal or note.—A. S. H. E., 519 West 69th Street, Chicago, Ill.

Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new.

They protect your Mattress from all impurities and lengthen its life.

A single trial will convince.

Insist on seeing our trade mark and name—Excelsior Quilted Mattress Protector—on each Protector.

"None genuine without
Trade Mark"

The New York School of Philanthropy offers among others the following timely courses in preparation:

The Method of Social Case Work

This course is based upon the assumption that there are some ways of helping people out of trouble or into a state of well-being that are better than others. How to win confidence; how and where to secure relevant information; how to draw conclusions from such information; what kinds of help are available in the community; how to find a place for personal influence;—are some of the questions discussed.

Child Welfare

Because of the state of war upon which we have entered more children will be found dependent, neglected and delinquent. They will need the services of the most expert and humane friends, who have knowledge of and ready access to all the agencies and methods of help that this and other countries have devised.

Industrial Conditions

Attention will be directed in this course to the constructive work of employers, trade unions, and other organizations, public and private, looking toward satisfactory living and working conditions. In war time these problems differ in degree but not necessarily in kind from those prevailing in time of peace.

Hygiene and Disease

As the majority of the problems of the social worker have their origin in or are complicated by disease, it is necessary to prepare for field work by familiarity with the principles of preventive medicine and with the equipment available for the relief of the sick. In a time when sickness prevented and lives saved are counted as patriotic accomplishments of national and international importance, the application of modern scientific knowledge in the homes of this country becomes a duty as well as a privilege.

CHICAGO SCHOOL OF CIVICS AND PHILANTHROPY

FIFTEENTH YEAR OPENS OCTOBER 1, 1917

GENERAL TRAINING COURSE FOR SOCIAL WORKERS

One-year course for college graduates. Two-year course for other qualified students

SPECIAL PLAYGROUND COURSE

With technical classes, at Hull-House Gymnasium, in folk dancing, games, story telling, dramatics, preparation of pageants, and gymnastics

SPECIAL COURSE FOR PUBLIC HEALTH NURSES

For further information, address The Dean, 2559 Michigan Avenue, Chicago

School of Social Work

A Department of Simmons College

18 Somerset Street, Boston, Mass.

FOURTEENTH YEAR, 1917-18

Combined study and training in social service for paid or volunteer work. FIRST YEAR PROGRAMME begins September 19—a desirable introduction to any form of social service.

SECOND YEAR PROGRAMME begins September 12—for further study and training in a selected field, such as Organizing Charity and Medical Social Service. Boston offers exceptional opportunities for practice work.

Send for the 1917-18 Circular, describing the regular and special courses.

WAR WITHOUT TAX

on Food, Labor or Industry

Will you think or pay? The Nation creates all land values—justice demands their use for National Defense—not for private gain. Tax on land values alone with no other taxes whatever will provide entire annual national budget—even five billion dollars. Will force idle land into use. Increase crops. Stimulate industry. Reduce taxes for 95% of the people. Will not raise prices or reduce production. Booklet free. NATIONAL SINGLE TAX LEAGUE, Cincinnati. Dept. 25

ing troops on the Mexican border.
as between war and peace hung in the
balance.

A year ago in August the joint commission began its sittings to work out a solution—a solution which never came, because of the overhanging question of sovereignty raised by the Pershing expedition.

But in disbanding, the American members of the commission recommended that we withdraw troops from Mexican soil and send our new ambassador to Carranza's capital; that is, supersede a military with an unhampered civil approach to the "Mexican problem." How the new formula has worked from the standpoint of building up friendly relations, has been brought out by Ambassador Fletcher in his reports. How internal social progress is making gains in Mexico is told by Mr. Winton.

AMERICAN SECTION OF THE COMMITTEE ON COOPERATION IN LATIN AMERICA

THE constitution of New Russia is to have a clause guaranteeing to organized labor the right to strike. A recent Swedish visitor to Russia writes of that enactment that it is probably the first instance of such legislation in the history of the modern world. Not so; Mexico was ahead. That provision was adopted as part of her constitution promulgated last February. And it is only a sample. *Ex pede Herculem*. The program of reorganized Mexico is strictly modern—radical some will call it, progressive others. Even so, the program as written into the new constitution, which is so specific in some sections that one student remarked that it seemed to him “more like by-laws than a constitution,” is merely a symptom. It exhibits but tamely and partially what is going on in the thinking and life of the people.

The revolution (in the singular, please, always) has shot its influence, vital sap from one point of view, deadly infection from another, through absolutely all strata of the national life. There are new men, a new type of men, at the political helm; the educational system of the country has changed hands; business enterprises are shaking off the old ways and the old management; the aristocracy is discredited; in social life the bottom rail is on top.

Conditions are a queer jumble of those prevailing in our own country immediately after the Revolutionary war and those which obtained in the South during reconstruction days. A friend of mine, a Spanish land-owner, said to me: “I have been reading Thomas Dixon’s account of the days of the carpet-bagger in the South. That is the situation we have down here now.” Others see it as only the rebirth of liberty, the overthrow of the tyrants. One thing is certain. The class that has long dominated business, social life, church affairs, politics, is in abeyance now. A middle class, newly formed and almost without a separate consciousness as yet, holds the reins of power. What the event is to be time will tell.

With the outlawing of the old ruling classes went naturally much of the social amenity, business integrity, domestic standards and high honor of which they were noteworthy exponents. Everywhere now there is a frightful scramble. Standards have not yet been set up. The fighting of the last five years has brought into places of power many un-

lettered and untrained peons. Too much must not be expected of them. They are as illiterate morally as intellectually. For centuries nobody has been concerned with their morals. They are, therefore, children of nature—docile, amiable, interesting, sprightly children, but children still, capable of childish excesses, ferocities, brutalities. The small group of revolutionary intellectuals, middle class almost wholly, are fighting gallantly to preserve the standards of which they are proud, and to make Mexico take her place among the modern, self-respecting, decent nations. But they face on the one side the implacable hostility of the displaced leaders of the old regime, intellectuals themselves, and financially potent still, and on the other the immense inertia of a population of which more than half is illiterate, indolent, contentedly ignorant and contentedly poor. The task is gigantic.

Meantime the new liberty is clamorous with voices. Daily papers are springing up on every hand. The debates of the federal Congress and of the state legislatures air fantastic views and bizarre eloquence. Every man hath a parable. Social, moral, ethical cure-alls are as plentiful as quack nostrums for the physical man. The clash of interests in the scramble for control of the country’s resources and the collisions of rival political factions result in personalities and vituperation equal to that indulged in by our own fathers in days when Adams abused Washington, Hamilton excoriated Adams and Jefferson flayed Hamilton. Whatever else Mexico may be indulging in now, she is not given over to stagnation.

The national election took place in March, and the first of May marked the transition from a *de facto* to a *de jure* government. Venustiano Carranza, the commander-in-chief and acting executive of the constitutionalist movement, was elected President. The voting was by manhood suffrage on blank ballots, no nominations. The regular Congress differs radically in its personnel from the constitutional congress, or constitutional convention, which sat during December and January. Men of standing and of wide influence obtained seats in both Senate and House, and the Congress as a whole is an able and representative body.

State elections, for governors and legislators, are taking place still, as the different sections of the country are reduced, one by one, to order and quiet. Only a few of the

states of the South and one or two of the West have not yet undergone reorganization. The election machinery has throughout been in the hands of the municipalities. They were reorganized early this year under a decree of the *de facto* government. The elections have uniformly been quiet and peaceful. There has been complaint of ballot box stuffing and of false counting in certain sections. Everybody concerned was without experience. "Machines" were rapidly organized and used the tactics with which long experience has made us familiar. But the total outcome of the elections has been satisfactory. The people are aroused to interest in political matters as never before.

A significant phase of the current state elections has been the triumph as governors of the principal states of men whose loyalty to Mr. Carranza has been tested. Several of them are former constitutionalist generals. (All military officers were required to resign three months before the election if they proposed to run for office.) Millan is now governor of Mexico, Aguilar of Vera Cruz, Barragan of San Luis Potosi, Iturbide of Sinaloa, Calles of Sonora, Dieguez of Jalisco, Arrieta of Durango. Besides these are civilians like Zambrano of Neuva Leon, Mireles of Coahuila, Valles of Colima, and others known to be faithful to the leader of the great revolution.

This is a most important matter. It has two aspects that bear on the developments of the future. One is the relation of the states to the federation. The states of the Mexican republic were not originally self-directing colonies which entered upon a federation. Their early training was as subordinate provinces of a central government. Now under a federal constitution they call themselves "free and sovereign." One of their besetting sins is to assert their sovereignty and demand "state rights" when they should rather be standing by the central government and helping it over its difficulties. It is most important, therefore, that the executives of the states be on good terms with the president in Mexico City.

Progress in Yucatan

THE other phase of the situation is not less important. This is the fact that the municipalities will depend upon the state governments and their capital cities for leadership. Most of these local organizations, outside the neighborhood of the state capital, are weak. All of them are inexperienced. Their two prime problems, of sanitation and public schools, will be solved or allowed to drag largely as the capital sets the pace. It is of distinct importance, therefore, that the men at the helm in the state governments are strongly committed to the ideals and program of the popular revolution.

Even during the *de facto* days much was accomplished by progressive governors. Governor Salvador Alvarado, for example, introduced into Yucatan elements of progress that in view of conditions there prior to the revolution are little short of incredible. Yucatan is a farming district which gives practically its whole attention to one product—henequen hemp. The demand for this fibre for binder twine is so great and the soil and conditions on that flat, hot peninsula are so favorable for producing it, that no other crop gets much attention. A somewhat lurid and overdrawn picture of labor conditions there in pre-revolutionary days may be found in J. K. Turner's book, *Barbarous Mexico*. In its main outlines his account is correct. The land all belonged to a few rich men. It was worked by peons who were largely untutored Indians. Their condition differed practically in nothing from that of slaves.

Alvarado, in line with the principles of the revolution, undertook to improve conditions. He organized a board of con-

trol for the henequen market, to regulate prices and distribution. He insisted that laborers should be free to make their own agreements to work where they pleased. He established a minimum wage. In addition to these more direct lines of interference, he pressed the matter of public education. On a visit to Mexico City within the last few weeks he declared that there are 2,500 school teachers in Yucatan and only 500 soldiers. Many buildings that had been used as churches were bought and converted into schoolhouses. Convents were confiscated as illegal. Among other institutions he organized one which is called the "School City" (*Ciudad Escolar*) modeled on the Tuskegee Institute of Booker Washington. It is for the training of Indian leaders. The Maya Indians of Yucatan have hitherto remained isolated and without education or proper civilization. Into this institute will be received the boys and girls of this tribe to learn not only grammar and arithmetic, but all the arts of civilized life. Instruction is given in mechanics, domestic science, farming, horticulture, etc. The young people are allowed to pay their way with their own work. The institution is in full swing and is immensely popular.

There is also a system of school inspection for the whole state and a board of medical inspectors who have charge of all matters of sanitation. The production of hemp fell off a little last year on account of the new freedom of the laborers. But the demand for it is such that the landowner can well afford to pay the new schedule of wages. When complaints are heard in this country that Mexico is interfering with exports and that the harvester trust may not be able to get twine, that prices of wheat will go up accordingly, etc., it will not be amiss to remember that the Yucatan government has been concerning itself primarily with the interests of the Yucatecos. So long as so much good money is ready to be paid for a product, there is little danger that its exportation will be artificially hindered. (It might be well to remember this also in regard to petroleum.)

A system of school savings banks was inaugurated along with the other school enterprises in Yucatan. An item has just now come under my eye in a daily paper from Mexico City that already these banks have gathered a fund of over \$6,000.

The federal Department of Sanitation, with powers extending throughout the states, is provided for in a bill now before Congress. A very able and modern physician, Dr. J. M. Rodriguez, is in charge of sanitation in Mexico City. His skill is well exhibited in the stamping out of the typhus plague in 1916 and its prevention this past winter. Typhus is endemic in Mexico City and the housing and habits of the people there afford it every facility. Yet for over a year now it has been under control.

Labor Conditions

LABOR conditions in Mexico are so chaotic that no national conspectus of them can pretend to be adequate. To this confusion there are several contributing causes. There is naturally the usual gap between farm labor and industrial labor, with the miners occupying a sort of middle ground. Then, because of climatic conditions, as well as racial and social influences, there is, as between sections, much variation even in the same class of labor. Prior to the revolution there was a decided movement in the direction of organizing the workers—a movement which, though wholly new, was profoundly affecting labor conditions. Most of all, the revolution itself has brought those conditions, along with most affairs Mexican, into a veritable chaos.

In the sphere of labor, however, the confusion is not quite

so confounded as at first it may seem. The Mexican conflict has been largely on social lines. It was the landless man against the big estates (*latifundios*, a much stronger word than we have in English), the peon against the *amo*, the clerk against his employer, the miner against the operator, the poor against the rich. All this, to be sure, merely on broad lines, with no claim to exact definition. For several months after the revolutionary leaders got control of the national territory the states were governed under a sort of compromise between military and civil administration. The governor was a military governor, appointed from headquarters. But in the measure of his tastes, and somewhat of his opportunities, he was busy inaugurating civil administration in the lesser units of his state. The results are distinctly miscellaneous.

The federal legislation in regard to labor, of which some account has already been given in the SURVEY, has been forecast by regulations introduced by executive order in several of the states. The governors have been mostly young generals or civilians, with the daring of youth and the boldness of free hands. A very large proportion of the men who have led and still lead the revolution have risen from the laboring class. Their sympathies with working men are not merely theoretical. It may safely be predicted that they will never take the harsh, antagonistic attitude toward labor organizations, strikes, petitions, claims for injury and the like, which have for hundreds of years marked the employing class in Mexico.

The Old Tyranny

THE autocratic temper of the old government was reflected in the tyrannical attitude of the employer of labor. The peonage system, the forced drafts (*enganches*), the imprisonment for debt, the miserable wage and unsanitary conditions of colonial and dictatorial days, are probably gone forever. The people now in power have no mind to restore such things. They are encouraging organization and the free discussion and assertion of the rights of labor. By the time they shall have given over the control of things to others, the workmen will be so strongly intrenched that they will be able to defend themselves. It may be suspected, by the way, that this passion for belonging to a democratic labor union, where all talk and all vote, will supply one kind of a school of training for the inexpert citizens of Mexico, that they may learn to exercise more worthily their civic privileges and obligations.

There can be no doubt that employers and employes alike are setting themselves seriously to this matter of improving the conditions of labor. While I was in Mexico City the latter part of March, there was in session a congress of railroad men. Most of the railway lines of the country are operated just now by the government. This situation is one of the left-overs of the revolution. Under the auspices of the government, therefore, there had been gathered for consultation and discussion with the officers of the lines representatives of all branches of the service. The acting president, the general manager, the superintendents, train masters, etc., sat down day by day in amiable conference with brakemen, switchmen, train dispatchers, conductors, engine drivers and the rest, concerning their mutual and conflicting interests. The body was a rather large one, of several hundred members. Its doings were reported at length in the daily papers. I was too busy to attend a session, but recall among other things that a vigorous protest came in one day and was published in the press from certain bridge-carpenters out on the line who were dissatisfied with some conclusion agreed to by

their delegates. One of the papers of the city claimed that no such meeting had ever been held before in all the history of railroading throughout the world. Is that correct?

Agricultural Labor

ON THE matter of farm labor I got while in Mexico some interesting and at times amusing side-lights. On the train one day I fell into conversation with a young fellow who had a seat by my side. During a ride of several hours I drew him out on many topics. He told me that he had been engaged in military operations and was on his way to report to his *Jefe*. From others I learned later that he was himself a general, famous throughout the whole country for his reckless daring and the thorough way he had of cleaning up any job assigned to him. He admitted to me that he had had several horses killed under him, and that numerous bullets had traversed various parts of his anatomy (seven in all, I think he said) so that he had been quite often laid up for repairs. "But they haven't got me yet," he added with a grin. The thing he growled about most was that malaria that had got into his veins while campaigning in the hot country after Zapata and which was trying to shake his teeth out with chills and burn him to ashes with fevers.

"Did you have good crops in the region under your command?" I asked.

"We certainly did. But I had to lay the law down to everybody concerned. The *hacendados* did not want to try to raise anything. They said it would only invite robbery. But I told them they had to go ahead, and so they got busy. Then the peons wouldn't work. Said they were going to wait till the government divided up the big *haciendas* and gave them land of their own. I soon settled with them. I told them my soldiers were serving the country in arms and that they had to serve it by raising food, and that the soldiers were right there with their guns to see that they did it. That settled things. The ranch owners did not have as many work animals as they needed, but considering everything we had a fine crop. It was an unusually good season. And I am seeing to it that the grain is protected, too."

There was a look in his eyes as he said this that gave me to understand that it would be rough sailing for the bandits that tried to operate in his district.

"How about the distribution of land?" I inquired. He flashed his fine teeth in a laugh.

"Well, of course, the estates are too big. Something will have to be done. But there is another side. Those Indians don't want to work. Why you know," and his gestures grew eloquent, "all they want is corn for their *tortillas* and plenty of *pulque* to drink. The average Indian would be perfectly happy with a patch of land just big enough to lie down on, and he wouldn't mind if his feet stuck over the edge. He would work maybe one day in the week. The rest of the time he would lie in the sun with his jug of *pulque* by his side."

This rather vivid picture has, no doubt, lineaments of truth. The Indian of the high sierras is fond of *pulque*, and the Indian of the *terra caliente* has his *aquardiente*, made of sugar cane. Drink increases his natural sluggishness and makes the problem of his elevation difficult. My young friend was himself from the frontier, had been, indeed, as I found, mostly brought up north of the Rio Grande. Like most *fronterizos* he found the people of central Mexico slow. His judgments should be qualified accordingly.

It is often rather oracularly asserted that the land question is the secret of Mexico's unrest. This is far from being the whole truth. In a dull way the average poor man of

the country feels that the original dividing up of its territory among a few royal favorites and the perpetuation of these holdings through the centuries have worked to his disadvantage. But he has other grievances more intimate and urgent. It is doubtless true also that the eviction of Indian squatters from their ancestral acres under federal regulations issued during the time of President Diaz has heated many groups of Indians white hot. They were turned out perhaps because some mining or lumber company wanted to extend its holdings, or some landowner wanted to straighten his boundary lines.

But it should be remembered that in the greater part of Mexico farming conditions are such that great holdings are practically inevitable, and that, moreover, a very considerable proportion of the national territory cannot be farmed at all. It lacks water, and always will. Even the pasturage is so scanty that animals need a wide range. Irrigation, in the very nature of the case, calls for either concentration of ownership or for cooperation on a scale that is difficult for inexperienced groups. The more easily available sources of the water supply of Mexico were naturally seized upon from the first by the people with capital. There is room yet for much development, however, and it is probable that the federal government will undertake reclamation projects on a large scale, similar to those of our own government in the

arid west. This will make available for farming large stretches that are now practically worthless and in that way will supply land to the landless without the need of taking it away from its owners.

Industrial workers in manufacturing enterprises are a class that is rapidly increasing in Mexico. They are sure to become more and more numerous, for the manufacturing interests of the country are capable of enormous development. The low wages, cheap raw material and friendly climate should invite manufacturers. It is true that there is a prodigious ferment of organization among the workers just at present, and that the new freedom may result in fantastic demands. But a Mexican strike is not usually so serious a matter as those to which we are accustomed. The Mexican workman, having declared a strike to assert his independence (*independencia* being the dearest of all words to Mexican ears), is forthwith ready to talk terms of settlement and is almost sure to be reasonable about it. He is especially averse to putting up with the inconvenient results of striking. He has little of that grim "win or die" spirit that so often animates the strikers north of the Rio Grande. He understands his strike declaration rather as a basis of negotiation. For one who can speak their language and has gone to the trouble to fathom their psychology Mexican laborers are essentially docile, good-humored and reasonable.

Making War Safe for Childhood

IV. The Nation's Youngest

By Winthrop D. Lane

OF THE SURVEY STAFF

TWO decades have seen great strides in the effort to protect infant life in this country. Scientific research has been accompanied by wide campaigns of education. Mothers have been taught how to care for themselves during pregnancy, and constructive suggestions have been given to them for the proper feeding and treatment of their babies. Nurses, both those publicly and privately supported, have visited mothers in their homes and taught them how to modify milk and how to combat common diseases. "Little mothers' leagues" have been formed to teach young girls the rudiments of infant hygiene. Measures to prevent blindness of babies have been improved, and there has been increased inspection of the city milk supply.

The machinery for accomplishing all this has become highly specialized in some communities. In 1915 all but four of the state boards of health gave special attention to work for infants, while twenty cities had established divisions of child hygiene since New York opened the first in 1908. Three hundred cities of 10,000 population and over were making some public effort in this field, while no fewer than 205 municipal and private agencies maintained 539 infant welfare stations in 142 cities. To all this effort must be added the remarkable spread of "baby week." This is the name given to local campaigns to educate mothers in matters affecting their young children. The idea was inaugurated by Chicago in 1914. By the spring of 1916 "baby week" had spread to 2,100 cities, towns and rural districts where local celebrations of the sort were carried on. The benefit thus afforded mothers, though scattered, has nevertheless been of value in the long run.

Not all of this work is of equal grade. Some of it is unscientific in character and inadequate in amount. The nation as a whole is far from justified in thinking that its effort in this field is sufficient, for many communities still know little or nothing of careful work for the prevention of infant sickness and death. Dr. Cressy L. Wilbur, late vital statistician of the Census Bureau, estimated that 300,000 babies die annually in the United States before reaching the age of one year—yet every one of the five so-called "diseases of childhood," measles, scarlet fever, whooping cough, chickenpox and mumps, is preventable if only the known measures of prevention are taken in time. Fifteen thousand women die each year from causes connected with childbirth; these, too, could in large part be saved.

Dr. Josephine Baker, chief of the division of child hygiene of the New York city Department of Health, declared recently that 160,000 children in New York's public schools were found to be suffering last year from "pronounced under-nourishment"—a condition not likely to be improved by our own entry into the war. We need also to continue our investigations of the causes of disease. In six months 27,000 cases of poliomyelitis occurred in the registration area alone last year and 6,000 of these resulted in death; yet today we know as little as ever about the origin of this disease. No one can calculate, of course, the amount of preventable sickness of all kinds. It is clear enough that contentment in matters of child welfare is unjustified.

England, from almost the first day of the war, has given increased attention to child hygiene. Nevertheless, her death

rate for infants rose perceptibly at first. The rate for England and Wales in 1914 was 105 per thousand, approximately the same as in 1913; in 1915 it rose to 110. This increase led to a still further improvement of health measures, with the result that last year the rate went down to ninety-one, the lowest for any year on record. A cool summer and higher wages generally doubtless contributed to this decline, but the added measures to protect both infancy and maternity played their part. Scotland, which has carried out many of the same measures as England and Wales, showed a similar rise and fall in her deaths of infants, the rates being 111 in 1914, 126 in 1915, and 97 in 1916. The 1916 rate was nine points lower than any previously recorded.

Commenting on these facts, Grace L. Meigs, head of the division of hygiene of the United States Children's Bureau, told an audience of social workers recently that two conflicting tendencies were noticeable in most of the countries at war. One was increased interest in the protection of mothers and babies; this has been accelerated by the lower birth rate and the fear of a rise in infant mortality. The other was a diversion of interest and support from work in behalf of mothers and babies to tasks having an apparently closer connection with winning the war. This is most evident in the belligerent countries farthest from the conflict.

Here lies the warning and lesson for the United States. We are three thousand miles from the fighting; yet unless our wisdom rises superior to some of the indications now at hand, we shall not readily overcome the temptation to drop the unglorious tasks of peace and to expend our patriotic but indiscriminating energy on caring only for those who wear the khaki.

England's concern for her infants has in part taken the form of increased protection for mothers. She has also strengthened the preventive rather than the remedial side of infant welfare work—that is, she has tried to assure intelligent care of a baby by a healthy mother in her own home. Throughout the war the Local Government Board has pursued its avowed purpose of securing systematic supervision by a health visitor of all babies born who need care. The board estimated that to accomplish this one full-time visitor would be required for every 500 births reported annually. In March, 1914, 600 health visitors were employed by local authorities. At the end of 1915 the number had risen to 812 and by 1916 it had become 1,000 full and part-time workers. This assured one visitor for every 800 births a year.

With all this effort and success, Great Britain, however, is not content. Lord Rhondda declared soon after his appointment as president of the Local Government Board that the lives of 1,000 babies could and should be saved each week. Questions of infant welfare are being widely discussed in the press and reports on the physical care of mothers and children are issuing on every hand. As an aid toward the goal set by Lord Rhondda, the board has taken an active interest in a national baby week that was planned for July of this year. An organization formed with the prime minister as president sent suggestions to mayors and medical officers everywhere and it was expected that from 800 to 1,000 local celebrations would be held in the interest of an improved health among infants.

To enable mothers to secure proper care during pregnancy and confinement and to nurse their babies in their own homes is one of the ideals of scientific effort for child welfare. This ideal has not been sought without disturbing interruptions in some of the countries at war. In France a discussion arose over one aspect of it that is likely to become famous in medical annals. A French author-

ity on child nurture, Professor Pinard, precipitated the affray by comparing the results of child care in Paris in the first year of the war with those in the second. The results in the first year were good. A larger percentage of babies born in the city had received their mothers' care, infant mortality among babies remaining in Paris had slightly declined, and the rates of maternal mortality and stillbirths had gone down also. There were other incidental improvements. During the second year, however, results were not so encouraging. Although the infant mortality rate declined again and aid at confinement was supplied to more women than ever, the death rate for children under two years was higher than before the war. Measles and whooping cough were more deadly, the number of babies put out to nurse was greater, more infants were abandoned and more were stillborn.

Pinard believed that these unfavorable results were to be explained only by the entrance of pregnant women and nursing mothers into factories. He therefore proposed restrictive measures. Resolutions presented by him at a meeting of the French Academy of Medicine called upon the government to forbid any woman who was pregnant, nursing her baby or had been confined within six months, to be employed in factory work. Pinard urged, also, that every woman pregnant or nursing a baby less than a year old should receive five francs a day as allowance.

After prolonged debate the resolutions of Pinard were defeated. The academy divided itself into two groups, those favoring with him the abolition of factory work for pregnant and nursing mothers, and those favoring its regulation. In order to increase nursing by mothers, the academy advised that rooms be established in factories and munition works where working mothers could nurse their babies. Evidence was submitted to show that these were difficult to manage, and that they could be conducted only at a high cost, but the academy went on record in favor of them.

Concerning work for infants in Germany, we have no satisfactory accounts since the first months of the war. The indications then were that such work was being generally continued. The experience of New Zealand and Canada is especially interesting to the United States because those countries, like us, are far removed from the scene of the conflict. Dr. Meigs reports that in both there seems to have been no such increased emphasis on the care of maternity and infancy as in the European countries. This work has suffered greatly from the loss of physicians and nurses. While a similar loss has occurred, of course, in all countries, this has been offset in England and France by a greater interest in babies' health by public officials and the people generally.

As a result of her survey of foreign experience, Dr. Meigs submits the following suggestions for this country:

1. That no hasty conclusions be drawn that this war makes immediately indispensable in this country such purely palliative measures as the increase of day nurseries or the supervision of pregnant women working in factories—to which dire necessity has driven certain foreign countries.
2. That the chief preventive measure for protecting babies is to insure their intelligent care and nurture by healthy mothers in their own homes.
3. That the disorganization of infant welfare work through the loss of doctors and nurses especially trained for it, is an imminent danger and should be avoided if this can be done. In view of the greater demand for nurses, every effort should be made to enlist a large number of candidates for hospital training courses.
4. That such preventive work for infant and maternal welfare as is already established should be strengthened and extended.

The withdrawal of nurses and of specialists in children's diseases is seen as a grave danger by members of the American Medical Association also. At its annual meeting in June

the section on children's diseases submitted a report in answer to questions asked by the Council of National Defense. Even in times of peace, said this report, there are not enough pediatricists and nurses trained in the diseases of children to meet the demand; further shortage has already begun to be caused by the war. The report declares that such persons can best serve their country by continuing to give their attention to the problems for which they are best fitted, and offers to furnish the government with a list of pediatricists if desired.

The physicians signing the statement do not tolerate the idea of allowing mothers to be separated from their young children. "We deplore the breaking up of the home," they say, "and recommend that special provision be made to keep the mothers with young children in the home."

Delegates from nearly a score of organizations interested in child welfare met in Washington in June at the request of the Council of National Defense and drew up recommendations for the protection of children in wartime. The conference urged that the council see to it that there be no abatement, but a decided increase in local community effort for maternal and child welfare. In addition to the specific suggestions already put forth in these pages, it recommended that volunteer aids be enlisted to assist public health nurses and other social workers; that mothers of nursing infants be helped by means of mother's pensions or otherwise; that model laws be enacted promptly for the registration of births and deaths and the reporting of preventable diseases in states where such laws do not now exist; that free and systematic circulation be given to accredited literature on maternal, infant and child welfare, that a committee of obstetricians, pediatricians, sanitarians and nurses be appointed to review and standardize such literature for wider distribution, and that the government take the necessary steps to prevent a milk shortage and to end the indiscriminate slaughter of milch cows.

The conference also proposed that the Council of National Defense organize a national committee representative of maternal, infant and child welfare associations to keep in touch during the present emergency with national problems of maternal, infant and child welfare and to advise the council from time to time of the need for remedial action. It suggested, also, that the Council of National Defense, through the several state councils, cooperate with local organizations and establish agencies or designate existing agencies to secure information about the specific needs of each community and to show how such needs can be adequately met.

Most of the work so far described is educational or administrative. It aims to remove one of the chief causes of infant mortality, ignorance. Poverty is the other chief cause, and measures affecting the economic conditions of mothers and their babies are of fundamental importance also. Wages play a most important part, of course, in any scheme of economic provision against the neglect of children. In so far as wages are a phase of the industrial problem they will be treated more at length in future articles in this series.

Here it is only necessary to point out that for some years past wages have not kept pace with the increase in the cost of living in the United States. According to a recent report of the United States Department of Labor the food bill in the average family has grown from \$339 in 1913 to \$426 in 1917. "Despite the average increase of 19 per cent an hour in wages in the last ten years," says the report, "and despite a cut in hours worked of 4 per cent, the rising cost of foods has operated to reduce the pay of the American workingman about 16 per cent, expressed in terms of food his dollar will buy." While food is only one of the necessities entering into a consideration of child welfare, no one can doubt that a

serious situation presents itself also in respect of other commodities and service.

In a few industries wages are bound to be high in wartime. In others not so affected by war conditions, as well as in many commercial employments and professions, wages will need to be appreciably raised if they are to keep pace with the rising cost of living and if child life is not to be allowed to suffer. A study just made by the United States Children's Bureau shows that in Manchester, N. H., the low wages of fathers and the gainful employment of mothers accompanied an excessive death rate among babies in that community, the death rate in the poorest families being more than four times as great as that in the most well-to-do. Clearly here is a place where American generosity and good sense will have to assert itself. Municipalities and the state and federal governments will do well to act as examples to private employers. The nation will have to recognize that only by enabling parents to provide themselves and their children with the essentials of health can the next generation be assured its rightful preparation for work that it will be called upon to perform.

Next to wages, the most important element in any scheme of economic provision for child welfare is perhaps the payment made to the dependent families of soldiers and sailors. This is a virgin field of experiment where, indeed, experience is not lacking, but where our government can adopt such methods as it chooses and where execution can follow close upon desire. Practically every government has declared its belief that some provision for the families of fighting men should be made as a matter of right by the government itself, in recognition of sacrifice borne and service rendered.

In England, where the separation allowance is conditional upon the size of the family, special consideration has been had for children. The government allowance for wives has been increased once since the war began, that for children several times; the age of the beneficiary has been lifted from fourteen to sixteen. Moreover, the amount may be continued up to twenty-one if the child is an apprentice receiving a nominal wage or is attending a secondary or technical school or a university.

The Treasury Department and the Council of National Defense are at work on plans commissioning Judge Julian W. Mack to draft a system for this country. Appropriately enough, one of the first steps was taken by the Children's Bureau, which has brought out S. H. Wolfe's careful report on compensation to soldiers' families in Canada. At the National Conference of Social Work in May, the opinion of social workers seemed to crystallize in favor of the following elements in any compensation scheme adopted by this country; assigned pay by the soldier to his dependent wife and family; separation allowances by the government, graded to the size of the family; rehabilitation and re-education for disabled soldiers; indemnities against death and total or partial disability, issued on a basis of annuities rather than in lump sums; and, finally, provision for further insurance by and for the men themselves, the premiums to be at ordinary rates and the government to cover the cost of the extraordinary risk of war service.

To protect babies by educating their mothers; to preserve an adequate staff of trained physicians and nurses to look after young children; to see that local, state and national governments do their full duty toward the infants that are later to become citizens, and that they recognize this duty as more important to the national welfare now than ever, and finally to assure all families the means to safeguard the health of their own members fully—these are tasks the war imposes upon every American community.

Books on Education

MENTAL CONFLICTS AND MISCONDUCT

By William Healy. Little, Brown & Co.
330 pp. Price \$2.50; by mail of the SURVEY
\$2.64.

Those of us who have watched the development of the American work in criminology, and especially the share of psychopathology, look upon the past few years as the period of the first fruition of a new movement. It has become possible through a change in the medical attitude towards psychopathological facts. Up to but a few years ago, the physician's idea of the recognition of a morbid condition or of a "diagnosis," was a matter of identification of the particular case with a type of lesion or with a sanctioned clinical entity, something entitled to some definite name; from this identification under a definite concept, of which the facts at hand were but symptoms, the physician could then proceed to make certain deductions with regard to the nature, cause, course, and outcome of the disorder; deductions which usually were deemed impossible from the mere facts as observed by the uninitiated.

A great change has come through a growth of confidence in the facts as they actually can be observed and in our study of them. From a method of excessive confidence in rationalizing and systematizing, we have come to a method of greater confidence in the facts open to trained observation and in the help to be derived from having enough facts, and not merely a central diagnosis. This development conflicts with the limitations cultivated by both legal procedure and medical tradition, but who can deny that this emancipation is or promises to be one of the greatest elements in putting human judgment concerning the management of human affairs on a sound common-sense basis free of dogmatic limitations and yet open to all progress and gains derived by scientific methods?

Healy brought home the need of individual analysis in his first book, *The Individual Delinquent*. In a smaller monograph on *Pathological Lying, Accusation and Swindling*, he treated a specific group of delinquents, and in this latest book, *Mental Conflicts and Misconduct*, he takes up the working of some special factors accounting for "a distinct inner urge towards misdoing," an untoward drive of something in the concealed mental life, as a reaction to certain prior experiences, as the outcome of mental conflict. Seventy-three and seventy-four such cases, respectively, were found in a first and a second thousand of juvenile recidivists, presenting every kind of juvenile misconduct, from general troublesomeness to vagrancy, stealing, violence, cruelty, injury of self or others, not to speak of pettier unpleasant attitudes and dissatisfactions. Conflicts accompanied by obsessive imagery, conflicts causing impelling ideas, criminal careers developed from conflicts, cases readily analyzed, difficult cases, conflicts arising from sex experiences, and conflicts arising from secret sex knowledge; conflicts concerning parentage or other matters, conflicts in abnormal mental types, conflicts resulting in stealing, conflicts

resulting in running away, and conflicts resulting in other delinquencies—these are the chapter headings for the types of cases presented; and in three introductory chapters and in the chapter on Conclusions, the author gives his general principles, applications, methods and conceptions.

The forty cases are very simply and attractively described and give a picture of an almost uniform pattern bringing home the havoc played in the child's mind by the lottery of naïveté and partial information on sex topics to which the child is exposed in a world with hardly any remedy except repression and ignoring, or punishment, or whitewash. In contrast to the very direct and perhaps over-simple account of records, the general discussion goes at length into a fairly orthodox though somewhat simplified rendering of the Freudian system of interpretations, general principles, applications and methods, with many interesting and helpful discussions, with much evidence of sound experience. The last chapter, Conclusions, is unfortunately little more than an enumeration of the tests developed by the psychometric work and a statement of their relative inadequacy in getting at the dynamics of these cases, the very relative rôle of various environmental factors, institutional life, etc., each dealt with in a very brief paragraph. The demonstration of the nature and actual rôle of the conflict and of the methods of dealing with it is not always brought up to the standard of what one might expect from the theoretical discussion.

The perusal of the case records makes one feel that in the main, one's common-sense reasoning and ordinary human sympathy and experience are the safest helps in the consideration of the facts and in the efforts at adjustment. No specially technical inquiries mark the analyses, and sometimes one is somewhat surprised by the freedom of generalization along lines in which the hard-headed practical penologist might easily feel censured and yet but little helped or comforted. The handling of these cases will always call for some compromises, and the question is how can we make all the special provisions and compromises free from the reproach that more is asked for by the reformer than the case warrants through its ultimate value as a member of the community.

Mack, Case 7, is one of the most interesting failures, according to Healy, "a career very largely a product of social blunderings. His life in institutions totals about fourteen years. And yet Mack is anything but a vicious character; he is intelligent and capable; he has never stolen to the value of more than thirty-five dollars at any one

time; he has for considerable periods held to some good ideals, and in several ways he has proved himself particularly decent. . . . He had never tried to think out his career as an entirety. He shows this by his early statements to us that nobody had taught him to steal and that some of his thieving was not connected with sex affairs, when on later analysis it proved to be. . . . From the first appearance of his delinquencies he was certainly not an institutional case, or at least should not have gone to any institution which accepts boys without special study of their qualities. His conflict at that time could have been readily recognized, and there is no reason whatever why he should not have succeeded, with personal help, in overcoming his tendencies. . . . To continue to commit him so many times to institutions without consideration of the fact of previous failure, or even of deterioration, through institutional treatment was, of course, nothing short of stupidity. The supervision and vocational placing through parole agencies was likewise notably unadapted to his needs and even contrary to advice which we then had the chance to give. Clearly it was unwise ever to have allowed Mack to work where he handled articles which might tempt to steal, or where he was frequently thrown in association with girls. He just as well might have worked at a trade with men, or in the country on a farm, where he would have earlier gained the physical vigor that he lacked.

Many of the cases show the stupendous blunderings of our crude and impulsive methods of dealing with these life problems. The actual study of the cases presented in the book deals largely with such palpable problems, which, once noted, would certainly call for some type or another of direct remedial effort in the protection of the victims and in constructive treatment. But that does not mean that the removal of the "conflict" would clearly be all that is wanted, nor is it made plain that in the successes and failures the conflicts played always the decisive rôle or were the points on which the essential work was done. One feels that a full discussion of trials and a careful study of the reasons of the successes and the failures would have offered a great experience and a greater stimulation and corrective to the skeptic and to the over-sentimental and over-hopeful, than the oft-repeated accounts of "mental mechanisms," discussed in the theoretical part and far less easily intelligible and less easily turned to practical use. With such a discussion of the successes and failures, Healy would probably tend to do better justice to factors other than the "mental mechanisms," such as the heredity, family-type, the constitutional make-up of the delinquent apart from the "conflicts," and the organization of schools and corrective institutions.

A reading of the accounts of both the successfully treated cases and the failures cannot fail to give one the impression that the offenders capable of inner conflicts present a type worthy of special consideration, even if the rôle of the conflict as such may remain somewhat problematic at times.

The main return from a perusal of this book is the human sympathy and constructive attitude, the feeling of the kinship and similarity of all human nature and the need of intelligent, individualizing study for determining factors and motives and the experiences or complexes back of them. One gains an insight into the existence of conflicts and chances for remedial attack in wholesome contrast to the doctrine of degeneracy and hard-hearted, one-sided clamor for the sequestration of those who are caught by the agencies of justice.

Dr. Healy, like so many of us, has been thrown into a huge, relatively unorganized field with boundless opportunities, but also boundless demands and not enough resting-

THE BOOKS

- CADY: *The Way Life Begins*
HEALY: *Mental Conflicts and Misconduct*
LOCK: *Variation, Heredity and Evolution*
McMANIS: *Study and Behavior of an Individual Child*
MORGAN: *Critique of the Theory of Evolution*
PATRI: *A Schoolmaster of the Great City*
PEARSON: *The Vitalized School*
TERMAN: *Measurement of Intelligence*

points where a survey might have been taken, serving a general orientation and for renewed attacks upon more specific questions. Hence the flight into a rehearsal of Freudian formulations in the general chapters, whereas the records of the cases keep the same level of preliminary survey and good enough work, considering the circumstances. It is greatly to be hoped that in his new field he may be granted a free hand, with work on the general frame and on special questions more satisfactorily distributed.

I am a strong believer in the case method. But we must not get swamped by the average run of facts with their mediocrity; we must reach the point where an average standard is attained and used as a starting-point for specific things and no longer an aim in itself.

The next thing then would be the record of intensive study of a small group of cases and then the sifting of the new and old material with the question as to what can be incorporated in the routine work and in the summary of scientific principles as the result of the work done.

The book is written in a very readable style. The profusion of cases gives one a chance to saturate oneself with the magnitude and concrete variety and strong appeal of the problem. With a progression towards cases with more specific solutions and more specific methods, we shall at last be led to the period of intensive investigation and research which, I hope, the new sphere of work will open up to Dr. Healy.

ADOLPH MEYER.

THE VITALIZED SCHOOL

By Francis B. Pearson. The Macmillan Company. 335 pp. Price \$1.25; by mail of the SURVEY \$1.37.

Perhaps the most striking thing about this book is that it was written by a state superintendent of public instruction. One cannot read it without wondering what it must be like to teach school in Ohio and to come into contact with an executive who finds joy in writing a whole book on the poetry, the

art and the ethical obligations not merely of "being a school-teacher," but of really "teaching school."

The reader will find here no Flexnerized curriculum or recommended recipes for vitalizing education. He will find instead a series of short treatises, aiming to be both practical and inspirational, on teaching as related to life: on "the teacher," "the child," "democracy," "the artist teacher," "the socialized recitation," "the school and the community," "a sense of humor," "poetry and life," "examinations," etc. There is much that teachers, and other people, too, will do well to ponder. Such, for example, are the passages on hospitals for abnormal and sub-normal children and eleemosynary institutions generally, which in one state, says Mr. Pearson, cost more than all the school facilities for the normal. "The title of education will be cloudy," he adds, "until such time as these institutions have become a thing of the past."

The book suffers somewhat from its sustained effort to treat broad, elusive, "inspirational" subjects and relationships as if they were matter for exact exposition and could be stated as facts to be acquired rather than feelings to be aroused. Perhaps (though we doubt it) this is suited to the intended audience. Then, too, Mr. Pearson makes a bad guess occasionally in his illustrations: such as when he quotes a statement that the first purpose of the schools at Gary is to make efficient workers for the mills, and

again when he intimates that somebody at some time may have been taught to "aspire" by reading Longfellow's poem, *Excelsior!*

In general, the book is an attempt to bring together some of the fundamental modern implications of teaching in a way that will induce teachers to incorporate them into the practice of their profession. The "vitalized school," according to Mr. Pearson, is nothing but a school with a vitalized teacher in charge. It may be a school of one room in a village or of forty rooms in a city. Its work "cannot be standardized until life itself is standardized, and that is neither possible nor desirable." It is a school in which the teacher's work "is to open the gates of life for the pupils."

W. D. L.

RECENT PROGRESS IN THE STUDY OF VARIATION, HEREDITY AND EVOLUTION

By Robert Heath Lock. E. P. Dutton & Co. xxiv, 366 pp. Price \$2.00; by mail of the SURVEY \$2.14.

A CRITIQUE OF THE THEORY OF EVOLUTION

By Thomas Hunt Morgan. Princeton University Press. x, 197 pp. Price \$1.50; by mail of the SURVEY \$1.60.

These two books, concerned with the same general problems, command the attention of all careful students in the field of the biological and social sciences because of their high standards of scholarship and because of the sound scientific background they afford for the consideration of the problems of human evolution.

The author of the first book, lately deceased, was fitted for his undertaking by years of research work in the Royal Botanic Gardens in Ceylon as well as in England. The book, which first appeared in 1906, was among the first to survey the new experimental knowledge of variation and heredity, and it has not been superseded by any other, in the knowledge of the reviewer, in extent of treatment as well as in scholarship. Taking for its main topic the nature and method of origin of existing differences between species, the book sketches first the earlier theories of evolution and then emphasizes the recent experimental observations on variation and inheritance including first, biometry, or the statistical study of variation; second, direct observations of the origin of species by the discontinuous method (the observations of de Vries and others); and, third, the results of experimental observations on heredity by the methods of scientific breeding (the method of Mendel and others).

The results of the last method are shown to have completely revolutionized biological science, emphasizing the fact that the individual can no longer be considered as a unit, but as a mosaic of independent unit characters, each inherited separately and with marked definiteness. Mendel's discovery seems to afford the connecting link between the various divergent branches or problems of evolution, leading possibly to the conclusion that a large part, if not the whole of evolution may have taken place by the method of discontinuous variations. A chapter on Eugenics seems to the reviewer the weakest part of the book, possibly because the author here stepped out of his chosen field and makes dogmatic statements concerning facts which he has not specially studied and which in the opinion of the reviewer are by no means yet well-established.

The second book, by the well-known professor of experimental zoology in Columbia University, consists of a series of four lectures criticizing the older and appreciating

the newer evidence for evolution. Mendel's discovery is ranked as of first importance, as in Professor Lock's book, and beautiful illustrations accompany clear explanations of the experimental work done in this field. Evidence from recent experimentation is given to show that the mechanism of cell formation and development harmonizes with the theory of Mendelian heredity. Further recent experimental evidence is cited to throw light on the influence of natural selection in bringing about evolution and it is shown that we do not know the cause of mutations giving rise to new characters. Evolution has taken place by the incorporation into the race of those mutations beneficial to the life and reproduction of the organism.

The social scientist may gain much from a careful study of these two books. In the first place, the method of work, the painstaking scientific thoroughness and the lack of dogma or haste in reaching conclusions (except in the one instance cited), is one that must be imitated by all students of society before they can take their place among scientific leaders. Years of research and investigation are certainly as necessary in the study of human society as in the field of plant and animal life and great harm can be done by those who advocate reforms based on insufficient study, whereas much is to be gained by harmonizing our efforts at human improvement with the real needs and possibilities of human evolution. Differ as we may with the author of the first volume in his discussion of eugenics, we can carry over from the rest of his book much that is valuable, and the second book yields an equal or greater return.

The emphasis both place on the value of the Mendelian law applies in the field of the social sciences as well as in the biological sciences, for as regards feeble-mindedness at least it has greatly influenced our thinking and our programs. Further sound scientific evidence as to the influence of the Mendelian law and other methods of inheritance on human progress is yet to be worked out; when such knowledge comes, it may throw light on many problems eluding us today. May such books as the above stimulate truly thorough work in the field of social investigation as well as give perspective to many who are working with the more immediate problems of social treatment.

AMEY EATON WATSON.

A SCHOOLMASTER OF THE GREAT CITY

By Angelo Patri. The Macmillan Company. 221 pp. Price \$1.25; by mail of the SURVEY \$1.35.

One of the chief hopes of American public education is that the administrative personnel, principals and teachers, shall acquire a professional dignity and competence that will relieve the somewhat forlorn social and pecuniary status into which we have allowed the men and women of our educational system to sink. It is sometimes said that when teachers are worth more they will be paid more and will be more highly respected. Perhaps it is true rather that if they were paid more they would make the school more vital. Somehow the instinct of workmanship must be gotten generally into the teaching profession, this instinct which brings a disgust with routine, with verbalism, with mass-teaching, and those other evils of a congested and mechanical school system. Education is a practical, even a fine art, rather than a science. It works upon the most sensitive and complex raw material in the world, the human personality, and the

educational craftsmen and artists have therefore to be of a more skillful and subtle caliber than any other craft demands.

There is no book that will more aid such an end than this charming and intimate record of a schoolmaster's life in the teeming public schools of New York city. Angelo Patri came out of Little Italy. He knows from his own experience the life that is behind the children who throng the city schools. There was no one better fitted than he to know how much the congested city home needed the ministrations of the school, and how effectively the school could spread out its functions until it touches and stimulates the home. Mr. Patri's school, P. S. 45, in New York city, has been known to everyone as one of the most successful results of the Gary experiment there, but few of us knew the life of the principal to whose philosophy and skill those results have been due. P. S. 45 was not any quick magic of a new idea. It was the product of Mr. Patri's slow working out in his classroom teaching and in his direction of large schools the relation of school to neighborhood, the permeation of the neighborhood by the school. The Wirt idea was easy to apply because Mr. Patri had been working along the same lines. The extension of the city school is one of those fertile ideas that leaders with a love of the people and a sense of children's needs devise independently of each other. Coming together, they find they have the same spirit and have invented separately the same technique. The conjunction of Mr. Wirt and Mr. Patri has produced one of the most interesting and vitalizing city schools in the country.

This book tells the story of Mr. Patri's own education in learning what a school should be. He tells it in little homely incidents of the life of a teacher and principal. There is no theorizing or dogmatizing. You see the children and the mothers and the homes with his own eyes. You unravel the snarls and tangles with him. You marvel that the despised craft of teaching could be so dramatic, could call for such skill and talent. It is an artist who has seen the possibilities of this raw human material he works with. It is a man with a vision. Mr. Patri makes the technique of running a school seem like the most fascinating and complex of modern enterprises. It involves generalship, quick resourcefulness, human sympathy, a workmanlike use of materials to create personality and effectiveness in the child.

Schoolmasters like Mr. Patri would make teaching the most important of professions, and education the finest of the arts.

RANDOLPH BURNE.

THE WAY LIFE BEGINS

By Bertha C. Cady and Vernon M. Cady. American Social Hygiene Association. 78 pp. Price, \$1.00; by mail of SURVEY, \$1.07.

The "conspiracy of silence" on the subject of the sex function, of which young people in this country, not to mention others, have been the victims, has, for good or ill, come to an end. It is no longer "respectable" to be ignorant on the subject. It may even be doubted whether the tendency at present

is not to go too far in the opposite direction; to overdo candor; to over-stimulate attention to this matter; tolerating a hectic chatter on the subject which tends to take it out of its place and proportion even as did the former reticence. If I have to choose, I prefer the publicity; but a middle ground is perfectly attainable. There is no more reason for overstrained attention to this function and

relationship than to the other physiological matters about which we try to be intelligent.

It may be, indeed, that it would be better if young people could be kept in ignorance about the whole subject of sex until some "right time"—whenever that may be!—but the fact is that, however desirable such a course, it cannot be done. It is not a question of *whether* boys and girls shall know the essentials of the sex function; nor of *when*; but of *who shall tell them, and how?* You cannot keep it from them. If your boy is ten years old, the chances are ten to one that already he has learned in the gutter what you have not had the wisdom or the nerve to tell him.

To this many parents will answer, "I am willing and eager, but I do not know, what to tell, or how to tell it. I am a mother, or a father, but my ignorance is abysmal; I know hardly more than my child. How shall I go about it? Where is the information to be obtained?"

In *The Way Life Begins*, Mr. and Mrs. Cady have gone far to meet this need. Their small book, not unduly technical in phraseology, yet scientifically accurate and dependable, sets forth what most parents and teachers who have this problem to meet need most to know. The authors speak especially to parents and teachers, and seek to meet the need of a statement of the fundamental facts concerning the reproduction of living forms; of an interpretation of these facts in terms of human interest and well-being, and of a standpoint in this service which shall not be merely material. They have succeeded admirably. The tone is sweet and constructive—spiritual, in the finest sense of the word, without the pseudo-religious mush and gush which make most such books sickening.

In some days this essay could be made even more effective; but it is so very practical and clean and on the whole satisfying that one is pretty well justified in saying that while it is not the only useful and commendable book in its field, it is beyond any question the best.

JOHN PALMER GAVIT.

THE STUDY AND BEHAVIOR OF AN INDIVIDUAL CHILD

By John T. McManis. Warwick & York, Inc. 54 pp. Price, \$.75; by mail of the SURVEY, \$.80.

Although *The Study of the Behavior of an Individual Child*, by John T. McManis, is but 54 pages in length, yet it contains a great deal that is worth while. This little book is what it claims to be, namely, a "syllabus," the object of which is to suggest lines of study for persons who are not expert investigators but who are to become teachers of the young. It contains fifteen chapters, each beginning with a brief statement of the topic which the chapter covers. Then follows a list of questions or headings intended to direct the observation of the student of the individual child. Each chapter offers a list of suggestive reading which, if put together, forms quite a good bibliography. The topics have been well selected and the most significant points under each are enumerated.

Of course, in a book of this kind little or nothing is offered on the constructive side. The author does not claim to give either advice or aid in the treatment of the child. Indeed, he wisely recommends that where conditions are found to be exceptional the expert should be consulted.

Data which might be collected on a basis of the suggestions made in this syllabus would be valuable and scientific directly in proportion to the ability of the observer. Nothing is presented to the reader except an outline of points to be noted, and the accuracy of the data depends almost altogether on the judgment of the person who is studying the child. For a thoughtful, careful student these outlines should prove suggestive and helpful.

AUGUSTA F. BRONNER, M.D.

MEASUREMENT OF INTELLIGENCE

By Lewis M. Terman. Houghton, Mifflin Company. 362 pp. Price, \$1.50; by mail of the SURVEY, \$1.62.

This book reports the extension and revision of the Binet-Simon tests. It is an important and far-reaching contribution to the subjects of mental measurements and their sociological and educational bearings.

Part I includes a description of the Binet-Simon scale; outlines its limitations; indicates the need for its extension and revision, and for a clearer and more detailed account of the method of procedure and scoring; and it explains the Stanford revision. The records of 1,000 unselected school children, tested by Terman and his associates, are analyzed. The bearing of the results upon problems of vocational guidance, juvenile delinquency, grading of pupils, promotional schemes, retardation and the proper handling not only of the defective but of the superior child, is convincingly set forth. The scale has undoubtedly been made more serviceable by this revision as an instrument for measuring intelligence especially below the mental age of seven and above the mental age of twelve, where the earlier scales were least adequate.

Terman finds, as did Goddard, that not far from 2 per cent of the children enrolled in public schools must be looked upon as "real defectives." An almost equal number are of "very superior intellectual ability." The problem of retardation he finds to be exactly the reverse of what it is commonly thought to be. It is the bright children who are retarded and the dull who are accelerated. The latter are overestimated by their teacher and are in grades beyond their capacity; while the capacity of the bright children is underestimated and the large majority are in grades below their intellectual level. The harmful results of this "educational lockstep" are pointed out, and it is urged that teachers be better trained to recognize superior ability, and that children, when discovered, be promptly promoted, partly to save their time but chiefly to avoid the grave risk now being run, that they fall into life-long habits of sub-maximum efficiency.

Data gathered hold much of interest concerning the physical condition of the superior child and pile up evidence that such children will thrive under rapid promotion.

Part II, a "complete guide to the scale," provides the most careful instruction for the procedure and scoring of tests. It insures the greatest possible uniformity of method and overcomes the lack of adequately detailed guides. The book is exceptionally well written and in so clear and untechnical a manner that not merely the psychologist but the rank and file of student, teacher, social worker, lawyer, nurse and physician will find it decidedly interesting. The book may with profit be used as textbook in schools of philanthropy, of training for public health nursing, in normal schools and colleges.

Nevertheless, though his book is written in a popular manner to further a more general understanding of the scale and so secure its wider usefulness, Terman is very explicit that "the use of the scale for research purposes and for accurate diagnosis will of necessity be restricted to those who have had intensive training in experimental psychology." His own book is excellent testimony to the wisdom of securing expert testing and interpretation of results.

JEAN G. WEIDENSALL.

RED CROSS POLICY

THE control of policy and, therefore, the responsibility for the usefulness of the American Red Cross now rests upon what is known as the War Council—a body of financiers; of men experienced in the direction of large business affairs. The spirit and methods of this War Council are a fair subject of public discussion. It is appropriate to recall that the creation of the War Council is only the latest—probably not the last—of a series of radical changes which have marked the thirty-five years of the history of the Red Cross in this country. Prior to the recent financial *coup d'état*, the most important of these was the revolution of 1905, as a result of which Clara Barton was eliminated and ex-President Taft, then secretary of war, and Mabel T. Boardman became respectively chief official sponsor and animating spirit.

During the next decade the Red Cross occupied itself largely with emergency relief in disasters. Of these there were many, great and small, at home and abroad. There was much to do in a neglected field, and it was done with energy and with constantly increasing public appreciation and confidence. The military and medical functions were not subordinated. On the contrary they were emphasized. A nursing service was organized and first-aid instruction was provided. The annual sale of Christmas seals was a model publicity campaign for health. The international character of the organization was scrupulously maintained. Nevertheless those aspects of the Red Cross which are associated with relief and rehabilitation became more and more familiar as earthquake and fire, shipwreck and mine explosion, flood and famine continually brought before the nation the necessity for prompt and generous relief for those who suffer from such calamities. An institutional membership was established, largely on the initiative of Robert W. de Forest, vice-president of the Red Cross, as a convenient means of insuring a supply of experienced social workers to do the actual work of relief and rehabilitation as occasion required.

In 1914 the Red Cross would have been well prepared for any such responsibility as had been encountered in the previous nine years. For the disaster which actually occurred—the European war—it was wholly unprepared. Organization and material resources were naturally lacking, but, what was far more serious, the Red Cross had no program of action which would give a clear and authoritative lead to public opinion. The decision not to undertake any relief work for civilian non-combatants made inevitable the starting of numerous special relief funds. At first the Red Cross attempted to furnish doctors and nurses and supplies to belligerents on both sides. Later it became impossible to send supplies directly to Germany, but long before this the medical units had been withdrawn with much resulting embarrassment to any other Red Cross activities in the countries to which they had been sent. Heroic work was done by some of these doctors and nurses and large quantities of supplies were sent which certainly saved lives and mitigated suffering.

A dispassionate review, however, of the three years must leave some feeling of disappointment in the mind of patriotic Americans who would like to think of the Red Cross as the symbol of the humanity of the nation, of the part which the neutral American people would play in lessening the unnecessary suffering and distress, the unintended horrors incident to but not an absolutely unavoidable part of a state of war. As compared with what might have been done under the banner of neutrality and humanity, in Belgium and Poland, in Galicia and Armenia, for prisoners of war, for

SOCIAL FORCE

widows and orphans, as well as for sick and wounded soldiers, it must be admitted that America has played somewhat less than a heroic part. The multiplicity of war relief agencies with which the Red Cross is now trying to cope might not have come into being if the Red Cross had decided earlier on its present rôle, if its appeals had been based on thorough investigation abroad, if it had had a broader program and had demanded resources for carrying it out.

The justification for the War Council and the present attempt to unify war relief is not in our having entered the war. The prevention of tuberculosis and the rehabilitation of villages, a legitimate task of American philanthropy now, have been so in fact for the past three years. Not perhaps a war council but a neutral humanitarian council should have been raising these huge sums and spending them. If in spite of war loans and taxes it can be done now, the presumption is strong that it could have been done as soon as the need became known—certainly more than two years ago.

That, however, like the decade before the war, is a closed chapter. What concerns us now is the present and the future.

The War Council is obviously at a disadvantage as a legislative and judicial body in not being in any broad sense representative. It is called upon to perform legislative and even judicial functions. It is formulating policies and deciding how and through what channels funds shall be applied. It is asking the public for very large sums in advance of such formulations and decisions, or at least in advance of public knowledge as to what they are or are to be. The public has responded with a general vote of confidence; but if the war continues that vote will have to be renewed another year. The demand will be for even greater sums and the response will depend not on the standing and ability of the members of the War Council but on the policies they have adopted and the measures they are putting into operation. In anticipation of these future demands the Red Cross should frankly take the public into confidence as rapidly as tentative plans are approved and such plans should not be finally adopted by the council until many persons whose experience in life may be quite different from their own—doctors, nurses, teachers, workingmen and women, closet philosophers and men of affairs—small affairs as well as large affairs—have had their say about them. Friendly criticism in advance may prevent very unfriendly but just complaint after it is too late. It might be still better if the Red Cross had a representative consulting body in which policies and measures could be proposed and discussed in advance both of appropriations and appeals.

The name War Council may unconsciously mislead even its own members. It is, of course, not a war council but a committee or a commission to devise and carry on extensive relief operations. Cooperation rather than control is the starting point of its relations with other relief agencies. Because of its official backing and its own large contribution to the common cause, the Red Cross should have little difficulty in securing cooperation if it is made apparent that this rather than domination is its genuine desire. If at the start an impression to the contrary has been made this is to be put down to inexperience on the one side and sensitiveness on the other.

in WAR TIME

By Edward T. Devine

The irritation and indignation shown by such veterans of war relief as Dr. Morton Prince and Mrs. Gertrude Atherton are excusable and natural. Mr. Coffin, the new chairman of the committee on cooperation, will have need for all his tact and skill in conciliation. He will surely succeed in removing all grounds for just complaint as the underlying sincerity and good will of those interested on both sides become apparent.

Possibly too much has been said about the unpaid full time to be given by various gentlemen recently called to important positions in the Red Cross. Such contributions are, of course, entitled to generous recognition. It would be unfortunate, however, to create the impression that the important positions, the great opportunities for most conspicuous service, are to be available only to those whose independent means enable them to work without salary. Mr. Hoover without salary and General Pershing with salary will be judged by the same scale. We do not want to repeat in the American Red Cross the conditions of the British Army when commissions had to be purchased or the British Parliament before members were paid—brilliant as the services of some of those officers and statesmen were. The Red Cross should be made and kept democratic. Its policies should be settled after public discussion and deliberation. Its higher ranks should be kept open for those who have shown preeminent fitness.

The War Council is composed of men of conspicuous administrative ability, as is proper; for it is primarily an executive and administrative agency. It has done brilliantly what it first undertook to do—raised a very large sum of money in a remarkably short time. It has shown courage, disinterested zeal and breadth of purpose. It has sought expert advice and has not hesitated to scrap what it considered antiquated machinery of organization. It is a magnificent experiment, with the real test, of course, still to come.

American generosity will be taxed far beyond any previous experience. People of moderate means will have to be reached and encouraged to give until they feel it. Whatever the peace terms may be, the waste places of the earth will not be restored through the device of war indemnities. The suffering caused by the war is like that of fire and flood, of the wreckage of all the ships that ever sailed the sea, of explosions in all the mines that ever were dug, of earthquakes and famine beyond human imagination. The Red Cross, while the war lasts, must bind the allied nations in affectionate and sympathetic bonds, sharing one another's burdens; and thus prepare for the better but harder time after the war when its symbol, lifted high above all divisions and enmities, may once more in the fulness of meaning stand for healing, for restoration, for rehabilitation: for neutrality and humanity.

THE WAR PROGRAM OF EDUCATION

A FINE example of the kind of "standing at attention" which we were advocating a month ago is supplied by the United States Bureau of Education. In a series of bulletins Commissioner Claxton has promulgated a philosophy and a program for the vast educational forces of the country, from state superintendent to Montessori baby, which is a summons to high patriotic service.

Schools and other agencies of education must be maintained at whatever necessary cost and against all hurtful interference with their regular work except as may be necessary for the national defense, which is, of course, our immediate task and must be kept constantly in mind and have right of way everywhere and at all times.

If the war should be long and severe, there will be great need in its later days for many young men and women of scientific knowledge, training, and skill; and it may then be much more difficult than it is now to support our schools, to spare our children and youth from other service and to permit them to attend school.

Therefore, no school should close its doors now or shorten its term unnecessarily.

All young men and women in college should remain and use their time to the very best advantage, except such as may find it necessary to leave for immediate profitable employment in some productive occupation or for the acceptance of some position in some branch of the military service, which position can not be so well filled by anyone else.

All children in the elementary schools and as nearly as possible all high-school pupils should remain in school through the entire session.

England, France, Italy, and the central Empires have thrown into battle a very large per cent of their educated and trained men, including most of the young professors and instructors in their universities, colleges, gymnasium, lycées, and public schools.

Their colleges and universities are almost empty. The young men who would, under normal conditions, be receiving the education and training necessary to prepare them for leadership in the future development of these countries are fighting and dying in the trenches.

All these countries must needs go through a long period of reconstruction, industrially and in many other respects.

Our own trained men and women should be able and ready to render every possible assistance.

Therefore, a right conception of patriotism should induce all students who can not render some immediate service of great value to remain in college, concentrate their energies on their college work, and thus be all the more ready and fit when their services may be needed either for war or for the important work of reconstruction and development in our own and other countries when the war shall have ended.

This advice is reinforced by President Wilson in an open letter of July 20 to Secretary Lane, in which he urges that colleges and technical schools "maintain their courses as far as possible on the usual basis," and that as many as possible of the boys and girls leaving high school should continue their education.

A distinction is made between true and false economy in administration, and the proper place for productive work by school children is stated in a discriminating paragraph.

The salaries of teachers should not be lowered in this time of unusual high cost of living. When possible, salaries should be increased in proportion to the services rendered. Since the people will be taxed heavily by the Federal Government for the payment of the expenses of the war, teachers should be willing to continue to do their work, and do it as well as they can, as a patriotic service, even if their salaries can not now be increased.

All equipment necessary for the best use of the time of teachers and students should be provided, as should all necessary increase of room, but costly building should not be undertaken now while the prices of building material are excessively high and while there are urgent and unfilled demands for labor in industries pertaining directly and immediately to the national defense.

During school hours and out of school, on mornings, afternoons, Saturdays, and during vacation, all older children and youth should be encouraged and directed to do as much useful productive work as they can without interfering with their more important school duties. This productive work should be so directed as to give it the highest possible value, both economically and educationally.

The importance of increased attention to certain "social" features of the public schools is urged.

For children and youth in schools of all grades there will be need of more effective moral training, and provision should be made for this.

While the war for the safety of democracy is in progress and when it is over, there will be greater need for effective machinery for the promotion of intelligent discussion.

To this end every schoolhouse should be made a community center and civic forum with frequent meetings for the discussion of matters of public interest and for social intercourse.

(Continued on page 430)

COMMON WELFARE

"KEEP COMING," THE POLIO SLOGAN THIS YEAR

THIS is the time to keep coming," says every dispensary caring for the little survivors of the epidemic of infantile paralysis. And it is the time which Mrs. Munro foretold, writing to the SURVEY of February 3, this year, when the mother whose child is well now, save for his weakened muscles, wonders "whether it is worth while to force this helpless being to do such a distasteful task day after day, and year after year, when he might be made a happy, comfortable invalid." The exercises have lost their novelty; progress is very slow; the child is hot and tired; why not give it up? There are so many things that a cripple can do these days.

As the nurses see it, the epidemic itself was almost easier to combat than this subtle, overwhelming discouragement. "No soldier is more deserving of honorable mention for his work in the trenches," says Dr. Donald Baxter, of the New York Committee for the After-care of Infantile Paralysis, "than are the nurses who are steadfastly meeting the insidious onslaught of that implacable foe, Discouragement."

"Several months ago," continues Dr. Baxter, "the mother of a little Manhattan boy became discouraged because she could see but little improvement in the condition of her child and refused to continue the clinical treatment. At that time the little fellow could not walk, but had to be constantly kept on an iron frame. Through the united efforts of the nursing associations and the members of the hospital staff, this child was placed in a large institution where regular attention was assured and, as a result, he is nearly well. He is now not only able to walk, but has been returned to his home and mother and is now regularly transported to the clinic in one of the many big ambulances used only for after-care work."

And from all along the line comes proof that just this unwavering, persistent muscle-training is keeping little children from the loss of control over their limbs and providing instead for their full vigor when the training time has passed. In Greater New York alone

fully fifty hospitals are giving nearly 3,000 such treatments every month. With the cooperation of nursing associations in educating mothers for this care of their children at home, fully 25,000 treatments are being given monthly. Of the 7,600 children that have come to the After-care Committee, already 1,052 have been discharged as cured.

The danger of another epidemic is apparently passed, and poliomyelitis seems to be fulfilling the prophecy of those who said that it would smolder along this year, using up the remaining material rather than break out into another conflagration. The outburst threatened in West Virginia, a few months ago, has subsided. One focus in Vermont that became active for a time has quieted down again, only eighteen cases being reported as late as July 14. From twenty-five states all over the country reports range from two to thirteen cases, only Ohio, Pennsylvania and Virginia exceeding this number. In New York city, at the week which saw fifty-six cases last year, only nine were found this year. Meantime the strictest watch is being kept that none of even the sporadic cases shall later prove a focus of spreading infection.

UNDERGRADUATES INTRODUCED TO SOCIAL WORK

THE New York Charity Organization Society has just completed a novel educational campaign. During the four weeks ending August 4 the society entertained as its guests undergraduates from eight different institutions in the Middle and New England States.

These students spent three days a week as volunteers working under the direction of the society's district visitors; two days a week they devoted to the inspection of institutions engaged in various forms of social work, and one day a week to lectures and discussions.

The students have all been leaders in the undergraduate life of their respective colleges and are of the class

of 1918. It is the hope of the society that they will, therefore, be able to take back this year to their fellow-students something of what they have learned during their stay in New York. Social agencies have frequently conducted summer institutes of various kinds for college graduates; this is said to be the first time that a vacation course of work and instruction has been carried out for undergraduates.

The students stayed at Hartley House and Union Settlement. The colleges represented were Bryn Mawr, Mount Holyoke, Smith, Vassar, Wellesley, Wells, Amherst and Haverford.

PAN-AMERICAN LABOR FEDERATION

ARRIVAL in Washington of Edmundo E. Martinez, representing the Confederation of Workers' Syndicates of the Mexican Republic, and announcement of the selection of Antonio Correa as delegate from Cuba, and of Gardenio Gonzales as delegate from the Great Federation of Labor of Chile, to become resident members at Washington this summer of the Central Committee of the Pan-American Federation of Labor, mark the enlistment in this movement of three national bodies widely influential in the industrial progress of Latin America. The other resident delegates are Carlos Loveira, delegate from the unions and syndicates of Yucatan, and Santiago Iglesias, head of the Free Federation of Workers of Porto Rico. Samuel Gom-

THE SURVEY

Published weekly by

SURVEY ASSOCIATES, INC.

112 East 19 street, New York.

Robert W. de Forest, president; Paul U. Kellogg, editor; Arthur P. Kellogg, secretary; Frank Tucker, treasurer. 10 cents a copy; \$3 a year; foreign postage \$1.50. Canadian 75 cents. Copyright, 1917, by Survey Associates, Inc.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

pers and John Murray are the spokesmen of the American Federation of Labor on this Central Committee.

As soon as the Cuban and Chilean delegates arrive questions as to the policy of the new Pan-American Federation of Labor will be taken up. One of the first issues to be met will be that of sending, or refusing to send, delegates to the labor and Socialist peace terms conference at Stockholm in September. As this conference has been called at the instance of the Russian Council of Workmen's and Soldiers' delegates and of the Russian Socialists, it has enlisted the sympathy of the syndicalists and trade unionists of Latin America. On the other hand, President Gompers, of the American Federation of Labor, has come out against sending representatives as premature and in the interests of Germany.

WORK OF SOCIAL SERVICE COUNCIL IN ST. LOUIS

HOW the St. Louis Central Council Social Agencies has attempted to follow up the recent survey of local charities carried out by Francis H. McLean is of interest to every city where steps have been taken toward greater team work. The council took stock at its recent annual meeting when reports by various committees were submitted, showing how suggestions from the survey are being put into effect.

Two questionnaires were prepared by the Health Committee and sent to all visiting nurses' associations, outing camps, clinics (municipal and private), maternity hospitals, convalescent homes, homes for incurables, tuberculosis agencies, sick diet and free ice and pure milk agencies. Tabulations were made of the results and the recommendations of the committee in some instances were sent to the institutions in question and in others were referred for conferences to members of the committee.

The Children's Committee spent part of last year in formulating standards for children's institutions, child-placing agencies and day nurseries. Copies of their recommendations were sent to all societies and institutions concerned.

The Committee on Family Treatment investigated and made suggestions to homes for single women and women with children, working girls' boarding homes and women's lodging houses, which were reviewed and in the main approved by Mr. McLean. The committee also investigated and reported on the work of the Salvation Army and Humane Society and prepared questionnaires on the Red Cross, Citizens' Emergency Relief Organization and the Emergency Aid Society.

The Committee on Adult Dependents has made a complete survey of the old people's homes which disclosed a list of over 100 old people anxiously waiting

to be admitted to homes that were taxed to their capacity. This situation has been remedied upon recommendations from the committee, by an addition to the Memorial Home and the Altenheim and the purchase of an additional house by the Christian Old People's Home.

Through the efforts of the committee, a bill was introduced in the Board of Aldermen, providing for the purchase of a municipal farm and an appropriation of \$150,000, to meet the immediate needs. Subsequently a Municipal Farm Commission was appointed by the mayor to investigate municipal farms in other cities. The bill has been somewhat delayed because of other important measures pending.

One of the big problems before the council for the past year and one which will occupy an important part of its program for the coming year is the establishment of a centralized purchasing bureau where supplies for all charitable institutions in the city can be procured and distributed to them at a reduced price. The committee handling this matter has collected considerable data from other cities and has asked the Charities Committee of the Chamber of Commerce to cooperate by requesting all charities on its endorsed list to furnish an itemized statement of their supplies in 1916.

Committees on employment, uniform records and social service among colored agencies have been recently appointed. A number of special committees have also been named to investigate proposed new agencies and agencies where the work is not up to the required standard.

SOCIAL PROBLEMS OF THE SOUTHLAND

WARTIME social problems vied with questions of race relations and the participation of the church in social service as chief concerns in the minds of the delegates and speakers from twenty-six states who attended the sixth annual Southern Sociological Congress.

In addition to constructive suggestions for attack on the social problems of the Southland, the meeting was distinguished by a thorough reorganization which superseded the former loose form of government by a highly developed system of executive committee and governing board, with close control over the affairs of the congress. Arrangements were made so that J. E. McCulloch, former executive secretary, might give his full time to the duties of educational secretary, in connection, particularly, with the extension work. New departments were created on Wartime Relation to the Man in Uniform, and Relief and Social Work.

Perhaps the most striking feature of the congress was the strong bond between the church and the social aims

of the South. A large proportion of the delegates were ministers—or former ministers—engaged in social work. The official sessions were held in the Robert E. Lee Memorial Hall at Blue Ridge, a beautiful structure on a thousand-acre tract on the side of a mountain, overlooking the Swannanoa River Valley and the receding Blue Ridge Mountains, founded and largely maintained by the Y. M. C. A. and Y. W. C. A.

A characteristic note was struck by the Rev. Worth M. Tippy, secretary of the Commission on the Church and Social Service of the Federal Council of the Churches of Christ in America. He declared for a social service program which would make every church a center of social education, make it a center for neighborhood activities, tie the church up to the social and civic agencies of the community, federate the churches in each community, get them unitedly behind all movements for human betterment in city, state and nation, and lead them into the fight for social justice. He spoke also of the Federated Churches' selection of chaplains for the new National Army, saying that the new chaplains will be the peer of the finest men from West Point and Annapolis.

"Let us not be timid, but aggressive, in using the churches," said Dr. Tippy. "Any minister or church that hasn't the broad outlook doesn't really know the love of God. Victory in the war now is the great task of this country. It requires every ounce of consecrated power we have. The church needs to be on the ground in the military training camps, backing to the limit the Y. W. C. A. and the Y. M. C. A. and the other accredited agencies, and getting into touch with the boys who belong to their denominations."

R. M. Archibald, conference missionary secretary of the North Alabama Conference of the Methodist Episcopal Church, South, Birmingham, Ala., said of the rural church:

In the South considerably more than half our people live in the country, and must be saved by the country church if they are to be saved at all. Better roads and the automobile have broken up the isolation of the country community, so that instead of having a distinct type it has largely lost its peculiarly rural characteristics and is becoming more and more dominated by city and town. Vices as well as virtues project themselves into the country in a manner hitherto unknown.

The methods of the past generations will not meet the needs of the rural life of today. The church's program for the rural community must include every interest of humanity. We must look after the health of the people, cooperate with the school in a war upon ignorance, promote better methods and cooperative activity in agriculture, dairying, poultry, and marketing, provide for social and recreational life of the people, and promote in every way possible a strong community life.

Richard Carroll, colored preacher of Columbia, S. C., said: "Teaching that is not teaching is not preaching." That

is the hardest lesson for the colored preacher to learn. Making social service evangelism is the basis of the greatest movement I know for the salvation of the South."

Wartime service to soldiers was discussed by a number of speakers. Among the most practical was the Rev. Kirkman G. Finlay, of Columbia, S. C. He said:

We must clean up our town, stop the sale of liquor, and close up the houses of prostitution and other dens of iniquity. But our work is not done then. The average man in uniform does not go to these places because he is depraved or vicious. He goes there, first of all, because he has nothing else to do; and, second, because the ordinary refining and restraining influences of home are gone.

We must give him something else to do, and we must try to give him at least some of the refining and restraining influences of home. First I place the Y. M. C. A. But our churches must come to the rescue. They must make every possible effort to adapt their services to the needs of the soldiers and make them welcome. They must make their recreation rooms social centers. After that point of contact is established it will be for us to make it mean what we will. Let us not be afraid to give these boys a touch of home.

"The American soldier is only the American boy away from home, plus the uniform and plus the crowd spirit," said Dr. Paul B. Johnson, of Washington, D. C., representing the American Social Hygiene Association. "The communities near training camps will find that the responsibilities brought to them by the camps will lead them to three lines of work—for the soldiers, for the town girls and for the elimination of prostitutes."

Influences in isolated mountain localities which affect children were discussed by John C. Campbell, director of the Southern Highland Division of the Russell Sage Foundation, Asheville, N. C.:

The two outstanding agencies in furthering social and spiritual ends are the school and the church. Helpful as they often are elsewhere, here they too often tend to strengthen faults that result from over-emphasis of individualism. Such schools are likely to be but an echo of the thought of the opinionated leaders, who have no basis of judgment as to what schools should be. If the trustee system prevails, it is too generally true that some kinsman or kinswoman of the strongest trustee is the teacher, and if some other system prevails, it is "good politics," as it is called, to make such appointments as will hold the votes of the strongest families. The child does not, then, even in school, get away from the limiting mental environment of his elders, for the teacher, who holds a pay-job where jobs are few, does not wish to offend the elders by innovations.

Church ministrations are infrequent. The child is not allowed to forget that he is a stranger in a sinful world, from which he is urged to flee, and is seldom led to feel that he is a citizen in the Kingdom of Heaven which begins here and now. Denominational antagonism too often arises between what might be called local and non-local agencies, and religion to the child becomes a thing of

controversy, having to do with ways, means and formulae.

NEGRO MIGRATION AS THE SOUTH SEES IT

THE sessions of the closing day of the Southern Sociological Congress, held at Asheville, were on race relations and emphasized the newly developed problem of Negro migration. The sense of a number of speakers on the subject was that Negro migration was not a new thing; that probably no more than 250,000 Negroes have gone North in the last year (in spite of prevalent reports of much greater figures); that migration in large part is caused by high wages in the North, with ill treatment of the Negroes a varying factor in different parts of the South, and that the movement is to be stopped, not by repression, but by cooperation between colored and white people to ensure fair opportunity and treatment for the Negroes.

A number of colored speakers expressed the feeling of their people.

The present migration is simply an acceleration of the movement of the last thirty years, according to Prof. George E. Haines, of Fisk University, Nashville, Tenn.

The largest exodus has been from the places where there have been the poorest economic conditions and the greatest race friction. One Negro who moved North said to me, "There's been so much killing of Negroes around here I didn't know when my turn might come." The colored and white people must get together and talk frankly and act honestly in common.

Another colored speaker, the Rev. H. H. Proctor, of Atlanta, Ga., said:

This is the most unique movement in history. The colored race, known as the race which is led, has broken away from its leaders. This movement has all the earmarks of spontaneity. There are a number of contributing causes, but the basic fact is that Negroes are seeking men's wages and men's treatment. They have been restless at living under a double standard not only of conduct and character, one code for white and one for black, but also of wages, while unfortunately, expenses have increased on a single standard, that of the white man.

The colored man carries in his heart a deep and abiding sense of mistreatment. He resents segregation, disfranchisement, "Jim Crow-ism." He wants a sense of physical safety. He wants to be left alone, to be safe in a democratic community.

The highest good of the colored people lies right here in the South. We can stop this movement northward by giving them a square deal. If the leading white folks and the leading colored folks can get together, this can be done.

Most of the Negro migrants are unskilled, unmarried, unreliable young fellows, according to Judge Gilbert Stephenson, of Winston-Salem, N. C.

"Many of these young bucks already have criminal records and, going North, add to their bad reputations," he said. "They are the ones who cause riots. In spite of state

laws against agencies enticing Negroes out of the state, labor agents still are active. The lure of high wages is the chief cause of Negro immigration. In their desire to better conditions, many earnest people magnify the undesirability of the present situation of the Negroes.

"No cause for alarm should be found in the present accelerated migration. The South after a few years will profit by the adjustment to new labor conditions, while a distribution of the Negroes throughout the country would tend to equalize the race problem. The sociologist and the business man must combine forces to make sure that the Negro gets a man's chance in the South."

"The church can do much to promote good will between the races," said Bishop G. W. Clinton, a colored man, of Charlotte.

Among the causes of race friction are these: (1) Lack of understanding and of cooperation between the races; failure to take into counsel the man most concerned—the Negro. (2) Failure to recognize the status in life and the aspirations of the Negro. There is a new Negro, just as there is a new South. (3) A marked hesitancy on the part of the church to apply the only sure remedy as seen in the practical application of the gospel.

The church can: (1) Acquaint itself with the needs of people close at hand. The challenge of the remote must not blind us to the opportunities of the immediate. (2) Emphasize the spiritual worth of every man. (3) Call attention to the best side of the Negro, acquaint itself with the evidences of his progress, and act in harmony with this information. (4) Condemn unsparingly the barbarities which are committed upon Negroes and see that the sense of fair play prevails at all times in line with a definite program for the promotion of harmony.

"We must make up our minds that we are done with race prejudice," said W. D. Weatherford, traveling secretary of the Y. M. C. A. "The minute you make progress in the economics and schools of the Negroes you also make progress in home and church. A tremendous field for usefulness lies in teaching the Negroes better farming methods."

THE sudden death, August 5th, at Whitfield, N. H., of Hollis Burke Frissell, head of Hampton Institute, removes the outstanding leader in work for Negro education and development in the South. A review of Dr. Frissell's great social service will be published in an early issue.

LABOR UNREST IN THE SOUTHWEST

SAMUEL GOMPERS, in his capacity as president of the American Federation of Labor, brought to the President's attention last week the fact that the United Mine Workers of America deeply resent the deportation of eighty members of their union from Gallup, N. M. Frank Farrington, member of the international executive board of the mine workers, had come to Washington to lay all of the facts before the government. William Green, international secretary of the mine workers, had telegraphed to the President, August 1, that unless federal intervention should be given to protect the men in their re-

turn to the town from which they were driven he would favor a strike of the coal miners of the United States to bring about such protection. Farrington stated that he endorsed Green's proposal, and believed that the membership of the union throughout the country would approve it.

The President showed himself eager to learn all of the facts from the viewpoint of those making the protest. He was told that a copper company had purchased a coal mine at Gallup, and had proclaimed an "open shop," at the same time dismissing its union coal miners and evicting them from their homes. Tents were provided for them by the union. It was this tent colony which was raided, and all of the union men living there were put on cars and sent across the state line.

Washington dispatches to the metropolitan press, to the effect that the activities of the Industrial Workers of the World in the copper mining districts of Arizona, Utah and Montana, in the northern peninsula of Michigan and in the lumber camps and the farming regions of the Pacific slope, have been ascertained to be German-promoted and of a treasonable character, were not confirmed by a representative of the SURVEY at the offices of the Department of Justice, the Department of Labor or the American Federation of Labor and its constituent organizations. The officials of the American Federation of Labor, the mining department of the federation and the International Association of Machinists go so far as to claim that the cry of "I. W. W." has been raised by employers in order to stamp out attempts of union men to maintain their accustomed standard of living during the war. That this is at least in a measure true is the opinion expressed by an official of the Department of Labor.

Asked whether it were true, as alleged in press dispatches under date of August 1, that the government was in possession of a mass of evidence of seditious and treasonable activities, instigated apparently by German agents using German money, through the Industrial Workers of the World, Assistant Attorney General Wm. C. Fitts replied in the negative.

"If we had evidence of violation of federal law," he said, "we would instantly take steps to apprehend the violators of the law. We have not made arrests, and we will not make arrests until federal laws have been violated. Of course, we are keeping a close watch on persons who may be suspected of planning to commit such violations. If fires are set, or property is destroyed, or men are killed, within a state, those are matters covered by state law."

Emil Davison, general secretary-treasurer of the International Association of Machinists, which has taken part in scores of industrial disputes

throughout the country during the year, had this to say:

"Some of our own men have been shut out in Arizona," he said, "and of course the impression is created that these men belong to the I. W. W. and are somehow influenced by German schemes against the government. Every big employer who is trying to prevent the workers in his employ from getting better conditions at this time is yelling that he is the victim of German plots. We refuse to be fooled by that sort of sham. Nor are we to be sidetracked by the cry of 'disloyalty' when they import cheap Negro labor, or woman labor, to replace our men in shops where we ask for better conditions. This attempt to create a panic in the public mind over the name of the I. W. W. will fall flat."

James Lord, president of the mining department of the American Federation of Labor, said that the miners and other workers on strike in the West had legitimate grievances, and that "no false accusations as to loyalty would becloud that issue." He had heard of no deliberate destruction of property by strikers.

These views, in general, are endorsed by President Gompers and Secretary Morrison, of the American Federation of Labor, although they do not hesitate to confess a suspicion of the motives of, and a dislike for, the I. W. W. organizers in recruiting members among the lowest-paid or the most radical of the wage-workers in the West.

Evidence reaching the Department of Labor is to the effect that word-of-mouth rumor of I. W. W. "outrages" has created a considerable degree of panic in the Pacific Coast States, and that much property—especially timber and orchards and field crops of various kinds—is as a result being guarded by armed men against possible incendiaries. Evidence of actual crimes on the part of the I. W. W. members, who are chiefly of the itinerant laborer class, has not reached Washington. The department officials believe that just as some of the less cautious men in the regular labor movement were induced, early in the war, to use money coming from German sources, it may be that an occasional member of the I. W. W. may have been led to do the same. But the movement directed by the loose organization of the Industrial Workers of the World, as seen from the Department of Labor, is an expression primarily of social unrest, of revolt at low wages and hard conditions in industry and of impatience with the slow evolution of economic democracy through the organized labor movement.

The lynching of Frank Little, I. W. W. agitator, by six masked men at Butte, is looked upon by labor officials in Washington as a threat to the labor movement in general. As deportations of I. W. W. and A. F. of L. miners indiscriminately, at Bisbee, were followed by the deportation of a group composed wholly of A. F. of L. miners

from Gallup, so the murder of Little at Butte is looked upon as the possible forerunner of violence in other strike zones, in which leaders of the unions affiliated with the American Federation of Labor may be the victims.

On August 2 Secretary of Labor Wilson transmitted to the Governor of New Mexico a request that the men deported from Gallup be returned to their homes, and that they be protected against further interference with their liberty.

WHAT HAYWOOD SAYS OF THE I. W. W.

"THE I. W. W. will take care of its deported members now in Columbus, New Mexico. These men will go back to their homes if they have to shoulder arms and fight their way back." This was the statement of W. D. Haywood, secretary of the Industrial Workers of the World, made last week at his office in Chicago, to a representative of the SURVEY.

"From Bisbee alone," he said, "1,134 men have been deported. Most of them are citizens, 456 of them are heads of families, and many are owners of homes in Bisbee, having lived there for many years."

The strike of copper miners in Southern Arizona is a bona fide movement for better conditions, according to Haywood. He points out that members of the Mill, Mine and Smelter Workers' Union (the old Western Federation of Miners) are on strike as well as the I. W. W. Here are the demands:

1. Two men shall be employed on all piston and Leyner machines.
2. Two men to work together in all raises and stopes.
3. No blasting in raises, stopes or drifts during shifts.
4. Abolition of the contract and the bonus systems.
5. Abolition of the rustling card system.
6. Abolition of the sliding scale.
7. Representation in the control of the hospital.
8. No discrimination against members of any union.
9. A minimum wage of \$6 for all men working underground.
10. A minimum wage of \$5.50 for all men working on the surface.

Haywood denied that German influence or German money had anything to do with the present activities of his organization. "It's true," he said, "that we think there is only one fight in the world, and that is between capital and labor. It's true that we are not interested in nationalities. We will fight for German workers or French workers or Norwegian workers just as hard as we will for American workers. But do you think we want to see the Prussian military system prevail? How would we stand to gain anything from that?"

The I. W. W. leader intimated that

no outside influence was necessary. "We were on the job before war was declared," he said. It is the growing strength of the organization, according to Haywood, that makes the fight against it the more bitter. He claims that the holders of red cards include 50,000 harvest hands, 80 per cent of the timber workers of the Northwest, most of the migratory workers and "three times as many metal miners as there are in the Mill, Mine and Smelter Workers' Union."

It is because the employing interests fear its growth, Haywood declared, that they are bringing out the charge of German influence. It's a new weapon and a handy one, he intimated, but nevertheless merely another of the many "false and baseless charges" that have been made against the organization.

"Isn't it a fact," he was asked, "that Frank Little, the I. W. W. executive board member who was lynched in Butte last week, met his fate because he was believed to be unpatriotic at a time when patriotic feeling is naturally running high?"

"No," said Haywood. "Little was murdered because there is a strike in Butte, and he was helping to win it. They will try to make it appear that Little's remarks about the army were what led to his death, but it isn't so. It was the strike."

Fred H. Moore, the Los Angeles attorney who went to Bisbee recently to look after the interests of the I. W. W. there and who was forced by the citizens' committee to leave, has gone to Columbus, New Mexico. He expects to file claims for damages against the state of Arizona in behalf of each of the deported men who were loaded onto cattle cars and shipped off without food or water.

SITUATIONS WANTED

HEALTH WORKERS.—Lists of trained health officers, school medical inspectors, public health nurses, industrial hygienists, etc., furnished free of charge. AMERICAN PUBLIC HEALTH ASSOCIATION, HEALTH EMPLOYMENT BUREAU, 1039 Boylston St., Boston, Mass.

EXPERIENCED house-mother, with daughter school girl, desires position child-caring institution. Address 2552 SURVEY.

BY WOMAN—Constructive club worker. Jewish or non-sectarian. Address 2560, SURVEY.

WOMAN with experience in both social and editorial work desires editorial position. Address 2563, SURVEY.

LADY of several years' experience with unqualified references desires position as matron or housemother. Address 2567 SURVEY.

HELP WANTED

WANTED—Matron of small Preventorium on a farm near city of fifty thousand inhabitants. Must have had experience in group work with children. Address 2566 SURVEY.

WANTED—A social worker, who has had experience with immigrants and who understands immigrant problems, to direct Americanization work in Cincinnati. Address Frank P. Goodwin, Director of Social Centers and Night Schools, Denton Building, Cincinnati, Ohio.

WANTED—Superintendent for Jewish settlement. State age, previous education and training, salary expected. Address SIDNEY PRITZ, 101 Union Trust Building, Cincinnati, Ohio.

SEVERAL men, young or middle-aged, as boys' supervisors. State experience if any. Fine chance for the right men. Apply Superintendent, Hebrew Orphans Home, 12th Street and Green Lane, Philadelphia.

HOME SCHOOL SPARKILL, N. Y.

Mr. and Mrs. John Collier announce the 2nd year of the Home School, Sparkill, N. Y. Boarding School for small group of boys and girls between the ages of four and nine. Sleeping porches, open air school rooms. Work and play along modern educational lines.

GEORGE SCHOOL

A HOME SCHOOL IN THE COUNTRY
FOR BOYS AND GIRLS.

Careful supervision. Graduates succeed in college. Special courses. Athletics. 227 acres of woods and open country.

A Quaker school which teaches the high patriotism of good citizenship, the danger of militarism, the virtue of the democratic ideal of peaceful progress by law and order.

GEORGE A. WALTON, Principal
Box 293 GEORGE SCHOOL, PA.

SOCIAL FORCES IN WAR TIME

(Continued from page 425)

Special suggestions for increasing their usefulness in the present emergency are given to certain groups of institutions, and all students are reminded that it may well be their highest patriotic duty just now to stay in school and make the most of their opportunities.

All laboratories and manual-training shops in high schools should be run at their full capacity. In many of the shops work should be done which will have immediate value for the national defense.

In all high schools in which domestic science is taught, large units of time should be given in the summer and fall to sewing for the Red Cross and for local charities.

Classes for grown-up women should be formed in which practical instruction can be given, largely by lecture and demonstration, in the conservation and economic use of food.

For all boys and girls who can not attend the day sessions of the high schools, continuation classes should be formed. All cities should maintain evening schools for adult men and women.

The normal schools should double their energies and use all their funds in the most economic way for the work of preparing teachers.

In agricultural colleges special intensive courses should be given to prepare teachers, directors, and supervisors of agriculture and practical farm superintendents.

The number of students in colleges, universities, and technical schools should increase rather than diminish.

All students should be made to understand that it is their duty to give to their country and to the world the best and fullest possible measure of service, and that both will need more than they will get of that high type of service which only men and women of the best education and training can give. Patriotism and the desire to serve humanity may require of these young men and women the exercise of that very high type of self-restraint that will keep them to their tasks of preparation until the time comes when they can render service which can not be rendered by others.

No college, university, or technical school that can avoid it should permit its faculty or student body to be scattered or its energies to be dissipated. All should redouble their energies and concentrate them on those things that will be of most service during the progress of the war and which will prepare their students for the most effective service of the country and of the world when the war is over.

These are words of wisdom—of true statesmanship and of the best social economy. If we can realize, as England did not, that education, to quote Arnold Bennett, "is the very last thing that we ought to economize in," we shall spare ourselves some of the unnecessary calamities of war.

A SOLDIER'S MEMORIES IN PEACE AND WAR

By SIR GEORGE YOUNGHUSBAND

Net \$5.00

The *Boston Transcript*

in its issue of July 17th gives this book a three-column review headed "The Man Who Lived 'Arabian Nights.' An outpouring of tales wild, romantic and merry, by Sir George Younghusband, first white man in Tibet, about his escapades in the East." It then states that it is "most worthy of mention, not merely because Sir George has seen brisk and various service in many climes and conditions, but because he has the narration faculty allied to a genuine wit and an incorrigible love of adventure and sport. In this book he avoids heroics and such well worn themes as famous battles; his business is to embroider them with illustrations of men and motives. A remarkable all around book of good and racy stories."

RUSSIAN MEMORIES By MADAME OLGA NOVIKOFF

Net \$3.50

Boston Transcript says: "It is a sincere analysis of the relations between Russia and England as she has observed them during the last fifty years. And the personality shown in her writing is one of great intelligence and charm."

RUSSIAN COURT MEMOIRS 1914-16

Net \$5.00

The Argonaut says: "It is a work of real value for the study of what has been taking place during the past three years at Petrograd. The fact that it is authoritative does not in the least detract from its fascination and every page is full of interest."

A NATURALIST IN BORNEO

By ROBERT W. C. SHELFORD.

Net \$5.

Westminster Gazette says: "Do you want a legitimate distraction for an hour at a time? Then purchase this book and you will find it much more thrilling than any novel of adventure, for it is all adventures in the fairy land of Science and almost more incredible than any fairy romance conceived. Nevertheless it is packed with undiluted truth from the first page to the last. It is a work destined to become one of the classics of natural history to rank with books by Bates and Humboldt, Wallace and Fahre."

THE GOLDEN DAYS OF THE EARLY ENGLISH CHURCH

From the Arrival of Theodore to the Death of Bede. By SIR HENRY H. HOWORTH. 3 volumes. Illustrated. Net \$15.

The authority with which this book has been written has been acknowledged by the leading scholars.

CIVILIZED COMMERCIALISM

By ERNEST G. STEVENS.

Net \$1.25

An application of democracy to business. It outlines a scheme, sane, modern and just for eliminating oppression, czarism and cut-throat competition from business and yet of permitting the fullest useful growth and activity to business corporations of any size.

THE BOOK OF HOME NURSING

By FRANCES CAMPBELL

Net \$1.25

A practical guide for the Treatment of Sickness in the Home. A most invaluable book for all homes. Mrs. Campbell, herself a trained nurse, does not try to teach you to be a trained nurse but she does tell you what to do in an emergency and how to care for the sick in your household.

ON THE THRESHOLD OF THE UNSEEN

By SIR WILLIAM BARRETT. Ready about Aug. 5.

The *London Times* says: "A clear and temperate presentation of the case for scientific spiritualism. Essential to a proper understanding of psychical research either by those who want to believe or by those who want to disbelieve in actual communications from the departed."

CANADA THE SPELLBINDER

By LILIAN WHITING.

Net \$2.50

The Nation says: "Lilian Whiting's enthusiasm of spirit and glow of language are at their usual high level in 'Canada the Spellbinder.' One is carried from the great to the greater, from the bountiful to the more bountiful, from the beautiful to the more beautiful until one's power of appreciation are all but suffocated with the intoxicating draught."

STUDIES IN INSECT LIFE AND OTHER ESSAYS

By A. E. SHIPLEY.

Net \$3.50

Giving not only some delightful chapters on insects and war on the honey bee and the humble bee, on grouse disease and on the romance of the deep sea, but he gives also an account of Zoology as understood in Shakespeare's time, and of the revival of science in the seventeenth century.

AMERICA'S CASE AGAINST GERMANY

By LINDSAY ROGERS.

Net \$1.50

A precise and untechnical statement of the points at issue and a full explanation of the legal grounds of the American position. The legal part is only one part of our case against Germany, but it is a primary and indispensable one and should be understood by every intelligent citizen.

IDLE DAYS IN PATAGONIA

By W. H. HUDSON, author of *The Purple Land*. Net \$1.50

Review of Reviews says: "There is great literary charm in this series of delightful sketches. They have all the romantic flavor of a previous book, *Purple Land*, in combination with facts of natural history and observations dear to the nature-lover."

A STUDENT IN ARMS

By DONALD HANKEY.

Net \$1.50

The Argonaut—"The best the war has produced."
Bellman—"One of the most forceful and genuine books inspired by the world's conflict."
Baltimore Sun—"Bursting with things we all want to know."

Just Published, Second Series of Donald Hankey's "A Student in Arms." Net \$1.50

More of Hankey's beautiful work, with interesting details of the author's life.

HELEN OF FOUR GATES

Net \$1.50

The author of this extraordinary "first book" is referred to in England as one of the most remarkable writers of recent years. Thomas Hardy strongly commends the book.

New York Times—"Has brought a new note to current fiction, a note that excels in sheer emotional power, in beauty of tone, in imagination, any voice that is now telling stories to the English-speaking people."

The SURVEY publishes a CALENDAR OF CONFERENCES in its mid-monthly issue as a news service without charge to the organizations listed. Repeatedly, requests have come to us for more frequent announcements, especially in the month or two months preceding the date of meeting.

We are therefore making an experiment with this new advertising column—COMING MEETINGS.

Listings, fifty cents a line per month; four weekly insertions; copy unchanged throughout the month.

The free CALENDAR OF CONFERENCES merely lists the name, date, conference city and corresponding officer of the organization. More extended notices, giving the chief features on the program, may be included in the new column, Coming Meetings, at the rate stated.

The CALENDAR OF CONFERENCES will of course continue as in the past.

CURRENT PAMPHLETS

- CANADIAN PATRIOTIC FUND. By Paul U. Kellogg. With introduction by Ernest P. Bicknell of the Red Cross. First-hand account of case visiting and city organization of war relief for soldiers' families. Price 10 cents. Survey Associates.
- COMPLETE SET OF LAWS FOR THE WELFARE OF ALL MISSOURI CHILDREN, A. Prepared by the Missouri Children's Code Commission. Manley O. Hudson, sec'y, State University, Columbus, Mo.
- CRIME PREVENTION: THE STUDY OF CAUSES. By Dr. Thomas H. Haines, 1194 Oak street, Columbus, Ohio. Bulletin No. 5 of the Bureau of Juvenile Research.
- HART, SCHAFFNER & MARX LABOR AGREEMENT. By J. E. Williams, Sidney Hillman and Earl Dean Howard. Hart, Schaffner & Marx, Chicago.
- HOSPITAL AID FOR SCHOOL CHILDREN. Facilities and Procedure for Tonsil and Adenoid Operations in New York City Hospitals and Dispensaries. By J. H. Berkowitz, Bureau of Welfare of School Children, Association for Improving the condition of the Poor, 105 East 22 St., N. Y.
- INTEREST OF THE COMMUNITY IN CANCER. By Louis I. Dublin. Metropolitan Life Insurance Company, New York.
- LIVING WAGE BY LEGISLATION, A. The Oregon Experience. By Edwin V. O'Hara, chairman Industrial Welfare Commission. State Printing Department, Salem, Oregon.
- SOCIAL WORK AND THE WAR PAMPHLETS:
- No. 87 SOCIAL PROBLEMS OF THE WAR. A report by Prof. Edward T. Devine and Ernest P. Bicknell (10 cents).
- No. 88 WAR RELIEF IN CANADA. By Miss Helen R. Y. Reid, of the Canadian Patriotic Fund (12 cents).
- No. 89 PUBLIC HEALTH NURSING AND THE WAR. By Miss Mary E. Lent, Associate Secretary, National Association for Public Health Nursing (8 cents).
- No. 90 THE TREATMENT OF DISABLED SOLDIERS. By Mr. E. H. Scammell, Secretary of the Canadian Hospitals Commission (8 cents).
- No. 91 THE PUBLIC HEALTH IN WAR TIME. By Dr. C. E. A. Winslow, of Yale University (8 cents).
- No. 92 INFANT WELFARE IN WAR TIME. By Dr. Grace L. Meigs, of the Federal Children's Bureau (8 cents).
- No. 93 MOBILIZATION OF THE BRAIN POWER OF THE NATION. By Dr. Stewart Patch, of Princeton University (8 cents).
- No. 94 ECONOMY IN DIET. By Prof. Graham Lusk, of Cornell University (12 cents).
- No. 95 PUBLIC HEALTH AS A SOCIAL MOVEMENT. By Prof. Irving Fisher, of Yale University (12 cents).
- Order by number. Send remittance with order. Address National Conference of Social Work, 315 Plymouth Court, Chicago.
- SWORD OF DAMOCLES, THE. By William C. Rucker, Assistant Surgeon General, United States Public Health Service. 10 cents from American Social Hygiene Association, 105 West 40 St., N. Y.

The SURVEY lists, free, as soon as received at its editorial offices, current pamphlets brought out by social organizations and public agencies. Evidence reaches us repeatedly that this column is one of the most widely read in the SURVEY. Secretaries of national agencies have checked up responses from people all over the country due to a single listing—the very people they wanted to reach.

The free "Pamphlets Received" column will be continued. This new column offers an opportunity for consecutive advertising of new pamphlets—or of old pamphlets which have an ever-present serviceability.

Listings fifty cents a line per month, four weekly insertions, copy unchanged throughout the month.

HOLLIS BURKE FRISSELL
1851-1917

Dr. Frissell had been principal of Hampton Institute for nearly twenty-five years at the time of his death on August 5. The simple funeral services at the Institute Memorial Church and in the small school cemetery, on August 9, brought together hundreds upon hundreds of thoughtful white and colored people from the lower peninsula of Virginia to pay tribute to one of America's leading educators. Robert R. Moton, former commandant at Hampton and now principal of Tuskegee Institute, and Thomas Jesse Jones, of the federal Bureau of Education, formerly associate chaplain at Hampton, were among those who spoke. The whole Hampton student body sang with rare feeling two of the Negro religious folksongs which were dear to Dr. Frissell's heart—Swing Low Sweet Chariot, and My Lord What a Morning.

When the Soldiers Come to Town

By *Elwood Street*

OF THE SURVEY STAFF

"I'M GOING to buy a pistol, sir. For twelve years I've lived in this town and never felt the need to protect my two women-folks. What do you suppose will happen when 40,000 virile, red-blooded young men come here to train for the army and find the segregated district wiped out? I know; and I'm going to buy that pistol, sir, and do it now!"

His blue eyes blazed, the veins stood out on his aristocratic forehead, and he thumped the table to emphasize his feelings. He was a gentleman of the old school, of the old South, of old South Carolina. Outside the window, Main street in Columbia, South Carolina, slept in the sun of high noon in late July.

The apprehensive gentleman represents one of the many shades of opinion which are to be found in cities near which American soldiers are to be trained and in which requirements of the War and Navy Departments regarding the elimination of vice are to be enforced. Because many American cities will undergo this same experience, because practically every home in the land will have loved ones in this new army, it has seemed worth while to examine conditions in three typical cities, to gauge public opinion there, and to ascertain what modifications in the existing institutions of these communities are planned to meet the leisure-time needs of soldiers on leave. No mention will be made of plans for recreation within camps.

The cities briefly studied are Charleston, Columbia and Spartanburg, all in South Carolina. Charleston already has about 4,000 sailors and a varying number of soldiers to care for, and expects 5,000 more sailors. Columbia expects 40,000 men by October 1. Spartanburg expects the New York National Guard, 40,000 strong, by September 1. These facts determine partly the state of social preparedness found in these cities.

Charleston, with 65,000 people, one-third to two-fifths white, is over two hundred years old, wise in the ways of a world which has changed, strongly entrenched in precedent which has little changed since the Civil war. It boasts more "charities" than any city of the size in the country. Columbia, with 40,000 people, one-half white, is 125 years old, the state capital, with aspirations toward business and industrial prom-

inence, well organized from a social service standpoint. Spartanburg, with 26,000 people, three-quarters white, eighty years old, brisk, cultured, in the heart of a prosperous cotton-milling and agricultural region, has as yet felt few social problems. These facts determine in part the cities' approach to the question of vice and other social problems related to the soldiers' coming.

Each of these cities expects to have its normal adult white male population increased from three to ten times by the men in training. At Spartanburg, with its approximately 20,000 white population, 40,000 soldiers are expected. The soldiers probably each will get one night of leave a week. Spartanburg authorities have been told to expect from 5,000 to 10,000 men every afternoon and evening. Spartanburg merchants are oiling up their cash registers. Spartanburg has invested about \$200,000 in land and waterworks for the camp site four miles out of town, in the expectation that dividends will be prompt and ample, when New York troops, surely the prize of all the troops from the spending point of view, arrive. Spartanburg is wondering just what East Main street will look like with 10,000 men all industriously spending money at one time—and what those men will do when their money is spent or the possibilities of novelty in spending are exhausted. Charleston and Columbia are wondering, too.

All three cities have in varying degree the Negro problem, which to the South is the greatest social problem of all, never out of sight.

All three cities are dry—for South Carolina is dry, really and truly dry. "Blind tigers," but recently visible, cannot even be smelled, as a result of state and federal enactment and vigorous enforcement by city, state and federal authorities. The only way one can get a drink is through getting permission of the probate judge to import one quart a month as medicine. Certainly, our soldiers will have no temptation to alcoholic intemperance.

The question of commercialized vice is much more serious. South Carolina has no state institution to which to send women offenders. The maximum penalty which may be imposed upon a prostitute is that for vagrancy, \$100 fine and thirty days in jail. Competent authorities feel that the fine merely forces the woman to earn money in the only way she has

available. The imprisonment merely gives her a chance to rest up, get necessary medical attention, and then go on her way. South Carolina has no immediate prospect of getting a women's reformatory, because the next social legislation is that, already half-accomplished, for a state institution for the feeble-minded, which seems even more fundamental.

Charleston openly has a red light district. It runs directly from King street, the main shopping street which is most frequented by soldiers and sailors on leave, along Clifford, Beresford and Princess streets, thence into West, Archdale and Mazyck streets. The district is open and unashamed. On one afternoon in late July, Clifford street so resounded with ribaldry flung from open window to open window by out-leaning women that shoppers on King street stopped and looked.

First Steps in Reform

CHARLESTON quite generally believes in a segregated vice district. It is held to be a protection to the respectable women of the city—the wives and sisters and sweethearts and daughters. Not only that, but Charleston has been so lax in the past that prostitutes have solicited trade in Broad and other business streets. They have had houses and apartments all over the city. Secretary Daniels' recent order to clean up has been obeyed by the police, closing all the places not in the segregated district, pretty well preventing street solicitation, and imposing a rule on the segregated district that none of the inmates shall leave after 7:30 o'clock at night. Police-men have orders to arrest any man in uniform who tries to enter a house of ill-fame. Charleston believes that after it gets its commercialized vice localized, it can gradually reduce it. Whether that will be accomplished is still to be seen.

Active steps have, however, been taken to care for the leisure time of men on leave. The Young Men's Christian Association has opened its well-equipped building to men in uniform, increased its facilities, and done everything possible to make the men use its equipment.

The women of the city, following a mass meeting called by the Civic Club, have organized a unique community club. An old four-story residence was equipped with all the appurtenances of a home, except bedroom furniture. Books, easy chairs, pictures, piano, phonographs with a multiplicity of records, typewriters (unceasingly active), games, dining room furniture (for the serving of refreshments at nominal prices), a parrot, a mocking bird, and a delightful matron with a son in the army, combine to make the place as home-like as possible. Two naval recruits on their first visit retired, apologizing profusely to the matron, Mrs. Brinsden, because they had, as they thought, entered a private home instead of the Community Club for which they were looking. Once every two weeks parties with town girls, dancing, and refreshment, are held at the club. Proper chaperonage makes the young folks at their ease. Aside from these parties, women, excepting the matron, are not allowed in the building. Even the women who conduct the club are refused admittance there except on definite business. It is the boys' place.

Expenses of the Community Club are paid partly by members (men and women of Charleston) and partly by contributions of \$2 a month, which are being asked of every organization in Charleston.

Recreation on a smaller scale is provided for soldiers and sailors by the Circle Congregational Church, which has turned over its Sunday school building (once the church edifice). The Ladies' Home Missionary Society provides relays of

women members to supervise activities. Games, books and music are provided. Once a week, a social evening is held, with motion pictures and refreshments.

A war problem akin to that of the soldiers and sailors, which Charleston has experienced, is that of the women who have come to work at the clothing factory in the navy yard. About 350 of the 700 women employed are from out of town, largely from the country districts, never before in a large city. They are earning more money than they ever had in their lives before—\$15 to \$25 a week. A definite social question still to be answered is found in the fact that these women work ten hours a shift, one shift by day and one shift by night, in buildings which have no fans, no screens and no rest rooms. The more immediate question has been that of housing them adequately and safely. The commandant of the navy yard and the officers of the Young Women's Christian Association have worked together well in this respect. Each woman employed at the navy yard is turned over to the Y. W. C. A., which places her in a good family home in the city. The Confederate College for Women has been used as a dormitory for forty girls working during the summer vacation period, and will be replaced when college opens this fall by a house of about the same capacity, now being remodeled. A recreation house has been equipped on Sullivan's Island, a pleasure resort near Charleston. There the women may meet men friends under chaperonage.

In these ways, Charleston is making a beginning of caring for those brought to it by war.

In Columbia the situation is quite different.

The segregated district in Gates street long has been an inseparable feature of the state capital. In 1898, the Spanish American war volunteers found 115 prostitutes established in town. In 1917, the world war found precisely the same number, in precisely the same place—as a recent census revealed. The soldiers of the world war who train five miles out of Columbia will, presumably, find none of them, for on August 1 Columbia's segregated district ceased to exist, legally. On that day an ordinance passed by the city council July 24 went into effect. That ordinance provided that no one should live at or frequent any house employed for immoral purposes, or rent a house personally or through an agent for such purpose, and if the house is so used and the owner allows such action, he shall be guilty under the law. Proprietors of a hotel so used are guilty, if they have not taken proper precautions. Any citizen may make a complaint, which shall be put on public record, and which must be investigated and reported on by the police in five days. Thus, the woman and the man are both subject to penalty, and the police are publicly responsible for enforcement.

Prodded by the Government

THIS ordinance was passed after a meeting of citizens called by Governor Manning. Action was hastened by letters from Secretary of War Baker. Action was made complete by the conviction of business men that the \$50,000 they had put into a camp site would avail them nothing unless the town were cleared up. Many citizens say that now this move has been forced by war, peace will never bring back old conditions. The gentleman who is going to buy the pistol to protect his women is typical of the opposition, but his group has been defeated by the popular sentiment of Columbia.

What effect the new ordinance will have is not yet certain. Troops will not be in training at Columbia for two months, and the elimination of the district probably will be gradual.

A group of church women have twice visited all the twenty-

one houses in the district, offering help of any sort to the women who want to start life over again. Many of the women have said they were going to leave town. Seven announced that they would start boarding houses! Only two asked for help to start anew.

While the segregated district unquestionably will be eliminated, the police expect to keep a close watch on the "boarding houses" which may be started. They expect certainly to prevent much of an influx of women from outside when the army comes.

With the army two months away, Columbia has not done much yet for its recreation. The only plans completely developed are those of the Y. M. C. A., which will be much the same as in Charleston.

In Spartanburg conditions are entirely different from either Charleston or Columbia. Spartanburg never has had a tenderloin and does not intend to. Mayor John Floyd is eager in rooting out the least suspicion of vice. Spartanburg is and will be as clean a town as can well be found. It never has felt the need of a vice district, doesn't expect to feel it, and isn't buying pistols to protect its women.

Spartanburg faces immediately, however, a bigger soldier-reception problem than Charleston. It is busy on that problem.

The Y. M. C. A., of course, is planning its usual splendid work adapted to wartime needs.

The Y. W. C. A., not yet organized, expects to form a branch to care for the needs of the many young women who will be called in from the countryside to work in the stores.

The Red Cross will make a "squaw camp" out of the old Magnolia street school, where wives and sweethearts and relatives (female) can have dormitory accommodations if necessary. In the building will be a bureau to connect visitors with those they want to see.

The Chamber of Commerce will conduct a clearing house for lodgings and all conceivable services. The Episcopal parish house will be used as a tea room and rest room. A bandstand will be erected on Morgan Square, and regimental band concerts will be held frequently. The auditorium of Congress College for Women will be used for entertainments.

Spartanburg, in brief, expects the new army to be made up of normal, clean young men, neither better nor worse than the average. It does not fear their "virility." It rather suspects they will enjoy the same things the average young man out of uniform enjoys, and it intends to provide those things just as far as possible.

It remains, of course, to be seen whether cynical Charleston or dubious Columbia or hopeful Spartanburg is right. Much depends on the cooperation of the military authorities. South Carolina's pessimists point to their many mulattoes and say Sherman's men on their triumphant march did their best to "whiten the dark belt." The pessimists quote with remarkable consistency stories of conditions on the Mexican border last year which would indicate an interest of military authorities there in efficiency rather than morality. The optimists point to the wholesome faces of the sailors on the streets of Charleston and of the National Guardsmen mobilized in all three cities.

When the Breadwinner Goes to War

The Administration Bill, Drafted by Judge Mack for Insurance, Compensation and Family Allowances

APPROVED in advance by President Wilson, and urgently recommended by Secretary of the Treasury McAdoo, the bill drafted by Judge Julian W. Mack, to provide life insurance and compensation for men killed, injured or made sick in the federal service, and allowances for their families, was introduced in the House and Senate on August 10. Representative Alexander, of Missouri, chairman of the Committee on Merchant Marine and Fisheries, is its sponsor in the House, and Senator Simmons, chairman of the Senate Committee on Finance, will pilot it through the upper branch of Congress.

The bill takes the form of an amendment to the act which established the existing Bureau of War Risk Insurance in the Treasury Department. It applies to enlisted men of all ranks in all branches of the military and naval forces and to the women of the army and navy nursing service. It provides in detail just what the government will do for dependent families of any size and degree of dependent kinship (covering, for instance, a step-child or a feeble-minded grandfather) while the man is in service; what it will do for him in case of injury ("the term 'injury' includes disease," is among the progressive definitions in the bill); and as to how the insurance against death may be taken at such low rates that even privates can carry the maximum policy of \$10,000. Free hospital treatment and appliances for mutilated men are provided for, and the government may require vocational training and re-education.

"Its main purpose," says the secretary,

is to grant a reasonable government indemnity against the losses and risks incurred in the discharge of a patriotic duty and in the performance of extraordinarily hazardous service to which the government has called and forced the citizens. It provides not only for the man, but for his family.

It aims to accomplish these ends by granting a reasonable measure of indemnity against the risk of loss of support of the bread-winner, or of life and limb, or of present insurability at ordinary rates.

As to family allowances, the measure proposes that allotments from the soldier's pay shall be compulsory, unless waived or exempted under regulations, for a wife or children up to 18 years of age, or if the dependents are "incapable of pursuing a substantially gainful occupation because of mental or physical infirmities." Allotments of the soldier's pay for other dependents are to be voluntary. Compulsory allotment from his pay will have a minimum of \$15 a month and a maximum of one-half pay. The allowance given the family from government funds ranges from \$5 to \$50, according to the size of the family and, except as to wife and children, the actual needs of the dependents and the amount usually contributed by the soldier to their support. No allowance will be made to these kindred by the government unless voluntary allowance is made by the soldier, in which case a minimum of \$5 and a maximum of one-seventh pay is a condition to the government payment.

In a letter transmitting the bill to the President, Mr. McAdoo points out the justice of liberal treatment of men

forced into the service under conscription and the benefit, not only to dependents, but to the morale of the fighting force, in having a man's mind at ease regarding his family while he is away and in case he is wounded or killed. These "provisions for the men and their families should not be offered as gratuities or pensions and they should not be deferred until the end of the war . . . not be left, as in previous wars, to the uncertain charity of the communities in which they live."

This illustration of the operation of the plan is given by Mr. McAdoo:

A private gets \$33 a month for service abroad. If he has a wife and two children he must allot to them at least \$15 out of his pay. The government supplements this by giving the family an allowance of \$32.50. This family's minimum income, therefore, would be \$47.50. The father can allot as much more as he pleases. If there is another child, the government will allow \$5 additional. If that man should have a mother or father actually dependent upon him, and to whom he has been accustomed to contribute, say \$15 a month, he can secure an allotment of \$10 a month from the government for the parent by allotting \$5 more of his pay. Thus, the private with a wife, three children and a mother actually dependent upon him, by giving \$20 out of his \$33 a month, would get from the government for his family \$47.50 a month, giving the family an income of \$67.50, and still leave the man \$13 per month for spending money. If there are more children, or if there is also a dependent father, the government would give up to \$50 in all, over and above the man's own allotment.

The family allowances, payable monthly, are as follows:

Class A. In the case of a man to his wife (including a former wife divorced) and to his child or children:

- (a) If there be a wife but no child, \$15.
- (b) If there be a wife and one child, \$25.
- (c) If there be a wife and two children, with \$5 per month additional for each child, \$32.50.
- (d) If there be no wife, but one child, \$5.
- (e) If there be no wife, but two children, \$12.50.
- (f) If there be no wife, but three children, \$20.
- (g) If there be no wife, but four children, with \$5 per month additional for each additional child, \$30.

Class B provides \$10 for one parent, \$20 for two parents, \$5 for each grandchild, brother, sister and additional parent. In the case of a woman with dependent children the amounts are as in d, e, f and g above.

Included among "children" for the purposes of the act are stepchildren living in the household, children legally adopted and illegitimate children, the last, "as to the father, only if acknowledged by him, or if he has been judicially ordered or decreed to contribute to such child's support." A "parent" includes grandparents and step-parents of either man or wife, while "brother" and "sister" include those "of the half blood as well as of the whole blood, stepbrothers and stepsisters and brothers and sisters through adoption."

Finally, as to these dependent families, a "wife" is thus defined:

That for the purpose of this Act marriage shall be conclusively presumed, in the absence of proof that there is a legal spouse living, if the man and woman have lived together in the openly acknowledged relation of husband and wife during the two years immediately preceding the date of the declaration of war, or the date of enlistment or of entrance into or employment in active service in the military or naval forces of the United States if subsequent to such declaration, or during the two years immediately preceding the man's death or the beginning of the disability.

The compensation section of the bill provides that "if death results from injury" the payments shall be the following percentages of his army pay:

- (a) For a widow alone, 25 per cent, but not less than \$30; (b) for a widow and one child, 35 per cent, but not less than \$40; (c) for a widow and two children, 40 per cent, but not less than \$50, with 5 per cent additional, but not less than \$5, for each additional child up to two; (d) if there be no widow, then for one child, 20 per cent, but not less than \$15; (e) for two children, 30 per cent, but not less than \$25; (f) for three children, 40 per cent, but not less

than \$35, with 5 per cent additional, but not less than \$10, for each additional child up to two; (g) for a widowed mother, 20 per cent, but not less than \$25; the maximum monthly compensation for death shall be \$200.

For total disability from injury ("so as to make it impracticable for the injured person to pursue any gainful occupation") the compensation will be the following percentages of a man's pay:

- (a) If he has neither wife nor child living, 40 per cent, but not less than \$40; (b) if he has a wife, but no child living, 50 per cent, but not less than \$55; (c) if he has a wife and one child living, 55 per cent, but not less than \$65; (d) if he has a wife and two or more children living, 60 per cent, but not less than \$75; (e) if he has no wife, but one child living, 50 per cent, but not less than \$50, with 5 per cent additional, but not less than \$10, for each additional child up to two; (f) if he has a widowed mother substantially dependent on him for support, then in addition to the above, 10 per cent, but not less than \$10; \$20 additional for a helpless person in constant need of nurse or attendant; the maximum monthly compensation to be \$200.

No attempt is made in this measure to work out the details of means and methods of rehabilitation and re-education of the injured men, but the bill establishes two principles:

1. The man's obligations to avail himself of such opportunities as the government may provide or cause to be provided, under penalty of loss of compensation during any period of unreasonable refusal.
2. A man's right to disability compensation regardless of his individual economic recuperation, this being considered by the framers of the bill as "an essential spur to the full development of his potentialities."

Compensation for death continues until the children are 18 years of age, and until two years after the remarriage of the widow. The amount of the grant is to be determined by the family status at the time of each monthly payment. This, in order that the young man returning home in a maimed condition may have the adequate care of wife and children.

When death or disability occurs after discharge or resignation, compensation for such death or disability resulting from injury suffered or disease contracted in the course of service will still be paid, if proper certification of injury is made within one year after resignation or discharge.

On the administrative side, the bill provides for a division of the War Risk Bureau into two sections—one on Marine and Seamen's Insurance and the other on Military and Naval Insurance. Each division is to have a commissioner under the direction of the bureau.

The most notable and novel provision in Judge Mack's bill is the government insurance of soldiers and sailors. The committee of insurance men, representing the great private insurance companies and societies, reported adversely upon the idea of governmental insurance "over and above the compensation on the ground that the other provisions were liberal enough." Judge Mack had the support, however, of both the treasury officials and the labor committee of the Council of National Defense, as well as Assistant Secretary of Commerce Sweet and Insurance Commissioner Nesbit of the District of Columbia, who first suggested it. The bill will enable any man in the service to buy from \$1,000 to \$10,000 of insurance at a premium rate for the war period estimated at from \$7 to \$8 per \$1,000. The Insurance Committee objected that this was discriminatory against the poor man, and suggested as a substitute that the government pay \$1,000, over and above any other compensation, in each case of death during service or within five years after discharge from the service, to such beneficiary as the man might name.

Secretary McAdoo vigorously defends the insurance pro-

posal. It was drafted by Judge Mack after a study of the situation and the practice here and abroad. The bill, as a whole, had the advice and help of Captain S. H. Wolfe, of the War Department, an actuary; Assistant Secretary Edwin F. Sweet, of the Department of Commerce; Major Henry Leonard, of the Navy Department; Julia C. Lathrop, of the Department of Labor, and an advisory committee, including P. Tecumseh Sherman, J. W. Sullivan, Frank Whiting, F. Spencer Baldwin and D. L. Cease, with aid from V. Everit Macy, A. Parker Nevin and Lee K. Frankel, of the Executive Committee of the Committee on Labor, and it was put in shape by the Legislative Drafting Bureau.

As a means of promoting the purchase of government insurance, the bill prescribes that the War and Navy Departments may, by regulation, compel men who do not allot one-half of their pay to deposit with the government the difference between their allotment and one-half their pay, these deposits to bear 4 per cent interest, compounded semi-annually. This compulsory impounding of a part of the pay of the soldier is expected to result in his allotting a reasonable sum to the payment of insurance premiums.

"The risk of non-insurability at ordinary rates," says Secretary McAdoo,

is indemnified against by the issuance of government insurance, covering total disability and death, to officers, men and army nurses while in active service as part of the military or naval forces.

The excess cost due to the increased mortality and disability risk should clearly be borne by the government. The cost of administering the insurance bureau for the benefit of the fighting men is also a proper governmental charge. As the government will not have the other expenses incident to insurance, the premium rates to be charged by it are based upon the mortality experience tables of peace times without "loading." "Loading" comprises overhead charges, commissions to agents, advertising etc., and is a large item in the premium charges of private companies.

The cheapest form of insurance, costing during the war on an average \$8 per \$1,000 of insurance and thus bringing even the maximum of \$10,000 insurance within the reach of practically every private is provided for. After the war the insurance may be converted into other forms with earlier maturity, the premiums to be based, however, on the same mortality tables and without "loading." All insurance is to be payable in installments, to be non-assignable and free from the claims of creditors either of the insured or of the beneficiary. It is to be limited to wife, children, and other specified kindred. It must be applied for within 120 days after the terms are promulgated or subsequent enlistment or entrance into the service. For those who are totally disabled or die before they have had an opportunity to insure within the prescribed period of 120 days, insurance in the sum of \$5,000 is deemed to have been applied for and granted.

Through the insurance the opportunity is given to every man to gain greater protection for himself and for his family than the government itself voluntarily gives in case of total disability or death resulting from injuries or disease contracted in the service.

But it ought also to check any future attempts at service pension

legislation by enabling a man now to provide against impairment through old age, total disability or death resulting from other causes and to give all this protection to those kindred who may be dependent upon him and who do not share in the government compensation. Under the present laws monthly service pensions range from \$12 to \$30 for a man, and \$8 for the widow and \$2 for a child.

The bureau is further empowered to give information to the men and to act for them in respect to their outstanding insurance. In this way many existing policies that might lapse may be saved by prompt payment of premiums out of the man's deposit.

Mr. McAdoo estimates that "if the bill is promptly enacted into law, the total expenditures for the first and second years will be as follows":

	First Year	Second Year
Family allowances.....	\$141,000,000	\$190,000,000
Death indemnities.....	3,700,000	22,000,000
Compensation for total disability.....	5,250,000	35,000,000
Compensation for partial disability....	3,200,000	21,000,000
Insurance against death and disability	23,000,000	112,500,000
Total.....	\$176,150,000	\$380,500,000

Discussing the suggestion that the cost of this system is too great, Mr. McAdoo says:

Personally I have no patience with such a suggestion; I confess that I have only compassion for it. If under this measure the annual cost of doing justice to our fighting men and their dependents should amount to five, six or seven hundred million dollars per annum at the crest of the load, it is an insignificant sum as compared with what these men do for their country and for the world. At this time we are contemplating expenditures during the fiscal year 1918 of more than ten billion dollars for the prosecution of the war—for the creation of armies and death-dealing instruments to be used in destroying enough human life to restore peace and justice in the world. Shall we hesitate to expend seven hundred million dollars more per annum if need be—only about 6 per cent of the amount we propose to expend for purposes of the war—for the protection of the widows and orphans, the dependent and the injured, who, after all, make the greatest sacrifices of any part of our people for the safety, security and honor of our country?

Furthermore, it must be borne in mind that the government will not escape these expenditures if this plan of compensation and insurance should be rejected, for the pension system would then be resorted to and the cost would likely exceed that of the proposed plan. At the same time the pension system would not provide the same benefits nor cover the subject in the same comprehensive, humane and equitable way. No provision is made in our pension laws for family allowances while the men are at the front nor for rehabilitation, life insurance, etc., etc. I earnestly recommend enactment into law of the proposed measure.

But even if the bill should become law as it stands, Mr. McAdoo declares that

it is clearly recognized that the government can offer but the minimum protection based on general averages throughout the country and that in many states and large cities especially supplemental grants will be required. State and municipal legislation will be expected to meet this need.

President Wilson wrote Mr. McAdoo in reply:

I have examined the enclosed papers very carefully and take pleasure in returning them with my entire approval.

COMRADES

By Paul Lyman Benjamin

I SAW a man who trudged along a road,
 Footsore and weary with the soil of it,
 And well-nigh spent with all the toil of it.
 With sagging knees that wobbled as he
 strode,
 He whipped his flagging spirits with a goad
 Of will which drove him through the broil
 of it,
 To do his bit through all the toil of it,
 To do his bit beneath his irksome load.

But one there came with joy a part of him,
 A merry lad, who whistled, blithe and gay,
 Who whistled clear with all the art of him,
 And called, "I'll help you with your load
 today.
 I'll help you"; oh, the hungry heart of him
 Who heard that comrade's voice along the
 way.

THE FIRST OBLIGATION

YOUNG men of military age and normal physique who are social reformers by instinct and conviction will ordinarily find their best occupation at the present time in military service. Where the armies and navies of the nations are fighting for democracy and for the maintenance of the fabric of international law, there rather than in relief work, or in other civilian occupations, should social workers and students of social problems take their place shoulder to shoulder with the elect of every other calling. And where these able-bodied, fighting men are in the body, there in the spirit should be the rest of us who are not young enough or strong enough to be acceptable.

The nation demands, and rightly demands, the unqualified moral support of all its citizens—male and female, qualified or not qualified for military service. The basis of this demand is not patriotism in general, or militarism in any degree, but the very justice of the national cause, the supreme importance of the issues at stake. Truth needs now not apologists, but defenders. Humanity needs not lip confessors, but champions. Civilization needs not expounders, but exponents. Internationalism needs practical builders who know the precise lay of the national foundations. The peacemakers who shall be called the children of God are none other than the stern, unsentimental, stout-hearted fighting men who now strive with might and main to build a lasting international peace, who are the exponents of civilization where it is threatened, the champions of humanity, the defenders of truth.

These are the great social forces of war time: faith in the righteousness and justice of the national purpose; reliance on the moral support of the whole body of the people; voluntary suppression of captious criticism; and strenuous, unified support through all legitimate channels of those who in the fighting forces or in the government are carrying the burden of responsibility. Official and voluntary social agencies, educational and philanthropic institutions, have a conspicuous part to play in securing this unity of action and unanimity of support.

The conscientious objectors and those who clamor for peace without regard to the purposes of the war and whether they have been attained need not be judged harshly; but they are to be pitied that in the greatest crisis of all history they have failed. The nation needs their moral support and they have been unable to respond. Issues more profound than those of the Reformation or the French Revolution have left them cold. They have had to make nice calculations as to how far they can go in opposition to the national will and still keep out of jail. They are deserters where they might have been partakers in the national life at one of the supreme moments. They are exerting a divisive, paralyzing influence, as far as their influence goes, instead of a strengthening, unifying and invigorating force. The grievance against them is not so much any positive harm they will do, as that they are a burden to carry, a negative instead of an affirmative element in its long struggle for a lasting and desirable peace. In order that we may live peacefully hereafter with Germans, the first consideration is to win this war against the military autocracy of Germany. To win this war will not of itself overthrow Prussian militarism. That can be done only in Germany itself. But defeat in the war will make the task of those Germans who desire liberty and international peace based on law and mutual good will infinitely easier. Internationalists and social reformers belong above all others in the fighting ranks of America.

War has its own dangers physical and social, both in defeat

SOCIAL FORCE

and in victory. Against those dangers we shall need to create our defenses and safeguards and we shall have to do this as we go along. About the least useful of all people, however, in the defense against such dangers will be those who stand aloof from the emotions and do not share affirmatively in the national undertaking. The first qualification for preserving the ideals of democracy at home in the present crisis is to appreciate its deadly peril in the world at large.

A PERMANENT NATIONAL REGISTRY

THE exigencies of war have already made us acutely conscious of some of the defects in our social organization. One of these is the almost oriental indifference we show about the human units of our population. Once in ten years we count them, to be sure, and we began to do this before the European nations generally had adopted the plan of a periodical census. That is as much as we do, however, as a nation. Between times, if we happen to want to know what the population is—as we frequently do—we have no recourse but to estimates.

Estimates we call them when we want to believe in them, but what with immigration, migration north and east and west and to cities, the mobility of labor generally, and variations in the rate of natural increase and decrease by birth and death, we know perfectly well that they are nothing but guesses, no matter how laborious the calculations we perform to arrive at them. When it is a question merely of the total population of the whole country, the estimates prove to be close to the facts, but for a single city or state, especially if sub-divisions of sex and age are attempted, they are disappointing.

Some states and some cities, more curious about themselves than the rest of the nation, make a count of their own between the federal census years, but it is generally found that estimates based on these local counts are wilder guesses than those which depend on the federal censuses alone.

When Congress decided to raise two armies of half a million each, from the male population "between the ages of twenty-one and thirty, both inclusive," Congress knew that we had more than a million men of that age, and could even count with confidence on there being something like ten million, as the Census Bureau estimated. Where these young men lived, however, how many of them were unnaturalized foreigners, how many were "alien enemies," what occupations they were in, how many of them were proper subjects for exemption within the intention of the draft law—such vital questions as these could be answered only by conjecture.

On one of these points, the first and simplest, the distribution of the men of draft age over the country, estimates were worked out by the Census Bureau. The registration in the state of Washington was 49.8 per cent of this estimate; in Michigan and Connecticut it was 129 per cent. This does not mean that there was evasion in Washington and duplicate registration through excess of patriotism in Connecticut and Michigan; nor does it mean that the Census Bureau made mistakes in its calculations; but merely that population had shifted between 1910 and 1917 in different directions

in WAR TIME

By Edward T. Devine

and different degrees from those that had characterized its development in the decade between 1900 and 1910, and that there was no means of knowing what the changes had been.

If we had a permanent registration of the entire population, kept constantly corrected, such as several European countries have had for many years, all this information would have been automatically available when it was needed. As it was, it was necessary to make a special enumeration of the men concerned, creating an elaborate machinery for the purpose, interrupting important work in order to supply the personnel, and waiting until the work was done before the draft could be made. The law was signed on May 18; the state quotas were not allotted until July 13.

The inconvenience of such ignorance as ours about the population at a time like this must be clear to all. It has less obvious disadvantages which are more serious. For example, the estimates of population which have proved so far from accurate in certain cases are the only basis we have for the vital statistics which are our guide in measures for the public health. The death-rate of men 21-30 years of age in Washington this year, based on the estimated population, would be only one-half the true death-rate; in Connecticut it would be 29 per cent too high. This is probably the extreme instance. Probably women and children and older men have not been shifting so abnormally as the particular group of men in whom we are just now most interested. In greater or less degree, however, the lack of accurate information about the population hampers us in all our social planning.

A general registration of the entire population, kept constantly corrected from birth to death, would replace the fifty or more partial registrations which we now have—taken by as many different authorities, official or self-constituted—each affecting a considerable part of the population and overlapping one another to an extraordinary degree. A single comprehensive one would be much less expensive. It should, of course, be accessible to all who have legitimate occasion to consult it, but not to the idly inquisitive. In Europe it is ordinarily administered by the police department. In America the health department would probably be an equally efficient and more acceptable agency; or it might be better to organize a special registration service throughout the country, responsible to the federal census bureau.

Whatever the machinery decided upon, the product, when perfected, would be of inestimable advantage to social welfare. It would make possible accurate vital statistics. It would simplify elections, assessments, the securing of all sorts of licenses, the enforcing of child-labor laws and school attendance. It would serve as a guide for town-planning, school-planning, church-planning. It would keep us informed about many economic and social conditions. It would save the ordinary citizen and many officials a great deal of inconvenience. The war is habituating us to the idea. This may be an opportune time for the formation of a national committee which, acting with the census bureau and other registration authorities, would work out a plan and begin to "educate the public" to accept or even to demand it.

QUEER AMERICAN INFLUENCES IN RUSSIA

MEMBERS of the American mission to Russia seem to have been surprised and shocked by the unfavorable accounts of American life given in that country by many of the ten thousand or so who, with the permission and in some cases with the help of their government, have returned from the United States after the fall of the dynasty. Had they been more intimately acquainted with the life of the Russian colonies in the United States, the critical attitude of these recent emigrants might have appeared to them more natural.

Of pure Russians, that is excluding Jews and Ruthenians as well as Poles, Lithuanians and Letts, there are in the United States probably 300,000. The largest colonies of them are in New York, Pennsylvania and Illinois. The city of New York probably has 30,000 of them and Chicago about 20,000. Of western cities none has a Russian population of more than 5,000. Though the proportion of illiterates among American Russians is much smaller than in the home country, they are handicapped by their ignorance of the Roman alphabet and in many cases by an education much inferior to that of immigrants from other European countries. In spite of this, the proportion of men of extraordinary intellectual gifts is considerable among the Russian immigrants, for the simple reason that in their case much more than in that of others it was a striving for spiritual emancipation rather than economic allurements which brought them to this country.

Different circumstances have thus combined to make the Americanization of our Russian immigrants particularly difficult of accomplishment. Owing to the language barrier between Americans and Russians, leadership has almost entirely been in the hands of intellectual Russians, usually political refugees, with an intense enthusiasm for the ideals of democracy but little versed in practical affairs and little acquainted with the conditions of life in this country. Superstition, drink and ignorance on the one hand, anarchism and communism on the other, have fought for the souls of our Russian brethren.

Owing to their ignorance of the language and owing to their social habits, Russian immigrants, even more than other immigrants, have congregated in our large cities, with the result that many of them have become demoralized by bad housing conditions and by that despondency which comes from lacking opportunities of self-realization. If some of these men, disappointed in what they had expected to find in America, return to their own country with stories of the hardships which await the immigrant here—perhaps exaggerated yet based upon painful personal experience—they are victims of circumstances rather than wilful perverters of truth. If we have, perhaps, some little reason for blaming them, let us not forget the much greater blame which attaches to us as American citizens for having allowed so large a group of fine and well-intentioned participants of our national life to become disillusioned and to return home bitter assailants of our institutions instead of grateful guests. We have left them to exploiters, at their work, in their home life, and in their recreation. By failing to provide them with enlightened leadership, which should sympathetically study their particular needs and organize them into a community life favoring rapid adaptation to our conditions and ideas, by persecuting their own leaders as dangerous agitators instead of entering with them into relations of mutual education, we have raised up accusers of the sincerity of our democracy. They might have been a most valuable link between us and the great democracy in the East; they have

Book Reviews

THE RESTORATION OF TRADE UNION CONDITIONS

By Sidney Webb. Nisbet & Co., Ltd., London, 1917. 109 pp. Price, 1 shilling; by mail of the SURVEY, \$4.6.

This little book of approximately one hundred pages should at the present time demand the serious attention of every trade-unionist, employer, and citizen interested in industrial relations; for in it Sidney Webb discusses one of the serious questions facing the English nation: How

is organized labor to be restored to the *status quo ante* when peace is signed?

For shortly after the outbreak of the war the trade unions were asked to surrender their customs and rules which they had established after decades of bitter struggle. They were asked to do this for the duration of the war only. Realizing the pressing necessity for the increased production of munitions, they patriotically agreed to comply with the government's request.

With trade-union rules suspended, a tremendous revolution has occurred in British industry. Process of manufactures has been changed; new and additional machinery has been introduced; boys, women and unapprenticed men have been engaged in work formerly done by skilled craftsmen; piece-work and bonus systems have been substituted for time-wages, without any collective agreement upon a piece-work list of prices; hours of work have been increased; production has been speeded up; customary understandings among the workers of what constituted a fair day's work, or what time should be taken for particular jobs, have been abandoned; "scientific management" comparatively unknown in English workshops before the war, has become the prevailing practice.

So far-reaching have these changes been that the British government will not be able to fulfill its pledge of restoring trade-union conditions at the end of the war. Employers will not scrap their new machines, they will not give up the technique of "scientific management." Nor will the new operatives, consisting mainly of women and unskilled laborers, leave the positions from which they have been so long excluded by trade-union rules.

What, then, can be done? How can the government and employers fulfill their pledge? Not by a policy of sham restoration, is the reply, for the mere declaration or even enactment that trade-union rules are re-established will not alter the new conditions in industry. What is needed, we are told, is a new industrial charter. And so Mr. Webb outlines five essential features of such a charter.

The first one deals with the prevention of unemployment. When demobilization will come, and at the same time a vast number of munition workers will be discharged, there will, of course, be the danger of a grave unemployment situation. Enormous public works, on the other hand, will have to be

carried on at the conclusion of the war. Mr. Webb, therefore, urges the government to plan this work over each decade in such a manner as will maintain approximately level from year to year (including the fluctuating wage total of capitalist employers) the aggregate wage total of the kingdom. In addition, Mr. Webb would have the government pay one pound a week to the Trade Union for every member for whom the employment exchanges will be unable to find a situation.

The second feature of the new industrial charter provides for the maintenance of the standard rates. The author suggests the formation of joint boards of employers and trade unions in each industry, who "should be required, within a certain time, to formulate for the whole industry a precisely definite standard rate applicable to each trade and section of the industry and based upon the existing practice of the best employers." The same board should fix piece rates. He would also have minimum wages prescribed for those industries in which the bulk of operatives earn less than 30s. per week.

A constitution for factory and industry is next outlined. The main provisions of this constitution should be the universal acceptance of trade unionism by employers, and the establishment of workshop committees to whom the employer should be required to communicate any new rules at least one week prior to their adoption. And, if possible, he would have a deliberative, national council for each industry which would consider such general questions as the regularization of wages, unemployment, employment of partially disabled soldiers, technical training, publicity, and investigation into possible lines of improvement.

If the workers, in the fourth place, are to be guaranteed against unemployment, against the nibbling of the standard rates, and against the dangers of individual bargaining, they should give up those customs which restrict output.

Finally, "the skilled crafts should abandon their monopoly, and allow the employer to put any person, male or female, to any work, conditional on (1) the fixed standard rate for the work as actually performed being paid; and (2) on the person immediately joining the Trade Union concerned (which must, of course, be open to that person)."

BEN M. SELEKMAN.

THE WORKERS AND EDUCATION

By Frederick John Gillman. George Allen & Unwin, Ltd., London. 68 pp. Price, \$4.0; by mail of the SURVEY, \$5.0.

Concisely, but with sufficient detail, Mr. Gillman sets before us an account of some of the most vital of recent experiments in adult education. This little volume may be specially recommended to pessimists. Branches of the National Union of Railway men and of the Locomotive Enginemen

and Firemen sitting down together on a Sunday afternoon to discuss with the utmost frankness subjects of philosophy and religion; and, on the other hand, large employers of labor handsomely endowing educational institutions where socialism, labor organization and the most fundamental economic and social problems are freely discussed—where, in fact, budding labor leaders are equipped with knowledge and power—such things really can be found in England today.

Arising out of the adult school movement which, with a religious background, nevertheless has long become cultural in the widest sense, a new group of settlements, guest houses, lecture schools, summer schools, and study circles has grown up in recent years. The present reviewer has visited many of those mentioned in this book and can vouch for it that the description which it gives of the tone and freedom of these institutions—much too formal a term for these simple meeting-houses and country places—is in no way exaggerated. "It has often been remarked (of the lecture schools) that these meetings seem to recall the spontaneity and eagerness of the gatherings of the early Christian Church. Men and women have again and again testified that in them they have experienced new visions of religious truth and duty and have made fresh resolves for service."

The secret, if there be a secret, is perhaps that in this effort—as in that of the Workers' Education Association with which it is closely affiliated—the education of the adult is based upon a genuinely democratic foundation as regards everything connected with it, including choice of subjects, and, to some extent, of teachers. The religious motive is not tacked on as a necessary evil to please some financial supporter; nor is some fanciful excursion into economics, history, literature, and art, made the excuse for roping unbelievers into a religious meeting-house. Here the discussion of religious topics arises naturally out of the every-day problems in home, in industry, in politics, of those who come together. In the same way, history and literature, not as general branches of human learning, but where they touch and deepen every-day experience, naturally group themselves into a scheme of study which is spontaneous and vital.

Some of the most interesting experiments recorded in this book are those made by Theodore Grubb in a remote rural environment. Those interested in the rural church and desirous to know how a man of education can most advantageously share his gifts with the simple people among whom his lot is cast, should not fail to read how Grubb has succeeded in getting some fifty or sixty farmers to come together on dark winter evenings to read the Trojan Women of Euripides, or Boswell's Life of Johnson; small groups of working folk to study Irish poetry; and ploughboys to give performances of *As You Like It*. Everything is possible, provided you

B. L.

CONDITIONS OF LABOR IN AMERICAN INDUSTRIES

By W. Jett Lauck & Edgar Sydenstricker. Funk & Wagnalls Co. 403 pp. Price, \$1.75; by mail of the SURVEY, \$1.90.

It was a valuable and worth-while thing that W. Jett Lauck and Edgar Sydenstricker did for the United States commission on industrial relations when they analyzed results of the more important inquiries of recent years into the economic condition of the wage-earner. Since the commission

failed to publish the report, it is fortunate that the authors have made a book out of it and that Funk & Wagnalls have published it, under the title Conditions of Labor in American Industries.

The book discusses the composition and character of the labor population of America, earnings, unemployment, family income, health; and briefly, under the chapter heading, Working Conditions, such subjects as hours, accidents, profit-sharing and welfare work. Despite these various subjects, the book is devoted, in the main, to an examination of the income of the American wage-earner and a consideration of its sufficiency.

The chapters that deal with that subject are worth reading. One may not always agree with the conclusions—based as they are on statistics that are anywhere from four to sixteen years old and some of them questionable too—but the discussions are illuminating and the figures are the only ones we have. Why the authors thought they ought to offer a minimum wage essential to the maintenance of a normal standard of life for a workman's family, it is difficult to understand, especially when they placed the figure at \$800 a year—a sum lower than other recent estimates and lower than the most authoritative data published in the book would seem logically to require.

It is a little hard to do justice to the book because the reader cannot help feeling, when he is through, that he has been somewhat trifled with. The book is full of little errors of varying degrees of importance, from misspelled names to misstatements of fact. Why must the authors refer several times to the "306 possible working days" in a year, as if everyone knew just which days they are, when, as a matter of fact, if you deduct the fifty-two Sundays there are three hundred and thirteen working days, and if you deduct the generally observed national holidays you will have in most of the industrial states three hundred and four days left? And then, somewhere else, without a word of apology, they make it three hundred days.

Dates get mixed, words are omitted, pages at one point are incorrectly inserted, and the SURVEY is solemnly listed as Official Organ of the Charity Organization Corporation of the City of New York!

These are minor matters, most of them due, unquestionably, to hasty proofreading. But there are other errors that are more serious. Lauck and Sydenstricker surely know that the non-union operators in the bituminous fields of the country are fairly numerous, and some of them are fairly large, yet they tell us (page 185) that there is only one big non-union operator in the country. It is equally incorrect to say that the opposition of the American Federation of Labor to eight hours by law is due to the opposition of the majority to the socialist faction. The Social-

ists believe in a legal limit on hours of labor, but so do John B. Lennon, James O'Connell and John Mitchell, not to mention the Pacific Coast unions, which are aggressive but as far from Socialism as Samuel Gompers himself.

It is a curious lapse when the authors intimate on page 309 that workers who have suffered for many generations from bad housing conditions have become accustomed to the situation and lost the desire for better surroundings. Not only is this view contrary to that of most students, but the authors themselves say on page 367, "there will be few to combat proportions of these wage-working families would live under such conditions (i. e., bad and insanitary housing) if their incomes were sufficient to enable them to live under better conditions."

JOHN A. FITCH.

THE ADMINISTRATION OF INDUSTRIAL ENTERPRISES

By E. D. Jones. Longmans, Green & Co. Price, \$2.00; by mail of the SURVEY, \$2.15.

The main topics treated in this-book are, first, the problem of equipment; second, the formation of an administrative organization; third, the adjustment of the relations of labor and capital; and fourth, the process of mercantile distribution. The factory, rather than the methods of commercial organization, has in the main been the subject of discussion.

The treatment of the relations between capital and labor occupies approximately one-third the book. It considers in succession employment, shop training, discipline, the working environment, measurement of work done, rewards in wages and promotion or discharge, and welfare work. The various wage systems are treated in considerable detail.

The author's purpose has been "to trace the application of the scientific method in industry, and to point out the efficiency and the charm of an economic policy based upon welfare and service." In the opinion of the reviewer, Professor Jones has attacked this somewhat formidable task with considerable success.

E. B. GOWIN.

ULTIMATE DEMOCRACY AND ITS MAKING

By Newell L. Sims. A. C. McClurg & Co. 347 pp. Price, \$1.50; by mail of the SURVEY, \$1.65.

The optimism of a Jeffersonian democrat who is also a sociologist—the author is professor of sociology in the University of Florida—makes a very readable book of this statement of reasons for believing that the world is on its way to an ultimate democratization.

As conceived by him democracy is essentially a matter of equality, with liberty and fraternity as necessary expressions. It existed in the pioneer days of America, but has declined under the inequalities forced by our rapid industrial growth and under our wholesale welcoming of alien populations. This decline, he believes, is only temporary. Democracy will again come into its own when a program of four necessary changes has been fulfilled—economic equality; a eugenics to prevent inefficiency; a new type of sovereignty in which "the popular will causes the whole social organism to function for the good of all its parts"; and finally, "social equilibration," a process of so equalizing the various energies of the race that occasions for disturbances like wars between classes or nations will disappear. The remaining

chapters are concerned with the forces now at work to hasten this advance.

The book is interesting for the happy manner in which the writer marshals authorities and concrete instances (whose truth no one can deny) in defense of his cheerful thesis. We need not debate whether the democracy he beholds is quite so certain to arrive. More to the point is the bias which makes him single out equality as the distinguishing feature in democracy and then rule out as anti-democratic all that offends his idea of what equality should mean. For instance, it is not altogether scientific, to say the least, to look upon the immigration of recent decades as wholly a menace; and though he does not treat specifically the problem raised by the Negro, surely the latter cannot be absent from his mind when he adduces the necessity of a eugenics which will make equality possible by weeding out the "constitutionally incapable."

We prefer to believe that a much more desirable destiny for America than Professor Sims indicates is a democracy in which the existence of those biological diversities which he deprecates is rather regarded as a challenge to the ethical sense to produce a finer mode of living together than any democracy, past or present, has cared to create. The type of social stability which he hails as an ultimate solution is perilously akin, we cannot help thinking, to the *pax Romana* of old.

HENRY NEUMANN.

AGRICULTURE AFTER THE WAR

By A. D. Hall, F.R.S. E. P. Dutton & Co., New York. 137 pp. Price, \$1.25; by mail of the SURVEY, \$1.31.

"In the forefront I should place the development in Great Britain of extensive farms worked upon the same principles as large industrial concerns." With this recommendation, the author puts himself in entire opposition to the recommendations of the majority of rural economists and land reformers in England

prior to the war. While there was disagreement on almost every other point, it was generally agreed that England suffered from the large size of her holdings and that progress was to be sought in rapidly increasing the number of smaller farms. But the war has changed many plans; and one would not be surprised to hear that Mr. Hall's ideas on the development of agriculture after the war are shared by many. For the viewpoint has undergone a complete transformation. Both rural and industrial problems now are discussed with an emphasis on productivity and efficiency such as England has never known before; whereas, three years ago, considerations of social economy were in the foreground.

Thus it is typical that Mr. Hall discusses at length the advantages of large-scale farming without once trying to reconcile his recommendations with the demand for a vastly increased independent rural population which dominated popular imagination during the Lloyd-Georgian land campaign. In 1913, the reader of this chapter would have said, "Of course, what you say may be very true about the necessity for large farms in order to make practicable the use of machinery and to work the land economically. But even a large addition of laborers per acre, and better paid laborers, is not the same thing as a strong, independent, self-reliant and prospering community of yeomen."

Then the talk was all of the laborer's "ladder of progress" towards independence and prosperity by the rungs of land and housing laws, minimum wage boards, right to own a garden, adequate provision of small holdings by state and county to meet the demand, credits, education, and cooperation. Now Mr. Hall seems to take it for granted that the nation will be satisfied if only conditions of labor are somewhat improved, provided that the maximum yield of food is obtained. Not that he is opposed to small holdings; indeed, he has some exceedingly thoughtful suggestions how the best might be made of them. But somehow one feels that, to his mind, their provision is at best a sop to popular clamor, and that the future of English agriculture lies in the laying together of holdings rather than their splitting.

Thus, though extremely interesting in his detailed suggestions, which often are much to the point, the author is unconvincing on his main thesis because this really hinges on a question which falls outside the scope of his book, namely: What is British tariff policy going to be after the war? If Free Trade is preserved in essentials, then this insistence on maximum food production for the nation is an exaggeration and a snare. There are other national interests which must not be lost sight of. Above all, the United Kingdom will need to use every incentive in her power to stimulate a return to the land and the building up of rural community life for the sake of the physical recuperation of the race. The creation of industrialized farming conditions with managers, superintendents, foremen, and a functional sub-division of skilled and unskilled laborers, such as proposed by Mr. Hall, would act in direct opposition to such incentives; it would deprive work on the land of the one hope which it holds out to the worker, the escape from wage slavery.

B. L.

UNFAIR COMPETITION

By W. H. S. Stevens. University of Chicago Press. 265 pp. Price, \$1.50; by mail of the SURVEY, \$1.60.

A government can recognize monopolies and control them, or it can rely on competition as the regulating factor. We have been committed to the latter policy, but it has not been self-operative. Hence the Sherman Antitrust law, and later the Trade Commission act. The effort to maintain free competition, however, has necessitated practical regulation. We have not yet officially recognized the legitimacy of combination, for the Sherman law is actively in operation, but under the pressure of war necessity coal and iron producers are being forced to fix prices. The experience of the war is going to make us recognize the monopoly principle in many of the fundamental industries and fix prices in those industries. This will make it the easier to maintain free competition where it is economically justifiable.

Mr. Stevens is confident of the Trade Commission's ability to cope with the evils of unfair competition. He does not seem to recognize that changes in governmental policy may be just as imperative as reformation of business ethics. There is a growing belief that we have sinned politically rather than economically. What is desired is maximum utilities at minimum cost. Where competition is wasteful it should not be forced by law.

Nowhere else will be found under one cover the data which this book supplies. For this reason it is of invaluable assistance to the student of the trust problem. Particularly timely is it at this moment when the question of policy in the matter of price regulation is in everybody's mind.

H. F. GRADY.

THE FINANCIAL ADMINISTRATION OF GREAT BRITAIN

By William F. Willoughby, Westel W. Willoughby, and Samuel McCune Lindsay. D. Appleton & Co. 362 pp. Price, \$2.75; by mail of the SURVEY, \$3.

This is the first of a series of studies in administration published, or to be published, by the Institute of Government Research, organized last year. The second volume is a much-needed translation of the seventh edition of Stourm's famous work on the budget. The third will be *The Principles Governing Retirement from the Public Service*, by Lewis Merriam. It is needless to say that such studies as these are valuable, for in the matter of efficiency in government we have much to learn.

The Financial Administration of Great Britain is in the form of a report by a commission of three American scholars whose qualifications for the task are well known to the readers of the SURVEY. It would have been difficult to find three men better qualified than they.

The original plans of the commission involved an intensive study of the financial administration of Germany and France as well as of that of Great Britain, but these were interrupted by the war and only the investigation of the British system was completed. The excellence of this one part will cause students of finance and government to regret that the plans could not be carried out as conceived.

Readers who desire a popular, and at the same time a scientific, account of the British system, will perhaps prefer E. Hilton Young's *The System of National Finance* (published in 1915) to the report under review. The two books cover much the same ground and the authors arrive at about the same conclusions as to the good and the weak points in the system. For American students, however, *The Financial Administration of Great Britain* will be superior to Young's volume because of its many references to American practice and its conclusions in the way of lessons the United States may learn from Great Britain.

The authors of the Financial Administration of Great Britain endeavor to set forth the fundamental principles upon which the British system rests and to bring out clearly the specific means employed in putting these principles into execution. After an analysis of the problem of financial administration, the commission discusses in turn in twelve chapters the fundamentals of the English system, the preparation and submission of "the estimates" by the executive, the character and form of these "estimates," appropriations in aid and the voting of moneys by Parliament, the disbursement of public funds, treasury control over expenditures, the office of Public Works and Public Buildings, the Stationery Office, the auditing of public accounts, the system of financial reports, and the budget.

Conclusions are drawn with more or less reference to our own situation. The authors suggest that in striving for budgetary reform in this country we should seek to secure the formulation of a budget by the executive and the provision of organs and a procedure through which budgetary control may be secured, and not seek to place limitations on the power now exercised by the legislative body in the voting of appropriations.

COMMON WELFARE

THE NEW SLOGAN, "BACK TO THE SEA"

THE lure of the sea, almost forgotten in this age of floating skyscrapers and machine-shops, is to be revived and held up before the eyes of American youth. Not merely the sea's old romance, but a career—an opportunity to work out a man's individual capabilities amid favorable rather than deadening surroundings, and an opportunity to help make American seamen the most advanced of the wage-working groups on the globe—this is the picture which the United States government, the ship-owning employers and the representatives of the International Seamen's Union and the Masters', Mates' and Pilots' Associations have outlined in a call sent out from Washington on August 9.

Back of this call is a series of conferences between these three factors—the government, the owners and the workers—which on May 8 led to tentative agreement upon an advanced scale of wages, since ratified by vote of the men and now ratified, in Washington, by a special conference committee of the three parties.

Under this agreement the old struggle between the ship-owners of the Atlantic and of the Gulf of Mexico against the organizing of the crews and against the enactment of the seamen's law is buried. The need for bringing men back from the land to the ships is imperative. Government influence has been turned upon the ship-owners, and self-interest—their desire to charter the government-built vessels which will soon be launched—has played a part. Andrew Furuseth, president of the International Seamen's Union of North America, has for more than a year been carrying on negotiations leading up to this treaty of peace and of mutual effort for the new merchant marine. Hence the conference of all parties in Washington on August 1-2, and the selection of a committee of six ship-owners, six representatives of the organized seamen and officers and one each from the Departments of Labor, of Commerce and

of the United States Shipping Board. This joint committee ratified the new wage scale, as follows:

Sailors and firemen, \$60 per month; coal passers, \$50; oilers and water tenders, \$65; boatswains, \$70; carpenters, \$75 per month; overtime pay for cargo work, 50 cents an hour; overtime for ship work, 40 cents an hour; bonus for going into the war zone, 50 per cent of wages, bonus and wages to continue until crew arrive back in the United States; compensation for loss of personal effects caused by war conditions, \$100; cooks and stewards to continue at their present rate of wages.

The committee then agreed

that a certain number of boys determined by the number of men carried are to be employed, in addition to the usual crew; that a number of ordinary seamen will be employed in proportion to the number of able seamen carried. Thus, a vessel now carrying 8 men on deck will carry 6 able seamen, 2 ordinary seamen and 2 boys, such ordinary seamen and boys to have ample opportunity to learn the work usually demanded of able seamen.

In other words, the old-time custom of teaching the sailing trade to boys who love the ocean will be restored to build up the personnel of the American merchant fleets.

No progress was made in settling the contest over the pass-book, or "welfare" system, on the Great Lakes lines, against which the seamen have fought for many years. The lakes ship-owners were not represented in the conference. Pledges were given by the government representatives, however, that a way would be found to end this grievance.

LAW AND ORDER FOR THE NEGRO

A VISION of a new South, in which the Negro, aided by the understanding and cooperation of the white race, shall live happily and usefully, free from violence and from discrimination, was raised at a Conference on Mob Violence held in Robert E. Lee Hall, Blue Ridge, N. C., the first week in August. Its principles were set down in permanent record and are to be projected into a substantial educational campaign. Educators, ministers, club-women, church leaders, editors, judges, state and county officials and doctors were among those who attended.

Especial significance was given the conference by the fact that, while its plans had been laid eighteen months ago, its actual sessions came at a time when Negro migration from the South to the North had made race relations the paramount social problem of the South and a pressing problem in the North.

The conference was brought into being largely through the activities of W. D. Weatherford, international student secretary of the Young Men's Christian Association, field secretary of the Blue Ridge Association and author of several books on the Negro.

That the Negro is not migrating purely because of higher pay and steady work was stated at this conference. While the occasion of the present migration is found in economic conditions, it has for background the fear of lynching and other violence, the fear of indignities to colored women by white men, a feeling of insecurity in all the relations of life, the necessity of paying more than the white man in stores and earning less in work, in unequal schooling, living conditions, traveling accommodations and voting, and with the general lack of a square deal.

"Black men are ready to give their lives, as American soldiers, in this world war to make the world safe for democracy," said Prof. John Wesley Gilbert, of Payne College, Augusta, Ga., a col-

TO MAKE DEMOCRACY SAFE FOR AMERICA

RESOLUTIONS OF THE CONFERENCE ON MOB VIOLENCE

. . . We are convinced that the solution of the problem before us is essential to the task of making democracy safe in America, that America may help make the world safe for democracy.

1. The so-called Negro problem is a detail of the age-long and universal human problem of how the different peoples of the earth, and even the same people, though separated by differences in religion, language, customs, civic attitudes, social and economic status, occupation, profession and a multitude of other differences, can dwell together in peace, harmony and mutual helpfulness, and not in discord and mutual destructiveness. In but very few places on our planet has this lesson been learned; hence, the ceaseless wars, conflicts and frictions. The friction between the races in the South is but a part of this whole.

2. Probably the most fundamental and important element in the complex Negro problem is the economic one. Heretofore the strong, either in body or mind, have used their strength to exploit the weak for their own advantage and aggrandizement. The Negro, being weak, has naturally been exploited. When, in the new era that is dawning, the strong shall use their powers not to exploit the weak, but to serve them, then the Negro along with other weak and backward races shall receive not only a square deal, but help and encouragement to develop to the fullest his native capacities for the enlargement and enrichment of all human life.

3. This conference deprecates any lack of certain and speedy justice by due process of law in the case of any and all crime.

4. All officers of justice who resist any attempts at public disorder on the part of a mob should be publicly commended in the highest degree.

5. Public sentiment should be so cultivated as to make it impossible for any officer to retain public office who does not to the utmost of his ability carry out his full oath to enforce the law he is sworn to uphold.

6. We hold as fundamental that for the Negro, as well as for all other human beings, home ownership is the basis of security, stability of citizenship, full-statured civic responsibility, law and order, and social progress.

7. We recommend the establishment of law and order leagues everywhere, with a view to correcting unfortunate conditions and improving surroundings that lead to insanitation, poverty, disorder and crime, and charged with the duty of anticipating and preventing mob violence whenever threatened.

8. We urge the importance of regular and fearless charges to grand juries by trial judges on the evil of mob violence.

9. We look forward to the time when

physical and mental examinations by recognized experts shall be made of all persons on trial in our criminal courts.

10. We endorse the formation of a southern speakers bureau of law and order, the members of which may be called on to speak before all bodies concerned with social problems, looking forward to the establishment of similar bureaus in every southern state.

11. We realize the immediate need of a fund for publication and extension work, and to this end we urge that contributions be sent to Dr. W. D. Weatherford, Nashville, Tenn.

12. We suggest that abundant literature on race problems be placed in all libraries throughout the South. A reading list can be had from Dr. Weatherford.

13. We suggest the editing of text books on elemental morality, on the lives and works of noted Negroes, and on the problems and progress of the Negro race, to be placed in the regular curriculum of all Negro public schools.

14. Since the chief remedial force for the prevention of mob violence is the development of a right public sentiment, and since women have a large share in the creation of public sentiment, we believe there should be concerted action by women for the education of white women on the evils of mob violence, through the agencies of the home, the women's clubs, the church organizations, the schools and colleges. We believe that the women need to impress upon the men of the country that mob violence is not an effective protection of womanhood. We believe further that no race is stronger than its woman-kind, and therefore, we exalt the integrity of the home as the largest asset of any race, white or colored. We believe that true chivalry on the part of all men demands respect for womanhood, both white and colored.

15. A committee shall be appointed to submit to the consideration of state teachers' associations, state conventions of political parties, state press associations and state church conventions, short resolutions urging obedience to law and condemning mob violence.

16. That this committee prepare and submit to state boards of education for use in public schools in connection with the study of civil government, a monograph setting forth obedience to lawfully constituted authority as a paramount duty of citizenship.

17. We pledge to each other and to the people of both white and black races in the South our utmost endeavors to allay hurtful race prejudice, to promote mutual understanding, sympathy and good will, to procure economic justice, and in particular to condemn and oppose mob violence in all forms.

does not decrease crime; it merely adds to lawlessness. It does not protect women, and the publicity but adds to the distress of women victims.

The remedies for lynching and the less spectacular evils are to be found chiefly in the creation of a new sentiment and a new attitude toward the Negro and a new understanding of his problems. Dr. Weatherford said:

I am not sorry that Negro migration, with its immense economic loss to the South in labor values, has come. It is worth every dollar it has cost, if it wakes us up to the tremendous obligation we in the South have to work out our relations with the Negro. We have the biggest chance any people in the world's history ever had to work out the race problem; not the Negro problem alone, but the problem everywhere found of the relations of a race supposedly inferior to a race supposedly superior. To paraphrase the prophet Jonah, we are a nation on the high-road to a great destiny, but we are stumbling on that road. Let us cease to stumble.

The conference set down specific ways of improving race relations in its resolutions given in the adjoining columns.

The committee in charge is composed of E. C. Branson, professor of economics, University of North Carolina; Dr. Richard Hogue, Baltimore, Md.; C. D. Menzler, secretary of the Tennessee State Board of Charities; Mrs. Arch Trawick, Nashville, Tenn.; Jackson Davis, Richmond, Va., and W. D. Weatherford, Nashville, Tenn.

OSBORNE WARDEN OF THE NAVY PRISON

THOMAS MOTT OSBORNE, who, as warden of Sing Sing prison, was the first administrator to introduce self-government among adult male prisoners and who has done more than any other man of his generation to direct public attention to the harshness and stupidity of much of the old prison order, has been appointed commandant of the United States Naval Penitentiary at Portsmouth, N. H.

Mr. Osborne, it is understood, has been given a free hand by Secretary Daniels to apply his own theories of prison administration. Self-government will be introduced as soon as practicable. The inmates of a naval prison are in some respects better qualified to succeed with self-government than those in a large civil prison. The general level of intelligence of the prisoners is apt to be higher. The majority of naval prisoners, moreover, are young fellows who have gone wrong in some small way only; many of them have not really committed criminal acts and the percentage of so-called habitual offenders is small. A large number have been trained to wage-earning occupations.

Under Secretary Daniels, the principles of probation and of suspended and indeterminate sentences have been intro-

ored man, "but they want to feel their own lives and liberties are safe in the democracy here at home."

While the conference was severe in its testimony as to conditions affecting the Negro, it by no means gave the impression that his lot in the South is uniformly bad. In some places race relations are all that could be desired; in others unjust to the extreme. Negro migration has been largest from the places where wages and other economic conditions have been most unfavorable and treatment of the Negro most severe;

least, where wages and treatment are best.

Lynching as a preventive of any form of crime was shown to be absolutely futile. Only one-fourth of the lynchings in the last year were for crimes against women; many were for the most trivial causes. Race hatred breeds race hatred and race violence, race reprisal. Negroes connive to break the law and conceal offenders, because they feel sure they have small chance for justice. The spectacle of lynching breeds brutality in those who do it or see it. Lynching

duced into naval prison administration [the SURVEY, February 10, page 552]. Largely as a result of these reforms the number of naval prisoners decreased in the three years ending in 1916 from 1,835 to 620. The enlisted strength of the navy increased during this same period more than 6,000. How far the raising of the navy enrollment to war strength will increase the number of prisoners cannot now be told, of course.

Last winter Mr. Osborne spent a week in voluntary incarceration aboard the naval prison ship Southery, at Portsmouth, to study the conditions and treatment of the prisoners. Many of the changes he recommended were immediately ordered to be made. Later he investigated conditions at two state prisons where naval prisoners were confined, those at Weathersfield, Conn., and Concord, N. H. The prisoners there were subsequently transferred to the naval prison at Portsmouth.

In accepting his appointment as commandant, Mr. Osborne declared that it was particularly important at the present time that young men sent to the naval prison should be returned to the navy as fit for service as possible, and that he would endeavor to make this object the aim of his administration.

FOOD CONTROL ENACTED AT LAST

AFTER two months of wrangling in House and Senate, after many attempts of interested parties to weaken important provisions and of conscientious congressmen and senators to perfect a measure which in the nature of the case must remain incomplete, President Wilson, last Friday, signed the food-control bill and used the power it conferred upon him to appoint Herbert C. Hoover national food administrator. At the same time there was passed the food-survey bill, which authorizes the Department of Agriculture to investi-

gate those factors in the food situation which have to do with production and to aid increase of production by distribution of seeds, fertilizer, feeds, implements and other necessities.

Food control, as now subjected to Mr. Hoover's administration, also includes feeds, fuel, fuel oils and natural gas, fertilizer and fertilizer ingredients, tools, utensils, implements, machinery and equipment "required for the actual production of foods, feeds and fuel." All other articles, such as cotton and metals, introduced in the bill in various stages by amendment, were eradicated from the final draft.

The act in many respects is more drastic than any law as yet adopted anywhere for the purpose of preventing scarcity, monopolization and hoarding of food. It makes it an offense, for instance, to destroy any necessities for the purpose of enhancing the price or restricting the supply thereof; knowingly to commit waste or wilfully to permit preventable deterioration of any necessities; to hoard any necessities beyond the reasonable requirements of home or business; to attempt to monopolize them; deliberately to limit facilities for production, harvesting, manufacturing, transportation, supplying or storing; or to exact excessive prices.

The President is authorized to license the importation, manufacture, storing, mining or distribution of any of the necessities named and to make stringent regulations concerning the exercise of licenses. This will not, however, affect the business of farmers, gardeners or retailers, and aims at the correction of abuses practised by large dealers rather than interference with all the different branches of the trades concerned.

In addition to these various preventive powers, the President is authorized also to requisition foods, feeds and fuels or other supplies necessary, as the

act curiously words it, "to the support of the army or the maintenance of the navy," or any other public use connected with the national defense—which may, of course, include civilian uses, and, whether intended or not, would seem to enable the government to requisition these necessities in any case of famine, whether local or general.

Wheat, flour, meal, beans and potatoes are specified as articles which the government may purchase, store and "sell for cash at reasonable prices." But in regard to any of the necessities subject to control, the President may, upon his own judgment, take over for operation by the government any factory, packing-house, oil pipe line, mine or other plant and restore them to their owners when the necessity for their use has ceased. Both the purchase of the articles named and the temporary use of such premises and plants must, of course, be paid for at a reasonable price; and the act prescribes the procedure to be adopted in case of dissatisfaction with the compensation offered, which will ensure a fair and judicial determination.

Much social distress last winter and spring was occasioned by market speculation in necessities which was quite independent of actual supplies and was caused entirely by market and exchange quotations manipulated in the interests of particular holders. To prevent the recurrence of such artificial and harmful operations, in the act termed "evil practices," the government is authorized to make regulations governing and, if necessary, even prohibiting transactions under the rules of any exchange or similar institution. It may also demand such records and returns of all transactions of this kind as will disclose all the essential facts and appoint special agents for their investigation.

Minimum price determination, after all the arguments for and against, is limited in the act to wheat, the only

THE CONFERENCE ON MOB VIOLENCE AT BLUE RIDGE, N. C.

Men and women of the South who met to discuss lynching and launched an educational movement to overcome it

article whose greatly increased production must, for some time to come, be the anxious concern of this country both on account of its own needs and on that of its allies. For the crop of 1918 the price fixed for No. 1 northern spring is two dollars per bushel, and the minimum prices for other standard grades at the principal interior markets will be determined by relation to this price as a basis. Such determination will hold good until May, 1919. To prevent possible unfair competition of imported wheat which would defeat the purpose of this section, the government is given power to impose an additional import duty to level up the price to the price guaranteed to American producers.

The famous liquor clause, as finally adopted, provides that after September 6 no foods, fruits, food materials or feeds shall be used in the production of distilled spirits for beverage purposes, other than "for the fortification of pure, sweet wines." Importation of distilled spirits also is prohibited. The President is given power to regulate, limit or prohibit also the use of the materials mentioned in the production of malt or vinous beverages if necessary to insure a sufficient supply of food or if he deems it desirable in the interest of the national defense. The maximum penalty for violation of this clause or any regulations made under it is a fine of \$5,000 or two years' imprisonment. The President is also empowered "and directed" to commandeer any or all distilled spirits in bond or stock for redistillation if needed for the manufacture of munitions or military and hospital supplies and to take the place of other food materials which, without this source, would have to be utilized in the manufacture of such munitions or supplies.

For the administration of the act, the sum of \$2,500,000 is appropriated, in addition to \$150,000,000 which may be expended for the various purposes of the act. The act is in effect only for the duration of the war.

While in the case of food and feed stuffs, price regulation will take the form of actual manipulation of supplies, the President is empowered to fix the price of coal and coke, either wholesale or retail, for the whole country or for certain localities. This is to be done through the Federal Trade Commission. If a producer or dealer fails to comply with the regulations made his premises and business may be requisitioned for the period of the war. If a more drastic procedure seems necessary for the prosecution of the war, another section of the act enables the President to requisition all the output of coke and coal, either from any special area or from the entire United States, and to establish agencies for resale.

A special fund of \$10,000,000 is appropriated for the purchase of any

stocks of nitrate of soda found available and deemed necessary to increase agricultural production in 1917 and 1918, to be resold at cost price including expenses.

Already Mr. Hoover has taken a number of steps which will go far to make effective the intention of this law. A staff has been enlisted for the general administrative work. A commission, headed by Harry A. Garfield, son of the late president and president of Williams College, has been appointed to fix the price to be paid for the wheat crop of 1917. Wheat gamblers have been warned that, if necessary, the government will buy the whole supply. As a preliminary step, Mr. Hoover is taking over control of all grain elevators and mills with a daily capacity of over 100 barrels of flour, which will be subjected to a license.

Speculation in futures is strongly discouraged by the announcement that the government will have no regard to the normal price-making machinery in disposing of the wheat supplies of the country. Grain exchanges, by regulations coming into force on September 1, are required to suspend all dealings and quotations in futures. Both our allies and neutral countries will be rationed, so far as grain and flour supplies from this country are concerned, and all purchases for the former are centralized in the food administration—so that the price regulation made for the purpose of stabilizing the market cannot be upset by unforeseen foreign demands. A larger proportion of wheat than normally will be exported in the form of flour, for the double purpose of conserving cargo space and of keeping American mills fully employed.

In contrast with other government departments, the food administration is keeping the public fully informed of its plans and purposes and thus conducts, through the press of the country, an educational campaign which is arousing general interest in the more detailed processes of food conservation which affect every home.

THE SOCIALIST CONFERENCE AT STOCKHOLM

THE efforts to arrange an international conference of labor and socialist bodies at Stockholm date from prior to the Russian revolution. So far as the allied governments were concerned, there was no occasion to express approval or disapproval, since the labor and socialist parties of England and France themselves were opposed to participation in the conference. Resolutions to this effect were passed twice by the French Socialist Party, the first time with a large majority, the second time with the narrow majority of two votes. Until quite recently the British

Labour Party and the British Socialist Party also were opposed to taking part in what was branded as a pro-German move; only the Independent Labor Party—of which Ramsay MacDonald and Philip Snowden are leading members—desired to send delegates.

With the Russian revolution, the situation changed considerably. According to Morris Hillquit, of the American Socialist Party, who has twice been refused a passport to Stockholm by the State Department, it became a concrete and important proposition for Socialists in all the allied countries owing to two new factors previously non-existent:

First, the Russian Socialists were determined to reunite the Socialist International on the basis of the peace program which they had induced their own government to make its own, the famous program of peace without annexations and without punitive indemnities or, in President Wilson's phrase, peace without victory. Owing to the new struggles and triumphs of socialism in Russia, the sentiments of Socialists in other countries began to shift from national defense to industrial and democratic reforms.

Second, several more months of war and non-realization of the expected great spring offensive which was to shatter the German positions in France and Belgium increased the war-weariness of the workers in the entente countries. There has developed a more open mind to suggestions for an interchange of ideas such as proposed by the Russian comrades. Visits of Russian Socialist delegates in England and France and of French and English delegations in Russia also influenced the attitude of the Socialist and labor parties; and with their acceptance of the Russian invitation to meet in Stockholm with German delegates, the question of participation or non-participation has become a government question.

In this country, the State Department in declining to issue passports to Mr. Hillquit and his colleagues of the Socialist party, has the support of the American Federation of Labor, especially of its president, Samuel Gompers, who has declared that "such a conference" as that proposed "cannot at this time or in the near future be productive of good."

In England, on the other hand, the government by deciding to adopt the same course, has acted in direct opposition to the Labour Party which, on August 10, resolved by a ballot of 1,046,000 to 550,000 votes cast by 600 delegates to send a delegation. The present Cabinet thus has cut off the support of the party to which more than to any other it owes its office, thereby creating a political crisis.

From the obscurity which surrounds the motive of the allied governments in their hostility to the Stockholm meeting, it would seem, Morris Hillquit told a representative of the SURVEY that it is not its futility which they fear but, on the contrary, its possible effect in strengthening peace sentiment among the workers of the allied countries. It is not likely that German persuasiveness will disturb the sentiments of such men

as Arthur Henderson and Albert Thomas, the French minister of munitions and Socialist leader, who have proved themselves strong supporters of their respective governments in the conduct of the war; but there seems to be considerable uneasiness at the thought that peace terms are to be discussed at all at a representative gathering of working class leaders. "There is," says Mr. Hillquit, "no apparent enthusiasm in London and in Paris for peace on the Russian formula. But more obvious is the bureaucratic abhorrence of any international action taken without the due formality of accredited diplomacy."

Such discussion, however, even if it can be prevented from taking place by word of mouth, it is impossible to stifle. The British Labour Party on August 21 will discuss a memorandum prepared by a subcommittee of the executive committee upon the issues raised in the war and conditions of peace. This document, submitted in advance to the press, is by no means a demand for peace at any price, nor does it, apparently, mention an "early" peace. It states that Germany is threatening the very existence of independent nationalities, has struck a blow at all faith in treaties and, if victorious, would destroy democracy and liberty the world over. While disavowing a desire to crush Germany politically and economically, it expresses a strong resolve to fight until her defeat is assured.

As a condition of peace, it demands "complete democratization of Germany and Austria-Hungary, which now cannot fail to place themselves in line with other civilized nations on a frank abandonment of every form of imperialism, on the suppression of secret diplomacy, on the placing of the foreign policy under the control of elected legislators, on the absolute responsibility of the foreign minister of each country to the legislature, on concerted action for the limitation of armaments and the abolition of profit-making of armament firms."

Peace negotiations on the basis of this program would involve restoration of Alsace-Lorraine to France, securing of the legitimate interests of Italy in the Adriatic and Aegean, creating of autonomous government in Poland, re-establishment of independent sovereignty in Luxembourg, equal rights of citizenship for Jews, creation of an independent state under international guarantee in Palestine, creation of an international protectorate over Mesopotamia, Armenia and Arabia and over Central Africa.

As regards the effect which the holding of the Stockholm conference would have in Germany, only conjectures are possible. The previous visit in that city of delegates of the majority and minority branches of the German Social Democratic Party resulted in a visible

increase of sentiment in favor of an early peace on the basis of no annexations and of internal political reforms. "It requires no great political sagacity," says Morris Hillquit, "to see that the Stockholm conference can only have a salutary effect upon public opinion in Germany, that it would stiffen the backbone of socialist opposition to the government, both as regards a peace on the Russian terms and as regards democratization of the machinery of government." It is not known, of course, whether the German government will allow socialist delegates to go to Stockholm; there certainly is no indication whatever that the calling of that conference is in any way due to its desire.

"The Russian Socialists," says the usually well-informed *Manchester Guardian*, "have set their hearts upon this conference, and it is to be remembered that there are a great many of them, and that their sympathy can make things a great deal easier for us in this war, and that therefore we have much to hope from them." "It certainly is improbable," according to Mr. Hillquit, "that from a meeting with the delegates from the allied countries German Socialist leaders could gain information not otherwise accessible to them or that the Russian delegates, whether meeting them alone or together with their French, British and American comrades, could be won over for a pro-German program of peace terms."

"WAR'S HERETICS"

TO THE EDITOR: At a time when so many clergymen are spending their talents in denouncing the pacifist, it is refreshing to read the able plea by the Rev. Mr. Thomas in your hospitable columns [August 4, page 391]. May I ask the privilege of supplementing what he says in answer to the charge that the conscientious objector is a parasite?

It is true that the conscientious objector partakes of benefits which he did not help to win. Are men, however, to enjoy no advantages save those for which they have paid as dearly the others who made them possible? If so, then all of us, combatants and pacifists alike, must carry a frightful burden of guilt; for many of our advantages have been bought by sacrifices which we do not think of sharing.

For instance, thousands of lives have been crushed in coal mines. Are we therefore entitled to use coal only upon condition of our willingness to pay the same cost in blood? Then we ride in a railway car, we are enjoying what cost countless lives to construct. Probe deeply enough into the making of many of our necessities, and we shall find somewhere charged against them sacrifices like industrial disease or accident. Are we then shirkers when we choose not to dig coal or face death in a steel-mill? If, like Tolstoi, we decide to renounce the benefits of civilization for peasant life, we are confronted by

the fact that even the simplest tools we should use have a history which at some stage or other has spelt suffering and sacrifice far greater than our own.

If, therefore, some members of the community share the benefits of a war which they count unrighteous, their plight is no different from that of all of us in even normal times. The trouble is that most of us are simply unaware how we all enjoy advantages derived by methods which conscience condemns. But the very least we can do is to raise our voices in protest, as the pacifist is doing, and put every effort into preventing the continuance of the evil.

A dispassionate view ought to tell us that no wrong can be remedied unless people are willing to brand it as such, even when the country they love best is involved. When prayers for peace were uttered over here in October, 1914, America was ready enough to recognize how monstrous was the visage of the war-god. The pacifists are those who cannot believe that the war-god has been miraculously transformed into the angel St. Michael by the simple fact of becoming for the time being our own god. It is not that they care more for other countries than their own. On the contrary, just because they do care for our country, they want it to be true to what they conceive to be its finer mission.

EAST ST. LOUIS—WHY?

TO THE EDITOR: Practically all the discussion of the race riots in East St. Louis has neglected a fundamental factor in the inability of the second city of Illinois to control such an outbreak of violence.

The impotence of the police and municipal administration has been cited, but no explanation given of the significance of their weakness. In the light of the warning that "what happened in East St. Louis might happen anywhere" in the North under the pressure of cheap Negro labor migrating from the South, that explanation is of unusual interest. It is of interest, too, in light of the fact that citizens of St. Louis, Mo., have since been busy explaining that East St. Louis is across the Mississippi in another state, and that St. Louis must not be held responsible for East St. Louis' sins.

The explanation that explains whether it "can happen anywhere" will also answer St. Louis' proud disclaimer.

It is an old story—and simple.

East St. Louis is industrially part and parcel of St. Louis. It is the big shipping and railroad center of the metropolitan district. It is the Hoboken of St. Louis. It houses all those larger industrial processes of a big city which seek cheaper land and lower business costs, railroad yards, stock markets and warehouses. These represent the great corporations engaged in transportation. The history of East St. Louis is the history of the fight of these interests to create a monopoly control of transportation across the Mississippi. Under one power they have for years controlled every bridge, ferry company and most of the river front. (Their control is now for the first time slowly being broken by the city of St. Louis.)

To get this transportation monopoly these interests found it necessary to control the city government of East St. Louis. It has since been theirs without question and without a fight. (They once also owned the city government of St. Louis.) And East St. Louis is probably the most finished example of corporation-owned city government in the United States. This second city of Illinois is a by-word among reformers, for municipal corruption and inefficiency. Graft trials, bribery and scandals have been rife for years.

Prostitution, gambling, illegal liquor-selling, have all flourished. All the lawless elements turned out by the clean-ups in St. Louis have found their haven over the river in Illinois.

East St. Louis' failure to control the recent outbreak of race violence is only her long-standing failure to control every form of violence and lawlessness. It is due directly to the exploitation of the East St. Louis city government by selfish business interests. These are located chiefly in St. Louis, and constitute probably the most powerful single element in the organized commercial life of the city. They know no boundaries of state or city; they have no loyalties.

But among the chief interests in St. Louis which have put in a disclaimer for sharing the guilt of East St. Louis are the closest business associates of the monopoly crowd responsible for her corruption. Practically all the men in that crowd are citizens of St. Louis.

The East St. Louis outrages therefore are the joint product of corporation exploitation of city government for selfish purposes, and uncontrolled race prejudice in a labor struggle. In other cities race prejudice in labor struggles has not done such violence because the community forces of law and order controlled it. In East St. Louis those forces have not been operative for years.

The chief lesson to be drawn from East St. Louis, behind all other factors, is the need of freeing government from the control of selfish interests. If the people of East St. Louis really controlled their own government democratically, the recent outrages would have been impossible. All that the business interests need is a city government that will give them the privileges they want, and then let them alone. The politicians and the underworld can have the rest. But with the citizens really in control, law enforcement and public service would become realities.

East St. Louis is almost in a class by itself. It is among the last of the larger cities still so exclusively under the thumb of big business. No, it probably can't and won't "happen anywhere else," and St. Louis shares the guilt of her east side partner's corruption.

ROGER BALDWIN.

[Recently Secretary St. Louis Civic League.]

A NEGRO ON EAST ST. LOUIS

TO THE EDITOR: It was not labor masquerading under race prejudice, or even prejudice using the labor troubles as a pretence that caused the riots in East St. Louis; it was the absolute conviction on the part of the labor leaders that no Negro has a right to any position or privilege which the white man wants. Mr. Gompers, it may be remembered, in his reply to Colonel Roosevelt, complained that capitalists in East St. Louis had been "luring colored men" to that city. And a few days before the riots the secretary of the Central Trades and Labor Unions in East St. Louis had sent out a letter to this effect: "The southern Negro is being used to the detriment of our white citizens. The entire body of delegates to the central trades and labor unions will call upon the mayor and city council . . . and devise a way to get rid of a certain portion of those (Negroes) who are already here." The emphasis in both quotations is on color. Labor leaders are psychologists. They know that in this country the chances are more than even that any group of whites can attack a group of blacks, and not only get away with it, but probably have the protection of the laws. It was the connivance of the police and the militia which enabled the East St. Louis mob to expel from their homes 6,000 working men, burn down the dwellings of several thousands, and butcher and burn upwards of 200 helpless men, women and children.

How do we black Americans feel about all

this? I asked an unlettered southern "emigrant" the other day if he would be willing to go back South. "Miss," he told me, "if I had the money I would go South and dig up my father's and my mother's bones and bring them up to this country [Philadelphia]. I am forty-nine years old, and these six weeks I have spent here are the first weeks in my life of peace and comfort. And if I can't get along here I mean to keep on goin', but, no matter what happens, I'll never go back." Of course since then East St. Louis, Chester and Youngstown have shown him what he may expect—he is damned if he stays South and he is damned if he doesn't. But at least he has known a little respite, he has not died yearning vainly to see Carcassonne. Thus much for our untrained class.

As for the rest of us, being true democrats, we acknowledge only two classes, the trained and the untrained. We are becoming fatalists; we no longer expect any miraculous intervention of Providence. We are perfectly well aware that the outlook for us is not encouraging, but we know this, too, it is senseless to suppose that anarchy and autocracy can be confined to only one quarter of a nation. A people whose members would snatch a baby because it was black from its mother's arms, as was done in East St. Louis, and fling it into a blazing house while white furies held the mother until the men shot her to death—such a people is definitely approaching moral disintegration. Turkey has slaughtered its Armenians, Russia has held its pogroms, Belgium has tortured and maimed in the Congo, and today Turkey, Russia, Belgium are synonyms for anathema, demoralization and pauperdom. We, the American Negroes, are the acid test for occidental civilization. If we perish, we perish. But when we fall, we shall fall like Samson, dragging inevitably with us the pillars of a nation's democracy.

A PRESENT NEED

TO THE EDITOR: "Give one reason why women don't command the wages that men get for the same work," says the economics professor, addressing the class. With one voice the class responds, "Because women look upon work as a stop-gap between school and marriage." And the professor beams his approval.

Should the same question be asked the classes of 1918, however, a different answer would have to be given, for not only are women engaged in a far wider range of activities than ever before, but they are doing their work in a different spirit. This war has shown that dilettantism is no longer popular, with the result that whether women have to work for their daily bread or not, they all want to do something to prove they are not slackers.

It is a courageous thing to think that the women of the United States are responding to their country's call, but there is a danger in it as well. The danger is that in the excitement of the new positions, in the desire to do a day's work equivalent to that done by men, the health of the women workers will be injured. The report of the committee which investigated the health of the British women munition workers ought to prove a warning to us, standing as we are on the very threshold of the place where England was three years ago.

Now, if we are wise, we will have a system of inspection and regulation of women's work, springing from a national committee which shall have authority to prevent the exploitation of women on the time-worn excuse of the war. The work of the committee or bureau would be similar to that of the children's bureau under Miss Lathrop at Washington, and would have, instead of

children, the interest of safeguarding the health of women in industry. Such a bureau would be a good thing at all times, but it is especially needed at this time. Would it not be far better to start the committee to work now, before the bad results have occurred, than wait for a couple of years and then appoint a committee to investigate the evil that has arisen?

Miss Rankin has already seen the need of investigation of the hours of women in government workshops and offices. These women represent only a small portion of the women who are working all over the country and only an infinitesimal part of those who will soon be a part of the industrial world. It is time that attention was focused on these before harm has been accomplished.

GERTRUDE BEDELL.

Springfield, Mass.

WAR ECONOMICS

TO THE EDITOR: Recently, at a gathering of economists and business men, a member of the federal Reserve Board asserted that a saving of one hundred dollars on the part of a well-to-do man was of less importance than the same amount saved by several common laborers. If the former saved one hundred dollars and used it to buy a liberty bond, it might mean one less dress suit. But the same amount saved and invested in a bond by several recent immigrants on the East Side of New York city would signify a reduction in the consumption of potatoes, meat or rough garments—articles that might be used directly by our soldiers or by those of our allies. Surely this is a comforting doctrine for the man with a reasonably large income, and especially is it pleasing to the men who are interested in producing articles classed as luxuries.

A Boston broker a few weeks ago put the matter still more emphatically. He enthusiastically asserted that in the present emergency "wealthy people should exceed their regular expenditure—eat the most expensive things, dine at the best hotels, spend their money in legitimate channels, and the effect will be an inspired country." Such statements as these, made by men of some prominence in the nation in a time of great national stress, are unfortunate, to put the matter mildly. There never was a time in our national history when clear and calm thinking upon economic questions was more desirable or more important.

It is conservatively estimated that the nation during the first year of the war will spend approximately ten billion dollars. This huge sum is about one-fourth of the money value of the entire income of the American people. In other words, one-quarter of the production of the nation must be turned over through bond issues or taxation to the federal government. Or, in other words, one-fourth of all the productive energy of the workers of the nation must go to produce food, materials, munitions, guns, ships and the like for our own war purposes and for the assistance of our allies. And this work must be done at the time when our labor force is being depleted to fill the ranks in our army.

Clearly, then, unnecessary kinds of effort should be eliminated. Workers must be shunted with as little friction as possible from unnecessary or dispensable kinds of work into those which are essential or indispensable in modern warfare. The men producing dress suits might put out uniforms; and the wool intended for the dress suit should be used for the uniform. Or, the workers who are producing dress suits and acting as attendants in fashionable tailor shops can be utilized to make other war necessities. It may take a few weeks to make them efficient in their new work, but in the meantime they will be producing some things

which the nation needs and needs sorely, instead of wasting their efforts on non-essentials. The taxicab driver, the chauffeur and the footman may enter the army or become munition workers. Inevitably the adjustment will hurt somewhat; but adjustment there must be. Let it be boldly proclaimed that until peace is again declared the production of non-essential commodities should be reduced to a minimum. It is not urged that we should produce less; on the contrary, we should produce more. But a large amount of business must be carried on to satisfy the new demands of the government.

Coal, food, clothing, ships, munitions, motor trucks, airships, railways and the like are essential to the defeat of Germany. Dress suits, whiskey, fine furniture, jewelry, luxurious automobiles and so forth can, and should, be sacrificed to the war needs. To win the war is of prime importance; the pleasure, comfort and business prosperity of individuals must be subordinated to the stern business of the hour. Surely, even the most enthusiastic exponent of the old, fallacious theory of "make work" must find it exceedingly difficult to exploit his favorite hypothesis in the face of a war demand of ten billion dollars or more per year. The man who plaintively demands that all kinds of business go on as usual or who asserts that the savings of wealthy and well-to-do individuals are relatively unimportant is unwittingly but none the less certainly playing into the hands of our enemy.

There is, however, one kind of saving which has a hidden element of national danger, and this is the kind of saving which the speaker referred to commended. If a family having a very low yearly income, say less than six hundred dollars, attempts to save much, it will in these days of high prices probably mean a reduction in food, clothing and shelter below the minimum necessary for efficient work. Such savings spell national waste and should be carefully avoided. The savings of the poor East Siders may actually represent a national deficit, but the savings in the time of extraordinary war expenditures, made by abstaining from the consumption of luxuries carries with it little possibility of reducing efficiency and great probability of national helpfulness.

JOTTINGS

FUNDS for a Commonwealth Hall modeled after the Maisons du Peuple of Belgium and France are being raised by the Rand School of Social Science. The plan is to establish a center where radicals may meet and where, to quote the prospectus, "cooperation may descend from the spheres of abstract speculation and be given a fair chance to prove itself and where arts and the sciences may be freed from their involuntary servitude to the few and brought to the joyous service of the many." The building will contain a library open free to the public; a popular restaurant run on a cooperative basis; a modern gymnasium; an art school; a large auditorium where dramas, dances, pageants and meetings may be held; offices for labor and socialist organizations and publications; the book store; and finally the Rand School itself. Option has been secured on a building admirable for the purpose, which will be taken if the financial campaign is successful.

THE Civic Federation of Dallas, Texas, on August 1 published the first number of the *Dallas Survey*, a fortnightly journal of social work. Its purpose is to inform the citizens of the multifarious social efforts in the community and to discuss the needs which have yet to be met. Like so many other cities, Dallas is experiencing a grave danger at the present time lest the predominant interest in national and international affairs should crowd out of public concern the ever-present perils in civil life. Early in June, some thirty or forty representatives of most of the social agencies of Dallas formed the civic federation for mutual aid and cooperation. Public as well as voluntary welfare organizations make up its membership, and the two local universities have entered a most helpful relationship to its officers. The president is Jos. E. Cockrell and the secretary Elmer Scott.

THE National Social Workers' Exchange opened its offices last Saturday at 130 East 22 street, New York city. The committee on organization is composed of Richard H. Edwards (chairman), Margaret F. Byington (secretary), James S. Cushman (treasurer), Charles A. Beard, Sophonisba P. Breckinridge, C. C. Carstens, Mary Vida Clark, William T. Cross, J. Byron Deacon, Edward T. Devine, John M. Glenn, the Rev. W. J. Kerby, Mrs. Alexander Kohut, Joseph C. Logan, Mrs. Williard D. Straight and Mary Van Kleeck. This group comprises chiefly the membership of the former committee of the Social Work Department of the Intercollegiate Bureau of Occupations, which will carry on its work in the development of occupational opportunities for trained women, in new offices at 19 West 44 street. Copies of the records of individuals registered with the Social Work Department of the bureau are on file with the exchange. The new organization is planning an enlarged registry to become a who's who in social work. The former manager of the Social Work Department of the bureau, Emelyn Peck, is the acting manager of the new organization.

MRS. ROBERT GREEN, of San Antonio, Texas, on behalf of a committee of women called together in that city to discuss the situation created by the removal of its vice district, has addressed a letter to Secretary of War Baker in which she suggests that the welfare of the soldiers will not be permanently served unless some consideration is given also to the fate of the women driven from the segregated areas. "They must be systematically diverted into other and better professions," she says, "or they will drift back to prostitution." Physical examination and medical treatment—even if the latter were more adequate than it actually was in the San Antonio clean-up—are not sufficient. Over a thousand women were deprived of their livelihood. Instead of allowing them to be driven from town to town, much less from army post to army post, or of becoming helpless charges on the community, the women should be studied, she suggests, by a psychologist and under his direction be trained for those occupations which he considers best suited to their individual capacities. Then they should be placed by a competent employment bureau, at a living wage and under wholesome restorative conditions.

THE Federal Council of the Churches of Christ in America is protesting against the attempt of some employers to take advantage of the war situation and compel employes to work a seven-day week. The industrial secretary, the Rev. Charles Stelzle, is appearing before the New York State Industrial Commission whenever requests are heard for exemption from the one-day-rest-in-seven law such as the recent petition of the International Paper Company operating eight large mills in various sections of the state. The New York law requires that when men are

compelled to work on Sunday, to repair machinery for example, they must be given another day during the week for their weekly holiday. The paper company argued that as the men objected to taking their holiday during the week, it felt justified in employing these men continuously, if the men so desired. Had the request been granted (which it was not), it would have meant not only that several hundred men working for this company might steadily be employed on Sundays, but that the commission would have been compelled to grant the same exemption to practically every other employer who based his request upon the same arguments. Mr. Stelzle pointed out that there may be occasions when some plants should be run seven days per week, but there is never a sufficient excuse for working men regularly seven days per week.

SUBSTANTIAL progress in establishing or developing kindergartens was made in five states the past winter and spring, due chiefly, according to the National Kindergarten Association, to the efforts of mothers organized in women's clubs and mothers' congresses. Women of Maine, Texas and Washington have greatest cause for rejoicing because their new laws authorize school boards to open kindergartens on petition of parents. In Maine the bill was helped by the kindergarten children of Bangor, who drew, colored and cut American flags for the members of the legislature; ten of them sang and saluted the flag at a hearing—a demonstration which clinched the passage of the bill. In Texas the state's educators joined with the women in advocating the bill, which passed, and the various teachers' training schools are not vying with each other in offering kindergarten courses. The Washington law is less advanced than the others, but is expected to work out satisfactorily. In Oregon there was stiff opposition on the curious misunderstanding that a kindergarten is a place to which mothers send their children in order to shirk their care at home, but it finally passed for the city of Portland, where a successful demonstration is counted on to lead to later extensions. The Tennessee law authorizes cities and towns to provide kindergartens, overcoming a difficulty in the old law which was interpreted as not permitting the disbursement of school funds for kindergartens.

SOCIAL FORCES IN WAR TIME

(Continued from page 439)

become instead a danger to our amicable relations with the Russian republic.

These returned Russian-Americans, although not fully Americanized, are exceedingly well informed about any anarchistic and revolutionary movements in this country and naturally carry home with them an exaggerated appreciation of their importance. This explains another impression brought back by the American mission to Russia and voiced in an interview given to the press by Charles Edward Russell. He is genuinely alarmed lest the Russians come to feel that the United States is only half-heartedly in the war; that the selective draft law is likely to be repealed; that the moral support which America brought to the fight for democracy will shortly be dissipated and the narrower aims of individual European belligerents with which democratic Russia has little sympathy will become controlling. Intellectual Russians know about every peace manifesto, every disloyal utterance, every cartoon and epigram which is calculated to undermine the national will to a vigorous prosecution of the war. Mr. Russell may be an alarmist, but he evidently considers these American moral defections as more serious than any cowardice or desertions that have thus far been exhibited in the Russian army.

CHICAGO SCHOOL OF CIVICS AND PHILANTHROPY

FIFTEENTH YEAR OPENS OCTOBER 1, 1917

GENERAL TRAINING COURSE FOR SOCIAL WORKERS

One-year course for college graduates. Two-year course for other qualified students

HOME SCHOOL

SPARKILL, N. Y.

Mr. and Mrs. John Collier announce the 2nd year of the Home School, Sparkill, N. Y. Boarding School for small group of boys and girls between the ages of four and nine. Sleeping porches, open air school rooms. Work and play along modern educational lines.

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travels, Real Estate, twenty cents per line.

"Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19 St., New York City.

SITUATIONS WANTED

YOUNG WOMAN, college graduate, nurse's training, French, German; companion or social service. GLADYS LOUISE Cox, R. Long Hospital, Indianapolis, Ind.

EXPERIENCED house-mother with daughter school girl, desires position child-caring institution. Address 2569 SURVEY.

WANTED—Position as matron in convalescent home or child-caring institution. Experienced. Address 2570 SURVEY.

HELP WANTED

SEVERAL men, young or middle-aged, as boys' supervisors. State experience if any. Fine chance for the right men. Apply Superintendent, Hebrew Orphans Home, 12th Street and Green Lane, Philadelphia.

GRADUATE NURSE: The position of visiting nurse in connection with a settlement located in a Jewish neighborhood is open. Must be a graduate nurse, and one who can speak Yiddish or German. Will live in the settlement as resident. Give full information, stating age, education, experience, reference and salary expected. Address 2568 SURVEY.

MASTER OF ARTS, broad education, New York School of Philanthropy graduate, organizer, six years' experience in socialized education, settlement work and vocational guidance, now holds executive position. Seeks position as executive or first assistant in a progressive organization. Address 2571 SURVEY.

NEXT WEEK

The SURVEY will begin, in its issue for August 25, a new weekly feature, A Directory of Social Agencies. National social agencies will be listed both alphabetically and by subjects. Those seeking reading matter, advice, information, experience, laws—help of any sort in the field of social concern—will find the directory complete, unique, handy. Watch for it.

V.—Delinquency in War-Time

By *Winthrop D. Lane*

OF THE SURVEY STAFF

AN increase in juvenile delinquency, like a rise in infant mortality, creeps quietly upon a community without warning. Both maladies usually result from acts or circumstances in no way designed to bring them about. Whole industries may through ignorance or greed exploit children as premature workers, but it is a very exceptional man who sets out to make criminals of children—only a depraved individual here and there. Juvenile delinquency is an effect that flows from quite other and incidental causes. It is for the most part the product of neglect, or of a lack of foresight in discovering and adopting rational channels for the impulses and activities of childhood. It may be the result also of bad policies of repression and punishment instead of policies of prevention and education.

This insidious, unobtrusive character of juvenile waywardness explains the surprise with which England greeted the announcement that law-breaking among children had increased there during the first and second years of the war. A circular issued by the Home Office in May, 1916, conveyed the information that during the three months from December, 1915, to February, 1916, seventeen of the largest cities showed an increase of 34 per cent in the number of children charged with punishable offenses, as compared with the same three months the year before. The figures referred to all children below sixteen and the increase was experienced in practically all of the cities consulted. Larceny rose nearly 50 per cent, and there were increases also in charges of assault, wilful damage and gaming.

The figures referred to the number of children accused, but since those found not guilty are less than 1 per cent of the total the increase holds for convictions as well as for charges. Moreover, this increase was greater among children twelve and thirteen years of age than among other age groups.² These furnish normally a higher proportion of delinquents than do children just older or just younger, yet the comparison shows them contributing *more than their due share* of the increase during the war. The relaxation of English school attendance

laws and the premature entrance of English children into industry permitted during the first two years of the war have already been described in this series of articles, and it was, of course, the children of twelve and thirteen who were most affected by these two policies.

From other belligerent countries reports in regard to juvenile delinquency are meager. A German police court judge, writing late in 1916,³ leaves no doubt that a considerable increase had occurred in Germany. "Crime among the young diminished in some places during the first months of the war," he said, but added that "afterward the increase was all the greater—at least in the larger cities and as regards crimes tried before a judge and jury." In Berlin twice as many crimes were committed by children in 1915 as in 1914. In Munich the number of youthful delinquents for the first three months of 1915 equaled the total for 1914. Frankfurt reported a decrease of 55 per cent in the number of minor offenses—possibly because prosecution slackened—with an increase of 40 per cent in serious crimes.

The inspector of auxiliary classes in Ontario, Canada, declares that "there is reason to think that here, as in Great Britain, while the number of men who have offended against the law is much smaller than before the war, the number of boys who are before the juvenile courts is greater."⁴

The chief cause of the increase in England is declared by the secretary of the Howard Association, Cecil Leeson, to be "the withdrawal from child-life of adult personal influence and the curtailment of those social and educational agencies that hitherto have occupied so large a part of the child's life." A school life conducted under difficulties, he thinks, is one cause, depletion of the regular police force another, and restricted street lighting a third. The influence of the moving picture, though noticeable, Mr. Leeson believes to be much exaggerated.⁵ He thinks that the interruption of club work among boys, the closing of public playgrounds and the dis-

¹ Der Krieg und die Kriminalität der Jugendlichen, by Albert Hellwig.

² Second Annual Report of the Inspector of Auxiliary Classes of Ontario, 1916, page 7.

³ The main objections to the movie, thinks Mr. Leeson, are that it is too sensational, that it induces the child to imitate wrongful acts pictured, that it tempts him to resort to any methods to secure pennies for admission, and that it is harmful on hygienic grounds.

⁴ For earlier instalments see the SURVEY for August 4 and August 11.

⁵ The Child and the War, by Cecil Leeson; P. S. King & Son, Ltd., London; page 31.

continuance of organized games are important causes of the increase in juvenile lawlessness.

Dr. Albert Hellwig, the German police judge referred to, explains the increase in his country largely by the change in economic conditions—poverty first and high wages afterwards; and further by relaxed school attendance, relaxed home control. "Trashy war books and films," amnesty granted to juvenile criminals in the early days of war, and reduction of the police force through mobilization are other causes cited by him. He speaks significantly enough of the demoralizing effect of hating one's enemies: "The excessive excitement of the childish imagination by the events of the war," he says, ". . . is one of the brutalizing influences acting on our young people in war time. To inoculate the children with hate would breed lust for revenge, and could only bear evil fruit."

Our Situation Better than Europe's

IN THIS country not all of the causes that have operated elsewhere are making themselves felt in the early stages of the war. The selective draft is apparently going to reach few men with children or with children old enough to violate the law, and the weakening of parental control will therefore be less serious here than in other countries. Moreover, there is less likelihood of disrupting schools through the replacement of men by women for the simple reason that our teachers are mostly women.

On the other hand, children are beginning here as elsewhere to taste the freedom of wage-earning, and this gives them a control of their own time and conduct that they have not had heretofore. Not only will the additional spending money tempt them to new pleasures and devices for "killing time," but the preoccupation of their elders will give them greater liberty to find these things. If, in addition, the nation should permit leaders of boys' clubs and recreation centers, and other young men who exercise a wholesome influence upon children, to be drawn into other work, this also may open the door to an increase in lawlessness.

One cause, indeed, that has been of considerable force in other countries, if we may trust observers, will doubtless make itself felt here also. This is described by Prof. Lewis M. Terman as "psychical contagion." Writing in the *Journal of Delinquency* for May, 1917, Professor Terman said:

Morals do not easily rise higher than their source, and the example of bloodshed, strategy and brute force, which for nearly three years have occupied the attention of European children, could hardly be expected to have a moralizing effect. It would not be strange if in children, as in men and women, some of the primal instincts, which are usually held in check by the restraints of civilization, law and order, should reassert themselves in the atmosphere of war.

Whether the fact that we are farther from the scene of fighting than European countries will diminish the force of this contagion it is perhaps too early to tell. Our newspapers have a remarkable capacity for annihilating space. Thoughts and conversation, even with us, will dwell more and more upon the personal tragedies that come home to us. We shall very likely find the attitude of adults among us undergoing that reversion to the primal that is discovered in adults elsewhere. The war and its deeds will enter more intimately into our homes and will sit with us at family gatherings. All this is certain to have its effect upon children, for children are the impressionable members of every group.

Already probation officers in New York city are reporting an increase in the number of juvenile offenders; last year more cases were handled in the Children's Court than in the

year before, and this is attributed by the officers themselves to the unsettlement of life and thought caused by the war. An illustration of what this may mean, now that we also are in the war, is afforded by four boys who recently appeared before the Juvenile Court in Chicago. These boys had left the city to work upon farms. One of them, having injured a horse by putting on it a collar that was too small, feared his employer's displeasure and ran away. The others ran away from sheer dislike of their work. Their appearance in the juvenile court followed, and the boys were, of course, looked upon with disfavor by their parents and by many others with whom they came in contact during that experience. They were regarded as having taken the first step toward becoming "bad" boys, an attitude likely to produce its counterpart in the boys themselves. In normal times, probably, they would never have had this experience, since it was very unusual for Chicago boys to work on farms.

In some minds an opinion is already forming itself that juvenile delinquents ought to be treated with exceptional severity in war time. In New England this belief has been voiced publicly. Gardening has become sacrosanct as a patriotic service. Many more people are engaged in it than normally, and raids upon gardens have increased. Children are among the chief raiders. Newspapers have discussed the matter with much acerbity and several judges in Massachusetts have threatened incarceration to all who are caught.

Undoubtedly young garden marauders are exasperating at any time. This year the public is having enough concern with its food supply to be spared this assault upon its patience. It would be unfortunate, however, if there were not cool sense enough in the American people to prevent serious inroads on its vegetable crop without dropping back twenty years, or 200 for that matter, in the treatment of juvenile delinquency. The days when severe "punishment," especially commitment to penal institutions, was believed to be of prime efficacy in the treatment of children are past. Today commitment is, among enlightened judges, a measure of last resort. If it should now be called into practice against young offenders, upon argument of war necessity, the likelihood is that it will not only fail to correct law-breaking tendencies in children, and so be valueless on humanitarian grounds, but that it will fail also to stop the particular offenses aimed at and so be valueless as a measure of protection to society. Judge A. C. Backus, of the Municipal Court of Milwaukee, said recently:

Carefully compiled statistics show that under the old system when first offenders were sent to the penitentiary or reformatory institutions, in a period of five years after serving their sentence, from 27 to 41 per cent were returned to court on their second offense, showing that the penal institutions have not been the best corrective method so far as the individual is concerned. The probation system has almost reduced this to a minimum, during a period of five years the return to the court being little over 3 per cent.

Probation Work the Solution

LEWIS E. MACBRAYNE and James P. Ramsay, two Massachusetts probation officers, have recently published a book describing their fifteen years' experience in probation work. Out of 3,000 young people who came under the observation of these officials, 55 per cent were permanently saved and remained good citizens; another 10 per cent kept well within the law. Dr. Bernard Glueck, psychiatrist at Sing Sing, commenting upon these figures, says:

One doubts very much whether there is a penal or reformatory institution in existence which could present a record such as this

* One More Chance. An Experiment in Human Salvage. Small, Maynard & Co., Boston, 1916.

There can be no doubt that juvenile courts and probation have fully proved their claim to be regarded as the best remedial agents for dealing with young lawbreakers. In the modern juvenile court the child is primarily regarded not as a wrongdoer but as the product of conditions responsible for his appearance in court.⁷ Examples of such conditions are a neglected home life, a trying school experience, a lack of the proper opportunity and means for play, and a temperament demanding strong excitement. To discover and either change or meet these conditions is the object of the court machinery. The child is recognized as having a valid claim against the state to be saved to it, not punished by it.

The main objects of court action are, therefore, to keep the child separate from adult criminals; to organize the physical surroundings and procedure of the court so as to avoid intimidation or instilling into the child a "fear of the law"; to let it be clearly seen that the purpose of the hearing and of any subsequent action by court authorities is to discover and correct conditions tending to make the child an offender; to make the parent feel a definite responsibility for the wrongdoing of his child; never to commit a child to jail, and to take it away from its parents only when that is the only recourse left; and, finally, to place the child, when possible, under the friendly guidance of a probation officer who knows its needs and is looked upon as the representative of a wise and considerate court.

Probation officers should, therefore, be trained and sympathetic men and women. They should regard their relation to the child as an educational one, their function not mere surveillance but the adjusting of all the forces in the community that touch children to a particular child's outlook and needs. They should know the uses and limitations of social agencies, the family environment of the child, the conditions of the neighborhood in which it lives and its school life. Probation should never be for a definite period, but for as long a time as the friendly influence of the probation officer is needed. Courts should get away from that loose and lifeless supervision that permits a boy to go for weeks without seeing his probation officer and to fail in his reports without being looked up. They should regard probation as a vital, adjusting, educational force in children's lives.

In spite of the good that juvenile courts and probation have done, however, there are too many communities without this machinery for saving children. In many states, especially in the South and West, the laws creating these agencies are limited in their scope or fail to make them really effective. Fifteen or twenty states have fairly adequate juvenile court laws. Even where the system itself is good, not all of those who administer it always measure up to the ideals outlined above.

The Backward Federal Courts

RECENTLY the United States Supreme Court decided (in the famous *Killits* case) that federal judges have no authority to put on probation people convicted before them. Federal courts had exercised this function for years; in a moment they were deprived of it, and now they must either impose definite sentences upon offenders or let them go entirely free. A bill restoring the power to federal judges was introduced into Congress following the court's decision and both houses approved it. The President, however, withheld his signature, largely upon the recommendations, it is understood, of Attorney-General Gregory.

Mr. Gregory believes that the measure would have placed too arbitrary a power and too great a burden upon judges by

requiring them to determine whether each violation of law should involve punishment. He believes also that the bill should have provided machinery for the observation of released prisoners and that it was unconstitutional because its provisions were extended to cases in which conviction occurred before the date that was set for the bill to become law.

In answering the attorney-general's objections, Charles L. Chute, secretary of the National Probation Association, has pointed out that the right of using suspended sentences has been declared to be an inherent right by the courts of New York and of many other states. The "arbitrary" power of deciding whether a violation of law should involve punishment, therefore, says Mr. Chute, is well established in fact in nearly every state in the Union. It is little criticized in its operation, and the men appointed by the President to sit as federal district judges may well be entrusted, thinks Mr. Chute, with the exercise of similar power.

With respect to the second objection, that machinery should have been provided for the observation of released prisoners, Mr. Chute declares that the bill as first introduced did call for salaried probation officers to be attached to each court and to be paid on a *per diem* basis. This provision was stricken out, however, by the House Judiciary Committee. While the National Probation Association believes that paid probation officers are highly desirable, it points out that volunteer officers could have been appointed under the measure as it reached the President and that these would have relieved the judges of much of the burden of keeping watch on offenders. The bill would, it believes, have been a long step forward.

The third question, that of the bill's constitutionality, would have been settled in due time, doubtless, by the courts themselves. The association plans to introduce another measure of similar character when the chances for passage again seem favorable.

Playgrounds vs. Courts

SO FAR we have been considering methods of saving children who have actually become delinquent. Equal importance lies in prevention. Wholesome recreation is one of the greatest preventives of waywardness among children. Perhaps more young people are brought into conflict with the law through their instinct for play than from any other one cause. Yet in many cities the ordinances affecting children read like prohibitions against every natural impulse of childhood. To provide a suitable outlet for these impulses is not only sound education, it is the best kind of insurance against a crowded juvenile court docket and well-filled houses of correction. In war time especially it becomes a measure of the greatest virtue and wisdom.

During the past decade public provision for recreation has enormously increased in this country. Ten years ago a single field secretary of the Playground and Recreation Association of America was able to cooperate with all the communities interested in this aspect of child life; now thirteen workers are not enough to meet the demand. Over 7,000 professional workers were employed in public recreation last year. The tendency today is more and more toward municipal control of both playgrounds and neighborhood center activities.

In spite of this growth, however, a large number of cities of more than 10,000 people still have no public provision for play or very inadequate provision. Last year the total average daily attendance upon playgrounds in 317 cities was 639,486 during the summer months; this is fewer than the number of children in New York city's elementary schools alone. Too many cities, also, permit their recreation to be administered by private organizations of citizens—at best a temporary ex-

⁷ See *Juvenile Courts and Probation*. By Flexner & Baldwin, published by The Century Co.

pedient and one that should be employed only until an official body can take charge.

The Boy Scouts and Camp-Fire Girls have here a large field for service in training and recreation of a general nature. In England the militarization of the organization has been pronounced. In this country, where much discretion and choice of activities is left to many individual leaders, the appearance of a military cast to activities here and there is inevitable. Public opinion, if it does not want military training for young boys, should assert itself. If it does, it should provide carefully for some responsible agency, preferably a public one, to give such training. The position taken officially by the Boy Scout organization since the United States entered the war, while it does not preclude boys from being of service in some domestic activities closely related to the war, is definitely against the introduction of military training into the scout program. In so far as organizations like the Boy Scouts and Camp-Fire Girls make for healthy, vigorous youth, for an enlargement of the activities of young people and an increase of their civic sense, they should furnish a wholesome preventive to waywardness and unsocial conduct.

Other measures for protecting the pleasures and conduct of children ought not to be slighted. In communities where the moving picture is a large attraction, committees should be appointed to cooperate with the Affiliated Committees for Better Films, with headquarters at 70 Fifth avenue, New York city, to receive information and advice on how to secure better pictures for children and family groups.

An agency of a different sort is the organized junior police, which, under proper direction, is capable not only of aiding in the actual enforcement of law, but of placing responsibility for that enforcement upon boys and of teaching an acquaintance with the functions of government. This is a better method of instilling "respect for the law" into children than any number of reformatories. One of the latest communities to form such an organization is Somerville, Mass., where the superintendent is a boy of seventeen years, with captains, lieutenants, sergeants and privates under him. The organization was started last spring, after our own entry into the war, and one of its objects is to prevent those very depredations on gardens that we have seen to be a matter of much concern to New England communities.

This same fear of garden destruction has given rise to another organization in Massachusetts that may hold value for other places as well. The Committee on Food Conservation

appointed a sub-committee to protect gardens. This committee promptly took upon itself the additional duty of protecting children. Instead of encouraging the severe treatment of youthful destroyers of gardens, it decided that the true interests of the public demanded the preservation of existing juvenile court and probation methods, both of which are admirable in Massachusetts. Members of the committee hold themselves in readiness to visit different parts of the state where a tendency is seen to revert to former methods of harshness, and to explain the importance of not allowing a loss of temper to interfere with wise treatment. It has also kept a close watch on the amount of garden depredation, has informed the public through the press of the amount of destruction going on, and has endeavored in so far as it is able to combine the necessity of food conservation with the best method of handling children who come in contact with the law.

This idea might well be extended still further. The suggestion is herewith made that local voluntary councils be formed in cities throughout the country to protect children from harm during the war and to reduce child delinquency. Such councils ought to be composed of educators, leaders of boys' clubs, representatives of churches and social agencies, and of municipal and judicial authorities. While they might come in time to deal with many aspects of child welfare, especially after they had become familiar with local conditions and needs, their first usefulness would perhaps lie in remedying the conditions that make for violation of law. They could help to allay any tendency toward undue severity and to improve the administration of existing juvenile courts and probation systems; where these do not exist, they could work for the passage of laws establishing them. They could increase and improve recreational facilities, see to it that child labor laws are enforced and, if needed, try to secure a better class of moving-picture exhibitions. They could carry on educational campaigns among the children themselves, pointing out to them the patriotic value of good behavior at this time. In a word, they could become the unofficial guardians of child conduct in each community and if, when the war is over, their work had been found to be successful, they could perhaps be continued as permanent and official bodies. In the meantime their efforts would have been instructive both to the members of the councils themselves and to the whole community. From this alone an indirect gain to children would result that would amply repay the expenditure of time and effort.

An International Humanitarian Commission in War Time

By William I. Hull

DEPARTMENT OF HISTORY AND INTERNATIONAL RELATIONS, SWARTHMORE COLLEGE

NOW that we have entered the great war on the side of the entente, there is a growing demand that we appoint commissions of various kinds to meet with others appointed by the entente to agree upon common plans for prosecuting the war with the utmost vigor. While this step may be desirable from the military, naval and economic points of view, there is a no less urgent need from the international point of view that we invite

the entente powers to enter with us into a joint commission, whose duty shall be to inquire into and take action upon matters of vital importance relating both to war and to peace.

Meeting, say, at Athens, such an international commission could keep in close touch with the advance of the allied armies through Syria, Mesopotamia, Armenia, Asia Minor and the Balkan and Austrian lands. It could hold aloft the

standards set up by the conferences at The Hague both for a humane prosecution of the war against belligerents, and for a just and merciful administration of the lands occupied by the victorious armies. It could thus prevent a repetition of the atrocities which blackened the progress of the victorious army of the western allies in the march to Peking, during the suppression of the Boxer revolt, and the horrors connected with the advance of the victors during the two Balkan wars. These atrocities were revealed to the gaze of an indignant world by international commissions appointed after the crimes against humanity had been perpetrated; similar ones should be prevented by precautions taken in due time and by an impartial, that is to say, by a truly international, commission.

The operations of the Red Cross within the conquered lands; the prevention of racial and religious reprisals; the rehabilitation of the civilian population, their homes and industries; and the restoration of the international postal system, the sanitary and the many other modern international institutions and relations, would all be greatly facilitated by the existence and control of the international commission.

The ravages of typhoid, malaria and dysentery in such lands as Serbia, Syria, Poland and Macedonia, among the adult population, and the malnutrition of such children as are left there, as well as epidemics of all the ills to which infancy is heir, will demand the utmost efforts of Red Cross societies organized and supported on an international and world-wide basis. It is greatly to be feared that the very best they can do will not suffice to cope adequately with the wholesale pestilence and famine which threaten to take possession of these lands for many years after the dogs of war have again been leashed within their kennels; and the tragic story of the Thirty Years' War, from whose ravages parts of central Europe did not recover for more than a hundred years, may again be repeated on a more far-reaching geographical and populous, if not chronological, scale. To prevent such a calamity, or to reduce it to the lowest possible terms, is the task to which scientific philanthropy is summoned by a most insistent challenge.

The infusion of renewed courage and ambition into the despairing hearts of civilians in such lands as Roumania, Belgium, Galicia and at least the inauguration of the task of reconstructing their devastated homes and industries, will engage the devoted efforts of their more fortunate fellowmen from other lands—our own, we hope, not the least or last among them. These efforts must not be handicapped by restrictions imposed in the name of national pride and jealousy, or in that of alleged "military necessity." An international commission should be vested with authority and power to cut without fatal delay the gordian knot of all such red tape and officialism. Acting in the spirit of the motto that "above all nations is humanity," such a commission, and such a commission alone, could confront the gigantic task of rehabilitating the physical, industrial and social morale of a continent, by wielding the united resources of the world.

The scope and character of the racial and religious re-

prisals which may follow the reoccupation of such lands as Armenia, Bulgaria, Albania and the conquests of such lands as Turkey and Bohemia, may be estimated from the black records of the recent and remoter past. To prevent worse blots upon the annals of our own times, and to forestall greater crimes against humanity, all the world of civilization should join hands and concentrate its united strength by means of an international commission. Such a commission would focus the glare of a pitiless publicity upon the dark and evil places, and by such illumination alone prevent the appearance or at least the continued activities of human vampires and vultures.

Aside from its tasks of far-reaching humanity and social philanthropy, such a commission could perform international administrative tasks of the first importance. For example, it could administer for the common welfare, during the rest of the war, lands conquered by rival and possibly suspicious armies of the various allies; and when peace is made the permanent disposition of these conquered lands could be more readily and more justly achieved if they were under the control of an international commission of civilians than if any national army, or even international army, dominated them. The fate of Persia, Turkey in Asia and in Europe, Greece, the Ukraine, colonial empires in Africa, and many other lands, is at stake in the present war, and their fate will largely determine the future peace and welfare of the entire world.

Most important of all, perhaps, the international commission could ascertain the first possible opportunity of bringing the war to an end; and it might even create a speedy opportunity for this devoutly to be hoped for consummation. For it would serve as a standing invitation to the German, Austrian and Bulgarian people to seek representation upon it, by setting aside their despotic governments, and, by thus establishing popular government, secure both a basis and means of achieving early and lasting peace.

Representation upon such a commission would be for the United States, not an entangling, but a disentangling, alliance; for, as at Algeciras, our representatives would exert a powerful influence, not for American self-aggrandizement, but for the triumph of national justice and permanent international peace. Without some conscious, well-defined and determined program of international policy, definitely entrusted during the war to a body specifically designed to carry it out, there is grave danger that the United States will find itself at the end of the war bound up with national plans and ambitions which are wholly at variance with democracy and inevitably the progenitors of lasting dissension and future war. While with a plan of international arrangements clearly conceived and boldly entrusted to an international commission inspired by genuinely international ideals, the United States may not only be kept from drifting upon the rocks of Old World politics, but may greatly assist the launching of that international organization which is the avowed purpose of all the combatants abroad, and which President Wilson and all forward-looking men regard as the chief present hope of humanity.

A LIGHT

Alter Abelson

AS one who in a jungle went astray
Where terrors tremble in the air; and
night,

A star-lorn cynic night derides our sight,
And none there be to cheer or show the way;

When lo, a lamp appears that turns to day
The shades, and human hands our foot-
steps light

Until we reach our home and lose all fright

In cities civilized where law holds sway.

In History's jungles journeyed I, when lo,
Thy lamp and hand, rapt Israel, I spied;
The Bible that suns outvied, all nights
defied;

I found a trail that led me out of woe
To where Civilization paved her pathways
wide

And where a human heart and home I know.

SOCIAL FORCES *in* WAR TIME

By Edward T. Devine

THE editor of this department has within the last few days gone to Europe in behalf of the War Council of the American Red Cross, to study the financial burden created by disabled soldiers and sailors, and the work for their re-education and return to normal life which is being done in France and England. For this reason the department may be somewhat irregular for a few weeks, but it will not be suspended. The following paragraphs were written by Mr. Devine just before he sailed.

INSURANCE RATHER THAN PENSIONS

IN the Treasury Department at Washington there is already what is known as a Bureau of War Risk Insurance, created in 1914, for the benefit of seamen and the merchant marine. There has now been introduced, with the approval of the secretary of the treasury and the President, a very important amending bill, which establishes, by the side of this marine and seamen's insurance, a division of military and naval insurance. To this new division in the War Risk Insurance Bureau, by what is no less than a stroke of genius, is entrusted the whole responsibility for allowances, allotments, compensation, and insurance to soldiers and sailors and to their families. Nurses are included.

Pensions totally disappear and with them, it is confidently hoped, all the niggardliness and the extravagance, the degrading charity and the mawkish sentimentality, the political chicanery and the social demoralization which have been such undesirable features of our past pension systems. The whole point of view is changed in the plan now presented to Congress, and with this change in the point of view radical reform becomes possible. The old controversies simply drop out of sight. A definite right to compensation, based on recognized principles of compensation for industrial injuries, replaces the more intense but also more sentimental and therefore more unreliable claim for a "pension."

The specific measures of the Simmons-Alexander bill should of course have close scrutiny. It may be that the particular scales proposed are too liberal or not liberal enough. The basis of calculation, viz., pay received while in the military or naval service, may be unjust in the case of officers or privates who prior to their enlistment were in receipt of much larger incomes. The principles of alternative claim, based on earnings in civil life, might be introduced, as it is to be found in the present English system. On the other hand, the regular pay in the American army and navy is so much more liberal than in the corresponding European services that the argument for allowing such an alternative loses some of its force. That Judge Julian W. Mack, under the authority of the Council of National Defense, prepared the bill, and that it has the endorsement of the Committee on Labor, of which Samuel Gompers is chairman, create strong presumptions in its favor. Its fundamental idea is right: that the financial risk of death, disease and disability should be carried by insurance, and that compensation, adequate in amount and clearly known in advance, should be guaranteed. The cost of such insurance can be estimated with some degree of certainty and its future

curve need exhibit no such erratic and abnormal course as has characterized that of Civil War pensions.

The bill has some very valuable incidental provisions, as, for example, that which makes the compensation dependent on the acceptance, in suitable cases, of such re-education and vocational training as the government may provide, and that which offers supplementary insurance to every officer, enlisted man or nurse who is in position to pay the specified premium. The policy embodied in the bill is so novel, and yet so simple and so completely in harmony with the whole trend of recent labor legislation in this country, that it deserves immediate and sympathetic study; and, with any modifications which such study and discussion may suggest, it should speedily be enacted into law.

CONTROL OF WAR CHARITIES

ILLINOIS so far claims the honor of being the only state to regulate by law the solicitation of contributions for war charity. A law which became effective July 1, 1917, provides that on and after that date, under penalty of a maximum fine of \$1,000, no individual society, club, association, or corporation shall engage in the solicitation of any war aid or war charity, without first obtaining from the State Council of Defense a license to make such solicitation. Information required by the council must be given, and rules and regulations issued by them must be obeyed, under penalty of forfeiting the license. No license is required for charities authorized by Congress or by proclamation of the President.

The Citizens' War Board of Chicago, through its committee on Administration of War Relief, has urged that all tag days for war relief be abolished in that city, and the Chicago Red Cross has courageously declined to accept a check for \$200 which represented the proceeds of a tag day.

Cities in other states, in the absence of state action, are taking steps to control war charities, by methods similar to those already used in time of peace by Chambers of Commerce and Federations. The Peoria (Illinois) War Relief Association, formed to finance war needs and prevent multitudinous and indiscriminate appeals, has secured monthly pledges and makes appropriations to certain local organizations in proportion as they have served soldiers and sailors. Cincinnati's War Council has a Committee on Authorization which issues cards to solicitors for approved war charities. There is close cooperation in Columbus, Ohio, between the Chamber of Commerce and the Central Philanthropic Council, and the Chamber of Commerce has a committee which endorses appeals for war charities. The New York Charity Organization Society, through its Bureau of Advice and Information, gives its members an advisory service on war charities, but has no control over appeals. Atlanta is undertaking to get a Central Council of Social Agencies under way, and the Atlanta *Constitution* is relating this need to the complications arising out of the war-time situation. Dallas, Texas, has a new Civic Federation which has for its object to secure the best possible mobilization of the social forces of Dallas, and which should furnish an excellent means of dealing with all war-time charities and needs.

COMMON WELFARE

DELAYED PUBLIC HEALTH MEASURES

TWO important measures for the public health of the nation are being delayed "somewhere in Congress." One of these is the appropriation of the sum necessary to purchase the New York quarantine plant at Rosebank, S. I., and thus take the final step in securing federal administration of this, the largest port of entry in the country.

At least six months ago the commission created by the New York legislature in 1916 to negotiate with the government for the transfer of the New York quarantine, advised the secretary of the treasury that, after considering figures and values of the plant at Rosebank, it would fix the price at \$1,395,275—a much smaller sum than was originally mentioned. On February 15 of this year the New York legislature adopted a resolution urging the congressmen and senators from this state to use their efforts to secure this appropriation. During the special session of Congress, early in June, the Senate Committee on Appropriations included in the sundry civil bill for 1918 this million dollars for the purchase of the New York quarantine. The item passed the Senate, but was stricken out, presumably by adverse conferees from the House.

So far as can be learned there is no opposition to the measure in Congress. In fact, it is said that favorable action will undoubtedly be taken during the coming session; for the transfer is obviously a measure of national defense as well as one of value to the public health. A further material argument in favor of this action is found in the operation of the new immigration law. At present the state quarantine officers require the assembling of crew and passengers for medical examination according to quarantine laws. Shortly after, crew and passengers have to be again assembled in order that the medical officers of the Public Health Service may examine them for immigration purposes. The saving of cost, time, trouble and delay to shipping and immi-

gration were both examinations conducted at once needs no special apologia. This could be done if both groups of examining officials were appointed by the Public Health Service.

The second measure that is delayed en route is joint resolution No. 63, establishing a sanitary reserve for the Public Health Service [see the SURVEY, May 19, June 7]. The resolution passed the Senate, but has not yet been reported from the House. Keeping the people's health at high level has been in each of the belligerent countries recognized as of first importance, and efforts have focused upon the regions round about training camps in order that infections native to the regions might be kept from the troops, as well as that any outbreak of sickness among the troops might be barred from the civilian population.

The care of the troops is a military responsibility; the care of the civilian population is clearly in the field of the civilian Public Health Service and co-operating state departments of health. Prompt action by Congress in securing to the service its needed quota of sanitarians will mean the extension of important scientific work already begun. And the activity of the war-time reserve will mean a splendid stimulus to permanent civilian health work upon a scientific basis. For infections are regrettably independent of treaties and peace settlements; and adequate sanitary service cannot be limited to emergency effort.

BILLS DRAFTED TO CURB THE I. W. W.

TWO bills attempting to lay a legal basis for suppression of the activity of the Industrial Workers of the World were introduced in the Senate last week, and Senator Hollis, of New Hampshire, announced that he would draft and introduce a third. None of these measures attempts to deal with any of the economic causes of the unrest in the industries affected—copper mining, lumbering and agriculture—but all propose to make certain acts on the part of workmen punishable as crimes.

Senator King, of Utah, introduced on August 16 a bill which provides, among other things, that

if any person or persons shall advise, counsel, persuade, or incite, or shall utter words or statements which shall tend to persuade or incite any person to break any contract with the government of the United States, or to break any contract which has to do with the production, fabrication, manufacture, or transportation of any article, commodity, or thing for the use of or intended for the use of the United States, he or they shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than \$1,000, or be imprisoned for not more than one year, or may, in the discretion of the court, be both fined and imprisoned.

Senator Myers, of Montana, introduced on August 15 a bill which prescribes:

That when the United States shall be engaged in war it shall be unlawful for any person or persons in the presence or hearing of others to utter any disloyal, threatening, profane, violent, scurrilous, contemptuous, slurring, abusive, or seditious language about the government of the United States, or the constitution of the United States, or the president of the United States, or the army or navy or soldiers or sailors of the United States, or the flag of the United States, or the uniform of the army or navy of the United States, or the good and welfare of the United States, or any other language calculated to bring the United States or the United States government, or the president of the United States, or the constitution of the United States, or the army or navy or soldiers or sailors of the United States, or the flag of the United States, or the good and welfare of the United States into contempt, scorn, contumely, or disrepute; or any language calculated to incite or inflame re-

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

sistance to any duly constituted federal or state authority in connection with the prosecution of war; or to threaten the good or welfare of the United States or the United States government or to advise, urge, or incite any curtailment of production in this country of any thing or things, product or products, necessary or essential to the prosecution of the war in which the United States may be engaged, with intent by such curtailment to cripple or hinder the United States in the prosecution of such war.

SEC. 2. That any person duly convicted of any such foregoing offense shall be for each such offense punished by a fine of not less than \$500 nor more than \$5,000 or by imprisonment for not less than six months nor more than five years, or by both such fine and imprisonment.

Senator King and Senator Myers have expressed themselves, on the floor of the Senate, as wishing to find some means of preventing the interruption of the mining and smelting of copper in their respective states, during the war, by I. W. W. agitation. They, like the senators from Arizona and New Mexico, have abstained from any expression of views as to the justice of the methods recently employed by the mine owners and their adherents at Bisbee and Gallup in deporting strikers and strike sympathizers.

Senator Ashurst, of Arizona, has, however, indicated his leanings in the matter by asking permission of the Senate to print in the *Congressional Record* for August 13 certain resolutions by the Chamber of Commerce of Phoenix, Ariz., and the constitution of the Loyalty League, which is the Arizona counterpart of the Citizens' Alliance of Cripple Creek strike days.

The resolutions by the Chamber of Commerce "urge upon the Arizona delegation in Congress the need of a census of labor, and recommend that an industrial drafting service be devised to be in operation during the war; and . . . that we recommend legislation be enacted which will prohibit in every form advocacy of crime, sabotage, violence, and any unlawful methods of securing industrial or political reforms."

These resolutions were adopted on August 3. Three days later there was adopted in the same city this preamble to the constitution of the Loyalty League:

To loyally stand for our country in the pending crisis; to promote a patriotic and militant spirit among our people; to exterminate the Industrial Workers of the World; to curb the treacherous alien; to fight disloyalty, anarchy and treason; to preserve order; to protect life, liberty and property, and to see to it that every law-abiding inhabitant of the community is unmolested by threat, epithet, taunt or espionage in the enjoyment of his right to pursue his own lawful course.

Arizona newspapers of their own party faith, reaching the Arizona senators, state that 400 men unaffiliated and unidentified with any labor organization were among those driven from Bisbee by the Bisbee Loyalty League;

that 400 members of the American Federation of Labor, unaffiliated with the I. W. W., were also among the number deported; that some 440 men affiliated with the I. W. W. were driven out.

After some consideration of the complex nature of the problem, Senator Hollis states that he will attempt to draft a bill which will not be open to the criticism levelled by labor union officials at the bills offered by Senators King and Myers—that these would have the effect of forbidding all strikes in war industries.

"I am a labor man," said Senator Hollis, on August 17, "and I shall not sponsor any measure which does not meet with the approval, in this matter, of the regular trade union officials. I will not stand for any bill which would forbid strikes."

In a discussion in the Senate, the New Hampshire senator outlined his position thus:

The Industrial Workers of the World teach resistance to all authority. So far as they resist the ordinary authorities, the state and local governments must take care of that situation; but this organization is taking advantage of the present war to stir up opposition to the federal government in its conduct of the war. They are advising and exhorting everyone to disregard the federal laws, particularly the laws that have to do with the conduct of the war and the selective draft. When they do that the federal government has a real and vital interest in what they are trying to accomplish, and I hope that all senators will study the subject carefully and be ready with suggestions which may aid us to cope with this very real danger.

THE NEW INDUSTRIAL TRIBUNAL

AFTER four months of discussion, the plan of establishing industrial standards to govern war work and to maintain such standards through a national industrial tribunal has been adopted by the Council of National Defense. How much the decision of the council was stimulated by the strikes in the copper camps, in the coal mines and in the shipyards, and how much by the demand of the executive council of the American Federation of Labor for direct representation of the workers on all boards having to do directly with contracts for war work, is a matter of speculation. Announcement of the new régime, which will be marked by enforcement of the federal law providing for a basic eight-hour day, with time and a half for all overtime, was made on August 9.

It is proposed that the tribunal, which will direct the settlement of all industrial disputes in the munitions and supplies industries throughout the country, shall consist of nine persons, three representing the government, three the employers and three the workers. Disputes involving more than 1,000 workers will be handled directly by this

board. Disputes affecting a smaller number will be treated by subordinate tribunals, which will be established as circumstances require. In each tribunal, however, the proportion of representation of the government, the employers and the workers will be the same.

Authority will be enforced through a clause in all contracts for work henceforth to be done for the government, requiring acceptance by the contractor of the decisions of this industrial tribunal. Officers of the national and international unions will give their written guaranty of adherence, and the secretaries of war and of the navy will sign for the government.

Samuel Gompers, as head of the American Federation of Labor, declined, last week, to discuss the matter, pending further developments. About June 15 he entered into a written agreement with Secretary of War Baker, covering the settlement of industrial disputes in the construction of the army cantonments. The army named one member of the central adjustment board, the Building Trades Department of the American Federation of Labor named John R. Alpine as its member and the secretary of war chose a civilian as the third. These three men have been adjusting various claims for advances in wages and for improved conditions of employment for nearly eight weeks past. Only now is the fact of this arrangement divulged.

The Navy Department did not become a member of this agreement as to industrial disputes in the building of camps, and hence arose the danger of a strike of carpenters at a naval camp near New York city, which led to the agreement of the contractor to employ none but union men. The Navy Department then promptly joined the War Department in its contract for adjustment through the central board.

James O'Connell, president of the Metal Trades Department of the American Federation of Labor, states that the creation of the industrial tribunal does not necessarily mean the end of strikes in plants doing war work. He points out that it is not retroactive as to past disputes nor as to contracts already given, and except by agreement between the government and the firms to which contracts have been awarded, it cannot be expected to apply to the hundreds of millions—possibly billions—of dollars' worth of supplies and munitions and ships now in process of manufacture.

Again, the tribunal has no legal power to enforce its decrees, but will rely wholly upon the cooperation of other branches of the government in influencing business men and workers to concur in its findings. Its success will be measured by its own promptness in satisfying the demands of various groups

of workers for a wage sufficient to maintain them at their accustomed standard of living, or at a better standard, consistent with the approval of active public opinion. That it will prevent strikes, except by establishing this relation between wages and the current cost of the necessities of life, is not assumed by the Council of National Defense.

At almost the same moment with the announcement that this tribunal would be named the President designated Justice Harry Covington, of the Supreme Court of the District of Columbia, to visit the copper mining regions of Arizona, Utah and Montana, to study and report upon the reasons for the strikes there. Jeannette Rankin, congresswoman from Montana, had charged in her first speech to the House that John D. Ryan, as head of the Amalgamated Copper interests, was personally responsible for the conditions leading up to the strike in Butte. She blamed the companies for preventing union organization and for repressing complaint against dangerous conditions in the mines, as a result of which 160 men were burned to death in one mine on June 8. This fire was followed immediately by the strike. She demanded that the government take over and operate the metalliferous mines of the country. Congressman Hayden, of Arizona, endorsed her demand. Judge Covington's report on the copper mine situation will not be ready for several weeks.

GEN. O'RYAN'S ANTI-ALCOHOL LETTER

MAJ.-GEN. JOHN F. O'RYAN, of the New York National Guard, who, with the taking over of his troops by the federal government has been given the same rank in the army, has written to his men a letter on the use of liquor that is being widely quoted.

General O'Ryan points out that in military life the ties of family and community that bind one to respectability slip away; in their place come military orders. He then points out that if a soldier tries to "buck" these orders, it means, when applied to 37,000 men, grave dangers to the whole division. Nothing will loosen this strict obedience to formal orders like alcohol; "this letter is, therefore, a personal appeal to your intelligence and better self to refrain from using liquor in any form," he says.

The plea is based upon principles of scientific military management.

This cannot be if we are to permit "booze" in any form into our military machine. Alcohol, whether you call it beer, wine, whisky, or by any other name, is a breeder of inefficiency. While it affects men differently, the results are the same, in that all affected by it cease for the time to be normal. Some become forgetful, others quarrelsome. Some become noisy, some get sick, some get sleepy;

others have their passions greatly stimulated. When you stop to consider the thousands in a division, do you not see how vital to efficiency is the elimination of liquor? If one officer or man is permitted to use liquor, then others will claim the right to do so. Now can a division of troops be ever ready—ever up on the bit to drive ahead or to thrust back the enemy's drive, if through the presence of this insidious evil, some soldiers forget their orders, or become noisy when silence is essential, fall asleep when every faculty should be alert, or absent from their posts?

To this letter is appended a memorandum from Lieutenant-Colonel Steers, of the Army Medical Corps, disclosing the physical ruin that results from participation in the evils of camp life. Dr. Haven Emerson, health commissioner of New York city, believes that 75 per cent of this venereal infection is contracted under "the influence of alcohol" and it was General O'Ryan's own troops on the Mexican border that prohibited saloons and prostitution and showed, in consequence, the lowest rate of treatment for venereal disease.

THE NATIONAL NURSING SERVICE

THE national nursing organizations of this country have mapped out a program of remarkable significance and extent. They are related to the Council of National Defense at three points: through a committee of nursing of the General Medical Board, a committee which came into existence as an emergency body to provide a supply of nurses for home work as well as for war duty. This group includes physicians, sanitarians, educators and social workers. The chairman is M. Adelaide Nutting, of Teachers' College, New York city. [See THE SURVEY, June 9 and June 30.]

The second group is a sub-committee of the Committee on Hygiene and Sanitation of the General Medical Board and concerns itself particularly with public-health nursing. The committee was appointed at the special request of Surgeon-General Blue, of the United States Public Health Service. It is gathering data relative to the effect of the war on public-health conditions in Europe; and in preparation for facing emergencies in this country, has sent a letter to departments of health, boards of education and visiting nursing associations, asking whether their budgets have as yet been affected, or their quota of nurses reduced; and if so, what steps the association is taking to maintain its work under the circumstances.

It is more than probable that this committee will be called upon a little later to assist in rehabilitation work abroad. It will ask all public-health nurses to enroll in the Red Cross as a special group exempt from all other forms of Red Cross work except that of public health. The Public Health Service has signified its approval of

using only such enrolled nurses for the work soon to be inaugurated in zones surrounding cantonments through the cooperation of federal and state health authorities and the Red Cross.

The third nursing committee is on home nursing, in the Committee of Labor, of which Samuel Gompers is chairman. Of this group Lillian D. Wald is chairman. She selected as her associates the nurses who are already serving on the committee on nursing of the General Medical Board, with the addition of Ysabella G. Waters, Edna L. Foley and Dr. Alice Hamilton. This committee has been asked for a report of "the nurse in industry" and has submitted such a report, showing which industries are now safeguarded by protection of the industrial nurse, which need such protection and what the greater hazards of war will be. It has also furnished, through Miss Waters, a statement of all industrial nursing service through the country. Information concerning sources of home care in all parts of the United States will be furnished by the committee to industrial workers and their families at any time.

As secretary of these three committees, Ella Phillips Crandall has been temporarily released from her position in the National Organization for Public Health Nursing and placed in Washington at the headquarters of the Council of National Defense.

SHORTER HOURS FOR WESTERN WORKING WOMEN

NIGHT work of women in Wisconsin between 6 p. m. and 6 a. m. has been stopped by order of the Industrial Commission. On petition of the Wisconsin State Federation of Labor, the Wisconsin Council of Social Agencies and the Wisconsin Consumers' League, the commission, after hearings and investigations, decided that night work in factories and laundries is "objectionable from the standpoint of the statutes forbidding employment prejudicial to the life, health, safety and welfare of women." The decision is in accord with the regulation contained in a state law enacted in 1913 and declared void by the courts last year.

The commission so far, however, has not attempted to regulate night work in mechanical and mercantile establishments, restaurants, telegraph and telephone offices, express and transportation houses. Neither does it include "pea canneries" within the term manufacturing so that in such places women may work any number of hours as was possible formerly in New York state. Finally the commission failed to reach any conclusion on the subject of hours to be permitted per day, announcing that further time was necessary to look into the matter.

Commissioner J. D. Beck alone ad-

vocated immediate action in favor of shorter working days arguing

that the eight-hour day will soon become recognized as necessary to the women factory workers if their health and welfare, and the welfare of the future generations are to be fully guarded.

He expressed the hope that

the commission may be able to speedily conclude its hearings and enter its final orders before any false propaganda under the guise of patriotism may induce exploitation of the women, which will react in this country, as it has in England, and result in lessening production instead of increasing it. If conditions of labor are made right, and man's pay is given to women for equal work in industry, there are many thousands of women who will respond to the needs of the country during the war, both from patriotic impulse and from necessity of increasing the family income to meet the burdens of war.

The Kansas State Industrial Welfare Commission has out-distanced the Wisconsin body in this matter of hours by establishing on July 28, a nine-hour day for women in mercantile establishments. Although the merchants pleaded that it was necessary to keep their stores open later than nine o'clock on Saturday evenings, the commission rejected the appeal.

MRS. MOONEY FREED IN SAN FRANCISCO

MRS. RENA MOONEY, third defendant in the San Francisco "bomb plot," was acquitted July 25 on virtually the same evidence that convicted her husband, Thomas J. Mooney, and Warren K. Billings of murder in the first degree (the SURVEY, July 7).

The result came after the attorneys and defendants had given up hope of an agreement by the jurors. After deliberating fifty-one hours, the jury reported that they were deadlocked, but the judge refused to discharge them until they had returned a verdict.

Mrs. Mooney, like Billings, Mooney, the two defendants, and Edward D. Nolan and Israel Weinberg who are yet to come to trial, was accused of causing the bomb explosion that killed ten people and injured fifty on July 22, 1916, during the preparedness parade in San Francisco. Billings has been sentenced to life imprisonment, Mooney has been sentenced to be hung. Both sentences are automatically stayed by appeal pending before higher courts for new trials. In Mrs. Mooney's trial the prosecution was weakened by lacking the testimony of F. C. Oxman, the Oregon cattle man, who was chief witness against Tom Mooney and is now facing trial for subordination of perjury.

Mrs. Mooney is the only one of the five defendants not connected with a labor organization. She is a music teacher. She did, however, cooperate with her husband in an unsuccessful campaign to organize a strike among the United Railroads carmen.

For the first time in a labor case a "silent jury" composed of trades unionists was appointed by labor organizations to sit in the court room and return a verdict to labor as to whether the defendant was guilty. Their verdict, reached in a far shorter time than that of the real jury, was likewise "not guilty."

HOUSING ENGLISH MUNITION WORKERS

THE serious shortage of housing accommodation which exists around the new, and some of the older, munitions works in this country was referred to in the article on Industrial Poisons in Munitions Plants in the SURVEY for June 30. A similar problem has had to be met by the British Ministry of Munitions, and some of the steps taken by it recently may be of interest.

In the first place, investigations were made whether the shortage reported was purely temporary or whether it antedated the war industries. In the latter case, the effort has been principally in the direction of stimulating the erection of permanent buildings; in the former temporary provision only has been made. In addition to this distinction, there has been careful study of the differences in local conditions with a view to rendering the most effective assistance to the local authorities primarily charged with the duty of preventing overcrowding.

Thus, in some cases, public utility housing societies—that is, societies limited by statute as regards profits and subject to other restrictions—have been given loans for the greater part of the capital required for building, usually at 5 per cent interest and repayable in forty years. In some cases, employers have been allowed to charge some portion of the cost of building workmen's houses, due to the higher war prices of material, wages, etc., against that part of their profit which, under the present system of taking excess profits for the nation, would have gone to the treasury. In some cases, loans have been made to the local authorities themselves.

The type of permanent building sanctioned usually is the familiar English two-story brick cottage containing kitchen, living room, two or three bedrooms and bath. Where temporary accommodation only was required, experiments have been made in a variety of types of construction—cottages, hostels and hutments, or groups of hostels.

In two cases, the ministry itself has been obliged to build whole villages, with stores, schools and churches. The temporary cottages are built either of wood or of concrete, in the latter case almost always only one story high, which makes possible the use of large standardized slabs and whole moulded walls.

The building of hostels has been resorted to where large numbers of single

workers, men or girls, had to be accommodated, usually for thirty persons each. In addition to kitchen and dining room, these buildings have cheerful common rooms to enable wholesome social life. The hutment system, also used chiefly where large numbers of girls had to be housed, makes use of larger individual units, each accommodating from 100 to 130 persons, sleeping in single or double cubicles.

To economize, the dining and common rooms in the case of these hutments or colonies, usually are centralized in a separate building, adjoining an administrative block which also houses the offices and rooms of the lady superintendent and her staff. The dormitory blocks have an adequate number of bathrooms and all the buildings are heated by hot water pipes.

COMMUNICATIONS

THE RIGHTS OF CHILDREN

TO THE EDITOR: May I, through the SURVEY, make a request to the Children's Bureau, which collects for us and distributes such valuable information.

There is no country which has recognized the right of every child to two parents as has Norway; the right of the illegitimate child to a father, and to that father's name; the right to inherit from the father, and the right to support and education at least up to sixteen, from both parents, and in proportion to the financial ability of each. The Castberg law, as it is called, "concerning children whose parents have not married each other," is being discussed in this country, with the view of presenting a bill drafted on similar lines to some state legislatures in 1918. There is, however, no translation in English in existence, so far as I know, and the German translation is not obtainable. The Children's Bureau would be adding another to its many good works if it would put out, as a public document indispensable at this stage to all interested in child welfare, such a translation of the Norwegian law.

Chicago.

ALICE HENRY.

A CHALLENGE

TO THE EDITOR: There are some of us who are unable to allow ourselves to be swept by the current into the psychic maelstrom of the world-war. We are unable to believe that methods we deemed hideously unjust in 1914 should seem necessary to world righteousness in 1917. To all such there comes a mighty challenge.

On all sides we see the patriots flocking to the colors, giving money, efforts, homes, and lives. If we would convince them of our sincerity, of the worth-whileness of our humanitarian ideals, we, too, must sacrifice, must show courage. In the midst of an almost universal activity toward death, we must have equal energy and enthusiasm for education, for social work, for all that tends to enrich life. The various ways in which this can be done will suggest themselves to an earnest seeker. There are hints on every hand.

ALGERNON BLACKWOOD'S NEW BOOK

DAY AND NIGHT STORIES

Net \$1.50

Works of Mr. Blackwood's previously issued

JULIUS LE VALLON

Net \$1.50

THE WAVE

Net \$1.50

TEN MINUTE STORIES

Net \$1.50

Any one of which would make the reputation of a new writer. He is a master of the mystical and a pioneer in the peculiar. This new collection of short stories contains material as bizarre and as unusual as any of his works. It is worth reading whether you know Mr. Blackwood or not.

MY WIFE By EDWARD BURKE.

Net \$1.50

Whether you are already married or whether you are merely afraid of being married you can not afford to miss this book. It is the work of a new humorist who treats the modern conventional family life in a breezy spirit of burlesque and exhibits the foibles and affectations of the "lord and master" of the house in a manner that suggests Jerome K. Jerome, but with a more refined and subtle humor. A book which you will enjoy in any kind of weather and on any day of the week.

THE MASTER OF THE HILLSBy SARAH JOHNSON COCKE, author of *By-Paths in Dixie*

Net \$1.50

Clark Howell of *The Atlanta Constitution* says: "I have devoted the last two evenings to reading 'The Master of the Hills.' I completed it last night and am writing immediately to thank you for the wonderful work you have done in your charming portrayal of the old Southern civilization before the Civil War and particularly to commend you for your splendid insight and your admirable picturization of the life of the Georgia mountaineers—a civilization peculiar to itself and little understood even by our own people."

THE JOYFUL YEARS By F. T. WAWN.

Net \$1.50

Pall Mall Gazette: "The story rings with the exuberance of youth, and transports the reader into a realm from which he hates to be drawn away at the end of the 450 odd pages."

HELEN OF FOUR GATES

Net \$1.50

The author of this "extraordinary first book" is referred to in England as one of the most remarkable writers of recent years. Thomas Hardy strongly commends the book. *N. Y. World* says: "Reveals originality in a high degree. It is full of rugged power; it is dramatic without being in the least theatrical, and it holds the reader's interest with uncompromising firmness. There are in print few pictures more impressive than those drawn by this unknown author."

THE ROYAL OUTLAW By CHARLES B. HUDSON

Net \$1.50

A wonderful tale of fighting men laid in the time of King David. Not since "Ben Hur" has such a novel appeared. *New York Tribune*: "No person can read this book without gaining a clearer understanding of those times and without being charmed with the vital human interest of the tale."

GONE TO EARTH

By MARY WEBB, author of "The Golden Arrow." Net \$1.50

A powerful book, describing the fierce love and elemental jealousy of the Welsh people. The story is full of fire and enthusiasm lighted with real humor and understanding of these quaint people.

THE GOLDEN ARROW

By MARY WEBB. Net \$1.50

Boston Advertiser: "A story of a lovely mountain glen on the border of Wales. The author has caught the very substance of the quaint atmosphere of this faraway country and has given it to us in a way we shall not forget."

SEEN AND HEARD

By MARY and JANE FINDLATER. Net \$1.50

New York Herald: "The book is a war book, but the crash of cannon and the cry of the wounded are in the far background. Few volumes that are so good have come out of Scotland in a generation; none that is better."

ON THE BRANCH

By PIERRE DE COULEVAIN. Translated by Alys Hallard. *New Edition Just Published.* Net \$1.50
The critics call it "a splendid piece of analytical writing, fascinating by the sheer interest in the personality of the woman and her experience." Really a brilliant novel. The sale of the French Edition has reached the 135th thousand.

EL SUPREMO

By EDWARD LUCAS WHITE. Net \$1.90

The New York Sun: "A capital romance with many thrilling moments in the ingenious plot. The picture of the life and ease and gracious hospitality among the old Spaniards is delightful and the book is worth the attention of the reader who is fascinated by unusual characters or who enjoys novel settings."

BEHIND THE THICKET

By W. E. B. HENDERSON. Net \$1.50

A book of vivid imagination, power and extraordinary originality. *Tennessean*: "A book that will hold the attention of the reader to the end, filled with symbolism and beautiful things."

GRAIL FIRE

By ZEPHINE HUMPHREY. Net \$1.50

The Dial: "Zephine Humphrey has written a very charming book 'Grail Fire.' The theme is the spiritual struggle and development of a man and the woman he loves. Miss Humphrey handles the theme very beautifully."

THE FEAR OF LIVING

By HENRY BORDEAUX. Translated by RUTH HENRY DAVIS. *New Edition Just Published.* Net \$1.50
New York Times: "It is a story that goes to the hearts of its characters and shows simply yet with passion what it is that makes life a thing of reality and nobility."

POSTAGE EXTRA. AT ALL BOOKSTORES

E. P. DUTTON & COMPANY, 681 FIFTH AVENUE, NEW YORK

The New York School of Philanthropy

Institute
in

**Probation Work for
Girls in War Time,**
to be conducted by
Maude E. Miner
Secretary of the New
York Probation and Pro-
tective Association.

September 4-22

THIS institute is designed to train women for the work of protecting young girls in the vicinity of military training camps, and in cities where soldiers and sailors are stationed. Among the topics covered will be investigating and patrolling in the vicinity of camps, supervision of amusement resorts, the run-away girl, the incorrigible girl, the unmarried mother, the feeble-minded girl, club work for girls, problems arising from adjustment in industry, the worker in munition factories, the suppression of vice in camp cities, probation work, public and private reformatories.

THE mornings will be devoted to lectures and round-table discussion supplemented by four hours a day of field work.

SPECIAL talks will be given by Katherine B. Davis, Chairman of the Parole Commission, New York City; Mr. Arthur W. Towne, Director of the Society for the Prevention of Cruelty to Children, Brooklyn; Mr. Frederick H. Whitin, Secretary, Committee of Fourteen; Mrs. Henry Moscowitz, Secretary of the Mayor's Committee of Women on Defense; Mr. Orin C. Baker, Secretary of the Travelers' Aid Society, and Mrs. Jane Rippin, Chief Probation Officer, Women's Court, Philadelphia.

APPLICATIONS should be sent to Miss Maude E. Miner, 130 East 22 Street, New York City. Preference will be given to women who have already had experience in social work in this particular field.

COMMUNICATIONS

(Continued from page 460)

We must strive for public expression of the purpose of this war. Attaining this, we must keep that end in view and emphasize it. We are apt to forget the end in the enthusiasm for the means, i. e., the war. If we are fighting for democracy, let us not allow democracy to be killed at home. All our civil individual rights must be safeguarded. Diplomacy can win the objects of the war perhaps better than battles. We must not forget Wilson's inspiring phrase, "peace without victory."

In the sudden strain of war on our social organism, the disharmonies and injustices are brought to light. We must call attention to these. Justice must be granted to the workers, and they must not be over-burdened. Graft and profiteering must be watched.

If there is conscription of life, there should also be conscription of wealth. Private property rights must be subordinated to the social welfare of all. Let the lesson of the benefits of cooperation be well learned, so that it will not be forgotten with the advent of peace.

We should not fail to speak against the violation of sincere individual consciences by social, political, or military persecution. Conscience should not be treated as a crime, as it was in England. If there is one thing more than another that tends to make the world better it is conscience. Fortunately, we have the word of President Wilson that "This is in no sense a conscription of the unwilling."

Above all things, we should strive for an early and lasting peace, that we may not lose to posterity our young men, whose faith, courage, and ideals are the hope of the future. There is much hard work of this sort to be done by those who still have faith and courage. May we not fail to meet the challenge.

SEDLEY HOPKINS PHINNEY.

Cleveland.

PUNISHMENT

TO THE EDITOR: Because I am subscribing to the SURVEY at present I am obliged to register my dissent from the views expressed in your signed editorial in italics on page 406 of the August 4 issue. Such pacifism (I, being sane, am a pacifist) would condemn the world to centuries of war more ghastly, more villainous than the present war.

Can you be ignorant or can you ignore the fact that Germany has set loose in the world a moral pestilence which, if it is not stamped out now, must run its horrid course?

Are you not aware that this has been a war not between armies chiefly, but of the German people against civilian populations whom they have deliberately attempted not merely to ruin materially, but physically, mentally and morally as well?

You talk about our keeping down rank growth of social hate. Are you not aware that the German people—a citizen army—have been occupied meanwhile with sowing hate monstrously, minutely, ineradicably, through and through the populations that surround them—a hate born of injuries so dastardly, so intimately personal that they will not, ought not and can not be forgiven for generations to come? If you will imagine (pardon me, because it bears directly on the views which you express) your own wife and your growing daughters outraged and with child by German citizen soldiers, and this of your neighbors and the nation through, you will better appreciate the situation to be dealt with. Madame Paderewski declares that by July, 1916, 500,000 young Polish women had had babies from such outrage. What is now taking place of that sort in Belgium and North France you may learn

from the *Journal d'une deportee* in a recent issue of the *Revue des deux mondes* (I have sent for it, but do not know the exact date), of which a summary was given in the *New York Tribune* of July 15 last.

Imagine as well your own home and those of your neighbors not only robbed and smashed, but filled actually with the excrement of these German citizens—every filthy insult of the degenerate, in short, heaped upon you and yours. I do not profess to know why you and others (even who do not share your views) avert your eyes from these facts and their like. It is unwise. The facts are proved, they distinguish this war—such things have been done before, but never on such a scale, so systematically, by an army of citizens straight from civil life. They can not be dodged. They have got to be dealt with.

If the German people are not crushed, mercilessly punished and efficiently policed, then their guilty fears on the one hand, and the hate they have so deeply implanted in their countless victims on the other will infallibly bring on another war almost immediately. For no German life is going to be safe in Europe after this war unless it is under heavy guard.

If, moreover, the principle of individual punishment for the infamous crimes committed by the German army of citizens in the present war is not established at the peace, then they become a part, automatically incorporated, of future wars. Either international usage is to be reinstated as law by the trial and the punishment on conviction of its assailants before an international tribunal as part of the final peace, or the work of centuries to institute international law is utterly destroyed.

Brooklyn.

ELLIS G. SEYMOUR.

JOTTINGS

THE POPE'S peace proposal of last week has been printed in full in practically every American newspaper and, it is said, in most of the papers of all European countries. Discussion is fast simmering down to the answer which President Wilson is to make and as to how far he will go in stating American terms concretely.

THE tuberculosis association, the state laboratories and the State Board of Health have joined forces in North Dakota as the "North Dakota Public Health Service."

IT IS reported that a state department of health has been formed in Austria by the Emperor. The title of the chief is given as "minister of hygiene and social welfare."

A BILL forbidding dissemination of knowledge or information relative to birth control has been vetoed by Governor Brumbaugh, of Pennsylvania, in a long message in which he declares that, should it be approved, it would be "more honored in its breach than in its observance."

A CONCISE and useful Handbook of Labor Laws of New York has been prepared for the Brooklyn Auxiliary of the Consumers' League by Katherine Anthony. The pamphlet is so arranged that all labor laws relating to the same subject, as well as statutes concerning labor drawn from the compulsory education law, the domestic relations law and

the penal code, are grouped under separate headings.

AMONG the measures adopted by the first national medical congress of the Argentine Republic, recently held, was that hospitals and sanatoria be founded at the seashore or in the mountains for tuberculous children and that protective measures be followed with the newly-born children of consumptive mothers.

DANTE BARTON, vice-chairman of the Committee on Industrial Relations, died August 5 in New York—a journalist who, year after year, in his newspaper work in Kansas City, made signal contribution to the progressive municipal, social and economic thinking of the whole Southwest.

IN VIEW of the heavy wartime demands made upon the Rockefeller Foundation, Mr. Rockefeller has rescinded that provision of his gift which left in his own hands the disposition of a large proportion of the foundation's income. Hereafter the responsibility rests on the board.

WITH the purpose of "Christianizing the social impact and socializing the Christian impact" of intelligent people of the South on the South, the Southern Summer School of Social Service is holding its fourth successive August of study courses and lectures at Robert E. Lee Memorial Hall of the Blue Ridge Association, Blue Ridge, N. C.

TO help in preventing the spread of diseases from state to state, the federal Public Health Service has arranged to vaccinate without cost persons who apply at designated stations in thirty-nine states, as well as in Hawaii, Porto Rico, and Alaska. The addresses may be had from the Public Health Service, Washington, D. C.

BY DIRECTION of the State Department, the American Legation at Berne, Switzerland, has formed an organization to cooperate with the Spanish ambassador in Berlin who represents American interests in Germany for the relief of Americans who are now or may be in the future detained as prisoners of war in that country. The name of the new organization is the American Prisoners' Central Committee, the address, Berne, Switzerland.

THE Associated Charities of Worcester, Mass., has estimated that the cost of a relief unit made up of flour, potatoes, salt pork, beans, molasses, sugar, cornmeal, condensed milk, oatmeal, tea and soup in 1904 was \$1.80; in 1915, \$2.36; in 1916, \$3.07; in May, 1917, \$5.10. Ten dollars would buy as much of these foods in 1904 as \$28.33 would buy in May, 1917; and \$15 in September, 1916, would purchase as much food as \$24.91 in May, 1917. Rent and clothing have not advanced proportionately.

THE Equal Franchise Federation of Pittsburgh brought out, on August 1, the first number of a new publication, *Publicity*, which is primarily for the purpose of illuminating with current news the political situation in Pennsylvania. Its principal program is the promotion of legislation for the suppression of vice, the elimination of liquor from politics, woman suffrage, protection of childhood, and restriction of child and woman's labor.

AT THE invitation of the Executive Council for Defense, of West Virginia, Hastings H. Hart, of the Russell Sage Foundation, and Charles L. Stonaker, of the Charities Aid

and Prison Association of New Jersey, have made a study of the social resources of West Virginia. It is expected that as a result of the study a program can be developed whereby the Executive Council for Defense will become the center of the patriotic activities of the state, the source of advice, information and instructions.

THE war has brought Thomas W. Garvin back to social work. For some years director of men's and boys' work at Hiram House, Cleveland, Ohio, more recently, secretary of the Cleveland Advertising Club, and most recently assistant to Richard H. Waldo, of the New York *Tribune*, Mr. Garvin has accepted an appointment by the Federal Commission on Training Camp Activities as director of the cantonment at Spartanburg, S. C. New York troops will be trained there.

PROFESSOR VICTOR HORTA, one of the most distinguished Belgian architects, has recently been appointed to George Washington University as Belgian Scholarship Professor of Architecture. This appointment is one result of the steadily growing Belgian scholarship fund which is being administered with the aim of "giving Belgian scholars, writers and artists a chance to resume their work, and to assist in the reconstruction of a greater Belgium in respect to education, when war is over."

ALIDA LATTIMORE, of New York city, is organizing the various activities of the Public Welfare Association in Bellville, Ohio, which developed from the survey made there by Ohio State University. The association is financed by the foundation left by a young banker, Mr. Cockley, for the benefit of his town. Bellville has the distinction of being the pioneer in this work in villages having less than one thousand inhabitants. Miss MacDonald, Cornell College of Agriculture, 1917, will take up the work of community secretary in Bellville.

THE PEORIA (Illinois) War Relief Association has been organized with the backing of the Chamber of Commerce, for the financing of war-time needs, and the prevention of a multitude of indiscriminate appeals. It has obtained monthly pledges and makes appropriations to such organizations as the local Red Cross, the Associated Charities, the Nursing Association and the Y. M. C. A. in so far as they have served soldiers and sailors or their families. By furnishing, when necessary, shoes, meals, etc., to soldiers en route through the city, it has made other solicitation for such gifts necessary.

ANOTHER chain letter for war relief has made its appearance in the eastern states, having traveled clear across the continent from Seattle. It is ostensibly for a special hospital in Paris, claiming the endorsement of the French consul at Seattle and of the Red Cross which, it says, has promised \$2,000 for every \$18,000 raised. Both the consul and the Red Cross repudiate any connection with the appeal. It has been calculated that the cost of a four-letter chain, if carried out to the tenth serial number, would aggregate a total of \$240,000,000 in postage alone, not counting the cost of paper, stenographic work, etc.

THE travelers' aid section of the Southern Sociological Congress was attended by fifty-two accredited representatives from twenty-six cities, representing sixteen states. The program included all the problems that may beset a traveler—from the inducements that

PREPARATION FOR SOCIAL WORK

The New York School of Philanthropy will register students September 20-26 for its two-year course.

The curriculum includes courses which will be of special value as preparation for social and civic work during and after the war.

The First Year

SOCIAL WORK IN WAR TIME. *Edward T. Devine*

*THE METHOD OF SOCIAL CASE WORK. } *Porter R. Lee*

FAMILY WELFARE.

CHILD WELFARE. *Henry W. Thurston.*

INDUSTRIAL CONDITIONS. *John A. Fitch*

SOCIAL AND LIVING CONDITIONS. } *Kate H. Claghorn*

STATISTICAL METHODS.

THE IMMIGRANT.

*TYPES OF SOCIAL WORK. Various lecturers

HYGIENE AND DISEASE. *Haven T. Emerson, M.D., and James Alexander Miller, M.D.*

EDUCATION AND RECREATION. *Walter W. Pettit*

CRIME AND PUNISHMENT. *George W. Kirchwey and Orlando F. Lewis*

THE LAW IN SOCIAL WORK. *David H. M. Pyle*

EXCURSIONS AND LECTURES. } *Mary Grace Worthington*

*FIELD WORK.

*Courses starred are required.

The Second Year

The second year permits a wide range of specialization adapted to individual interests. In addition to field work and seminar in the field of special interest, the following courses will be offered:

THE DEVELOPMENT OF SOCIAL CASE WORK. *Porter R. Lee*

STUDIES IN BEHAVIOR. *Henry W. Thurston*

SOCIAL POLITICS. *Sydney D. M. Hudson*

PUBLICITY IN SOCIAL WORK. *Karl de Schweinitz*

PRINCIPLES OF ADMINISTRATION. Lecturer to be announced

Columbia University gives credit for work in the School toward the degrees of M.A. and Ph.D.

THE NEW YORK SCHOOL OF PHILANTHROPY

Best references. Address, MRS. ANNA GOODRICK, Room 206, 433 E. Grand Avenue, Beloit, Wisconsin.

HELP WANTED

WANTED—Young woman as resident assistant in Jewish Settlement, New York City. Address 2572 SURVEY.

MANAGER and leaders for women's and girls' department in Jewish social centre now organizing. Write full details—education, training, experience, special abilities, interests, etc. LEDERMAN, 2005 Amsterdam Ave., New York City.

may cause them to leave their homes, the necessary protection at junction points and terminals, the housing problem on arrival, and the assimilation in the new community. It also included subjects pertaining to the nervous and unsettled conditions on account of the war, and plans were discussed for intensifying travelers' aid work in all parts of the United States, especially around camp centers and in munition manufacturing cities. A study of the experience of travelers' aid in Canada, the European countries at war and the conditions that existed on the Mexican border was the foundation upon which the plans were discussed and developed.

SHORTAGE of coal has begun seriously to embarrass municipal enterprise in Italy. The municipal baths of Milan, according to a report of Consul John H. Grout, have been obliged to close for three days each week since January. The baths are very popular with the working classes; the price of admission to the swimming pools is from two to six cents, including trunks and towel, with an added charge of six cents for a separate dressing compartment and shower. The largest of the municipal baths, the Ponte Gabelle, is excellently arranged for comfort and sanitation; the walls are of white tile, the floor of cement, and the tubs of white porcelain.

NINETEEN states pledged to direct law-making by means of the initiative and referendum and several hundred towns and cities governed under the commission plan are tallied up by the National Popular Government League in the three years of its existence. It inaugurates its fourth year by the issue of a monthly magazine, *Popular Government*, the first number of which contains, among many other interesting contributions, an account of the spread of democratic government in foreign countries. The organization of an international popular government league, to link up and stimulate this movement in the different countries, is in process.

PENNSYLVANIA has enlarged its pension roll for mothers. At the session of the legislature just adjourned, \$400,000 was appropriated for this purpose, with \$18,000 for state supervision and surveys and investigation. When there is added to this \$400,000 the non-merging balance of \$45,000 from the previous fiscal period and the \$445,000 which is required from the counties, the Pennsylvania widows are found to have almost \$900,000 to their credit for the next two years. Heretofore the sum has never exceeded \$500,000. The money is distributed to the counties on the basis of population.

PUBLIC opinion in Chicago among those familiar with modern methods of treating the mentally ill has been aroused by a judge who caused his bailiff at one time to issue writs of habeas corpus for thirteen patients who had been declared insane and had been under treatment in one of the state hospitals, and again for twenty-nine with no further knowledge than letters written to him by these patients. No action was taken by the state in the matter of the first thirteen, as they were practically all recovered and would very soon have been discharged; but when the second order came, the director of public welfare for the state of Illinois decided upon the advice of the attorney general to protest and the case was continued until the third Monday in September. The judge is described as kindly disposed, but this method of deciding whether or not a patient is recovered could easily result in serious harm.

FEARS of labor leaders that "anti-idleness" laws may be turned into strike-breaking measures have been realized in West Virginia, where a so-called vagrancy act was passed at the last session of the legislature. Under the act which was put through as a war measure, it is unlawful for any citizen of the state between the ages of sixteen and sixty to fail to work a certain number of hours per week. Now when miners employed by the Monte Coal Company at Ottawa suspended work because they were not permitted to present grievances to the management, the company seized upon the vagrancy law to drive them back to employment. Two miners and their sons were arrested and the company employed an attorney to assist the county prosecutor. Coal companies lobbied for an anti-strike law at the last session of the legislature, but were defeated by organized labor.

THE Industrial Commission of Wisconsin has submitted its first report on apprenticeship since the law of 1915, which requires minors learning a trade to be under legal contract; provides for trade instruction in a school five hours per week until the age of eighteen, and gives the state, through the Industrial Commission, power to classify trades, supervise contracts and mediate differences between apprentices and employers. The result of the law has been that 468 new contracts were entered into in 1916 as compared with 163 in 1915 and 220 in 1914. The greater part of them are in the machinists' trade. Very few apprentices start at less than ten cents per hour, and most of them begin at twelve cents per hour. These wages are increased every six months up to twenty cents per hour and above during the last period of apprenticeship. Of the contracts in force on January 1, 1917, 34.8 per cent were entered into by boys sixteen years of age; 29.7 per cent by boys seventeen years of age, 19.2 per cent eighteen years of age; while all above eighteen years total only 16.3 per cent.

THE *Collège Libre des Sciences Sociales* in Paris, of which Paul Deschanel, president of the Chamber of Deputies and a member of the Academy, is president, has conducted since the beginning of the war afternoon and evening courses of study relating social progress to war conditions. Each course of lectures, which has been extremely well attended, is re-enforced by visits to social institutions and factories. Among the subjects treated this year are: A New War and a New Peace, German Political Science and the Conduct of War, The Recovery of France after the Great Wars of the Past, The Reconstruction of Cities, Towns and Villages After the War, Professional Representation and Training, War and Language, Woman in Agriculture, Women and the War, The Lessons of the War, War Orphans, and series of lectures on various French colonies and foreign countries. This college prides itself on providing a platform for the free teaching of the most controversial social doctrines by the recognized authorities in each field.

THE WISCONSIN Anti-Tuberculosis Association has adopted the plan of sending out from time to time from its headquarters in Milwaukee, small informal bulletins to superintendents of the various tuberculosis sanatoria and to all public health nurses in the state. These bulletins are usually only about four or five pages in length and contain short articles, suggestions, questions, and brief items of interest to those engaged in health work. The material contained therein is of a more personal nature than that published in the *Crusader*, the official monthly

WHY BONDS?

The Nation needs money. Bonds extend long after "war profits" end. They increase all taxes, burden industry until paid and ultimately cost \$2.00 for every \$1.00 raised. They increase living costs and reduce wages.

THINK OR PAY

A tax on land values only will raise yearly \$5,000,000,000, will abolish all other taxes, force idle land into use, increase crops, boom industry and perpetuate real prosperity.

Investigate—Booklet Free

SINGLE TAX LEAGUE, Arden, Delaware, Dept. 25

TAX LAND

publication of the association. The idea of the bulletins is to bring those who are doing the actual public health and tuberculosis work in the field into more personal contact with the association and its work, and to serve as a means of the mutual exchange of ideas upon those seemingly unimportant matters which are so vital to the success of the health worker. To save expense these bulletins are multigraphed instead of printed. It is felt that this is an effective means of securing cooperation among the workers.

SOME of the proposals by which the practice of physicians who go to France may be protected in their absence are recorded in the current issue of the *Journal of the American Medical Association*. One Kansas society resolved that all patients attended during the absence of their regular physician should be restored to him on his return to the country, with one-third of the income received from this temporary practice. A Pennsylvania society will pay 35 per cent to the doctor in military service. The Society of the County of New York has started a fund to aid the families of absent physicians which will be administered through the Academy of Medicine. Many universities are arranging to re-employ members of their teaching staffs after their return.

PROBABLY the quickest clean-up ever effected in an American city resulted on August 8 from a visit to Mayor W. B. Mooers, of Plattsburg, N. Y., of the commandant and adjutant of the officers' training camp, accompanied by Walter J. Hooke, representing the Committee on Training Camp Activities. After spending an hour with the delegation and having become thoroughly aroused to the fact that only immediate compliance with their demands could save for Plattsburg the second officers' training camp to be opened on August 27, the mayor summoned by telephone the city council for an emergency session. A few minutes later, he was duly empowered to close between 7 P. M. and 8 A. M. nine saloons objected to by the camp authorities, to close one dance hall and subject the others to a license, and to replace the police commissioner. A further proposal of the mayor for the appointment of two policewomen was deferred for further discussion, the expenditure being deemed unnecessary by members of the council, who thought there would be nothing for such officers to do if the other measures approved at the meeting were carried out.

BECAUSE of the large number of "green hands" who must replace men who are drafted, a conference will be called in New York in September by the National Safety Council to emphasize the extraordinary need for inculcating "safety-first" principles among newcomers in factories.

THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

SURVEY

ASSOCIATES
INC.

KEY

If you know the name of the agency or organization, turn direct to the listings (3d column) for address, corresponding officer, etc. [They are arranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject classifications, as "HEALTH," printed in capitals.]

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but offers an opportunity for you to share spiritedly and seriously in your community or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall endeavor to get your inquiry into the right hands.

WARTIME SERVICE

"HOW the SURVEY can serve" was the subject of an informal conference held early in April, in our library, to which we asked the executives of perhaps twenty national social service organizations. The conference was a unit in feeling that as a link between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—how, when and where they can count locally—the SURVEY was at the threshold of an opportunity for service such as has seldom come to an educational enterprise.

The development of this directory is one of several steps in carrying out this commission. The executives of these organizations will answer questions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demands.

ALPHABETICAL LIST

✓ AMERICAN ASSOCIATION FOR LABOR LEGISLATION—John B. Andrews, sec'y; 131 E. 23 St., New York. Workmen's compensation; health insurance; industrial hygiene; unemployment; one-day-rest-in-seven; administration of labor laws.

AMERICAN ASSOCIATION FOR ORGANIZING CHARITY—Mrs. W. H. Lothrop, ch'n; Francis H. McLean, gen. sec'y; 130 E. 22 St., New York. Correspondence and active field work in the organization, and solution of problems confronting, charity organization societies and councils of social agencies; surveys of social agencies; plans for proper coordination of effort between different social agencies.

✓ AMERICAN ASSOC. FOR STUDY AND PREVENTION OF INFANT MORTALITY—Gertrude B. Knipp, exec. sec'y; 1211 Cathedral St., Baltimore. Literature on request. Traveling exhibit. Urges prenatal instruction; adequate obstetrical care; birth registration; maternal nursing; infant welfare consultations.

ASSOCIATION FOR THE STUDY OF NEGRO LIFE AND HISTORY—Carter G. Woodson, director of research; 1216 You St., N. W., Washington, D. C. To popularize the Negro and his contributions to civilization that he may not become a negligible factor in the thought of the world.

AMERICAN HOME ECONOMICS ASSOCIATION—Mrs. Alice P. Norton, sec'y; 1326 E. 58 St., Chicago. Information supplied on anything that pertains to food, shelter, clothing or management in school, institution or home.

AMERICAN INSTITUTE OF SOCIAL SERVICE—Founded by Dr. Josiah Strong. Nathaniel M. Pratt, gen. sec'y. Edward W. Bemis, Robert A. Woods, dept. directors, Bible House, Astor Place, New York. Welcomes inquiries as to all matters of community organization and progress. Members of its staff glad to enter into consultation by correspondence about given conditions or particular projects. Assists in bringing to individual new undertakings the combined results and lessons of the best productive achievement. Ready to aid in securing publications, speakers, temporary or permanent leadership. Particular attention given to requests from communities in which all such effort is at an early stage. Seeks to bring about better cooperation among specialized national organizations, toward securing the more comprehensive local application of their types of service. Promotes the fullest extension of principles and methods which on a limited scale have conclusively shown their power for the upbuilding of the nation.

AMERICAN LIBRARY ASSOCIATION—George B. Utley, exec. sec'y; 78 E. Washington St., Chicago. Furnishes information about organizing libraries, planning library buildings, training librarians; cataloging libraries, etc. List of publications on request.

AMERICAN PROPORTIONAL REPRESENTATION LEAGUE—C. G. Hoag, sec'y; 802 Franklin Bank Building, Philadelphia. Advocates proportional representation, a rational and fundamental reform in electing representatives. Literature free. Membership \$1.

THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

AMERICAN PUBLIC HEALTH ASSOCIATION—Dr. W. A. Evans, pres., Chicago; A. W. Hedrick, acting sec'y; 705 Huntington St., Boston. Object: to promote public and personal health. Health Employment Bureau lists health officers, public health nurses, industrial hygienists, etc.

AMERICAN RED CROSS—Woodrow Wilson, pres.; Robert W. de Forest, vice-pres.; John Skelton Williams, treas.; John W. Davis, counselor; Charles L. McLee, sec'y.

Central Committee: Wm. Howard Taft, ch'n; Eliot Wadsworth, v. ch'n; Harvey V. Gibson, gen'l mgr.

War Council: Henry P. Davidson, ch'n; Charles D. Norton, Grayson M. P. Murphy, Edward N. Hurley, Cornelius N. Bliss, Jr., William Howard Taft, Eliot Wadsworth.

Department of Military Relief: John D. Ryan, dir.; Major Kirby Smith, Medical Reserve Corps, U. S. A., asst. dir.

Department of Civilian Relief: W. Frank Parsons, dir.

Bureau of Medical Service: Lieutenant-Colonel C. H. Connor, Medical Corps, U. S. A., dir.

Bureau of Nursing Service: Clara D. Noyes, dir.

Town and Country Nursing Service: Fannie F. Clement, dir.

Woman's Bureau: Florence Marshall, dir.

Supply Service: Frank B. Gifford, dir.

THE AMERICAN SOCIAL HYGIENE ASSOCIATION—William F. Snow, M. D., gen. sec'y; 105 W. 40 St., New York. For the repression of prostitution, the reduction of venereal diseases, and the promotion of sound sex education; pamphlets upon request; membership \$5; sustaining \$10.

AMERICAN SOCIETY FOR THE CONTROL OF CANCER—Curtis E. Lakeman, exec. sec'y; 25 W. 45 St., New York. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

COMMITTEE OF ONE HUNDRED ON NATIONAL HEALTH—E. F. Robbins, exec. sec'y; 203 E. 27 St., New York. To unite all government health agencies into a National Department of Health to inform the people how to prevent disease.

COMMITTEE ON PROVISION FOR THE FEEBLEMINDED—Joseph P. Byers, ex. sec'y; Empire Bldg., Phila. Object to spread knowledge concerning extent and menace of feeble-mindedness; initiate methods for control and eradication.

COUNCIL OF JEWISH WOMEN (NATIONAL)—Department of Immigrant Aid, with headquarters, 242 E. Broadway, New York. Miss Helen Winkler, ch'n; gives friendly aid to immigrant girls; meets, visits, advises, guides; has international system of safeguarding. Invites membership.

DEPARTMENT OF SOCIAL AND PUBLIC SERVICE, AMERICAN UNITARIAN ASSOCIATION—Elmer S. Forbes, sec'y; 25 Beacon St., Boston. Reports and bulletins free; lecture bureau; social service committees.

EUGENICS REGISTRY—Battle Creek, Mich. Board of Registration: Chancellor David Starr Jordan, pres.; Dr. J. H. Kellogg, sec'y; Prof. Irving Fisher, Dr. Chas. B. Davenport, Luther Burbank, Prof. O. C. Glaser, exec. sec'y. A public service conducted by the Race Betterment Foundation and Eugenic's Record Office for knowledge about human inheritance and eugenics. Literature free. Registration blanks for those who desire an inventory, and wherever possible, an estimate of their hereditary possibilities.

FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA—Constituted by 30 Protestant denominations. Rev. Charles S. Macfarland, gen. sec'y; 105 E. 22 St., New York.

Commission on the Church and Social Service; Rev. Worth M. Tippy, exec. sec'y; Rev. Clyde F. Armitage, asso. sec'y; Herbert M. Shenton, special sec'y; Miss Grace M. Sims, office sec'y.

Commission on International Justice and Goodwill; Rev. Sidney L. Gulick, sec'y.

Commission on Inter-Church Federations; Rev. Roy B. Guild, exec. sec'y.

Commission on Church and Country Life; Rev. Charles O. Gill, sec'y; 104 N. Third St., Columbus, Ohio.

Campaign for the Conservation of Human Life; Charles Stelzle, sec'y.

HAMPTON INSTITUTE—G. P. Phenix, vice-pres.; F. K. Rogers, treas.; W. H. Scoville, sec'y; Hampton, Va. "Hampton is a war measure" (H. B. Russell). Trains Indian and Negro youth. Neither State nor a Government school. Supported by voluntary contributions. Free literature on race adjustment, Hampton aims and methods.

JOINT COMMISSION ON SOCIAL SERVICE OF THE PROTESTANT EPISCOPAL CHURCH—Address Rev. F. M. Crouch, exec. sec'y; Church Missions House, 281 Fourth Ave., New York.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE—Pres., Moorefield Storey; chairman, Board of Directors, Dr. J. E. Spingarn; treas., Oswald Garrison Villard; dir. of pub. and research, Dr. W. E. B. Du Bois; sec'y, Roy Nash; 70 Fifth Ave., New York. Proposes to make 10,000,000 Americans physically free from peonage, mentally free from ignorance, politically free from disfranchisement, and socially free from insult. Membership 8,500, with 86 branches.

NATIONAL ASSOCIATION FOR THE STUDY AND PREVENTION OF TUBERCULOSIS—Charles J. Hatfield, M. D., exec. sec'y; Philip P. Jacobs, Ph.D., ass't sec'y; 105 E. 22 St., New York. Organization of tuberculosis campaigns; tuberculosis hospitals, clinics, nurses, etc.; open air schools; Red Cross seals, educational methods, etc.

NATIONAL CHILD LABOR COMMITTEE—Owen R. Lovejoy, sec'y; 105 E. 22 St., New York. 35 state branches. Industrial and agricultural investigations; legislation; enforcement; education; mothers' pensions; juvenile delinquency; health; recreation.

NATIONAL CHILD WELFARE EXHIBIT ASSOCIATION, INC.—70 Fifth Ave., New York. Educational health posters covering care of babies and children. Second edition of Parcel Post Exhibit. Photogravure reproductions in color with simple, easily understood legends, attractively illustrated from original paintings; 25 posters (18" x 28") in set. Further information regarding these and other exhibits on request. Illustrated booklets on Baby and Child Care. Lantern slides.

NATIONAL COMMITTEE FOR MENTAL HYGIENE—Clifford W. Beers, sec'y; 50 Union Sq., New York. Write for pamphlets on mental hygiene, prevention of insanity and mental deficiency, care of insane and feeble-minded, surveys, social service in mental hygiene, state societies for mental hygiene.

NATIONAL COMMITTEE FOR THE PREVENTION OF BLINDNESS—Edward M. Van Cleave, mgr. dir.; Gordon L. Berry, fld. sec'y; Mrs. Winifred Hathaway, sec'y; 130 E. 22 St., New York. Objects: To furnish information for associations, commissions and persons working to conserve vision; to publish literature of movement; to furnish exhibits, lantern slides, lectures. Printed matter: samples free; quantities at cost. Invites membership. Field, United States. Includes N. Y. State Com.

NATIONAL CONFERENCE OF SOCIAL WORK—Robert A. Woods, pres., Boston; William T. Cross, gen. sec'y; 315 Plymouth Court, Chicago. General organization to discuss principles of humanitarian effort and increase efficiency of agencies. Publishes proceedings annual meetings, monthly bulletin, pamphlets, etc. Information bureau. Membership, \$3. 45th annual meeting Kansas City, spring of 1918. Main divisions and chairmen:

- Children, Henry W. Thurston.
- Delinquents and Correction, Mrs. Jessie D. Hodder.
- Health, Public Agencies and Institutions, Albert S. Johnstone.
- The Family, Gertrude Vaile.
- Industrial and Economic Problems, Mrs. Florence Kelley.
- The Local Community, Charles C. Cooper.
- Mental Hygiene, Frankwood E. Williams.
- Organization of Social Forces, Allen T. Burns.
- Social Problems of the War and Reconstruction, V. Everit Macy.

NATIONAL CONSUMERS' LEAGUE—Mrs. Florence Kelley, gen. sec'y; 289 Fourth Ave., New York. 87 branch leagues. 15,000 members. War program: To help our industrial army by promoting clinics for treatment of new diseases (incident to munitions work and to fatigue and strain); reasonable working hours; safe and sanitary working conditions; decent standards of living; safeguards for women taking men's places in industry; protection for children. Minimum membership, \$2.

NATIONAL FEDERATION OF SETTLEMENTS—Robert A. Woods, sec'y, 20 Union Park, Boston, Mass. Develops broad forms of comparative study and concerted action in city, state, and nation, for meeting the fundamental problems disclosed by settlement work; seeks the higher and more democratic organization of neighborhood life.

NATIONAL KINDERGARTEN ASSOCIATION—250 Madison Ave., New York. Object: To have the kindergarten established in every public school. Four million children in the United States are now without this training. Furnishes bulletins, exhibits, lecturers, advice and information. In cooperation with United States Bureau of Education, works for adequate legislation and for a wider interest in this method of increasing intelligence and reducing crime. Supported by voluntary contributions.

NATIONAL LEAGUE OF WOMEN WORKERS—Jean Hamilton, org. sec'y; 35 E. 30 St., New York. Evening clubs for girls; recreation and instruction in self-governing and supporting groups for girls over working age.

NATIONAL LIBERAL IMMIGRATION LEAGUE—Address Educational Dept., Sun Bldg., N. Y. Advocates selection, distribution and Americanization and opposes indiscriminate restriction. Summarized arguments and catalog of publications on request. Minimum membership (\$1) includes all available pamphlets desired, and current publications.

NATIONAL MUNICIPAL LEAGUE—Lawson Purdy, pres.; Clinton Rogers Woodruff, sec'y; North American Bldg., Phila.; charters; commission government; taxation; police; liquor; electoral reform; finances; accounting; efficiency; civic education; franchises; school extension.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING—Ella Phillips Crandall, R. N., exec. sec'y; 600 Lexington Ave., New York. Object: To stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Bulletins sent to members.

NATIONAL WOMEN'S TRADES UNION LEAGUE—Mrs. Raymond Robins, pres.; Mrs. Amy Walker, fld. editor; 139 N. Clark st. (room 703) Chicago. Stands for self-government in the work shop through organization and also for the enactment of protective legislation. Information given.

NEW YORK SOCIAL HYGIENE SOCIETY (Formerly Society of Sanitary and Moral Prophylaxis)—Dr. James Pederson, sec'y; 105 W. 40 St., New York. Seven educational pamphlets, 10c. each. Four reprints, 5c. each. Dues—Active, \$2; Contributing, \$5; sustaining, \$10. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA—Howard Braucher, sec'y; 1 Madison Ave., New York. Playground activities, equipment and administration; community centers; field work in communities; rural recreation; physical efficiency tests for boys and girls; cooperating with War Department Commission on Training Camp Activities.

RUSSELL SAGE FOUNDATION—For the Improvement of Living Conditions—John M. Glenn, dir., 130 E. 22 St., New York.

- Charity Organization Department; Mary E. Richmond, dir.; Fred S. Hall, associate dir.
- Department of Child-Helping; Hastings H. Hart, dir.; C. Spencer Richardson, assistant.
- Division of Education; Leonard P. Ayres, dir.
- Division of Statistics; Leonard P. Ayres, dir.; Earle Clark, statistician.
- Department of Recreation; Lee F. Hanmer, dir.; Clarence Arthur Perry, associate director.
- Division of Remedial Loans; Arthur H. Ham, dir.
- Department of Surveys and Exhibits; Shelby M. Harrison, dir.; E. G. Routzahn, associate dir.
- Division of Industrial Studies; Mary Van Kleeck, sec'y.
- Library; open free to the public; one of the best working collections in the United States on sociology and social work; Frederick Warren Jenkins, librarian.
- The Southern Highland Division; John C. Campbell, sec'y; headquarters, 412 Legal Bldg., Asheville, N. C.

SHORT BALLOT ORGANIZATION—Woodrow Wilson, pres.; Richard S. Childs, sec'y; 383 Fourth Ave., New York. National clearing house for information on short ballot and commission government. Pamphlets free. Publish *Beard's Loose-Leaf Digest of Short Ballot Chart-ers*.

SURVEY ASSOCIATES, INC.—Robert W. de Forest, pres.; Arthur P. Kellogg, sec'y; publishers of the Survey; Paul U. Kellogg, editor; Edward T. Devine, Graham Taylor, Jane Addams, associate editors; departments: Civics, Graham R. Taylor; Industry, John A. Fitch; Health, Alice Hamilton, M. D.; Gertrude Seymour; Education, Crime, Winthrop D. Lane; Foreign Service, Bruno Lasker.

TRAVELERS' AID SOCIETY—Orin C. Baker, gen'l sec'y; 465 Lexington Ave., New York. Provides advice, guidance and protection to travelers, especially women and girls, who need assistance. It is non-sectarian and its services are free irrespective of race, creed, class or sex.

TUSKEGEE INSTITUTE—Robert R. Moton, prin.; Warren Logan, treas.; Emmett J. Scott, sec'y; Tuskegee, Ala. An institution for the training of Negro youth; an experiment in race adjustment in the Black Belt of the South; furnishes information on all phases of the race problem and on the Tuskegee idea and methods.

The High Cost of Living

THE increasingly high cost of living can be reduced at once only by the application of Domestic Science, which shows how to lessen the food bills, how to save time and labor, how to keep the family in health, how to manage all the details of housekeeping in the best and easiest way. Domestic Science makes the work of the housekeeper an interesting profession instead of deadening drudgery.

The correspondence courses of the American School of Home Economics were prepared by leading teachers, especially for home study. They have been tested, proved by over 15,000 housekeepers, teachers, institution managers, etc.

The attractive illustrated 100-page handbook of the school, "The Profession of Home-Making," will be sent on request. Address a postcard or note—A. S. H. E., 519 West 69th St., Chicago, Ill.

Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new.

They protect your Mattress from all impurities and lengthen its life.

A single trial will convince.

"None genuine without
Trade Mark"

Insist on seeing our trade mark and name—Excelsior Quilted Mattress Protector—on each Protector.

Excelsior Quilted Mattress Co.

15 Laight Street, New York, N. Y.

THE SOCIAL CHALLENGE OF CHINA

A series of four articles on the marvelous modern blossoming of the republic on the rich soil of the old Flowery Kingdom, written by a man at the very heart of the New China, begins in the SURVEY next week.

Conquered by Dirt and Disease

Turkey's Appeal to American Sanitary and Medical Aid

By Alden R. Hoover, M.D.

MEDICAL MISSIONARY OF THE AMERICAN BOARD OF FOREIGN MISSIONS

The following article contains the substance of a report made by the author in July to the Rockefeller Foundation, which is making a careful study of conditions respecting medical work in Turkey. Dr. Hoover has for some twelve years been engaged in hospital and surgical work for the American Board of Foreign Missions, mostly in central Turkey. For seven months, in 1915, he was director of Red Cross work in Constantinople and had charge of the French hospital (40 beds), the British hospital (120 beds) and a hospital at the military barracks (556 beds). Here he had under his care thousands of wounded soldiers, most of them Ottoman Turks, and was thrown into close relation to Turkish officials, physicians and military men. The following pages contain the fullest and most authentic statement of sanitary and health conditions in Turkey which has come to this country since the outbreak of the war.

TURKEY is one of the richest regions in the temperate zone. Valuable mines of silver, copper and coal are untouched. The land after all these centuries yields a fair crop of wheat and barley with cultivation that scarcely more than scratches the ground. Fruits and nuts are of the finest. The apples of Amassia, the filberts of the Black Sea region, the tobacco of the northern region of Asia Minor, the figs of Smyrna, the cotton of the Adana region, the raw silk of Broussa are but a few samples of what might be accomplished throughout the whole country with modern agricultural methods.

As it is, the government has imposed heavy taxation, has encouraged rather than discountenanced the hatred among races. Suspicion takes the place of confidence. Towns and cities are high-walled; there is no such thing as the isolated farmhouse. Every man living for himself has taken from the country what could be gotten without thought of giving a return. The forests have been taken for fuel, even to digging up the roots. The farmer plants and reaps in a small way, may even pull up the stalks of grain by hand in order to save the straw for fodder, and seems content if in this way he ekes out an existence. It is a contentment of ignorance and resignation, for where the example of better living has been shown them Turks are eager to learn.

Flies, filth and vermin characterize the interior of Turkey. The roadside inns are notorious in this respect. Foreigners find it necessary to provide traveling beds in order to keep away from the vermin. It is common to see the village traveler sitting by the roadside picking the lice from his

underclothing. Fleas are taken for granted as a necessary evil, and they are everywhere in evidence. It makes the examination of patients in the out-patient clinic rooms a matter of great discomfort to the foreign physician. Bedbugs infest practically every home in the interior, and in such numbers as to make calling in the homes most disagreeable. A swat-the-fly campaign would be taken as a joke. Filth of all kinds is dumped in the streets, cattle slaughtered, and the blood allowed to drain away in the street. Flies in swarms cover the meats and other foods exposed for sale. A weak attempt has been made in certain cities to enforce an ordinance compelling the screening of food.

As in other countries where the science of medicine is not yet highly developed, the acute infectious diseases claim first place to attention on account of their universal prevalence, their unchecked ravages, and their preventability.

Typhus fever in 1915 caused the death of some 200,000 to 300,000 people in Turkey. The government, instead of cooperating with foreign medical missions as the Serbian government did in a similar emergency, sent their own physicians to cope with the disease, and of these several hundred took the disease and died. In the Erzerum region where, on a conservative estimate, between 60,000 and 100,000 died, soap, water and fuel were almost impossible to obtain during the epidemic. Three of our American board physicians in Asia Minor gave their lives a prey to this disease in trying to fight it single-handed.

Typhoid fever is prevalent throughout the entire country and assumes epidemic proportions in the summer and fall months. In the Caesarea region in the central part of Asia Minor, many thousands of cattle are slaughtered for making a sort of dried beef. This is done in the late summer. There are no abattoirs, the cattle are in countless instances butchered in the streets of the city. There is no system of drainage except the open sewer. I have seen a patient dying of typhoid fever in a room directly overlooking a courtyard where tons of this dried beef were being prepared and shipped to Constantinople. The better class escape the disease by living the entire summer in the vineyards outside the cities.

CHILDREN AND STREET SELLER

"The care of the child is simply a matter of doing the same as the forefathers did."

and then seems to leave that region for several years. It is perhaps as much dreaded as any disease in Turkey; the people look at it in a sort of hopeless terror. In the epidemic of 1910, the governor of the province could be interested only after the epidemic had gained headway in all quarters. He then gave strict orders as to quarantine of infected houses. This quarantine consisted in painting a streak of yellow paint on the door-posts of such houses. These signs, however, were absolutely disregarded by the kindly disposed neighbors of the sick. Orders to eat only cooked fruits and vegetables were disobeyed, for, as they expressed it, "Is the fruit this year any different from the fruit last year?" The city physicians in some instances were afraid to insist on the observance of this rule because of fear some personal injury to themselves might result.

Smallpox is especially prevalent in the village communities. More than half of the population of such places show the pock marks. The disease does not seem to have a very high mortality in Turkey, but it is the cause of innumerable cases of blindness among children and, in this respect, second only to gonorrhoeal infection. Vaccination is practiced in larger towns, cities and in the army. Only in the last instance is it systematically carried out.

Malaria, in all the low lands of the country, is the cause indirectly of thousands of deaths annually. The people become infected, take a few doses of quinine, partially control the disease in this way for years, all the time, however, physically unfit and an easy prey to other diseases. The disease is so prevalent that quinine sulphate is a household remedy known to every one by the name of "sulphato" and more used than any other drug in the country. The native physicians give the remedy by mouth or intermuscularly, but the result is rarely if ever controlled by microscopic examination of the blood. I have as yet seen no effort to destroy the mosquito larvæ, or to screen houses, although some in order to obtain sleep use netting over the bed.

Tuberculosis is ever-present. It is found in every city, town and village of the country. The houses themselves are contaminated, so that family after family occupying them becomes infected. With all their natural dread of the disease, the people take almost no precaution against its spread. The tubercular patient is found in the same room with other members of the family, and his bed upon the floor will be shared with others in the family. He will perhaps take the precaution to keep beside the bed an open tin cup into which he expectorates. Even in well-advanced cases he will be found eating with the family from the common dish.

If the physician pronounces the disease tuberculosis, the word sounds the death sentence for the patient in the minds of the family. They will ask what can be done to prevent others from taking the disease, but with their limited knowledge of germ infection the advice of the physician is of no practical avail, and they are apt to miss the most important point. I have many times had a glass of water brought to me for inspection, with the remark, "You can see, Doctor, there are no germs in this water." Forms of tuberculosis which are not so common in our country are exceedingly common in Turkey; for example, tuberculosis of the bones and joints, tuberculosis of the spine, tubercular glands, tubercular peritonitis, tuberculosis of the kidneys, bladder, etc. I know of no sanatoria for tuberculosis in all the interior of the country. There are ideal locations for the establishment of sanatoria in the mountain regions of the interior, with an elevation of 4,000 to 8,000 feet and with a climate quite as favorable as that of our Colorado.

Syphilis ravages some of the villages to the extent of 80 to 90 per cent of the population. This is accounted for by the manner of living of the village people, who live huddled together and use common eating and drinking utensils. The disease in such instances is the so-called "innocent" syphilis, carried from one to another in the same manner as any infectious disease. In such districts the disease is not associated in the minds of the people with immorality. A form commonly seen is a syphilitic ulceration of the skin, the so-called chronic syphilide. In the large cities, and especially in the coast cities, the social evil is flagrant. Proper treatment is costly, and in consequence the disease is allowed to run its course. A form of native treatment much used consists of mercury fumigations. This treatment so often results in mercurial poisoning that it is not at all rare to see cases of extensive necrosis of the jaw bone as a sequel. The hospitals of the interior are not equipped, as a rule, to do the Wasserman test, and no scientific study of the situation in regard to this disease is being made.

Gonorrhea is found more in the large centers than in the interior. It is probably the cause of more unhappy homes than any other disease. Pelvic infections in the female are the cause in most instances of the childless home; and in Turkey to have no child is not only the greatest of misfortunes but held to be a legitimate ground for divorce. As the cause of blindness in infants this disease holds first place. It is the most pitiable as the blindness is so easily and surely prevented by very simple means, but the midwives of the country are almost without exception ignorant and uncleanly women.

The infant mortality is hard to estimate, but is probably over rather than under 50 per cent. Very little preparation is made in the ordinary home for the new-born child. It is too often regarded as so much additional burden. The mother is attended by the midwife in the great majority of cases; the people as a rule do not consent to take confinement cases to the hospitals. The American hospitals, however, have been successful in increasing this class of patrons. The practice of the native midwives is absolutely brutal and oftentimes criminal. I have seen a case of contracted pelvis where the bones of the pelvis were broken and pulled wide apart by the combined strength of several midwives, the result being fatal to both mother and child. The induction of criminal abortion is common and results in untold misery from the consequent infection.

The care of the child is simply a matter of doing the same as the forefathers did. The new-born child is wrapped in swaddling clothes, with a sort of finely pulverized earth in place of the napkin. It is nursed whenever it cries and given a "comforter" made of a piece of Turkish sweet wrapped in a rag. At one year of age the child, although it may also nurse until it is two years or older, is given bread and a little of almost anything to eat. It is not unusual to see him toddling about with a half-eaten cucumber in his hand. Instruction in the care of the child has been taken up in some of our American board hospitals, and the eagerness shown on the part of the mothers is evidence of their desire to learn. The example of the care of the child in the American home has been a revelation to many who have had the opportunity to come in touch with American residents. The life of the woman of Turkey is circumscribed by her home and her children. Perhaps no other line of work among them would be more welcomed than instruction in the care of children.

The infectious diseases of childhood, such as measles, scarlet fever, etc., cause the death of hundreds of the children

A TURKISH BEGGAR
He lives in a hole in the cemetery.

of each city they visit. These diseases are of practically the same severity as they are in this country, but as soon as the rash is faded the child is allowed to go out and play in the streets, with the result that he dies from complications, pneumonia, nephritis, etc.

Conditions demanding surgical relief are the same as in our own country, except in different proportion as to relative frequency, and the stage of the disease when first seen by the surgeon. Cases are seen in their most aggravated form. The confidence in American surgery is seen in the work of the American hospitals in Asia Minor. The patients often come from distances of five days' journey in a country where travel is difficult. The limited capacity and more limited staff of these hospitals has resulted in the work being pretty largely surgical in nature. To give a few examples:

HOSPITAL	New Patients	In-patients	Operations
Marsovan	3186	921	898
Talas	3641	808	1165
Aintab	5215	416	462
Sivas	2650	162	186
Adana	5100	310	340
Erzerum	356	14	22
Harpoat	10154	433	273
Mardin	4792	88	119
Van	997	260	156

From the number of out-patients in comparison to the number of in-patients, it is clear that by far the greater number are not seen in the hospitals, and of those admitted to the hospitals almost all are surgical cases. The people of the country appreciate western surgery. All classes and all races, Mo-

WOMEN IN A CEMETERY
The cemeteries are popular resorts. Gravestones are painted in gay colors and gold. The grave of a mother usually is marked by a symbol of fruit, that of a childless woman by a bud.

hammedan and Christian, rich as well as poor, come to the American hospitals. American surgery has proven a most effective means of breaking down prejudice against foreigners.

Turkey offers an unsurpassed field for research in such problems as the surgical forms of tuberculosis, gastro-intestinal diseases, vesical and renal calculus, trachoma, etc. It is a field which is practically open to American surgery. The way has been paved by the medical missionaries of the American board, who have won the confidence of all classes in a remarkable manner. The standard of ethics among the native practitioners is low, and as to proficiency in surgical diagnosis and operative technique, they are not able to take their place as modern surgeons. There are few indeed who would be able to meet the requirements of the American College of Surgeons.

In eye, ear, nose and throat work Turkey's need is pitiful. Trachoma is so prevalent that there should be a clinic for

the native eye surgeons still practice dislocation of the lens with needles, resulting in ultimate loss of the eye. The field for the eye specialist is unlimited.

Deafness and mutism, the result of neglected ear diseases, are frequent. One small school connected with the girls' school under the American board at Marsovan is the only school for this purpose in all Asia Minor.

Mastoid disease, and diseases of the antrum, the accessory sinuses, are common and demand the service of the specialist. The American surgeons, although there are no eye, ear, nose and throat specialists among them, have been compelled to enter this field of surgery and have done much for these sufferers.

The researches of men like Rosenow on focal infections, pyorrhea, etc., make one long to enter the unexplored field in Turkey in this line of research. It is the rarest exception to find a well-kept mouth among the middle class in Turkey.

TYPICAL GROUP OF TURKS OUTSIDE A CAFE

"The centralization of political power in the hands of a few unprincipled men in the capital city . . . results in a condition which brands their country as among the least progressive on earth."

treating trachoma in every city of the country. The disease is a distinct menace to our own country as well as to Turkey, and in spite of strict immigration laws, many cases find entrance into America each year. The amount of defective vision and consequent inefficiency is incalculable. Operations for entropion and trichiasis, and effects of trachoma, are among the most frequent operations we are called upon to perform.

The prevention of blindness by the control of trachoma, gonorrhoeal ophthalmia and smallpox would be one of the greatest blessings America could give to Turkey. The blind in Turkey are objects of pity, as they are apt to be turned out as unproductive members of society, in a land where the people consider themselves poor enough without taking care of the blind, the deaf, the crippled, the aged and the insane. Cataract is common, perhaps not so prevalent as in India;

Pyorrhea is the rule. The native dentists are very mediocre, while the village people simply allow their teeth to rot uncared for unless because of pain they have them pulled. Outside of the largest coast cities, there are no American dentists in Asia Minor. The Syrian Protestant College at Beyrout has recently established a department of dentistry.

Sanitation and preventive medicine in Turkey are still in their primitive stages. The reason for this backward condition is not in the inherent inferiority of the races which are found there, but rather in the system of government. The centralization of political power in the hands of a few unprincipled men in the capital city, and the ruling of the masses by a system which deliberately aims to keep them ignorant and submissive, results in a condition which brands their country as among the least progressive on earth.

The value of preventive inoculations for such diseases as

Asiatic cholera, bacillary dysentery, typhoid fever and small-pox has never been better demonstrated than in the present war. My own prediction that epidemic disease would defeat the Turkish troops at the Dardanelles was not fulfilled, because preventive measures were taken and systematically carried out. As a result no epidemic of these diseases occurred, while typhus fever, against which they have no preventive vaccine or serum, caused the death of over 200,000 people. I went through the Bacteriological Institute in Stamboul with the Turkish physician in charge and was impressed by the evident adaptability of the Turkish doctors to the situation. With very meager equipment, using, for instance, common flat bottles for culture flasks, storing the prepared sera in old beer bottles, they were getting the desired results. Preventive measures were compulsory for the soldiers, but the general civilian population was unprovided for.

The whole problem of preventive medicine in Turkey is

in village and city sanitation;
in care of water-ways, disposal of sewage, soil pollution, etc.;
in disinfection, fumigation, quarantine.

Considered geographically, two centers naturally suggest themselves for intensive sanitary and medical aid on these lines:

1. Constantinople for the region north of the Taurus mountains, including northern and central Asia Minor, the Balkan peninsula, southern Russia;
2. Beyrout for the region south of the Taurus mountains, including southern Asia Minor, Syria and Palestine, Mesopotamia and Arabia.

As to language, the northern region is Turkish speaking, and the southern region Arabic speaking.

Constantinople would seem to be pre-eminently favored as a location for a strong medical center. Its geographical location gives easy access to the whole Near East, both southern

THE DOG SCAVENGERS OF CONSTANTINOPLE

"Filth of all kinds is dumped in the streets, cattle slaughtered, and the blood allowed to drain away in the street." A pack of ownerless dogs begging at the door of an eating house at Galata.

practically untouched. It involves the changing of a whole country from a backward, unprogressive one, where filth and disease make it a real menace to the world, into a clean, livable country, one which might become progressively a real resource to the world's civilization.

The needs of the public health in Turkey may now briefly be summarized as follows:

- The control of epidemic diseases;
- Campaign against tuberculosis, syphilis, gonorrhea;
- Child-welfare study, prevention of excessive infant mortality;
- Control of malaria, trachoma, hookworm, anthrax, intestinal and parasitic diseases;
- Study of insect-borne diseases;
- War against universally present vermin, lice, fleas, bedbugs;
- Care of insane, blind, deaf, lepers, crippled;
- Education of men and women in modern medicine and surgery; of mothers, nurses, midwives;
- in private and domestic hygiene and sanitation;

Europe and western Asia. Its political importance as a great capital city gives prestige to its students. Its polyglot population makes possible the easy handling of students of many nationalities and the provision of an extremely varied clinical material in medical and surgical work. Being in touch with both Occident and Orient makes more natural the introduction of modern methods in medicine and surgery. The prestige of existing American educational institutions of high grade, such as Robert College for men, and Constantinople College for women, paves the way for the introduction of a strong medical school. These things, taken in connection with the great outstanding need, would seem to mark Constantinople as one of the great strategic centers of the world for the development of a medical center for women and for men, which would be a tremendous factor in the emancipation and regeneration of the Near East.

The framework for such plan is laid in the network of American colleges and hospitals already established. In Asia Minor the hospitals of the American Board of Commissioners for Foreign Missions number nine. The strengthening of these "one-man" hospitals would allow a better grade of medical and surgical work to be done and would assure more intelligent cooperation in carrying out preventive and sanitary measures, and in effective research work. The Balkan peninsula and southern Russia have been sending students in large numbers to the colleges in Constantinople and would contribute large numbers to a medical department if such were established. The opportunity seems to me unsurpassed for developing in Constantinople one of the greatest medical colleges for women in the world.

Here, then, we have an opportunity for American helpfulness to a disease-ridden people on an unsurpassed scale and with an unsurpassed prospect of success. A general scheme, such as has been working itself out in my mind during the past ten years, would make use of all the existing facilities and, with them, would create a medical plant of the first order. The location of its units would be influenced by that of the institutions named and by the natural geographical divisions of the city, perhaps as follows:

1. A medical college in proximity to Constantinople College and Robert College, in the region along the Bosphorus a few miles above the city proper, the most beautiful as well as the most healthful location.
2. An American hospital in the same region as the medical college.
3. A polyclinic building, located near the heart of the city in the European section (Galata, Pera, Taxim, Shishli).
4. Branch dispensaries and clinic rooms located in the geographical sections of the city, as at Stamboul, Galata, Pera, Scutari, Kadi-Keuy, and perhaps others.

The whole plant should be, it seems to me, of the same grade as similar institutions in the United States, such as are classified as "A, plus" by the American Medical Association. Teaching would be in the English language without change in the curriculum of existing colleges.

The training school for nurses in connection with the hospital should be made especially strong to supply the need for trained nurses throughout the whole country. A department of midwifery would combat the malpractice and criminal work of the ignorant, untrained midwives now working in the country. A department of dentistry would find a field of work, unlimited and untouched as far as concerns research work along the lines of work recently developed in this country, as in pyorrhea alveolaris, focal infections and modern oral surgery. A school of pharmacy is needed to develop pharmacists who will hold to a high standard of ethics in their profession.

The polyclinic plan seems to fit the situation in Constantinople. It would be a modification of the Mayo clinic idea, so successful in this country. The polyclinic would be the "center" of American clinical medicine in the Near East. In the polyclinic building would be associated under one management a staff of specialists, not in jealous individual competition, but

in aggressive cooperation for the advancement of American medicine in the Near East. The staff members would be selected with the view to implanting the high standards of American medicine, surgery, preventive medicine, modern medical research, and the high principles of Christian life and service.

The staff of such a polyclinic might include specialists in internal medicine; surgery; eye, ear, nose and throat; gynecology and obstetrics; pediatrics and orthopedics; genitourinary and skin; nervous system; x-ray and photography; bacteriology, serology and pathology; epidemiology, sanitary engineering and preventive medicine; printing and library work.

The department of epidemiology should train men capable of investigating outbreaks of epidemic disease in any part of the country and of cooperating with the nearest American hospital, and with government officials, for the control and eradication of the disease.

The polyclinic would be the clearing-house for all cases of a serious nature. The patients coming to the polyclinic would be referred to such specialists as were necessary for a thorough diagnosis of the case. The patient would feel that he is here receiving the best the medical profession affords, without the confusion resulting from consulting various doctors in general practice, to be told (as is quite the rule in Turkey) that the opinion of the doctor previously consulted is entirely incorrect. The polyclinic would help in raising the general standard of ethics in the profession. Cases sent to the polyclinic from the branch clinics or coming direct would be sifted out, surgical and serious medical cases being sent to the hospital.

The branch clinics and dispensaries would be the feeders for the polyclinic and the hospital. The staff would consist of one physician, one nurse, one pharmacist and perhaps one relief worker. The work of these clinics would be much like that done in the out-patient departments of our American hospitals. A great deal of trachoma and other eye diseases make necessary clinics for the daily or tri-weekly treatment of such cases. All cases of a minor nature would be treated from these branch clinics.

Turkey in her present condition of filth and disease is a menace to civilization. American prestige in education and medicine has firm hold on the people throughout the country. America seems fitted as no other nation to cope with this urgent need. Medical and surgical work has proven one of the most effective means of winning the confidence of the Moslem people. America has the opportunity in the Near East of making one of the most vivid, practical demonstrations of modern sanitation and preventive medicine the world has ever seen. As a means of bringing Christian culture to the Near East, the medical seems the most effective. If for no other reason than to safeguard the health of other nations from this breeding place and disseminator of disease, America may well afford to embrace the opportunity which is opening before her in this region.

VIEW OF THE SCHOOL FROM THE EAST ORCHARD

Self-Government

By Calvin Derrick

FORMER SUPERINTENDENT THE IONE REFORMATORY, CALIFORNIA; ONE TIME ASSOCIATE OF WILLIAM R. GEORGE AT THE ORIGINAL GEORGE JUNIOR REPUBLIC, AND WITH THOMAS MOTT OSBORNE AT SING SING; ORGANIZER OF THE SCHOOL AT AUBURN PRISON, NEW YORK; CONSULTING EXPERT FOR THE NEW YORK CITY DEPARTMENT OF CORRECTIONS

FOUR years ago the Ione Reformatory, at Ione, Cal., otherwise known as the Preston School of Industry, was committed to a definite policy of inmate self-government. When I became superintendent at that time I outlined an unequivocal program with this reform as the keystone of its arch. I declared my belief in the fundamental principles underlying the work of William R. George at the George Junior Republic in Freeville, N. Y., with which I had been associated, and while I disagreed with Mr. George in many matters concerning the application of those principles, I went on record as believing that the principles, practically and sanely applied to any reformatory population, were not only workable but would result in a higher standing of citizenship on the part of the boy after release.

I announced my intention to commit my theories to the acid test in an old-line reformatory which had about as bad a reputation, as well as about as tough a lot of boys and as ironclad a set of officers, as any institution in the country.

It was agreed between Gov. Hiram Johnson, my board of trustees and myself, that I should have a free hand in the application of these theories for two years. If at the end of that period the plans were rejected, I should retire; if endorsed, I should continue. The fact that I remained four years and am still superintendent, on leave of absence to New York for one year, must be evidence that, so far as the trustees and Governor Johnson's administration are concerned, the plans are considered safe, sane and successful.

This is the first time in the history of penology that self-government as such has been acknowledged and endorsed by any state. It is timely, therefore, that the whole experiment and the manner of its working out should be presented.

Practically every professional friend I had, east and west, predicted failure. The superintendents of several institutions and the wardens of two prisons with whom I talked consid-

ered that I had lost my former practicality and had become a dreamer by long association with George Junior Republic ideals. A few rare spirits, mostly outside the active field, saw great possibilities if the thing could be made to succeed. They spelled "if" with capitals, spoke consolingly to me, and their wishes for my success were extended in that peculiar tone of voice which we know is meant to encourage, but really commiserates. Among institution men in general, with one or two exceptions, I found prejudice rather than reason, and almost total ignorance rather than well-digested thought about the whole theory of self-government.

Before writing this paper, therefore, I thought it desirable to get as many people as possible, representing institutions of all kinds as well as other branches of social work, to express their present views and to criticize freely all phases of the question of self-government. The Department of Sociology in the University of California, at my request, recently sent out a questionnaire dealing with the general subject of control and correction, not only in reformatories, but in any institution, and giving ample opportunity for adverse criticisms and for theoretic exposition of untried views from others. Something over one hundred replies to this questionnaire were received. The answers are an illuminating commentary on the present state of information on this subject.

For instance, one writer stated that he had fully tested the matter in his own institution, where he had given it a thorough and honest trial for three weeks, and found it to be an utter failure. Another said that he had tried it on two or three occasions, one time persisting in it for about three months, and that he found it to be a dangerous experiment. A warden of one of our prisons stated that he did not know anything personally about it, and that he did not want to; that he thought it was a foolish fad that had no place in training delinquent boys. A large number of people put forth that per-

CARPENTERS IN THEIR WORKSHOP

fectly crushing argument that seems to the minds of so many to settle the entire question, that these boys were sent to a reformatory because they had lacked the power of self-control; that if they had been able to control themselves they would not be there; that, consequently, it was absurd to expect them to be able to control themselves in the institution.

One superintendent in a northwestern state had been operating a system of self-government very nearly akin to our own for a period of nearly three years. He endorsed it, and gave his reasons clearly and forcibly for so doing. Several pointed to the George Junior Republic as a failure and said that if Mr. George, the founder, had not succeeded in establishing these principles, it was probable that they could not be established. And so on, through a long list. A study of the letters convinced the university authorities and myself of the following facts:

1. That there are a few people in institutions who thoroughly believe in the principles of democracy and their application to populations in custody;
2. That almost all of the people in institutions are ignorant of the manner in which these principles should be applied or could be applied;
3. That the rank and file of the institution people are so prejudiced against the plan that they cannot be induced to

MASON SQUAD AT WORK

examine into it with an open mind.

After reading these answers, it seemed to me that the topic Segregation, Self-government and State Control embodies the essence of the whole question of institution management. A discussion of the subject of segregation, if confined to the institution alone, becomes very narrow; a more general aspect of the subject would induce us to begin our discussion with the kindergarten, because if proper segregation took place all along the line in public schools there would not be nearly so many questions for the institutions to solve or contend with.

Our public-school system seems to be made almost exclusively for the well-understood, normal, tractable, and well-educated and well-developed child from a fairly good home. Therefore, for many children education becomes problematical. We no longer attempt to teach the physically blind and deaf with other children. They are special pupils, requiring special courses and special teachers. But our public schools still fail to see, or at least to provide for, mental blindness and deafness, while our normal schools and teachers' colleges make but a feeble attempt to train prospective teachers to become adepts and experts in detecting such blindness. Boards of education fail to provide places or courses for the training needed for these peculiar cases. Nearly 70 per cent of the children who enter the first grade drop out before they complete the eighth or grammar school course. The future education of nearly all of them becomes problematical, because they have little or no industrial value. Trade unions will not permit many to enter the trades, and too often financial conditions in the family prevent entrance to special or technical schools.

The result is that we annually have a great mass of children added to the army of the poorly prepared workers. The majority of these, however, those who are mentally capable and normally balanced, will gradually adjust themselves to conditions and fit themselves into the social order of things. The remainder, who are peculiar, defective, undeveloped, oversexed, indifferent and incapable, find themselves unable to meet conditions successfully. Their training, as well as their very existence, becomes a problem.

I mean to confine myself to this group, because it furnishes nearly all the problems of delinquency, dependency and crime with which we have to deal. These boys and girls are out of place in the home, the school, the church, the shop, or on the

street. They have little or no respect for personal rights and personal property of others. They commit all manner of crimes and become a source of danger to society. On the other hand, we must not forget that nearly all physical and mental defects and incompetency such as cause a person to become a misfit in society, are the result of conditions of certain social sins and evils, tolerated and even fostered by society. The drunkard begets the drunkard; the terrible penalties of the syphilitic are passed on to his offspring; the children of the feebleminded will naturally be feebleminded. Argument to the effect that environment will overcome inheritance is idle, even if we could all agree upon the fact, because society makes but little more effort to control environment than inheritance.

Let us suppose one of this class of incompetents has reached his highest mental level in the third grade in school at the age of ten. The law says he must continue to attend school until fourteen. The law does not provide him with any choice of work or play. He is a nuisance to the teacher and to his classmates. He becomes ashamed of his dullness, overgrown, and refuses to go to school longer, to be the fool of the class. But the truant officer visits him and he is induced to go on. Finally, he runs away. Then he is taken to the probation officer and the court. Both recognize his mental weakness, but the law says "fourteen"; therefore, he must return to school, much as he hates it, and the teacher, and the pupils. He has not one thing in common with any of them. He has interests, plenty of them, such as they are, because he is a growing boy. The law itself has made him hate law, court, officers, schools and teachers. He cannot do what they require, so he is forced to do what he can and likes to do. To do this, however, he must evade the law; he must be a truant.

His only possible solace lies in joining other truants and other incompetents who are in the same position as himself before the school, the probation officer and the court. Thus the gang is formed and must live; and by live I mean have activities and interests and excitement. So, petty crimes begin. Sooner or later, every member of the gang must be caught, arrested and sent to some institution.

Practically the first thing which society now demands is that the boy shall be taught a trade and be made self-supporting. If it were not so tragic, it would be humorous. Millions are annually spent in maintaining a most elaborate system of

CADETS IN THE SWIMMING POOL

schools, from which less than 10 per cent of the child population of the land graduates, and which fails to provide at any point for that particular class of individuals at once the greatest problem and the greatest menace in the community. This class must ultimately be trained by a different system of schooling, involving greater expense and far less satisfaction, and to get which the child must be branded as a criminal and live with the shadow of a court record forever hanging over his head. We maintain saloons, red-light districts and gambling centers, ostensibly because of the revenue which they bring to the state. But there is no state in the Union, I believe, where the revenues from such sources begin to pay for the machinery of law and the upkeep of institutions, to say nothing of the misery and tragedy in private life, which are caused directly by the products of these favored resorts.

At Ione reformatory there is every grade of incompetency, above that of absolute idiocy. Ages range from nine to twenty-five, though no one is supposed to be over twenty-one; temperament passes through all stages, from near insanity of a violent nature, to the simple-minded, good-natured child; degrees of criminality include mere dependency and murder; educational experience varies from zero to fourth year in high school; as to nationalities, they girdle the globe. For facilities, there is an ordinary grammar school course, in association

THE FOOTBALL TEAM

A MILITARY COURT

with a group of eighteen trades, or industries, ranging all the way from gardening and horticulture to fine cabinet-making.

People often say: "How can these immature boys govern themselves? If they could they would not be in Preston." Others say: "Boys should not be allowed to govern other boys—boy judges are sure to be either too lax or too severe; they have no judgment." Some say that it is a mimic government; that it simply deceives the boys into thinking that they are what they really are not and cannot be, and that it elevates unduly one set of boys—the officers—at the expense of the others—the voters.

I have known but one person who had made an intelligent study of the principles of self-government and could claim to understand them, who denounced the principles, and he was a Russian. I have known many who criticize the methods of *applying* the principles. I, myself, radically disagree with

PRESIDENT FIKEL AND HIS CABINET

Mr. George on that point. The principles of self-government are the principles of democracy. If democracy is right, then self-government is right. It is not, therefore, a question of principles; it is a question of the intelligent application of principles to a given set of conditions.

The question for discussion then is: May the principles of democracy be advantageously incorporated into the training of boys in state schools?

In the beginning, let me answer some unasked questions. In the first place, every needed medical and physical aid is given the new boy coming into the institution. The teeth, eyes and all other parts of the body are carefully looked after. Very thorough Binet work is done, and the mental measure of every boy is quite accurately secured. The supervising principal of the school, who is also the supervisor of trades, makes a careful personal study of each boy's industrial possibilities and needs. The parole officer makes a report on home conditions, with special reference to the probable manner in which the boy can be expected to fit into home life and community life upon his release. This may or may not have a bearing on his trade training, but at any rate, it is a good supplement to the reports of the probation officer and juvenile court.

In other words, all the care, science and patience required to understand the boy thoroughly are exercised by a corps of workers, every one of whom is a university graduate. It is needless to say that the self-government enters in no way into this field of activity. Again, schools, shops and work squads are controlled by the teachers, foremen and instructors, as is the case in all well-regulated industrial schools. Self-government does not necessarily enter into these fields, although it may do so. The dormitories, too, are exempt from the field of self-government.

Through the Binet work and other sources of information are sifted out those who cannot, or should not, be permitted in a self-governing community. These include, among others, the moral perverts, those afflicted with venereal disease in a dangerous stage, and those having records as sodomists and who are known to us to have been unable to overcome the disease. These are under the study and control of adults. Finally, there is a small number of unbalanced, defiant boys, who by reason of their dispositions cannot live peaceably or efficiently except under rigid control and restraint. All these exclusions represent about 10 per cent of the population.

Fully realizing that one of the most important, and indeed scientific, sides of the work is that of discipline, or the proper method of correction, the following safeguards have been adopted: Every complaint against any boy for anything trivial or serious, by either cadets or state officers, passes through the hands of an officer, my second assistant, a university-bred man, who has made a special study of discipline and is fairly well grounded in applied psychology; complaints dealing with immorality between the boys, or those requiring a pathological study, also those peculiar deviations which could not, or in justice to the boy should not, be handled by the cadet courts, are put aside for special care and disposal by the state; all complaints against those who are excluded from self-government are similarly treated. The remainder go to the clerk of the court and are disposed of by the cadets themselves. As a further safeguard to the cadets, it is granted that any and all defendants before the court have the right to appeal to the supreme court, over which the superintendent presides. There has been but one appeal in over three years.

I have now shown that from the scientific, humane, pedagogical and industrial standpoints the interests and welfare of

the boy are fully guarded. Self-government has nothing to do with any of these steps. Yet in the average state institution these vital matters are in the hands of untrained adults who are little, if any, better equipped to handle them than immature boys.

As to the field left open for the exercise of self-government, it is a rather restricted field, to be sure, but from the viewpoint of the boy it is the most important. It leaves just about the same activities to his discretion as are left to the discretion of boys at large; namely, the social, including home, playgrounds, and their inter-relations, all club work, home study and discipline, the military affairs, and certain unskilled lines of manual labor. It is within this field somewhere that the boys fail before coming to us; because they are anti-social, or because the people charged with the responsibility of their training fail to understand them, that is, to make them see the necessity of conforming to the set order of things. The first, last and only business of the state school is to enable the boy to return to free society fully understanding his relations and responsibilities toward others—socially, morally and industrially. In other words, we are asked to *re-form* boys.

not develop; he submits and becomes colorless, or rebels and becomes hardened. If he develops, he develops excuses and cunning rather than effort and reason.

This, then, is the starting point for the boy: to make him conscious that he is a free moral agent and that every decision he makes affects his own life and status. At Ione he makes that start the day he arrives.

Let me now make clear two things: first, that self-government, as interpreted and applied at Ione, is not an end, but a means to a very definite purpose. In his many tours and lectures, as well as his two books, Mr. George so emphasized the courts and the jail system, that most people came to feel that self-government among boys was concerned chiefly with their prosecuting of one another. This is not the main object of self-government, although it serves a very definite purpose and affords a splendid training in a variety of ways.

The second thought is this: that the home, school, church, and city have each in turn failed to make the boy fit into the established and approved civilization. The boy either could not or would not fit. Does it not seem absurd to suppose that we can place him in an institution which forces a much higher

CADETS DRILLING

What are the elements of reformation? I have read volumes on the subject. I have examined many systems invented to accomplish the thing. Does it consist in determining the boy's mental measurements, teaching him a trade, perfecting him in military training, or subjecting him to a course in discipline? It is none of these, nor yet a combination of all or any of them. He may have all of these and not be reformed. He may have gained none of them, and be considerably reformed.

Reformation is accomplished through a change of mind, a fresh viewpoint, a new and wholesome interest in life and a growing consciousness of one's own power to succeed. To successfully train and direct a boy you must start with his viewpoint. It may be all wrong, and probably is, but it is his view of things, and either you must make your plans coincide with his views or else change his views. In the beginning, it is generally easier to do the former.

In the next place, the boy must be made a concrete factor in a variety of activities where he accepts and carries ever-increasing responsibilities, which, however, become his as a result of his deliberate choice, never by compulsion. I am not to be understood as saying that you cannot train a boy through force. You may, but such training is negative; the boy does

and more nearly perfect social order upon him, and is wholly repressive in its application and expect him to develop a character and individuality which will allow him to succeed any better upon his return to the outside world in which he had for years failed? The sole object of self-government is to furnish a medium in which the boys may develop a civilization of their own with as many degrees and gradations as is necessary to meet their needs and interests, the ideal being to come as close to our standards of civilization as possible.

Starting in basements under the strictest state control, the boys at Ione were granted two hours a day of self-government under the eyes of officers. A brief and faulty constitution was given them. Each company's constitution differed. They could not agree as to a set of rules, each company being actuated by purely selfish motives in securing everything it could for itself at the expense of the other companies. They could not even agree among themselves that civil government is a good thing. Two companies insisted on a military government and were allowed to work out this experiment in competition with the civil government companies. Civil government won, and at the end of fourteen months the military companies applied for a constitution and admission to the Republic.

I wrote and placed in operation the first constitution and administered the first court, training the boys in a crude way. The constitution was intentionally faulty. A casual reading carried the impression that a great deal of liberty had been granted, but in the court the judge, and out of court the citizens, were very closely restricted when they came to study the document. This was intentional on my part. It was not long before I had a committee visiting me, asking for a more liberal constitution. This was what I was aiming at—the development of their initiative. I prescribed certain limits, territories and restrictions and told them to do as they liked within this field. They did so. Within eighteen months we had four constitutions, each a great improvement over the former.

A difference of opinion as to the interpretation of the constitution gave rise to political parties; the confusion resulting in various courts by reason of each company having a different set of laws and penalties for the same offense gave birth to the House of Congress; disagreement among the congressmen as to which laws should be abolished and which retained resulted in the formation of a commission to draw up a code of civil and penal procedure, and finally in a body of uniform law. This commission developed, after its purpose had been accomplished, into a bar association, and thereafter all boys who became applicants for the position of judges, district attorneys, or clerks of court, as well as those who wished to practice law before the courts, were obliged to pass an examination before the bar association.

The code of laws caused the formation of a prison to enforce the mandates of the court. Political graft by the warden showed the necessity of reform in the matter of appointments to office. A civil service commission and law were enacted by the succeeding congress. Because the government now had prisoners to care for, it had to have work to busy them with; therefore, a commissioner of labor was created and made a member of the president's cabinet, and a certain field of rough, unskilled labor put under the jurisdiction of the government.

A certain politician among the boys, who was running for office, was elected by crooked work in the receiving company, the members of which were not well versed in the politics of the place. The next congress created a board of naturalization and made it a part of the department of labor. All boys entering the school after that time had to be naturalized before they could vote, the naturalization calling for the completion of a three months' course of study.

The civil service law and the recall made the officials much more careful and ambitious in the performance of their duties, but it took practically all of their time. The next congress passed the compensation act, which allowed these officials extra credits for their official duties.

The third congress made application for the control of the military training of the school. It was granted, and a secretary of military affairs was added to the president's cabinet. He acts as an *aide de camp* to the military instructor. The congress then passed military inspection laws by the terms of which every member of a company became responsible for every other member's inspection. That is, if one boy in a company lost a certain number of credits for an infraction, every member in the company suffered the same loss. In other words, they had arrived at a stage where they realized, as a group, that the liberty and safety of all depends upon each individual doing his part, while the individual had learned that he cannot do as he pleases without injury to everyone else in his group. I considered the passage of these laws a marvelous advance in social and moral responsibility and understanding of the boys.

The government began to feel an interest in the possibilities

of the new material arriving at the school, and asked permission to establish night school in the receiving company. This, of course, was granted. Out of this grew the commission on social affairs. The commissioner met with the president's cabinet, though not a member thereof. He established clubs, organized orchestras and glee clubs, until there are now twelve such organizations, three orchestras and two quartets. The social commissioner is allowed to draw upon the commissary and kitchen for sufficient cocoa, sugar, cookies, sandwiches and other necessary material to make a real sociable time for the club he is visiting that evening. Needless to say, the social commissioner is the most popular man in the government.

The present administration has placed before me a proposition to permit the government to operate a store for the benefit of the boys and to put into operation a system of coinage. I have agreed to permit it if they can work out a feasible plan that I can with prudence approve.

In the three and a half years I have been at Ione, I have never once interfered in their field of government. If a company becomes lax in its citizenship or indifferent toward its obligations, so that its standards of citizenship fall below a certain fixed line, it automatically loses its constitution and goes under state control, thereby giving up a great many of its privileges. This has happened twice. It takes a company, from six months to a year to regain its charter. There is little trouble in this respect.

I have never vetoed a law, reversed a judgment, altered or set aside any proclamation of the president, adjourned a congress, or declined to consider any kind of proposition whatsoever, nor have I permitted any of my officers to do any of these things. I am an honorary member of the president's cabinet, as well as a member of the house of congress, but I have no vote in either.

Every Monday at one o'clock in the afternoon, the president's cabinet meets and all the affairs of the government are discussed. The attorney-general presents reports from all the inferior courts, of which there are nine. The prison commission presents a report on conditions in the prison, which includes the name and offense and sentence of every boy committed to it, as well as such vital matters as the work accomplished and punishments inflicted. Likewise, the civil service, bureau of naturalization and military commission are given a hearing.

I feel that I have the full confidence of all the officials in the cabinet. They have never yet, not even in my absence, tried to put over any tricky or underhand piece of work upon me, or in any way failed to meet or appreciate the very grave responsibility which I carry by virtue of allowing them to operate this government. If they request control of matters which I feel they should not handle, we discuss it until they understand why they should not, and withdraw their request. It would belittle their government for me to refuse it; we parley diplomatically over the question until we come to a mutual understanding. This whole series of commissions, laws, codes and social advancement is the outgrowth absolutely and completely of the initiative of the boy. It is, of course, to be expected that the superintendent as well as many other officers frequently suggest things, frequently encourage initiative and in every way foster its application to new fields of endeavor; but the accomplishment, the advancement, the actual thinking out and getting into operation of desirable things are always and under all circumstances the work, ingenuity and push of the boys.

There has developed a loyalty and honor system which to me are most satisfactory, and result in a strength of organization,

removing all of the former fear of riot, assault and breaks for escape. There are twenty-two government marshals and deputy marshals responsible for the honor system as operated among nearly 350 boys in the government. These marshals have as much liberty and as much responsibility concerning the custody of the boys in their companies as the state officials, within the grounds. In more than two years there has been but one marshal, or deputy marshal, who has violated his trust.

Finally, let me detail just for a moment the life of the new boy. It must be evident that the average boy arriving at the institution comes in a nervous and unsettled state of mind, full of apprehension and dread, and uncertain of his present status or his future opportunities. He is taken in charge by a cadet official, and while he is being shaved, bathed, inspected and clothed, the boy official and the new arrival become acquainted. The boy official starts the new arrival off on the right foot, advising him of the advantages and disadvantages, respectively, of life under the government or life in the companies under the state. He is made aware that his release depends upon his record and his ability to earn 7,000 credits. He is placed in a receiving company with a certain amount of privileges, and allowed to earn seven credits a day for the first month. Below him is a company with less liberty and five credits a day; above him, companies with much greater liberty and earning up to twenty credits a day. He must remain in the receiving company three months, then he automatically moves up or down. In order to go up, he must have completed a course of study in citizenship, passed an examination and been naturalized under the laws of self-government.

Note that he is not obliged to take this course of study, but if he is to advance his own interests, gain more privileges and credits and live under better conditions, he must exert himself from the very start and take advantage of the first opportunity offered by the state and the self-government. Almost every boy will quickly do this because it becomes his selfish interest to do so. He is able to see quick returns from his effort. The spirit, determination and excellence with which he undertakes and completes this first set of examinations greatly influence his school, cottage and trade advancement. If, therefore, he proves unstable, sulky or displays the qualities of a quitter, he is responsible to himself alone for a smaller number of credits and delay in entering a trade. But if he succeeds, the fourth month he may earn eleven credits a day. However, at any time he fails to maintain either his work or conduct record as thus established by the three months' effort, he may slide back to third class and five credits a day. He is not required by us to do either, but it is greatly to his interest to constantly advance his standard.

The *only* thing we, the system, really require of any boy is a choice, a decision—he must decide something, up or down; he cannot drift. What the decision shall be is always up to the boy; not even a question of advice from us, unless he asks it. If he chooses the opposite course, he must remain longer; he will not be sure of parole when he earns 7,000 credits; he will not learn a trade; he will not enjoy many of the privileges; he must live under very strict rule and do the most disagreeable work.

In other words, if we can surround him with the proper conditions, we find that the defective and delinquent boy will respond to precisely the same appeal and selfish interest which keep you and me at work; that is, the love of better living conditions, entertainment, distinction, hope of greater personal reward, etc. Self-government supplies every one of these desirable elements for our purpose, because it presents a large

number of well-graded opportunities, requires constant effort, quickly rewards the effort, appeals to the ambitious, offers a clear and broad field for initiative, fosters personal distinction, requires a declaration of principles, a high standard of ideals, a reasonable devotion to duty for the good and comfort of others, a responsibility toward the community, and a definite interest in the public good.

It is significant that self-government is as strong a force in the development of state officers as it is in the development of state wards. Formerly the only games played in the school were baseball and football. There were no inside activities but letter-writing and reading. The officers absolutely refused to mingle with the boys in a social way, even declining invitations to the superintendent's apartments to aid in the games for the boys. Three years ago, when I attempted to organize a movement to further the social life of the boys, there were only two or three officers who would consider having anything to do with the boys in a social way. But last January, after the government social commission had been organized and we called a mass meeting of officers to find out how many would volunteer to give their services as instructors, teachers, playmates, musicians, and general good fellows to help on the club work, wherever the boys needed them, forty-three officers, men and women, responded so rapidly that we could not write their names down on time.

The institution of self-government, when properly handled, begets a mutual confidence and respect between officers and boys. It requires a high-grade effort on the part of each, and high-grade effort is a great humanizer in whatever field it is exercised. In cooperation with self-government the state finds itself constantly exercising its best ability toward encouraging the boy to put forth his best effort, not alone for himself, but for his fellows, for the sake of the principles at stake, for the sake of the influence of his actions, his vote, his chance remark, upon the motive, the vote, or the official act of his fellows.

This attitude is much more encouraging for the state than spending an equal amount of energy on a repressive régime for the purpose of maintaining rigid discipline, which brutalizes both officers and boys. It takes a higher type of officer, to be sure. It requires a different capacity in the officer. It restrains and regulates the tendency for petty officers to be overbearing and too authoritative in the discharge of their duties. Finally, it sends boys out of the institution feeling that the state has been fair and interested and helpful, rather than merely a jailer. Because of his knowledge and interest in *why* laws are made and *how* they are made, the boy is more likely to be a law-abiding citizen from choice.

When Figures are Facts

By Winifred Stuart Gibbs

LECTURER IN HOUSEHOLD ARTS, TEACHERS' COLLEGE, COLUMBIA UNIVERSITY; DIRECTOR OF EXTENSION DEPARTMENT, MECHANICS' INSTITUTE, ROCHESTER, N. Y.

"I WISH that I could make my students understand that the mere expression of certain conclusions in terms of figures does not prove those conclusions to be facts," were the remarks, recently, of the head of the department of statistics in a great university. Of studies in the cost of living there is no end. Some of them stop at tabulation of figures—figures which may embody the life stories of real people. It is the purpose of this article to set forth some figures which tell something of the food story through which the toilers of the nation have lived during the decade just past.

In 1906, as in previous years, the problems of poverty seemed grievous enough. Like many another relief organization, the New York Association for Improving the Condition of the Poor was sorely bested. Its visitors labored patiently to untangle the snarled lives of the families in their care. Not the least of their problems was that of food. How could they make an insufficient and often intermittent food allowance stretch to cover the needs of white-faced children and weary men and women? Clearly, the first step was to determine as nearly as possible the actual needs of these work-worn folk. To this end the association added to its staff a dietitian, whose task it was to study food needs and food costs.

During the next few years there were various attempts at formulating a statement of the dietary needs in families living on the wage of the unskilled working man. Manifestly, the first responsibility of the dietitian was that of an adviser in matters of diet; to state clearly, to the best of her ability, just what food was needed by the families. Later there would come the questions of the entire family budget, of adequate relief and of constructive legislation in matters of an adequate wage. Any-one of them makes a story. The present one is on the food situation.

In 1909, the diet observations made crystallized into a ration allowance providing what seemed to be a fair quantity for the maintenance of strength and energy. Adapting this standard to the wants of a family of two adults and four children, there was required

Sugar	5 lbs.	Cabbage	3 lbs.
Beans	2 lbs.	Milk	21 qts.
Potatoes	18 lbs.	Codfish	1 lb.
Bacon	1 lb.	Butter	2 lbs.
Apples	12 lbs.	Raisins	1½ lbs.
Onions	6 lbs.	Cheese	1 lb.
Carrots	6 lbs.	Flour	17 lbs.
Tomatoes	1 lb.	Oatmeal	4 lbs.
Barley	½ lb.	Beef	2 lbs.
Rice	2 lbs.	Eggs	2 doz.
Tea	¼ lb.	Molasses	1 pt.
Coffee	1 lb.		

The ration allowance adopted is by no means to be taken as the ideal standard of food needs. It is simply an attempt to adjust established standards so as to meet some of the practical difficulties of a relief organization. Intensive study of individual needs was not the first step in the systematizing of relief. The aim was to formulate a ration allowance that should help to establish the quality and kind of food needed to keep many family groups in health, until such time as it shall be possible to undertake more intensive work in nutrition.

In adopting such a standard the aim was manifold. First, last and all the time there was the desire to help the family. Another aim was to point out to those interested the relation of food needs to income; still another was to trace some points of contact between the cost of food, then already rising, and any possible falling off in family standards.

It is safe to state that even in 1906 none of the families, if left to themselves, could have adopted an adequate food standard for any considerable length of time. The food story of the B. family, covering a term of six months, is typical. The following table shows how its monthly needs, according to the standard adopted, compared with actual purchases:

	NEEDS	—ACTUAL PURCHASES—					
		Jan.	Feb.	Mar.	April	May	June
Bread	lbs.— 35	35	33	33	33	37	23
Butter	lbs.— 6½	4	6	5	5	4	3
Milk	qts.— 61	60	61	66	66	67	32
Eggs	doz.— 4⅓	2	4	7	5	5	3
Cereal	lbs.— 13	12	12	13	13	17	6
Sugar	lbs.— 14	14	7	16	14	11	10
Meat & Fish.....	lbs.— 14	19	19	19	18	15	9
Potatoes	lbs.— 43	13	25	18	18	22	8
Vegetables	lbs.— 52	31	60	50	50	45	20
Fruits	lbs.— 24	30	30	20	20	25	20

It will be seen that this housekeeper came fairly near the standard for the first five months. The explanation for the falling off in June is given on the record sheet, where we read that the church was obliged to discontinue aid as planned and the income was reduced by \$15 a month. There was no intentional falling below the standard in any particular; it was simply a matter of making the best of stern necessity.

The food problems of the working man continued along the same dreary round until the monotony was varied by the first noticeable leap in prices. Someone has said of the year 1912: "It was ushered into history amid a climax of popular agitation regarding the cost of living unparalleled since the panic of 1907, and almost unprecedented in the annals of history." A comparison of the Association for Improving the Condition of the Poor grocery orders for this year with those for 1911 shows an increase of 24 5/5 per cent. The greatest increase was in those foods which are most needed to preserve health.

As is well known, retail prices form an unreliable basis for statistical comparison. The standard diet, therefore, has been applied to wholesale rating, as given in Bradstreet's reports. Taking the standard dietary for a family of two adults and four children, we find that the change in wholesale cost for the requisite quantities of the articles contained in that diet between 1906 and 1916 was as shown in the table at the top of the next page.

This table shows that *the rise in wholesale prices for a typical working class food budget has been more than three times as great between 1915 and 1916 than it was in the whole of the preceding decade!* Though this does not accurately represent the movement in retail prices, the net result of the increased cost of food obviously was a marked decrease in the purchasing power of wages. Most of the families with the characteristic resignation of the poor settled down to a diet without variety. Education in food values made the situation less disastrous than otherwise it would have been. It was ex-

	Yearly change		Cumulative change on basis of 1906	
	Increase	Decrease	Increase	Decrease
1907.....	.03391		.03381	
1908.....		.04885		.01670
1909.....	.07976		.06172	
1910.....		.01300	.04792	
1911.....	.03648		.08613	
1912.....	.02017		.10806

1915.....	.01611		.14811	
1916.....	.27726		.46644	

plained to the discouraged housekeepers that since redoubled effort toward reduction of cost was necessary, they must see to it that milk and cereals be used in larger proportion, lest the families' health suffer.

At the end of the ten-year period, it has now been established beyond question that in order to make the food expenditure bear its proper relation to other items in the budget, families with an income of ten dollars must secure one of twenty dollars weekly. Education can do much in making the best of hard times; but it cannot take the place of larger social measures which are essential to secure permanent good results.

Just now a clarion call to dietitians has gone forth. They must help in formulating reasonable food standards and in educating all branches of the community in the wise use of these standards. Even before the call from Washington came, Rochester, N. Y., was in the field, ready for organized work and a systematic study of the needs and opportunities of the community. In the five months which have elapsed since this work was inaugurated, much of interest has developed. The standards prepared for working men's families in New York are used as a basis for these studies.

The families observed represent all income groups, including housekeepers who spend from fifteen to twenty dollars weekly for food and who study their own needs and resources, looking towards a possible cutting down of superfluities as their contribution to the national service. Housekeepers with an average food allowance of ten dollars weekly are experimenting with one of eight dollars. Standards for groups similar to those of the New York families cared for by the Association for Improving the Condition of the Poor, for the present at least, are set by necessity. Standards voluntarily reduced from altruistic motives, with sound education as a background, cannot be called low; the thought and spirit that goes into them makes them most truly high.

SIT STRAIGHT

The typical office man leans over a desk and pushes a pen many hours a day. See the curves that he develops. (Below.) The typical office man walks home at night, his spine maintaining the same relative curves as at his desk. (Left.)

The Federal Child Labor Law

By Florence Kelley

GENERAL SECRETARY NATIONAL CONSUMERS' LEAGUE

THE first day of September, 1917, opens a new epoch for the children of the American Republic. For the first time the federal government attempts to protect all the children, north, east, south and west alike, against employment in mills, factories and workshops, below the age of fourteen years, and against labor in mines and quarries before the sixteenth birthday. Between the fourteenth and sixteenth birthdays, boys and girls engaged in manufacture can hereafter legally work only eight hours in one day, between 6 A. M. and 7 P. M.

True, the federal law applies only where goods are produced for interstate and foreign commerce. This may leave some small bread and cake bakeries and candy kitchens free to hire younger children in central Texas, for instance, far from the borders of that vast state. But in Delaware, Rhode Island or Connecticut, and even in the greatest manufacturing states, New York, Pennsylvania, Illinois, Ohio, New Jersey, it is so dangerously easy for goods to reach the state line and cross it, that the new law amounts in practice to a sweeping, nationwide prohibition.

We shall soon know whether there is any real ground for the fear lest the canning industry, hitherto a cruel exploiter of young children, may be able to continue its evil practices because the law shuts out of interstate and foreign commerce only goods from those places in which children were illegally employed within thirty days of the removal of the products. Some small canneries may, perhaps, defer removal more than thirty days after the last child is dismissed at the end of the canning season, and then legally ship the goods, purified by the lapse of time since the children's departure.

If so, however, Congress can in 1918 lengthen the period to 130 days, or to a year, or to whatever term may be needed to make the law effective. Meantime the fear is purely speculative.

The Children's Bureau, charged by Secretary Wilson with the duty of enforcing the statute, has prepared for it with extraordinary care. The appointment of Grace Abbott as director of the Child Labor Division assures capable, energetic and just enforcement. Miss Abbott's years of experience as executive secretary of the Immigrants' Protective League have acquainted her with the children's need of this law, and accustomed her to dealing with federal courts. No more promising selection could have been made.

The Administrative Board

THE statute provides for rules and regulations for administering it, to be made and published from time to time by a board composed of Attorney-General Gregory and Secretaries Wilson and Redfield. According to the usage in such cases, the Cabinet officers all appoint representatives to do this work. Judge Latimer of the District of Columbia Juvenile Court acted for Attorney-General Gregory, Assistant-Secretary of Labor Louis F. Post for Secretary Wilson, and Assistant-Secretary Sweet for the Department of Commerce.

A good omen for the children who are to benefit by the new statute is the open-minded search made by Miss Lathrop and Miss Abbott for every available ray of light upon

the unexplored territory which confronts the Children's Bureau in the work of enforcement.

The child labor law rests upon the precedent of the federal pure food law, in enforcing which the Department of Agriculture has acquired a mass of experience as to judicial interpretation, and also as to cooperation available from state and city officials. This experience has been frankly sought by the Children's Bureau and helpfully shared by Dr. Alsborg and the department.

The post office and the internal revenue service also have to do with penalties inflicted upon violators of federal provisions dealing with interstate relations. Their experience, too, has been shrewdly scanned for hints and helps in the service of the children.

Secretary Wilson invited the National Child Labor Committee, also, into counsel through a sub-committee of that body.

The rules and regulations have now been printed by the Children's Bureau under the title, Child Labor Division Circular No. 1. They have two qualities most unusual in rules and regulations. They are clear and interesting. They make it easy for manufacturers to know in advance what the Children's Bureau will demand of them under the new law.

Difficulties of Enforcement

THE greatest difficulties in the way of enforcement are the absence of birth records where registration is lacking or recently introduced, the dearth of schools and compulsory education in the southern manufacturing states, and a mass of public opinion averse to child labor statutes and to universal, free, public compulsory schools.

The rules and regulations show careful consideration of the troubles which beset parents in those regions. The range of acceptable evidence of age is made as wide as is compatible with reasonable sureness that the working certificates show how old the children presenting them really are.

Of the forty-eight states, twenty-three are designated by the bureau for the six months beginning September 1, 1917, as having state working certificates acceptable in place of federal certificates. This list can be lengthened or shortened from time to time. To prepare for September 1, agents of the bureau have been at work for some weeks in several southern states. They are looking into the available sources of documentary evidence of the ages of children already at work.

The items of documentary evidence of age are interestingly varied. They are:

- (a) A birth certificate;
- (b) A record of baptism showing the date of birth and place of baptism;
- (c) A bona fide contemporary record in a family bible, a passport, a certificate of arrival in the United States issued by the United States immigration officers, or a life insurance policy;
- (d) A certificate signed by a public health physician or a public school physician showing height, weight and other facts of physical development, and the statement of the opinion of the physician as to the child's age.

For the guidance of these official doctors a blank has been prepared to be filled out when the certificate is issued. A

mass of valuable facts will be accumulated as to the height, weight and physical development of children who, failing all satisfactory documentary evidence, avail themselves of the medical examination.

It is to be hoped that, in a not distant future, Congress may strengthen the federal law by adding to it the present New York state requirement that every child whose age is not otherwise certified must be found of the normal stature of a child of its alleged age, and in good health, before being allowed to leave school and begin work.

The children will have all the benefit that the law intends, so far as scrupulous care in the preliminary work of the bureau can assure this. Rules and regulations are, however, not laws of the Medes and Persians and they close with the statement that they may be altered or amended at any time without previous notice.

Before the law was even in force, an injunction suit was started in the home of cotton mill child labor, North Carolina. The hearing was set for August 29. Upon the invitation of Secretary Wilson and Attorney-General Gregory, Roscoe Pound, dean of the Harvard Law School and formerly a judge of the Supreme Court of Nebraska, consented to take part in defending the constitutionality of the statute in this very important test case, giving his services for love of the good cause.

The ground given for asking an injunction recalls the agitation in England in the 30's and 40's of the last century against employment of young children in manufacture. A father, Roland H. Dagenhart, appears as "next friend" in behalf of his two minor sons, Reuben and John, one below and the other just above the age of fourteen years. He says:

It has been the purpose of Roland H. Dagenhart, and each of the same minor plaintiffs that they should continue in cotton-mill work, as their life vocation, the father receiving compensation until they respectively attain their majority, the minors fitting themselves during these years to follow an honorable and suitable vocation for life.

The fact that this honorable and suitable vocation does not enable the father to support his child to the fourteenth birthday seems not to have occurred to the worthy parent or to the counsel in the case. Great stress is laid in the father's complaint on the threatened deprivation of the right of these boys to work ten hours a day under the South Carolina state law in preference to the eight-hour day prescribed by the new federal statute attacked in the suit.

A bill to repeal the child labor law has been introduced in the House by Representative Robinson, of North Carolina, not to be confused with Senator Robinson, of Arkansas, father of the present law in the Senate.

Women of the Country to Help

THE unique opportunity offered by the present moment has been seized by the Woman's Committee of the Council of National Defense which has sent out to all the great organizations of women in the country a manifesto of which the following paragraphs form the essential part:

WILL YOU SEE THAT NO MORE TIME IS WASTED?

The full benefit to be gained from the new federal child labor law cannot be secured merely by its complete enforcement. The final responsibility rests with the citizens of each locality and demands a service outside of the law itself. If every child released from work can be sent to school well nourished and decently clothed—sent to a good school, under a good teacher, then the full benefit of the federal child labor law will be reaped for the country's children.

This will cost money. It means sacrifice on the part of older people; it means more taxes for more schools and better schools. It means unstinted effort in communities where schools are not full

GRACE ABBOTT

*To her duties as director of the Child Labor Division of the Federal Children's Bureau, Miss Abbott brings long experience as executive secretary of the Immigrants' Protective League of Chicago, in which she has been accustomed to deal with the federal courts. She has been a resident of Hull House since 1908. She is the author of *The Immigrant and the Community* [Century Company, 1917; see the SURVEY for July 28, page 372].*

time; where teachers are not well-equipped; and where poverty may necessitate scholarships. There is reason to believe that comparatively few scholarships will be required and that the important matter is to provide the schools and see that the children attend them.

No words can be too strong to express the importance of giving to the nation's children nurture and education in the fullest possible measure as a war-time protection of our last reserves. It cannot but stir American women to know that England after three years of war is urging through the Departmental Committee on Education a new law keeping children in school until 14, allowing no exemptions and including all rural children, and thus going far greater lengths than the United States law.

Indirectly our new law will help rural children in those areas where the greatest problem of illiteracy now exists, for the nation will not long permit rural children to grow up untaught if the education of all other children is secured.

THERE CAN BE NO NATIONAL PROGRAM OF CHILD WELFARE WHICH TOLERATES ILLITERACY.

If children are not decently clothed and properly fed they cannot get the full value of school. Scholarships are raised for college and university students to help pay living expenses for those who could not otherwise attend the highest schools. These scholarships have proved an investment of incalculable value to the citizens of the United States.

SCHOLARSHIPS IN ELEMENTARY SCHOOLS will lay the foundation for perhaps a greater addition to national power.

HERE IS SOMETHING TO DO:

Please visit your school authorities and labor officials and find out whether all the children in your community under fourteen years of age are in school. If the school census and the attendance records differ greatly, something is wrong.

Will you find out where the children under 14 years are, if not in school?

If you wish to help, please **BEGIN TO HELP** by filling in the accompanying blank as soon as practicable after September first and returning it to the Woman's Committee.

ANSWERS WILL BE RECEIVED AND ANALYZED BY THE

WOMAN'S COMMITTEE, BUT NAMES OF SCHOOLS AND LOCALITIES WILL NOT BE MADE PUBLIC.

1. Are all children between 6 and 14 in your town, county, or school district in school?
2. How do you know?
3. Are any children in need of scholarships in order to attend school?

.....
(Signature)

Town.....

Date.....

This statesmanlike appeal shines by contrast with the hysterical words and deeds of well-known state officials connected with labor and education who have been cruelly eager to break down the existing standards of age, stature and intelligence set by the most enlightened states for children entering industry. It is much to be hoped that men as well as women will respond to the utmost limit of their power to the opportunity afforded to make the new federal child labor law a Magna Charta for our American boys and girls.

Home Service by the Red Cross

WHILE the National Army is mobilizing this week at its cantonments there will gather in Washington from all over the United States a group of men and women who during the coming months will be responsible for the training of volunteer Red Cross workers to carry on what has come to be known as "home service" for the families of soldiers and sailors. This conference, which will be held in September, is only one phase of the organization for war which the Department of Civilian Relief of the American Red Cross is developing.

In nearly three hundred cities and towns home service sections of Red Cross chapters are already engaged in helping families which, in the words of the Home Service Manual recently issued by the Red Cross, "would ordinarily be hard put to it by an attack of sickness, the sudden need for an operation, the loss of a job, the advent of either birth or death" and which in the presence of such problems are now handicapped by not having the judgment and counsel "of the very person upon whom at such a time they would most depend." As more men have been called to the colors the number of families needing advice and aid of various kinds has increased until the Red Cross, realizing that the longer the war lasts the greater this number will be, has developed plans for a series of institutes and extension courses for the training of home service visitors.

W. Frank Persons, director general of civilian relief, has appointed Thomas J. Riley, general secretary of the Brooklyn Bureau of Charities, and Porter R. Lee, of the staff of the New York School of Philanthropy, national directors of Red Cross Institutes of Home Service. They will have charge of the organization and standardization of training courses throughout the United States. The institutes will be affiliated wherever possible with educational institutions which have been conducting courses in social work.

The details of the kind of instruction to be given at the institutes will be discussed at the conference in Washington, at which will be present the persons who have been appointed to direct the work of the institutes in various cities and those who will be in charge of the field work in which the students will engage.

Mr. Lee has prepared a manual containing a syllabus of lectures and class discussions, reading lists, the nature of field work routine, and suggestions for the use of material for instruction. This manual, after it has been discussed by the directors of the institutes, will be used as the basis for the home service courses. Each session of the institutes will run for six weeks with four hours a week class work and twenty-five hours a week field work with home service sections and

with other social agencies. There will also be certain required reading.

The cities in which institutes have been organized and directors appointed, together with the name of the professional school with which the institute will be affiliated, follow:

Boston. Miss McMahan, director; Mrs. William H. Lothrop, supervisor of field work. Boston School for Social Workers.

New York. Porter R. Lee, director; Mrs. John M. Glenn, supervisor of field work for New York county chapter; Mrs. Janet Anderson for Kings county. New York School of Philanthropy.

Philadelphia. Bernard J. Newman, director; Elizabeth Wood, supervisor. Pennsylvania School for Social Service.

Baltimore. Theo. Jacobs, director; Mary C. Goodwillie, supervisor.

Pittsburgh. Francis Tyson, director. (Supervisor to be chosen.)

University of Pittsburgh.

Washington, D. C. Walter S. Ufford, director; Mrs. Walter S. Ufford, supervisor.

Chicago. Sophonisba P. Breckinridge, director. (Supervisor to be chosen.) Chicago School of Civics and Philanthropy.

Minneapolis. Prof. A. J. Todd, director. (Supervisor to be chosen.) University of Minnesota.

St. Louis, Mo. George B. Mangold, director; Miss Wilder, supervisor. Missouri School of Social Economy.

Denver. Prof. Loren B. Osborn, director; Gertrude Vaile, supervisor. University of Colorado.

Seattle. Prof. William F. Ogburn, director; Virginia McMechen, supervisor. University of Washington.

In ten other cities arrangements for institutes are under way. For persons who cannot devote to class and field work as much time as the institutes require, and in cities which have not the requisite field work facilities, it is probable that extension courses will be organized. It is likely that such courses will last for from six to ten weeks and will include a minimum of four hours of field work and two hours of class work a week.

These plans for the training of workers are only a part of the organization which the Red Cross has effected. Its whole work has recently been decentralized so that it will be carried on from thirteen divisional offices, which in turn will be responsible to the central headquarters in Washington. Each of these divisions will have a division manager, who will be responsible for the Red Cross activities in his territory. There will be associated with the manager, division directors in charge of the following bureaus: development, publicity, woman's bureau, nursing, transportation and supplies, accounting, military relief, civilian relief.

A list of the divisions with the territory covered and the names of the division managers and of the civilian relief directors where appointed follows:

Northeastern Division. Maine, New Hampshire, Vermont, Rhode Island, Massachusetts; division manager, James F. Jackson; division director of civilian relief, Mrs. William H. Lothrop.

Atlantic Division. New York, Connecticut, New Jersey; division

manager, Ethan Allen; division director of civilian relief, Alexander M. Wilson.

Pennsylvania Division. Pennsylvania and Delaware; manager and director not yet announced.

Potomac Division. West Virginia, Virginia, Maryland, District of Columbia; manager not announced; division director of civilian relief, J. W. Magruder.

Southern Division. North Carolina, South Carolina, Georgia, Florida, and Tennessee east of the L. & N. Railroad; manager and director not announced.

Gulf Division. Louisiana, Mississippi, Alabama; manager and director not announced.

Lakes Division. Ohio, Indiana, Kentucky east of the L. and N. Railroad; division manager, James R. Garfield; director not announced.

Central Division. Illinois, Wisconsin, Michigan, Nebraska; manager and director not announced.

Southwestern Division. Missouri, Kansas, Oklahoma, Arkansas, Texas west of the L. & N. Railroad; division manager, George W. Simmons; director not announced.

Mountain Division. Colorado, Wyoming, New Mexico, Utah; division manager, John W. Morey, State Capitol, Denver; division director of civilian relief, Gertrude Vaile.

Northern Division. Minnesota, South Dakota, North Dakota, Montana; division manager, A. R. Rogers; division director of civilian relief, Frank J. Bruno.

Pacific Division. California, Nevada, Arizona; manager not announced; division director of civilian relief, C. J. O'Connor.

Northwestern Division. Washington, Oregon, Idaho; manager not announced; division director of civilian relief, F. P. Foisie, Seattle, Wash.

Curtis E. Lakeman, executive secretary of the American Society for the Control of Cancer, has been appointed assistant to Mr. Persons, director-general of civilian relief.

The civilian relief directors will stimulate within their territories the formation of home service sections of civilian relief committees, and will supervise their work.

In addition to this, the Department of Civilian Relief has issued and will continue to issue pamphlets of instruction for the home service workers. Fifty thousand copies of the Home Service Manual, already referred to, have been published. This manual describes the character and method of the work which the Red Cross has undertaken to perform for the families of soldiers and sailors who come to it. "It should be the object of the Home Service Section," says the manual, "to safeguard the normal development of these families in health, in education, in employment and in ideals of self-help and self-reliance." Chapters in the manual are devoted to service, method, organization of civilian relief committees, training of workers, records and forms. While a chapter upon money relief is included, the manual points out that the government, through assignment of pay and separation allowances, will provide for the families of soldiers and sailors. The details of the government's plans in this respect have recently been made public in the insurance bill drawn by Judge Mack of Chicago [see the SURVEY for August 25] and now before Congress as an administration measure. The American Red Cross is supporting this bill. Relief which the Red Cross

will be called upon to grant will, it is believed, be interim relief or relief in exceptional instances. Its real work will be that of helping those families which have been unable to cope with difficulties that have arisen during the absence of the man at the front or on the high seas. To quote from the manual:

Usually the man of the household has been accustomed to transact all of the more important business of the home. He it is who knows what to do when the mortgage matures, when the insurance policy expires, when it becomes necessary to move into another neighborhood, or when the oldest boy is graduated from school and needs to be started in the right sort of job.

Without his advice the bewildered family makes mistakes, and the home is faced with danger of disaster. The mother who, perhaps, has been accustomed to an allowance for housekeeping expenses, now has the responsibility for administering the whole budget. She assumes this responsibility when the best manager finds it difficult to clear the month without a deficit. It is not surprising, therefore, that frequently an inexperienced wife finds herself involved in a financial maze from which, unaided, she cannot extricate herself. Nor are her problems made easier by the fact that now she alone has charge of the discipline and the training of the children. Similarly, many an old couple, who, when the son went to war, were self-supporting, become worried and confused in his absence and are no longer able to maintain themselves.

There is an endless number of friendly services to be performed. Here are a few such taken from the records of home service now actually being done:

Explaining their lessons to children who fall behind in their classes.

Seeing that the child in need of medical care actually goes to the dispensary and that the instructions there are understood and carried out. This often means having a home service worker accompany the child.

Trying to understand by patient talks, and by seeking advice elsewhere, the child who is just beginning to be wayward and disobedient.

Giving the children and the grown-up folks opportunities for good times—not as war families or war children, but individually and quietly, or in their own natural groupings.

Fitting people to the right job and helping them to stay fitted by trying to find out where the job pinches.

Seeing that insurance policies don't lapse. If the man has always attended to paying the premiums, his wife or mother may be careless about this.

Encouraging the people who have more ready money than usual—some will have—to spend it with good sense and to save some of it, if possible, for the time when service pay stops.

Protecting the recipient of pay and allowance checks from the wiles of the instalment man and from unscrupulous sales agents.

Getting the best legal advice for families in the complex problems that are sure to arise in war times.

Home service is the work of helping families to solve the problems confronting them, and of aiding them to adapt themselves to the exigencies of war times. Later when the soldiers and sailors begin to come back from the front, there will be the additional service of fitting disabled men for their old occupations or for new ones.

Home service applies to the families of men in all branches of the service, to the regular army as well as to the national guard and the national army, to sailors, marines, men of the aviation corps, engineers, and to the families of men and women attached to hospital units as nurses, doctors, orderlies, ambulance drivers. It will also have to do with the families of soldiers of any of the allied forces living in this country, and with the families of civilians who have been wounded or killed as the direct result of war activities as, for example, through the torpedoing of a merchantman by a submarine.

A MOTHER GOOSE RHYME

By Irwin Granich

"SHOE the horse, and shoe the mare,
But let the little colt go bare."
Let him go bare and glad and free,
It is yet time for his misery.
O, let him grow as the flowers grow,
Knowing not shaft or whip or woe;
There are enough to strain at the load,
Let there be some unscarred by the goad.
Let his cup be running with joy,
The heavens and hills his lovely toy,
Let him dream in the shining grass,
Learning his wisdom from clouds that pass,

The sun, the stars, the wind without end;
Let him be their gay little friend,
Dancing, innocent, child of spring,
Making us love such blossoming.

The little colt will toil in his day,
He will drag and sweat, we will drive him
gray;
Let us not steal his little gold,
Let him be laughing before he is old;
Dear little children, wherever they be,
Leave them still dreaming and free.

COMMON WELFARE

TRADE AGREEMENT IN THE SHIPYARDS

SPURRED on by the threat of a shipyard strike of 100,000 men on the Pacific coast, where the strike vote had been adopted and a walkout had been delayed only by heroic effort on the part of international union officials, as well as the unrest on the Atlantic seaboard, the government concluded on August 24 a "treaty" with the component unions of the American Federation of Labor whose members are employed in American shipyards.

Under the terms of this compact, the national board of adjustment which it creates will be the final arbiter of industrial disputes as to wages, hours and conditions in the yards, and the several labor organizations signatory to the agreement undertake to avoid strikes while it shall continue in force. Awards will be retroactive as to wage demands, and all circumstances which may seem to call for a change in labor standards will, upon complaint or demand, be duly considered. Awards may be reopened after six months for new adjustment.

While the unions do not, under this agreement, get what many union officials expected to win—recognition of "union standards" as the basis for further adjustment, as in the case of the agreement entered into some two months ago between the organized building trades and the War Department to cover the construction of army cantonments—the spirit of the agreement is considered to be wholly sympathetic with the establishment of a much higher standard than now obtains in many yards.

As viewed by government officials, the significant feature of this agreement is the fact of its being negotiated directly between the government and the organized workers, and that the representatives of these workers whose assent was found to be essential were the heads of the various national and international unions directly employed in the industry. The signatures of the officers of the American Federation of Labor were also affixed to the agreement, but only after the principle of direct labor repre-

sentation had been established. No other compact, in the opinion of both sides to the negotiations, would carry sufficient weight for enforcement.

President Wilson has named V. Everit Macy, of New York city, as chairman of the board. Samuel Gompers has named Alfred J. Berres, secretary of the Metal Trades Department of the American Federation of Labor, as the labor representative, while the representative of the Emergency Fleet Corporation had not been announced at the time of going to press. Assistant Secretary of the Navy Roosevelt will act for that department where its interests are affected by awards. In case of a tie vote, where Mr. Roosevelt sits with the board, Secretary of War Baker, as chairman of the Council of National Defense, will act as umpire. Those who signed the agreement are:

F. D. Roosevelt, acting secretary of the Navy; Edward N. Hurley, chairman U. S. Shipping Board; W. L. Capps, general manager, Emergency Fleet Corporation; James O'Connell, president, Metal Trades Department, American Federation of Labor; William H. Johnston, president, International Association of Machinists; A. J. Berres, secretary-treasurer, Metal Trades Department, American Federation of Labor; Samuel Gompers, president, American Federation of Labor; Joseph F. Valentine, president, International Moulders' Union; Theobald M. Guerin, United Brotherhood of Carpenters and Joiners; John M. Donlin, president, Building Trades Department, American Federation of Labor; John R. Alpine, president, United Association of Plumbers and Steam-Fitters; Milton Snellings, president, International Union of Steam and Operating Engineers; Joseph A. Franklin, president, In-

ternational Brotherhood of Boilermakers and Iron Ship Builders; James Wilson, president, Pattern Makers League of America.

As provided in the agreement, the adjustment board is to consist of three persons to be appointed by the United States Shipping Board Emergency Fleet Corporation, one member to represent the corporation, "one to represent the public [Mr. Macy] and to be nominated by the President of the United States, and one to represent labor, [Mr. Berres]." Mr. Gompers is to name another man to represent the woods trades, the appropriate member to sit in any given case. In hearing a case concerning a given plant the board is required to invite one person representing the owner and one representing the working forces of the plant to sit with it with voting power.

Similarly, the secretary of the navy, or someone designated by him, shall sit with voting power if a question arises in a private plant in which construction is also being carried on for the navy. In case of a tie vote the chairman of the Council of National Defense, or someone designated by him, is to decide. The country is to be districted geographically by the board, and the contractors and labor organizations in each district are required to select examiners, removable by the board at any time on unanimous vote.

Reports of disputes as to wages, hours or conditions of labor which cannot be adjusted locally are to be reported to the board by the district officer of the United States Shipping Board Emergency Fleet Corporation; the board in turn will send an examiner to bring about an adjustment, if possible, or, failing in this, to make a report to the board recommending terms of adjustment.

The agreement concludes as follows:

As basic standards with reference to each plant where such construction is being carried on, the board shall use such scales of wages and hours as were in force in such plant on July 15, 1917, and such conditions as obtained on said date in such plant. Consideration shall be given by the board to any circumstances whatever arising after such wages, hours or conditions were estab-

Robert W. de Farest, president; Poul U. Kellogg, editor; Arthur P. Kellogg, secretary; Frank Tucker, treasurer. 25 cents a copy; \$3 a year; foreign postage \$1.50, Canadian 75 cents. Copyright, 1917, by Survey Associates, Inc.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

lished, and which may seem to call for changes in wages, hours or conditions. The board shall keep itself fully informed as to the relation between living costs in the several districts, and their comparison between progressive periods of time.

The decisions of the board shall, under proper conditions, be retroactive, in which case accounting such as may be proper shall be made in accordance with the directions of the board.

The decisions of the board will, insofar as this memorandum may be capable of achieving such result, be final and binding on all parties; but at any time after six months have elapsed following any such ratified agreement or any such final decision by the board of any question as to wages, hours or conditions in any plant, such question may be reopened for adjustment upon the request of the majority of the craft or crafts at such plant affected by such agreement or decision.

THE GENERAL STRIKE IN SPAIN

OWING to rigid censorship and to the obvious desire of the Spanish government to minimize the seriousness of recent disturbances, it is impossible to obtain a clear and coherent picture of the events in that country which last week culminated in violent rioting at Barcelona and other Catalonian cities. From dispatches received at the French frontier on August 21, we know that a general strike was declared on August 13, and that throughout the ensuing week there was armed conflict between the strikers and the police, reinforced by regular troops. A number of houses were destroyed by shellfire, and many persons were killed and wounded.

At Bilbao, the principal Spanish port on the Bay of Biscay, during the same week, the metallurgical workers at a special convention in the People's Hall passed a strong resolution demanding repression of the submarine menace by the government. Later reports state that, discontented with the inaction of the government, the workers of Bilbao proclaimed a republic. A similar revolution against the crown is reported also from Saragossa.

As long ago as December, the General Union of Workers and the National Federation of Labor agreed that a general strike be declared on a date to be chosen later. Apparently it took place in the second week of August with only partial support from the unions, and did not succeed in effecting either the fall of the government or any very radical change. Support expected from dissatisfied factions other than labor, especially the reformist and local autonomy or regionalist parties, did not materialize. The streets of Bilbao, Barcelona and other centers of revolt again have assumed a normal life. Some hundreds of railway men at Valladolid who went on strike have appealed for reinstatement.

Evidences of popular discontent have been accumulating for some months. It

Courier of Soldier and Civilian

Our troops are now on the firing line in France. While at home every instrumentality of our government and private industry is being urged at top speed to insure victory. The telephone is in universal demand as courier, bringing to the front men and the materials of war.

From the farms the telephone courier brings foodstuffs; from the mines the telephone courier calls forth metals; from the factories this courier gathers manufactured products. The telephone courier leads troop and supply trains to the front; summons fighting flotillas and transports; and, in fact, leads

practically every contributing unit of supply to the firing line.

At such a time, when the government is straining at its task and every industry is loyally contributing its energy, this national courier is constantly being used to call up the reserves. It is at the base of every contributing activity.

The right of way must be given to the military for the direction of troops and to the government for the marshaling of endless supplies. To do this, and also to make the telephone serve all other needs, both patriotic and private, all must economize.

sprang—or rather, springs, since nothing has been done to eliminate its causes—from three distinct motives: the growing republican sentiment, by no means recent in origin and fanned every now and then by some conspicuously flagrant piece of maladministration, corruption or favoritism; dissatisfaction with the foreign policy of the government; and the crushing cost of living.

German attacks on Spanish shipping, despite assurances that they would cease, the echoes of democratic and belligerent

sentiment from France, but especially from Brazil, have created a feeling among large masses of the people, more particularly in the seaports and in the northern provinces, that, in the absence of a strong foreign policy, Spain is drifting into complete isolation which eventually will shut her off from the world's sympathies and commerce.

In Barcelona, street demonstrations in support of intervention in the war on the side of the allies were frequent in the early part of summer. The Social-

McCutcheon's New Catalogue Mailed Free

Reg. Trade Mark

The orderly and systematic way to keep track of the wear and tear on your Household Linen is to count it over and check it up at the beginning of the winter season. Then put in a complete order for the necessary new supplies to bring your outfit up to standard.

Such an annual inventory may save the excessive use of the expensive "best" linen; it may disclose undue laundry damage.

We carry the largest range of exclusive patterns to choose from and the widest choice of qualities. We guarantee that the Linen is *Pure Linen*. This sixty-year-old principle of dealing in Pure Linens only has not been deviated from one iota even in these difficult times. These facts combine to make "The Linen Store" the natural place to come to with your buying list.

Incidentally, we are very slow to discontinue a desirable pattern once adopted, and your purchase in all probability can be matched five or ten years hence.

Table Cloths and Napkins Fancy Table Linens
Bed Linen and Spreads Blankets and Comfortables
Towels and Bath Mats

Fall Catalogue. Despite the handicap of war conditions our stocks are so complete that we have been enabled to issue this year the best catalogue we have ever published. 64 pages. Profusely illustrated. Orders can be made from it by mail with ease and complete satisfaction.

James McCutcheon & Company

Fifth Avenue and 34th Street, New York

ist Party, though not unanimous in favor of war, is outspokenly pro-ally and, in resolutions adopted by different sections from time to time, has expressed its abhorrence of the terrorist methods employed by the central empires.

Most serious, perhaps, to the internal peace of the country at the present time is the economic motive of unrest. The cost of living in the great cities is some 150 per cent higher than it was in August, 1914. There has been no corresponding increase in wages, although

enormous profits have been coined out of the new war export industries in the early days of the war. The climax, no doubt, was reached when at the beginning of this year Great Britain deliberately adopted her plan of reducing imports to a minimum. Large quantities of raw materials and food supplies are still exported by Spain, but the new industries built up with so much energy and investment have slumped and thrown thousands out of work. The Spanish government has been forced to acquire cereals on its own account in

the United States and Argentina to prevent famine; nevertheless, there have been agitations all summer for the suppression of food speculation and relief of the acute distress suffered in many sections of the country.

WOMEN POLICE SERVICE IN ENGLAND

"Are they friends of yours?" said a policewoman to a couple of young fellows who had taken hold of two girls [in Leicester Square, London].

"How dare you!" said one of the men, quite furious. "Of course I know them; they are cousins."

"I am the wife of an officer," said the policewoman, "and as you are an officer, wearing the king's uniform, I take your word for it."

Ten minutes later the young officer overtook her and said: "They were not my cousins, and I thought you would like to know I am going home."

THIS incident, related by Arthur Gleason, in his recent book, *Inside the British Isles—1917*, illustrates the effective and altogether novel part played by the women police in England. Prior to the war, the policewoman was a rare figure in that country, and her duties were limited to certain small, special fields. There were no policewomen patrolling the streets. But war conditions brought about new perils to public safety, especially that of children bereft of parental control and that of young girls exposed to the allurements of the uniform and the prevailing patriotic excitement. The new dangers could not be fought by the established police organization, excellent though it was in most respects.

Under the leadership of Damer Dawson, now the chief officer in charge of the London women's police service, a new department was created in 1914, which from a handful of members soon increased to a force of three hundred or more. They are provided with uniforms and perform patrol duty in the streets. Birmingham, a few weeks ago, appointed two such officers. Others are serving in London, Grantham, Bath, Hull, Folkestone, Wimbledon, Richmond, and in many of the new industrial centers where large numbers of women are employed on the manufacture of munitions.

In some of these factories, there are twenty, forty and as many as 120 policewomen. They keep the gates, examine passports, prevent the introduction of matches and hairpins into explosive shops and the carrying of contraband. They watch the vicinities of these plants, the girls' hostels and the trains which take them to and from their homes.

The girls, Miss Dawson says, do not resent the watchfulness of these uniformed policewomen, but realize that they are there for their protection. In

fact, the policewoman is more tolerant of the larks of high-spirited girls than the average sturdy policeman, who is apt to run them in for trivial offences.

In dealing with prostitution, the chief use of the woman police is the patrolling of the streets where soliciting is most prevalent and, as in the instance given, to arouse by their presence a sense of shame in the men and youths bent on pleasure of the wrong sort. They also cooperate with the army in keeping soldiers away from disorderly houses, and keep a watch over those poorer districts in the great cities where sudden increases of earnings through profitable employment in war work bring with them new perils of intemperance and immorality.

Still another field of activity in which the policewomen have proved themselves is the enforcement of the school attendance law, and of street-selling regulations for minors. They frequently visit the homes and effect by moral suasion improvements in these respects which petty fines in the police courts have been unable to bring about. Street gambling, smoking by boys, loitering forbidden by street ordinances, and thieving—all these are evils which no mere bullying and prosecution seems to be able to eradicate; but they yield under the maternally suasive and yet authoritative control of these women.

During the Zeppelin raids, the policewomen have rendered splendid services in keeping order and maintaining quiet. They have, especially in London, already become accepted and trusted guardians of law and considerate behavior in public places and as such can never be replaced by men. It is expected that their number will increase rather than be reduced when peace returns, and with it a more normal public life.

THE BEGINNING OF FOOD CONTROL

THE most radical item on the government's program of food control [see the SURVEY for August 18] is well under way. After appointing the Wheat Price Fixing Commission, the President has authorized the incorporation of a \$50,000,000 wheat corporation, with Herbert C. Hoover as chairman and Julius H. Barnes, the country's biggest wheat exporter, as president. Mr. Barnes made a name for himself in the negotiations of the Northwestern Grain Association with Great Britain and the neutral governments concerning the disposition of the vast quantities of grain held up all over the world at the outbreak of the war.

The wheat corporation was organized too late, says the *Annalist*, to get control of any considerable part of the old crop. "The unprecedented prices prevailing have cleaned up most of that." But it

will control the price and movement of most of the 1917 crop. The corporation has announced that, if necessary, it will buy the entire crop at two dollars a bushel.

Apart from price control, the corporation has the further function of allotting wheat and flour shipments to Europe and to allot to the mills in different parts of the country their due share of the grain. While the allies will be allowed the same prices as those quoted to millers at home, there is no intention to let neutral countries have their wheat supplies so cheaply; and it is expected that some profit from this source will flow into the treasury, which is the sole financier of the undertaking.

Sugar is the second product to which the Food Administration has directed its attention. Sharp advances in prices, which he held to be unjustified by the actual situation, prompted Mr. Hoover

to ask the sugar exchanges of the country to stop all dealing in futures. The price of granulated sugar has gone up from 4½ cents a pound in 1914 to 9.15 cents at the present time, according to one refiner, and to 8.40 cents according to others. Raw sugar jumped from 2 9/32 cents per pound at the outbreak of the war to 6¾ cents in the second week of this month.

While he recognizes that the decreased production of sugar in France and Italy and the cutting off of the usual German supply from England has forced these countries into the same markets from which American refiners must buy, Mr. Hoover considers that present high prices are largely due to inflation artificially caused by speculation. Representatives of the sugar exchanges are in consultation with the food administration concerning further measures to regulate prices apart from that already

YOUR PUBLIC LIBRARY

should be a center of social influence in your community, supplying to teachers, students, ministers, club women and socially-minded people of all sorts the latest and most helpful material on the war-time aspects of health, industrial welfare, child welfare, civics, housing, poverty, education, recreation, delinquency, vice and crime.

To serve this need rightly, your library should have the SURVEY. Has it?

Why not start your library in the SURVEY habit either by making a present of the SURVEY for the first year, or seeing that the library subscribes—now, when clubs, churches and social agencies are starting their heavy work of fall and winter.

taken in which they willingly concur. It is not impossible that a corporation similar to the wheat corporation will be called into being to buy up and regulate the distribution of supplies.

But most likely the cooperation of the exchanges, of the beet sugar producers, who have voluntarily adopted, a wholesale price of \$7.25 per 100 pounds, f. o. b., for this year's crop, and of the wholesale grocers, who have agreed to eliminate all speculative or exorbitant profits from distribution charges, will be sufficient to effect a saving to consumers of \$30,000,000 between now and the end of the year, and to make other measures unnecessary for the present.

It is estimated that since the outbreak of the war there has been a decrease of 115,000,000 meat-producing animals the world over. Meat exports from the United States in the year ending June 30, 1916, were nearly three times as great, in weight, as they were on an average for the last three years preceding the war. These exports went chiefly to the allies, whose stock of animals, especially of cattle, has decreased enormously. While meat production in this country has increased during the war (*i. e.*, cattle and hogs; American sheep have decreased by three million), there is no possibility of keeping the supply abreast of the ever more urgent demands of our allies.

It is feared that herds will be seriously reduced and an even greater shortage of meat supplies ensue for the future if steps are not immediately taken to conserve the supply. The food administration, so far, has developed no plans to this effect other than pointing to the immediate need of reducing consumption here in America and aiding the Department of Agriculture in its campaign for the increase of stock-raising. For the purposes of this campaign a large and representative committee has been appointed jointly by the department and by the food administration, with an executive committee of four, one of whose members is Gifford Pinchot.

The food control act, it will be remembered, also gives the President power to control the prices of such necessities as coal, coke and fuel oils. Taking advantage of this authority, he appointed Harry A. Garfield, president of Williams College, coal administrator, and, after consultation with the interests most vitally concerned, fixed the prices of anthracite coal at the mine at a range from \$4 to \$5.30, according to grade. These prices are approximately the same as those agreed upon some months ago by the operators in conference with the Federal Trade Commission and are not likely to reduce prices or profits materially.

Such a cut, on the other hand, is expected from another determination of

"A VOICE IN THE WILDERNESS"

A NEW MAGAZINE BY DR. ROBINSON

In this new magazine Dr. Robinson tries to show that there are two sides even to the war question.

He tries to show that while we are at war, we are not yet under martial law, and that all our rights and liberties, gained by centuries of struggle, have not yet been abrogated.

He tries to show that national hysteria is a dangerous and infectious disease.

And he tries to counteract and neutralize the effects of the poison of international hatred which is being administered to the nation daily by its press.

It is a magazine for people with enough sanity and emotional poise left to be able and willing to hear the other side, to listen to a dissenter's voice.

Published Monthly, with Supplements. \$1.00 per Annum.

**Address: A VOICE IN THE WILDERNESS
12 MT. MORRIS PARK W. NEW YORK CITY**

the President, namely, that of 20 cents a ton for shipments east of Buffalo and 30 cents a ton west of Buffalo as the fee of the jobber. He also ruled that only a single jobber's fee should be charged, however many hands the coal is passing through in shipment from producer to retailer.

Control of retail profits is left with the new coal administrator, who may adopt a system of licensing. With wholesale and jobbing prices fixed, it would not be impossible to fix definite retail prices, with slight variations, according to local and business conditions. Should neither plan suffice to protect the consumer, Dr. Garfield has power to organize an anthracite corporation on the lines of the wheat corporation.

Price fixing in connection with other commodities than coal was the subject of long conferences during the last week between the War Industries Board and the Federal Trade Commission and between the latter and the President.

LABOR EXCHANGES FOR CANADA

A PETITION in favor of a national system of public labor bureaus has been laid before the governor-general of Canada by all the provincial governments, the Senate Labor Committee, the Federal Agricultural Com-

mittee, the Social Service Congress, the Imperial Munitions Board, the principals of five universities, a number of boards of trade and builders' exchanges, several city councils, some local labor councils, school boards, social service councils and other social agencies and administrative departments. It asks for the establishment of a permanent commission, responsible to Parliament, for the organization and administration of such a system and lays down some of the principles to be observed in its operations.

The Dominion, up to the summer of 1915, suffered from the same acute unemployment which was experienced in the United States in the winter and spring 1914-1915. The Ontario Commission on Unemployment, in 1916, reported strongly in favor of an organization of the labor market which would make impossible in the future a repetition of the distress and industrial demoralization then experienced. In addition to the permanent problems of fluctuations in employment, new dangers, it is feared, will threaten the security of large numbers of breadwinners at the close of the war:

1. Provision must be made for the employment of our soldiers on their return to civil life, who will number at least 300,000.

2. Provision must be made to meet the displacement of over 200,000 war equipment workers.

3. It is generally recognized that there will be an influx of immigration after hostilities have ceased.

As in the United States, there are no standing records of the labor market, other than the statistics of the Department of Labor made up from reports of trade unions and social agencies; there is no reliable knowledge of the amount of casual and seasonal employment; "nothing is known of the dovetailing of occupations, or how workers, either agricultural or industrial, carry over the dull seasons."

The petition deplors the lack of cooperation between the educational authorities and the labor department which results in the sending of thousands of minors annually into the unskilled markets of the country. It proposes that the national commission for the organization of labor bureaus shall cooperate with the educational authorities for the better technical and vocational training of children.

A special effort is desired to regulate the distribution of immigrants who concentrate in such large communities, both well-nigh impossible to inculcate standards of Canadian citizenship. The petitioners also deplore that the immigrant mechanic is not recognized by the au-

WAR TIME SOCIAL WORK

Start now to prepare for executive positions in Relief and Social Work during and after the War. Professional training is needed.

The New York School of Philanthropy offers among others the following timely courses in preparation:

The Method of Social Case Work

This course is based upon the assumption that there are some ways of helping people out of trouble or into a state of well-being that are better than others. How to win confidence; how and where to secure relevant information; how to draw conclusions from such information; what kinds of help are available in the community; how to find a place for personal influence;—are some of the questions discussed.

Child Welfare

Because of the state of war upon which we have entered, more children will be found dependent, neglected and delinquent. They will need the services of the most expert and humane friends, who have knowledge of and ready access to all the agencies and methods of help that this and other countries have devised.

Industrial Conditions

Attention will be directed in this course to the constructive work of employers, trade unions, and other organizations, public and private, looking toward satisfactory living and working conditions. In war time these problems differ in degree but not necessarily in kind from those prevailing in time of peace.

Hygiene and Disease

As the majority of the problems of the social worker have their origin in or are complicated by disease, it is necessary to prepare for field work by familiarity with the principles of preventive medicine and with the equipment available for the relief of the sick. In a time when sickness prevented and lives saved are counted as patriotic accomplishments of national and international importance, the application of modern scientific knowledge in the homes of this country becomes a duty as well as a privilege.

thorities, and that he is left uninformed of opportunities for following his own occupation. The Canadian government gives a bonus for securing agricultural and domestic workers but makes no provision for their settlement, with the result that the cities are crowded every winter with immigrant unemployed.

To effect the necessary coordination of different efforts for the assimilation of these workers, cooperation of the new commission with other government departments is suggested, particularly with the post office and with local boards which might be created in the chief cities, representative of city council, employers and workers, and in agricultural districts where a farmers' representative would be coopted; an agent of the central authority in each case acting as secretary of the board.

In view of the large number of women engaged in industry, the petitioners ask for the appointment of a woman on the national commission and on the local boards. The provision of separate waiting rooms for women also is recommended.

Etta St. John Wileman, who six years ago established the first labor bureau in Canada and has had much personal experience of the need for a centralized organization of employment agencies, in trying to enlist support for the project among social workers in the United States, writes:

By the inauguration of this national system there will be a great diminution of the constant erratic movement of workers to and fro across the border to find information about employment or to experiment with various jobs—a restless and unsettling method which is equally pernicious to the worker and to industry. Instead, reliable knowledge can promptly be secured through the system as to openings in employment and general conditions as to pay, etc. Further, it will be a great protection to your women and girls by keeping them out of the clutches of commercial employment agencies which, not infrequently, are feeders to the white slave traffic.

THE GROWING STAFF OF THE CHILDREN'S BUREAU

THE new staff of the Children's Bureau, for the enforcement of the federal child labor law, will be selected this autumn from lists established by civil service examination [see the SURVEY, July 21]. Announcements of the coming examinations have just been issued containing some new and interesting features.

For instance, the candidates will be spared the necessity of long and costly journeys to offices of the Civil Service Commission by the arrangement of giving examinations at many places throughout the country. And the examinations will be in part oral, a departure from the old type of examination, which successfully disguised the personality of the candidate.

The Public

An International Journal of Fundamental Democracy

Brand Whitlock, U. S. Minister to Belgium, said:

You don't know what a comfort it is to get *The Public*. In the midst of all the horrors of the world it is one thing I know of—aside from one's own conscience—and the democratic principle down deep in our hearts—by which to correct one's reckoning. It is a compass—never sensational, always calm and pointing in the same direction.

In times that try men's souls----

The Public will furnish you sane, strengthening reading. It is helping thousands to sustain the shocks of each day's news. Its weekly review of the current news of historical value is without editorial bias. Yet it has opinions of a pronounced character, based upon the principles of fundamental democracy, which, in the columns reserved for editorial comment, it expresses fully and freely. Its editorials are the compass to which Mr. Whitlock referred.

Subscribe to *The Public* now

The Public costs only \$1.00 a year—52 issues. You could not at this time spend a dollar to better advantage. You will find it not only worth reading, but worth filing and binding, too.

The Public, 122 E. 37th St., New York

Philadelphia Inquirer.—"Prof. Leeds' book is an admirable exposition of the possibilities of a well-conducted household."

The Household Budget

The first book on the work of the housewife to be written by a Professor of Economics. A scientific analysis of the budgets of families spending \$1800 to \$2400. Discusses the housewife as an economic producer. John B. Leeds, 234 W. School Lane, Philadelphia, Pa. \$1.50.

REDUCE THE COST OF LIVING By Home-Study of Domestic Science
100-pp. handbook FREE. Courses for home-makers, teachers, dietitians, nurses and many other well-paid positions.
Am. School of Home Economics, 619 W. 69th St., Chicago

The positions to be filled are:

1. Special agent and research assistants, whose work will be especially in Washington studying material assembled by the bureau and preparing reports or sections of reports. Salary, \$1,200 to \$1,680.

2. Assistant inspectors, Child Labor Division, who will inspect factories, mills, manufacturing establishments, workshops, mines, etc., where quick and accurate powers of observation and the ability to interview will be requisite. Salary, \$1,200 to \$1,680.

3. Experts in prevention of infant mortality, who must be graduates of a recognized school of medicine and have had experience in this work under public or private agencies. Salary, \$2,400 to \$3,600.

4. Assistants in the work of preventing infant mortality, who are to be graduate nurses, registered, in states having nurse-practice laws. Experience is also required. Salary, \$1,800 to \$2,400.

5. Experts in child welfare, whose duties are defined by the law creating the Children's Bureau: ". . . to investigate and report upon infant mortality, birth-rate, juvenile courts, dangerous occupations, legislation affecting children in the several states. . . ." Experience and the ability to write clear and readable reports are mentioned as requisite. Salary, \$1,800 to \$2,400.

6. Assistant director of the Child Labor Division. Grace Abbott, of Chicago, was recently appointed director of this division. The new appointee will assist Miss Abbott, and is required to have "familiarity with the general problems of child protection, methods of issuing employment certificates, and the general problems of factory inspection," and to have administrative ability. Salary, \$2,400 to \$2,820.

7. Inspector, Child Labor Division. This official will be expected to be informed regarding the employment of children in all industries affected by the child labor law, to make inspections from time to time, to supervise assistants, and to enforce the law in every way. Salary, \$1,800 to \$2,400.

Further information and application blanks may be had from the civil service boards of the different states or from the Children's Bureau at Washington. All applications must be filed in Washington with the Civil Service Commission before September 18.

"PROPERTY RIGHTS" IN THE PUBLIC HEALTH

THE New York city Department of Health is taking the recent decision of the Appellate Division of the Supreme Court to the Court of Appeals, for a verdict concerning the constitutionality of the ordinance passed three years ago requiring manufacturers of patent medicines to substantiate their claims. This they might do by printing on the label the physiologically active ingredients of the product, or they might file the complete formula with the department.

The manufacturers have balked at any such disclosure of the true inwardness of their wares, and on the day before the ordinance was scheduled to take effect, served papers in a motion for temporary injunction restraining the enforcement of this new section of the sanitary code. Reviewing the situation, Dr.

Charles F. Bolduan, of the Department of Health, says:

The principal argument advanced by the patent medicine interests was the nearly threadbare claim of "taking private property without due process of law." The fact was conveniently ignored that in Indiana the farmer may know the amount of active ingredients of all the commercial fertilizers offered in his state; in the Philippines the name and amount of all ingredients of proprietary medicines must be stated on the labels of bottle and packages.

It is said that some patent medicine vendors are hailing the Appellate Court's decision as a victory for their side; but the department has no mind to give up so easily. Until the case is again heard, they will act under other sections of the sanitary code, such as seeking a fine of \$500 for that "protector" which would "prevent and relieve infantile paralysis;" thirty days in city prison and \$250 for another "protector" against infantile diseases; a month in the same resort for the philanthropists who tried to impose "Sol and Sumacyl" upon a needy public. This does not complete the list; it only illustrates what can be accomplished when a department takes the code in its hand, so to speak, and goes out after business.

LEGAL AID FOR ENLISTED MEN

THE Boston Legal Aid Society has brought out in conjunction with the Lawyers' Preparedness Committee a little thirty-page pamphlet for the benefit and protection of drafted and enlisted men and their families. The pamphlet is intended to answer the questions most likely to perplex the recruit, as to his private affairs, on entering the army and navy service. In reality, as explained in the preface, it is a friendly warning that

there are rules of law which must be complied with in order that your intention concerning such things as your children, your property, your insurance, your pay, your debts may be given legal effect and carried out by the law and enforced by the courts as you desire. Often a man's clear wish has to be denied by the law because he has failed to comply with the rules laid down by the law. By making timely suggestions, it is

FOOD FACTS

The Metropolitan Life Insurance Company announces the publication of a new booklet—

FOOD FACTS

The following table of contents indicates its scope:

- CHAPTER I.—Where to Buy.**
CHAPTER II.—How to Buy Cheaply.
CHAPTER III.—Clean Food and Disease Prevention.
CHAPTER IV.—Wise Food and Health.
CHAPTER V.—Cooking Foods.
CHAPTER VI.—Good Food Habits.

In this booklet Dr. Donald B. Armstrong, the author, brings out in simple language the fundamental facts in regard to the purchase, preparation and use of foods.

This publication is a contribution on the part of the Company to the present war preparation of the Country. Individual copies or limited supplies may be secured through the Metropolitan Representative in your city or by application to the

Welfare Division

Metropolitan Life Insurance Co.

No. 1 Madison Avenue, New York City

hoped that you can see whether the facts and conditions in your life make some legal action desirable or necessary. "Forewarned is forearmed."

It must be clearly understood that the information in this pamphlet is not intended or desired to teach you how to perform the requirement of law yourself, except in the case of soldiers' wills made in emergencies. It would take many large volumes to attempt that. And, what is more important, remember that it is as dangerous to trust your own judgment in legal difficulties as in cases of serious sickness. If you find that you have legal matters which ought to be attended to or if you want further advice, the only safe thing to do is to consult an attorney—preferably your own lawyer, or one of the many honest and capable lawyers in the state, or the Legal Aid Society.

Some time before the society gave the following statement to the press:

The Boston Legal Aid Society hereby offers the legal services of its entire staff and its equipment to the wives, the children, and other dependents of soldiers and sailors in United States service, and of men who may hereafter enlist or be drafted for active service. No charge will be made for any such services.

Various chapters in the little booklet include one on the allotment of pay (covering federal and Massachusetts pay, state aid and Red Cross help); three on wills, a chapter on guardianship and the custody of children, another on suits in court, debts, mortgages, either pending or brought in the absence of the man; leases, goods on instalment, and mortgages and debts in general, and a chapter on some points of life insurance.

Massachusetts men are fortunate in having such a compact handbook. It could well be duplicated in every other part of the country, and is suggestive of the type of civilian information which the federal government might put in the hands of every man along with his military instructions.

BOOKS AND MAGAZINES FOR SOLDIERS

THE American Library Association, at a series of conferences of representatives from the East and South, developed a program for meeting the want of our troops for books. It was decided to raise a fund of at least a million dollars for the erection of camp library buildings and the purchase of books. J. I. Wyer, Jr., director of the New York State Library, is chairman of a committee on camp libraries which acts in cooperation with the war department.

At the meetings, some remarkable evidence was placed before librarians concerning the demand for good reading matter by the soldiers. Fiction, of course, is chiefly in demand; but with the composition of the new draft army, which is representative of practically every class of Americans, it is expected

Classified Advertisements

JEWESS wanted as neighborhood worker by large Philadelphia agency. Address 2581 SURVEY.

POSITION desired by intelligent graduate nurse with executive ability, experienced in institutional work. Address 2583 SURVEY.

that the greatest possible variety of books will be appreciated.

General Pershing, in a recent appeal from France for books and magazines, particularly asked well-disposed donors not to rake over their attics for grandfather's books and periodicals and send them to the front. The soldiers are just as keen as other people to read the latest news, and the best of the new books. Old magazines are not worth the cost of cartage.

While the larger plans for creating libraries for recruits, for men in training, in mobilization, in garrisons and outposts, for men in their rest periods while on march, for men on leave and for men on the front are maturing, the librarians in most cities are already co-operating with the War Council of the Young Men's Christian Association in assembling immediately as large as possible a collection of good books for the training camps and cantonments. Readers of the SURVEY are asked to look through their shelves and if they have seemingly suitable books which they can spare to send them to the nearest public library marked "For Soldiers' Camps," or the like.

It will have been noticed also that the SURVEY and other periodicals recently carried a notice to the reader by the postmaster-general requesting that copies which it is not intended to keep be placed in the hands of any postal employe with a one cent stamp in the upper right-hand corner which, without any further indication, will ensure its transmission to soldiers or sailors at the front.

A "federal committee for the distribution of reading matter in the field and in the hospitals," representing the joint effort of many societies in Germany, has, since the beginning of the war, collected and distributed without charge no less than ten million books.

PERIODICALS

Fifty cents a line per month; four weekly insertions; copy unchanged throughout the month

SURVEY

ASSOCIATES
INC.

KEY

If you know the name of the agency or organization, turn direct to the listings (3d column) for address, corresponding officer, etc. [They are arranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject classifications, as "HEALTH," printed in capitals.]

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but offers an opportunity for you to share spiritedly and seriously in your community or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall endeavor to get your inquiry into the right hands.

WARTIME SERVICE

"HOW the SURVEY can serve" was the subject of an informal conference held early in April, in our library, to which we asked the executives of perhaps twenty national social service organizations. The conference was a unit in feeling that as a link between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—how, when and where they can count locally—the SURVEY was at the threshold of an opportunity for service such as has seldom come to an educational enterprise.

The development of this directory is one of several steps in carrying out this commission. The executives of these organizations will answer questions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demands.

ALPHABETICAL LIST

- AMERICAN ASSOCIATION FOR LABOR LEGISLATION—John B. Andrews, sec'y; 131 E. 23 St., New York. Workmen's compensation; health insurance; industrial hygiene; unemployment; one-day-rest-in-seven; administration of labor laws.
- AMERICAN ASSOCIATION FOR ORGANIZING CHARITY—Mrs. W. H. Lothrop, ch'n; Francis H. McLean, gen. sec'y; 130 E. 22 St., New York. Correspondence and active field work in the organization, and solution of problems confronting charity organization societies and councils of social agencies; surveys of social agencies; plans for proper coordination of effort between different social agencies.
- AMERICAN ASSOC. FOR STUDY AND PREVENTION OF INFANT MORTALITY—Gertrude B. Knipp, exec. sec'y; 1211 Cathedral St., Baltimore. Literature on request. Traveling exhibit. Urges prenatal instruction; adequate obstetrical care; birth registration; maternal nursing; infant welfare consultations
- ASSOCIATION FOR THE STUDY OF NEGRO LIFE AND HISTORY—Carter G. Woodson, director of research; 1216 You St., N. W., Washington, D. C. To popularize the Negro and his contributions to civilization that he may not become a negligible factor in the thought of the world.
- AMERICAN HOME ECONOMICS ASSOCIATION—Mrs. Alice P. Norton, sec'y; 1326 E. 58 St., Chicago. Information supplied on anything that pertains to food, shelter, clothing or management in school, institution or home.
- AMERICAN INSTITUTE OF SOCIAL SERVICE—Founded by Dr. Josiah Strong. Nathaniel M. Pratt, gen. sec'y. Edward W. Bemis, Robert A. Woods, dept. directors, Bible House, Astor Place, New York. Welcomes inquiries as to all matters of community organization and progress. Members of its staff glad to enter into consultation by correspondence about given conditions or particular projects. Assists in bringing to individual new undertakings the combined results and lessons of the best productive achievement. Ready to aid in securing publications, speakers, temporary or permanent leadership. Particular attention given to requests from communities in which all such effort is at an early stage. Seeks to bring about better cooperation among specialized national organizations, toward securing the more comprehensive local application of their types of service. Promotes the fullest extension of principles and methods which on a limited scale have conclusively shown their power for the upbuilding of the nation.
- AMERICAN LIBRARY ASSOCIATION—George B. Utley, exec. sec'y; 78 E. Washington St., Chicago. Furnishes information about organizing libraries, planning library buildings, training librarians, cataloging libraries, etc. List of publications on request.
- AMERICAN PROPORTIONAL REPRESENTATION LEAGUE—C. G. Hoag, sec'y; 802 Franklin Bank Building, Philadelphia. Advocates a rational and fundamental reform in electing representatives. Literature free. Membership \$1.

THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

AMERICAN PUBLIC HEALTH ASSOCIATION—Dr. W. A. Evans, pres., Chicago; A. W. Hedrich, acting sec'y; 1039 Boylston St., Boston. Object: to promote public and personal health. Health Employment Bureau lists health officers, public health nurses, industrial hygienists, etc.

AMERICAN RED CROSS—Woodrow Wilson, pres.; Robert W. de Forest, vice-pres.; John Skelton Williams, treas.; John W. Davis, counselor; Charles L. McLee, sec'y.

Central Committee: Wm. Howard Taft, ch'n; Eliot Wadsworth, v. ch'n; Harvey V. Gibson, gen'l mgr.

War Council: Henry P. Davidson, ch'n; Charles D. Norton, Grayson M.-P. Murphy, Edward N. Hurley, Cornelius N. Bliss, Jr., William Howard Taft, Eliot Wadsworth.

Department of Military Relief: John D. Ryan, dir.; Major Kirby Smith, Medical Reserve Corps, U. S. A., asst. dir.

Department of Civilian Relief: W. Frank Persons, dir.

Bureau of Medical Service: Lieutenant-Colonel C. H. Connor, Medical Corps, U. S. A., dir.

Bureau of Nursing Service: Clara D. Noyes, dir.

Town and Country Nursing Service: Fannie F. Clement, dir.

Woman's Bureau: Florence Marshall, dir. Supply Service: Frank B. Gifford, dir.

THE AMERICAN SOCIAL HYGIENE ASSOCIATION—William F. Snow, M. D., gen. sec'y; 105 W. 40 St., New York. For the repression of prostitution, the reduction of venereal diseases, and the promotion of sound sex education; pamphlets upon request; membership \$5; sustaining \$10.

AMERICAN SOCIETY FOR THE CONTROL OF CANCER—Curtis E. Lakeman, exec. sec'y; 25 W. 45 St., New York. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

COMMITTEE OF ONE HUNDRED ON NATIONAL HEALTH—E. F. Robbins, exec. sec'y; 203 E. 27 St., New York. To unite all government health agencies into a National Department of Health to inform the people how to prevent disease.

COMMITTEE ON PROVISION FOR THE FEEBLEMINDED—Joseph P. Byers, ex. sec'y; Empire Bldg., Phila. Object to spread knowledge concerning extent and menace of feeble-mindedness; initiate methods for control and eradication.

COUNCIL OF JEWISH WOMEN (NATIONAL)—Department of Immigrant Aid, with headquarters, 242 E. Broadway, New York. Miss Helen Winkler, ch'n; gives friendly aid to immigrant girls; meets, visits, advises, guides; has international system of safeguarding. Invites membership.

DEPARTMENT OF SOCIAL AND PUBLIC SERVICE, AMERICAN UNITARIAN ASSOCIATION—Elmer S. Forbes, sec'y; 25 Beacon St., Boston. Reports and bulletins free; lecture bureau; social service committees.

EUGENICS' REGISTRY—Battle Creek, Mich. Board of Registration: Chancellor David Starr Jordan, pres.; Dr. J. H. Kellogg, sec'y; Prof. Irving Fisher, Dr. Chas. B. Davenport, Luther Burbank, Prof. O. C. Glaser, exec. sec'y. A public service conducted by the Race Betterment Foundation and Eugenics' Record Office for knowledge about human inheritance and eugenics. Literature free. Registration blanks for those who desire an inventory, and wherever possible, an estimate of their hereditary possibilities.

FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA—Constituted by 30 Protestant denominations. Rev. Charles S. Macfarland, genl. sec'y; 105 E. 22 St., New York.

Commission on the Church and Social Service; Rev. Worth M. Tippy, exec. sec'y; Rev. Clyde F. Armitage, asso. sec'y; Herbert M. Shenton, special sec'y; Miss Grace M. Sims, office sec'y.

Commission on International Justice and Goodwill; Rev. Sidney L. Gulick, sec'y.

Commission on Inter-Church Federations; Rev. Roy B. Guild, exec. sec'y.

Commission on Church and Country Life; Rev. Charles O. Gill, sec'y; 104 N. Third St., Columbus, Ohio.

Campaign for the Conservation of Human Life; Charles Stelzle, sec'y.

HAMPTON INSTITUTE—G. P. Phenix, vice-prin.; F. K. Rogers, treas.; W. H. Scoville, sec'y; Hampton, Va. "Hampton is a war measure" (H. B. Frissell). Trains Indian and Negro youth. Neither a State nor a Government school. Supported by voluntary contributions. Free literature on race adjustment, Hampton aims and methods.

JOINT COMMISSION ON SOCIAL SERVICE OF THE PROTESTANT EPISCOPAL CHURCH—Address Rev. F. M. Crouch, exec. sec'y; Church Missions House, 281 Fourth Ave., New York.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE—Pres., Moorefield Storey; chairman, Board of Directors,

Dr. J. E. Spingarn; treas., Oswald Garrison Villard; dir. of pub. and research, Dr. W. E. B. Du Bois; act'g sec'y, James Welden Johnson; 70 Fifth Ave., New York. Membership 8,500 with 90 branches.

NATIONAL ASSOCIATION FOR THE STUDY AND PREVENTION OF TUBERCULOSIS—Charles J. Hatfield, M. D., exec. sec'y; Philip P. Jacobs, Ph.D., ass't sec'y; 105 E. 22 St., New York. Organization of tuberculosis campaigns; tuberculosis hospitals, clinics, nurses, etc.; open air schools; Red Cross seals, educational methods, etc.

NATIONAL CHILD LABOR COMMITTEE—Owen R. Lovejoy, sec'y; 105 East 22 st., New York. 35 state branches. Industrial and agricultural investigations; legislation; studies of administration; education; mothers' pensions; juvenile delinquency; health; recreation; children's codes. Publishes quarterly *Child Labor Bulletin*. Photograph, slides, and exhibits.

NATIONAL CHILD WELFARE ASSOCIATION.—Chas. F. Powlison, gen. sec'y; 70 Fifth Ave., New York. Cooperates with hundreds of social agencies. Headquarters for child welfare material and information, exhibits, posters, charts, lantern slides, pamphlets, bulletins, lecturers. Inquiries, invited. Publications free to members.—Dues: active, \$10; associate, \$5. Will you help us build a better generation?

NATIONAL COMMITTEE FOR MENTAL HYGIENE—Clifford W. Beers, sec'y; 50 Union Sq., New York. Write for pamphlets on mental hygiene, prevention of insanity and mental deficiency, care of insane and feeble-minded, surveys, social service in mental hygiene, state societies for mental hygiene.

NATIONAL COMMITTEE FOR THE PREVENTION OF BLINDNESS—Edward M. Van Cleave, man. dir.; Gordon L. Berry, fid. sec'y; Mrs. Winifred Hathaway, sec'y; 130 E. 22 St., New York. Objects: To furnish information for associations, commissions and persons working to conserve vision; to publish literature of movement; to furnish exhibits, lantern slides, lectures. Printed matter: samples free; quantities at cost. Invites membership. Field, United States. Includes N. Y. State Com.

NATIONAL CONFERENCE OF SOCIAL WORK—Robert A. Woods, pres., Boston; William T. Cross, gen. sec'y; 315 Plymouth Court, Chicago. General organization to discuss principles of humanitarian effort and increase efficiency of agencies. Publishes proceedings annual meetings, monthly bulletin, pamphlets, etc. Information bureau. Membership, \$3. 45th annual meeting Kansas City, spring of 1918. Main divisions and chairmen:

- Children, Henry W. Thurston.
- Delinquents and Correction, Mrs. Jessie D. Hodder.
- Health.
- Public Agencies and Institutions, Albert S. Johnstone.
- The Family, Gertrude Vaile.
- Industrial and Economic Problems, Mrs. Florence Kelley.
- The Local Community, Charles C. Cooper.
- Mental Hygiene, Frankwood E. Williams.
- Organization of Social Forces, Allen T. Burns.
- Social Problems of the War and Reconstruction, V. Everit Macy.

NATIONAL CONSUMERS' LEAGUE—Mrs. Florence Kelley, gen. sec'y; 289 Fourth Ave., New York. 87 branch leagues. 15,000 members. War program: To help our industrial army by promoting clinics for treatment of new diseases (incident to munitions work and to fatigue and strain); reasonable working hours; safe and sanitary working conditions; decent standards of living; safeguards for women taking men's places in industry; protection for children. Minimum membership, \$2.

NATIONAL FEDERATION OF SETTLEMENTS—Robert A. Woods, sec'y, 20 Union Park, Boston, Mass. Develops broad forms of comparative study and concerted action in city, state, and nation, for meeting the fundamental problems disclosed by settlement work; seeks the higher and more democratic organization of neighborhood life.

NATIONAL KINDERGARTEN ASSOCIATION—250 Madison Ave., New York. Object: To have the kindergarten established in every public school. Four million children in the United States are now without this training. Furnishes bulletins, exhibits, lecturers, advice and information. In cooperation with United States Bureau of Education, works for adequate legislation and for a wider interest in this method of increasing intelligence and reducing crime. Supported by voluntary contributions.

NATIONAL LEAGUE OF WOMEN WORKERS—Jean Hamilton, org. sec'y; 35 E. 30 St., New York. Evening clubs for girls; recreation and instruction in self-governing and supporting groups for girls over working age.

NATIONAL LIBERAL IMMIGRATION LEAGUE—Address Education Dept., Sun Bldg., N. Y. Advocates selection, distribution and Americanization and opposes indiscriminate restriction. Summarized arguments and catalog of publications on request. Minimum membership (\$1) includes all available pamphlets desired, and current publications.

NATIONAL MUNICIPAL LEAGUE—Lawson Purdy, pres.; Clinton Rogers Woodruff, sec'y; North American Bldg., Phila.; charters; commission government; taxation; police; liquor; electoral reform; finances; accounting; efficiency; civic education; franchises; school extension.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING—Ella Phillips Crandall, R. N., exec. sec'y; 600 Lexington Ave., New York. Object: To stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Bulletins sent to members.

NATIONAL WOMAN'S PEACE PARTY. Section for the United States of the International Committee of Women for Permanent Peace—Mrs. Eleanor Daggett Karsten, office sec'y; Jane Addams, ch'n; 116 S. Michigan Ave., Chicago. The purpose of this organization is to enlist all American women in arousing the nations to respect the sacredness of human life and to abolish war.

NATIONAL WOMAN'S TRADE UNION LEAGUE—Mrs. Raymond Robins, pres.; 139 N. Clark St. [room 703], Chicago. Stands for self-government in the work shop through organization and also for the enactment of protective legislation. Information given. Official organ, *Life and Labor*.

NEW YORK SOCIAL HYGIENE SOCIETY (Formerly Society of Sanitary and Moral Prophylaxis)—Dr. James Pederson, sec'y; 105 W. 40 St., New York. Seven educational pamphlets, 10c. each. Four reprints, 5c. each. Dues—Active, \$2; Contributing, \$5; sustaining, \$10. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA—Howard Braucher, sec'y; 1 Madison Ave., New York. Playground activities, equipment and administration; community centers; field work in communities; rural recreation; physical efficiency tests for boys and girls; cooperating with War Department Commission on Training Camp Activities.

RUSSELL SAGE FOUNDATION—For the Improvement of Living Conditions—John M. Glenn, dir., 130 E. 22 St., New York.

Charity Organization Department; Mary E. Richmond, dir.; Fred S. Hall, associate dir. Department of Child-Helping; Hastings H. Hart, dir.; C. Spencer Richardson, assistant. Division of Education; Leonard P. Ayres, dir. Division of Statistics; Leonard P. Ayres, dir.; Earle Clark, statistician.

Department of Recreation; Lee F. Hamner, dir.; Clarence Arthur Perry, associate director.

Division of Remedial Loans; Arthur H. Ham, dir.

Department of Surveys and Exhibits; Shelby M. Harrison, dir.; E. G. Rutzahn, associate dir.

Division of Industrial Studies; Mary Van Kleeck, sec'y.

Library; open free to the public; one of the best working collections in the United States on sociology and social work; Frederick Warren Jenkins, librarian.

The Southern Highland Division; John C. Campbell, sec'y; headquarters, 412 Legal Bldg., Asheville, N. C.

SHORT BALLOT ORGANIZATION—Woodrow Wilson, pres.; Richard S. Childs, sec'y; 383 Fourth Ave., New York. National clearing house for information on short ballot and commission government, city manager plan, county government. Pamphlets free.

SURVEY ASSOCIATES, INC.—Robert W. de Forest, pres.; Arthur P. Kellogg, sec'y; publishers of the *Survey*; Paul U. Kellogg, editor; Edward T. Devine, Graham Taylor, Jane Addams, associate editors; departments: Civics, Graham R. Taylor; Industry, John A. Fitch; Health, Alice Hamilton, M. D.; Gertrude Seymour; Education, Crime, Winthrop D. Lane; Foreign Service, Bruno Lasker.

TRAVELERS' AID SOCIETY—Orin C. Baker, gen'l sec'y; 465 Lexington Ave., New York. Provides advice, guidance and protection to travelers, especially women and girls, who need assistance. It is non-sectarian and its services are free irrespective of race, creed, class or sex.

TUSKEGEE INSTITUTE—Robert R. Moton, prin.; Warren Logan, treas.; Emmett J. Scott, sec'y; Tuskegee, Ala. An institution for the training of Negro youth; an experiment in race adjustment in the Black Belt of the South; furnishes information on all phases of the race problem and on the Tuskegee Idea and methods.

"Not the name of a thing, but the mark of a service"

No lamps can ever be marked
MAZDA unless they embody MAZDA
Service standards of excellence

— The Meaning of MAZDA —

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company. :: :: :: ::

HEAVEN AT PEKING

Here, where the emperor worshipped yearly at the religious center of Confucianism, the first constitution of the new republic was drafted, and the temple grounds are now used as a government agricultural experiment station. The first national athletic meet of China was held on these grounds

CHINA'S SOCIAL CHALLENGE

Beginning a Series of Four Articles

By J. S. Burgess

AT THE CENTER OF THE SOCIAL CHALLENGE OF CHINA

The cabinet of the Peking Students' Social Service Club, an organization of 500 Chinese college students who are conducting free night schools and playgrounds and making studies of social conditions. The club is promoted by the Peking Young Men's Christian Association. Three of the advisors of the club sit in the first row of the picture. Left to right, they are W. P. Mills, a secretary of the Y. M. C. A.; Frank Yung Tao, Chinese merchant and philanthropist; J. S. Burgess, social service secretary of the Peking Y. M. C. A. and author of the series of articles beginning in this issue.

WHERE THE "BOXER" STUDENTS COME FROM

The American Indemnity College in China was established and is maintained by the Boxer indemnity funds which were returned by the United States to the Chinese government. The graduates attend American colleges, where many of them have made splendid records. The picture at the right shows a group of lower-grade students with one of the staff of twenty-five American teachers. At the left is the office building in the yamen (government office) of a prince's palace.

THE SURVEY

China's Social Challenge

I—An Opportunity for American Social Workers

By J. S. Burgess

SOCIAL SERVICE SECRETARY OF THE PEKING YOUNG MEN'S CHRISTIAN ASSOCIATION; THE PRINCETON UNIVERSITY CENTER IN CHINA

IN speaking with leaders in different fields of practical social endeavor in this country one is struck with the lack of realization that anything of vast and far-reaching social significance is now taking place across the Pacific. A few trained social thinkers, however, who have traveled to the Orient in recent years have come back with a veritable storehouse of new and undreamed-of material. Prof. Edward A. Ross, of Wisconsin, following methods of investigation entirely different from the average compiler of descriptive travel, after six months of study produced a most remarkable analysis of the social condition of China. In his book, *The Changing Chinese*, he gives it as his opinion that the Chinese, in their mental and physical characteristics, are very similar to the citizens of our own country. He did not find that they were "oriental" in the imaginative significance of that term, but, as a student of history, he saw a great vision of a whole race of men comprising one-fourth of the population of the world emerging from conditions similar to those of the West during the Middle-Ages and suddenly adopting the processes and methods of the nineteenth century western civilization.

Prof. Charles R. Henderson, with prophetic foresight, discerned the problems of the new industrial age in China and endeavored with all his persuasive power to induce the Chinese government to enact laws for the betterment of the working classes and thus to skip over the dark pages of the first years of industrial revolution in England. I can never forget him as he stood before several hundreds of the students of the National University in Peking, appealing to those men, many of them to be leaders in the political and industrial life of new China, to be champions of the cause of the common man.

Gardner L. Harding, a newspaper correspondent familiar with the social problems of the West, was traveling through China during the revolution of 1912. In his recent stimulating book on *Present-Day China* we find that he has discovered a vast field of hitherto almost unknown material, showing a tremendous social awakening of the educated people in China and the birth of a national consciousness which, however, he characterizes as a most impractical idealism. Coming in from a day of study of the social conditions of Peking, Mr. Harding used to say to me: "I have been investigating problems which hundreds of Europeans and Americans have for many decades been studying in the West, but the whole field in China is as yet unknown."

One is not surprised that Mrs. Congor, wife of the famous American minister, in comparing her life in South America with that in China, pointed out that South America is a delight to the eye and to the senses, but that China, while lacking many of these æsthetic features, is essentially a stimulus to the mind.

Until Russia's revolution China was the youngest of the republics. Her awakening was sudden and violent. Her young, modern leaders are facing a complex of social problems, industrial, political and educational, greater and more difficult than any generation of western men has ever faced. In helping her to master the process of modern life her heritage of the past is of little value—a fixed and traditional way of living and thinking with the least possible friction and with the ideal that every man should occupy his own inherited place in the order of things.

The American social worker realizes the difficulty of leading the Russian or Italian immigrant to understand the

Farm laborer bringing in a load of brush for fuel. The struggle for existence is so keen that small bushes are pulled up by the roots and the hills are denuded.

meaning of democracy and citizenship. Consider then the difficulties which the leaders of modern China have in educating in democracy one-fourth of the human race—a whole nation emerging into a republic. A common peasant in the fields near Peking, when asked what he thought of the revolution, replied:

"Oh, it is not important! The Manchu emperor is deposed and a new emperor has been put in. It is just about the same thing over again."

A common coolie, however, on the streets of Peking, dressed in shabby, torn blue cotton, with an extensive smile said to me one day during the first year of the republic: "Master, it's a great change for all of us; now you and I are both free and equal. I am a citizen, too."

The birth of a new patriotism and a national conscience has not only brought an expectation of a better social order among the scholars of the new China but it has also brought hopes of a good time ahead to great numbers of the common people.

The huge factories of Shanghai and Tientsin, from which every night, after long hours of hard labor, emerge thousands of men, women and children, make it apparent that a nation of farmers is changing from the primitive agricultural stage to the modern industrial age. The peasants come in from the crowded country districts where they have lived in poor but well-ventilated (too well ventilated for the American!) mud or tile huts, having been induced by "get-rich-quick" advertisements, and are now huddled together in great, unhealthy factories and harnessed sometimes for twelve or fifteen hours a day to modern machines.

The problems of the new industrial age, similar but one hundred-fold larger than those of England a century ago, are upon China. Problems of wages, living conditions, labor organizations, tuberculosis, child labor, vice and a dozen others, are emerging. Has the American republic no experience which it can give the Flowery Republic here?

Popular education! You say even in America we don't know what to do about that problem. We are in perplexity what education is for ourselves. True, but have we no experience which can help this situation? A nation which has revered the classical scholar for ages but which has had no schools for three hundred years, suddenly decided in 1905 to inaugurate a great system of western public education, middle school, high school, technical, college and university.

In many cities the gods of the local temples were cast out into a nearby river to make room for the apparatus of the public school—desks, blackboards and maps. In Peking there are today over 20,000 primary schoolboys and girls and nearly 11,000 high school and college students, the latter in forty-two private and government institutions, including four law colleges, a medical college, two normal colleges, a national university with six different departments and teachers from five different nations, and a technical college to turn out mechanical and civil engineers.

The achievement is remarkable. But if Americans, after all these years, are in many respects confused over modern educational methods, what amount of confusion is in the minds of the leaders of this great crusade in China!

The problems of general social education, of the community use of the school plant, of normal training, of industrial education, of vocational guidance and of school administration—all these are already present or are just emerging.

Then there is a whole set of social problems arising from the break-up of the old authoritative systems of custom and morality. To find what Confucius said on this or that prob-

lem, although surprisingly often it is apt, is no longer a panacea.

Young men, especially students away from their home surroundings, have reacted violently from the traditional way of thinking and acting. They are sons of a new age. Liberty and freedom of action often get confused in their minds with license and irresponsibility to any authority or obligation. Among the educated classes of the nation—for centuries perhaps the most moral in the world—immorality and the resultant diseases are on the rapid increase.

New ideals of marriage and of home life are in China fraught both with danger and with promise. The old family clan idea is losing its hold, and the sacredness of the smaller family unit has not yet been firmly established. There is also a desire on the part of many young men to make their own marriages rather than have them arranged in the traditional Chinese way.

While one from the West cannot but sympathize with this worthy change of ideals, it is evident that a too rapid transition is likely to deprive China of the advantages of both the old plan and the new.

The women, too, have a new conviction of freedom. A sudden and ill-advised woman-suffrage movement in 1912 astonished the world. Women for the first time in Chinese history took the public platform and vociferously discussed political and social questions. A band of young women formed a company of "Dare-to-Dies" to fight in the revolution. These were with difficulty disbanded by C. T. Waug, now president of the Senate. Another group of women banded themselves as bomb-throwers and dynamiters to destroy the hated Manchu officials. Without balanced judgment or sufficient education and grasp of the questions of new China, these women present both a difficult problem and sign of a new and progressive China.

Closely connected with these questions is that of wholesome recreation. In the hardened and conventionalized custom of Confucian civilization play had little place. It was said by a noted Chinese, "The Confucian ideal was that the father should make his son an old man as soon as possible." There was no play for the prospective scholar, only long hours of tedious study and a dignified behavior befitting a member of the "literati" class.

With the traditional ideals of dignity and uniformity broken down, a great volume of latent energy has been released. Who is to direct in proper recreation channels these vast energies of the four hundred million Chinese? The introduction of new industry is redirecting the working capacities of this great people. Will their leisure time be spent in a way which will build up and not destroy the manhood and womanhood of China?

Of the relationship of American Social Workers to these new social problems which I have been outlining we will speak presently. It is well here to emphasize that the leaders of this great social revolution must naturally come from the Chinese race itself. The leaders in China, more than those of any other nation, are young men. Thousands have studied and observed in Japan, many hundreds in Europe and America, but a far greater number are learning the process of the new world in the modern colleges of China.

On the shoulders of these college men and of the recent college graduates will rest in large measure the destiny of China. Intensely patriotic and deeply interested in fundamental questions, these young men, although often confused and discouraged, are bent upon a high ideal of the transformation of their country into a modern progressive nation.

THE THIRST FOR KNOWLEDGE

One of the government public lecture halls of which there are about a dozen in the city of Peking. A corps of lecturers trained by the government goes from one to another, speaking on modern subjects and illustrating their talks by the pictures and charts, printed in Japan, which are shown here on the wall. They include such common western subjects as clocks, scales, etc., which are great novelties to the illiterate coolies.

In my years in Peking I was constantly in touch with the students in the government and private universities. They come by the thousands from every province to enroll in one of the modern institutions at the capital.

Conversation among them does not concern itself principally with athletics or games, but with the pressing needs of the Chinese nation. Politics and international law are attacked in a vital way. "Which is the better form of government for China, a fixed cabinet or a responsible cabinet? What are the advantages of state socialism? What practical measures may we devise for the reform of the currency? How shall we go about training an army?" Such questions are brought to one constantly. The thinking men both in the colleges and among the younger officials are, during these years, laying the plans for the whole political, financial, and educational reconstruction of the nation.

Many of these young men very rapidly attain to places of responsibility. One of my students in a Peking college was, within one year after graduation, head of all high-school education in China. Another became within two years principal of the Shantung provincial college, which has a large faculty and 500 students. Two students left my class at the normal college to run for Parliament. Students at the National University edited newspapers. The rapid advance of these young men is by no means due to their superior mental qualities, but to the fact that there are no others of western training capable of the leadership called for.

Was there ever a condition calling more for help from the experience and training of the social thinkers of America? While it is true, as has been pointed out, that the leaders of these new movements must be Chinese, those who advise and inspire may be Americans.

Certain prominent Americans have already rendered to China great service. James Bayley, who, for several years had a small forestry school in Nanking, was recently asked by the Chinese government to take over the training of the students of forestry for the whole country. W. A. P. Mar-

tin founded the first western educational institution conducted by the Chinese government. Charles Tenney, now of the American legation in Peking, reorganized the educational system of the metropolitan province of Chihli. E. W. Thwing has for many years had a national influence in the popular anti-opium movement. He has had permission to telegraph at any time at the expense of the Peking government to any officials throughout China on questions pertaining to the opium traffic. He had access to the entire Chinese press.

Americans, whether in business life, diplomatic service, or in the Christian enterprises, if interested in questions of the welfare and progress of the Chinese race, have constant opportunities to serve the Chinese people in the pressing problems arising from the change from an old civilization to a progressive western life.

In connection with the work of Princeton University in Peking we constantly have such opportunities, of many of which, for lack of knowledge and time, we are unable to avail ourselves. In one of our English classes was the head of the sanitation department of Peking, a city of one million people. He knew nothing of the science of sanitation and was willing to learn anything we could tell him. Another friend of ours became the head of the prison system of the whole country. He was quite ignorant of new methods of prison management and police regulations. We were glad that we had Mr. Fosdick's book on police systems of Europe to lend him. In a few years of residence in that city we have been called on to lead in the first survey of the social institutions of Peking, to establish the first public playgrounds, to organize the first well-run orphanage, to conduct a public anti-tuberculosis campaign, and to organize a great popular demonstration for social and moral reform.

None of these services can be performed by the foreigner in China unless he is in close touch, sympathy and cooperation with the Chinese people themselves, but when he is, there is no nationality that is more warmly welcomed or that has a greater influence with the Chinese than the American.

Insurance for Soldiers and Sailors

By Joseph P. Chamberlain

LEGISLATIVE DRAFTING FUND, COLUMBIA UNIVERSITY

THE bill now before Congress to provide for men and women in the army and navy and for their families, is divided into four parts. Part I is administrative, Part II makes provision for the families of the men during their absence, Part III grants compensation to those injured "in the course of the service" and to their families, Part IV is a scheme of government insurance with a premium paid in part by the insured and in part by the government. It is the insurance feature of the bill which has aroused the most vigorous opposition and it is this feature, which, as a novelty in the federal administration, deserves the closest consideration as to principle and detail.

The plan proposed grants, on application, to every officer or man in the army or navy, or to every woman in the nurse corps in "active service," insurance against death or total disability from any cause, in a sum of not less than \$1,000 or over \$10,000, a maximum reduced in Congress to \$5,000. The insurance must be applied for during the first one hundred and twenty days after entrance into the service, but this time counts for persons then in "active war service" from the time of publication of the terms of the insurance contract, which is to be made "promptly" on passage of the act. If a person entitled to apply dies or is totally disabled within the one hundred and twenty days, without having made his application, he or his family, in case of his death, receives a pension of \$25 a month. The pension is paid him during his life and if he dies before two hundred and forty monthly instalments have been paid, it is continued for so many additional months as will make the total 240, to his widow, dependent mother or child up to eighteen, or after that age if unable to earn a living.

The act authorizes the payment of benefits to the insured, or on his designation to a member of his immediate family or "such other persons as may be provided from time to time by regulation." This vague provision, it is to be expected, will be interpreted in the general spirit of the act, which does not extend its benefits far from the home circle of the soldier. The insurance is payable only in instalments, not in a lump sum like ordinary life insurance. The act does not state whether these instalments shall be monthly, quarterly or yearly, and the meaning of the phrase is further clouded by a subsequent provision that the "contract of insurance" may provide "for a continuous instalment during the life of the insured," implying that the mandatory provisions, that the insurance be payable in instalments, means something other than continuous instalments.

The cost of administration and the excess cost resulting from the risk of war is borne by the United States, and the premium rate of the insured is the net rate of the American Experience Tables, which is estimated to average \$8 a year per \$1,000 of insurance.

After the war the policy may be converted into a form of insurance to be provided by regulation. This entirely vague expression is probably not against the interest of the soldier inasmuch as his influence will be strong enough to insure fairness to him.

In his letter to the President transmitting and recommending the bill, Secretary McAdoo gives two reasons for the addition of the insurance feature. One is the non-insurability

of the risks in the ordinary way; the other is "to check any future attempts at service pension legislation."

There are two kinds, at least, of non-insurability. One is the impossibility of securing insurance for soldiers about to go to war from insurance companies. The second, the fact that many a soldier who is now in good health and insurable at a low premium, will return from the war with his health impaired so far that he is no longer insurable by a company and yet not disabled so that he will be compensated under the act.

It is true that many of the men, particularly the older ones with families, already have insurance which will generally not be affected by the war, and in an amount which is as much as they can afford or which they consider sufficient for their families in case of the death which comes even in civil life. If these men are killed in the war, their immediate families will receive, in addition to the insurance, the compensation provided for in Part III, and so will be better off than if the breadwinner had died when employed in his ordinary business. It must not be forgotten, however, that almost all of the men are young, that they may fairly look forward to a long life and so may reasonably consider that they will be able, with increasing earnings, to provide more insurance to care for their loved ones before death calls them, or that their young children will be self-supporting before that calamity falls upon the family. Now they are going into a very great danger which increases the risk of death or disablement so much that insurance in the old way is not obtainable. Is it not fair to give those who desire it an opportunity to make further provision for the education of their children after the government compensation stops at the age of eighteen, for more comforts for the wife or for a mother and old father or a sister, who would get little or no compensation?

Should a man not be enabled to provide for his own future a better income than that granted by the government if he returns from the war unable to earn his living? His compensation as a single man is \$40 a month; if he is married or marries on his return, \$55 to \$75, depending on the number of his children, with higher amounts in case of higher paid men. Many soldiers will undoubtedly be willing to undergo restriction in their expenses during service in order to be certain of a larger monthly income in case of disablement, but if the government does not provide the means, there is no way in which they can get insurance to provide it.

Whether the premium should not be fixed at approximately enough to cover the whole cost is another question. It is agreed that the extra risk of war cannot be exactly computed, but can it not be sufficiently well approximated after Canadian and British experience, to fix a reasonable basis for premiums with a guaranty by the government that the promised benefit shall be paid even if the premium proves insufficient? The very heavy losses of the British and Canadians in their first years of struggle should not be taken as a criterion, but rather the smaller proportional losses since greater power in artillery and wider experience in fighting have cut down the human cost of war. Going into action at this time, with the lessons learned by the allies at the service of the War Department, could the government not fairly take as a basis the rate of loss for the past year and provide itself only for the extra cost which might come from unexpected events?

If, as the bill provides, the government is to pay the whole war cost, which will be the principal cost, the amount of the insurance thus given to the men should not be so much in excess of the insurance needs of the average man as the maximum fixed in the law, \$10,000, or even the \$5,000 to which it has been reduced. The average insured man in the state of New York, not taking into consideration industrial insurance, has \$1,800 of insurance; the average amount carried in industrial companies by the less well paid workmen is certainly not over \$200. The \$10,000 or even \$5,000, as provided in the bill, will seem entirely unnecessary to such men, far more than they can afford to continue to carry after the war, and they will not voluntarily take so much even at the cheap rate offered. The net result will probably be that the better off men of the middle classes will alone be benefited by the higher amount. Would it not be fairer to fix the amount of insurance for which the government pays the war premium at \$2,000 or \$2,500, and to allow the men who want more to buy it from the government on some such basis as indicated?

Furthermore, the success of the act depends on the number of men who take insurance so that every opportunity and encouragement to insure should be afforded. The limitation to four months (one hundred and twenty days) after enlistment as the time during which insurance may be applied for, seems unfortunate as a general provision and a hardship on the men who are subsequently promoted to higher ranks and consequently receive higher pay. The few dollars a month for premiums which may have seemed a heavy charge to a private will be less onerous to a sergeant and trifling to an officer. Yet men who are promoted have no opportunity either to increase their insurance or, if they have not taken out a policy in the four months, to apply for one. If no other change in the act is made every advance in rank should entitle a man to make a new application.

The uninsurable man is an after-the-war problem. He may have developed a heart or kidney or lung trouble as a result of shock or exposure, his nervous condition may be so bad that he is no longer a good insurance risk. The act provides for him by authorizing him to continue his war insurance. It is certainly as fair that he be insured by the government as that the soldiers in active service should be insured, and as well as the element of justice there is the same practical reason that he cannot get the insurance elsewhere at a reasonable price. The act leaves the premium rate to these men after the war indefinite, but it must have been the intention, in estimating it, to leave out of consideration their physical condition.

If the insurance is to be a success, as war insurance, it must attract as many of the men as possible. It is far more important that it be popular if it is to accomplish the second aim of the government, to prevent future pension agitation by providing voluntary and cheap means of caring for the needs for which the pensions are sought. Should only a small proportion of the men either accept insurance or continue it after the war as provision against old age or disability, the argument that they might have done so will have little effect. As an answer to the careless few who have not taken advantage of the opportunity it will be conclusive, but it will be vain as an argument against an appeal from the great majority of the veterans. Here is an added reason for not limiting the period during which the insurance can be applied for. The men should have every opportunity to become insured and the limitation in time would seem to be an advantage to the better off man, more accustomed to insurance, over the young workman.

Even with all the inducements possible offered to men to take the insurance, if experience can be trusted, a heavy loss in lapses must be looked for after the war. It is to be presumed that the secretary of the treasury and Judge Mack, who drafted the bill, had this point in mind and will devise a means to keep the insurance popular with the insured and to remind them of the time of paying premiums. This danger of lapses is an additional reason why the amount taken by any individual should not be disproportionate to his ideas of his insurance needs. If it is, he is fairly certain to let at least the excess lapse, and with the excess there is danger that the whole policy will go.

There are many minor changes which might well be made in the bill. For example, in Section 402 provision is made for "cash" value of the policy, which means a surrender value. But the government is interested in keeping the policies alive to avoid the necessity of pensions, one of its objects in offering such liberal terms. Why should it be made easy for the insured to surrender the protection of his policy? There is a movement against a similar provision in ordinary insurance as being opposed to the object of insurance—the provision against future contingencies. Is it wise for the government to encourage it?

Again, does the requirement for the payment of the benefits in instalments, uncertain as it is, apply to the forms of insurance after the war, to be "prescribed by regulation"? The requirement that after the war every policyholder is entitled to claim the right to pay his premium in monthly instalments may increase unduly the cost of the insurance to those who desire to pay annually. Monthly payments are very expensive as the government must provide clerks to check small payments twelve times in each year on each policy and keep track of each policyholder every month. Should not classes of annual and monthly paid policies be provided, so that persons able and willing to pay annually would benefit by the saving in cost? As another point, would it not be a saving to adopt a flat rate for all insurance during the war or at least to divide the insured into two classes: one, all ages up to 31; or second, all ages up to 40, rather than to figure premiums on each policy based on the exact age of the insured. The differences in premiums from year to year will be only a matter of a few cents among the young men and the good health at enlistment of the older ones will tend to equalize the difference of age.

The insurance feature of the bill is deserving of careful study by those interested in social welfare. It is not designed merely to supplement the relief and compensation features, but to meet needs which are not and cannot be met by those parts of the bill. If the insurance needs are fairly and adequately met by Part IV, as it now stands or as it can be amended, the argument that they should be slighted in favor of an increase in the amounts granted under the other parts, does not seem to be warranted. At least, so far as war-time insurance and insurance for the uninsurable after the war is concerned, it cannot be said that the government is going into a branch of the business which private enterprise is ready to care for. In continuing the insurance to the men who have taken policies during the war, the government, as the secretary says, is assuring itself against the risk of pension legislation. It may also be looked upon as agent of a great mutual association of ex-soldiers and sailors to secure their insurance at a reasonable rate.

These are details of the bill itself and of the proposed administration. Critical consideration of them should not obscure the great value of the measure and the gratitude we all owe Judge Mack for his ability and activity in preparing it and urging its passage.

The President to the Pope

WASHINGTON, D. C., August 27, 1917.

TO HIS HOLINESS BENEDICTUS XV, POPE:

In acknowledgment of the communication of your Holiness to the belligerent peoples, dated August 1, 1917, the President of the United States requests me to transmit the following reply:

EVERY heart that has not been blinded and hardened by this terrible war must be touched by this moving appeal of his Holiness the Pope, must feel the dignity and force of the humane and generous motives which prompted it, and must fervently wish that we might take the path of peace he so persuasively points out. But it would be folly to take it if it does not in fact lead to the goal he proposes. Our response must be based upon the stern facts, and upon nothing else. It is not a mere cessation of arms he desires; it is a stable and enduring peace. This agony must not be gone through with again, and it must be a matter of very sober judgment what will insure us against it.

His Holiness in substance proposes that we return to the status quo ante-bellum and that then there be a general condonation, disarmament, and a concert of nations based upon an acceptance of the principle of arbitration; that by a similar concert freedom of the seas be established; and that the territorial claims of France and Italy, the perplexing problems of the Balkan states, and the restitution of Poland be left to such conciliatory adjustments as may be possible in the new temper of such a peace, due regard being paid to the aspirations of the peoples whose political fortunes and affiliations will be involved.

It is manifest that no part of this program can be successfully carried out unless the restitution of the status quo ante furnishes a firm and satisfactory basis for it. The object of this war is to deliver the free peoples of the world from the menace and the actual power of a vast military establishment, controlled by an irresponsible government, which, having secretly planned to dominate the world, proceeded to carry the plan out without regard either to the sacred obligations of treaty or the long-established practices and long-cherished principles of international action and honor; which chose its own time for the war; delivered its blow fiercely and suddenly; stopped at no barrier, either of law or of mercy; swept a whole continent within the tide of blood—not the blood of soldiers only, but the blood of innocent women and children also and of the helpless poor; and now stands balked, but not defeated, the enemy of four-fifths of the world.

This power is not the German people. It is the ruthless master of the German people. It is no business of ours how that great people came under its control or submitted with temporary zest to the domination of its purpose; but it is our business to see to it that the history of the rest of the world is no longer left to its handling.

To deal with such a power by way of peace upon the plan proposed by his Holiness, the Pope, would, so far as we can see, involve a recuperation of its strength and a renewal of its policy; would make it necessary to create a permanent hostile combination of nations against the German people, who are its instruments; and would result in abandoning the newborn Russia to the intrigue, the manifold subtle interference,

and the certain counter-revolution which would be attempted by all the malign influences to which the German government has of late accustomed the world.

Can peace be based upon a restitution of its power or upon any word of honor it could pledge in a treaty of settlement and accommodation?

Responsible statesmen must now everywhere see, if they never saw before, that no peace can rest securely upon political or economic restrictions meant to benefit some nations and cripple or embarrass others, upon vindictive action of any sort, or any kind of revenge or deliberate injury. The American people have suffered intolerable wrongs at the hands of the imperial German government, but they desire no reprisal upon the German people, who have themselves suffered all things in this war, which they did not choose. They believe that peace should rest upon the rights of peoples, not the rights of governments—the rights of peoples, great or small, weak or powerful—their equal right to freedom and security and self-government and to a participation upon fair terms in the economic opportunities of the world, the German people, of course, included, if they will accept equality and not seek domination.

The test, therefore, of every plan of peace is this: Is it based upon the faith of all the peoples involved, or merely upon the word of an ambitious and intriguing government, on the one hand, and of a group of free peoples, on the other? This is a test which goes to the root of the matter; and it is the test which must be applied.

The purposes of the United States in this war are known to the whole world—to every people to whom the truth has been permitted to come. They do not need to be stated again. We seek no material advantage of any kind. We believe that the intolerable wrongs done in this war by the furious and brutal power of the imperial German government ought to be repaired, but not at the expense of the sovereignty of any people—rather a vindication of the sovereignty both of those that are weak and of those that are strong. Punitive damages, the dismemberment of empires, the establishment of selfish and exclusive economic leagues, we deem inexpedient, and in the end worse than futile, no proper basis for a peace of any kind, least of all for an enduring peace. That must be based upon justice and fairness and the common rights of mankind.

We cannot take the word of the present rulers of Germany as a guarantee of anything that is to endure unless explicitly supported by such conclusive evidence of the will and purpose of the German people themselves as the other peoples of the world would be justified in accepting. Without such guarantees treaties of settlement, agreements for disarmament, covenants to set up arbitration in the place of force, territorial adjustments, reconstitutions of small nations, if made with the German government, no man, no nation, could now depend on.

We must await some new evidence of the purpose of the great peoples of the Central Powers. God grant it may be given soon and in a way to restore the confidence of all peoples everywhere in the faith of nations and the possibility of a covenanted peace.

ROBERT LANSING,
Secretary of State of the United States of America.

COMMON WELFARE

ON THE WAY TO THE U. S. SUPREME COURT

JUDGE BOYD, of the federal court for the western district of North Carolina, has held unconstitutional the federal child labor law. The Department of Justice will appeal the case, carrying it as promptly as possible to the Supreme Court of the United States.

Judge Boyd's decision arose out of a request for an injunction against the Fidelity Manufacturing Company (a cotton mill) and William C. Hammer, United States attorney for the western district of North Carolina. The particulars of the complaint of Roland H. Dagenhart in the names of his sons, Reuben and John, were printed in the SURVEY for September 1.

Judge Boyd granted the injunction and made it permanent, rendering his decision on the day before the law took effect. The hearing of the case extended over three days, August 29-31.

The national significance of this injunction case, as the first step in the test of constitutionality of the federal child labor law, is suggested in the array of counsel enlisted for and against the statute. The Dagenharts, father and sons, poverty-stricken cotton mill hands, were nominally represented by the New York firm of O'Brien, Boardman, Harper and Fay; by Manly Handren and Wamblee, of Winston-Salem, N. C., and by Mr. Bynum, of Greensboro, N. C., a former member of Congress. Obviously the Southern Cotton Manufacturers' Association has the same dynamic interest in this case which the National Manufacturers' Association has always taken in the long series of cases concerning the hours of labor and minimum wage laws for women, which has resulted in the United States Supreme Court sustaining every case.

The government was represented by District Attorney William G. Hammer; Thomas I. Parkinson, of the Legislature Drafting Fund of Columbia University, who prepared the government brief and who made the closing argument; and Roscoe Pound, formerly a member of the Supreme Court of Ne-

braska, and now dean of the Harvard Law School, who made the opening argument.

In the course of District Attorney Hammer's address to the court, the ugly fact was brought out that, among the young men of a neighboring cotton mill district in which the mill had been established for more than a generation, 75 per cent of those registered for the draft were rejected by the army surgeons as physically unfit.

Judge Boyd held the law unconstitutional under the due process clause of the fifth amendment to the Constitution of the United States because it deprives the parent of the property right in the services of his children.

The judge held that the law was an attempt by Congress to control manufacture within the states by the use of its power over interstate commerce; this constituted an attempt to do by indirection what it could not do directly. The law, therefore, was unconstitutional, he held, though the government had brought out that this was the very point at issue in the case of the Louisiana and other lotteries and of the Mann federal white slave law, both of which were upheld by the United States Supreme Court.

The present decision is limited in its immediate practical effect to the federal district in which it was rendered. Everywhere else the law will continue in force, pending the decision of the Supreme Court of the United States.

JUDGE MACK'S BILL BEFORE THE HOUSE

REPORTED from the Committee on Interstate and Foreign Commerce on August 30, the soldiers' and sailors' insurance and compensation bill, drafted by Judge Mack [the SURVEY, August 18, page 435], is expected to pass the House without serious opposition and to be taken up in the Senate soon after the war revenue bill shall have been disposed of. Defended by Judge Mack, Secretary of the Treasury McAdoo, Assistant Secretary Rowe, Julia C. Lathrop, chief of the Children's Bureau, and others, the measure received only two amendments in committee, and there appeared strong likelihood, at the beginning of the House debate, that these two amendments would be rejected.

The first amendment reduces the possible amount of government insurance which a soldier may take out, under the terms of the bill, from \$10,000 to \$5,000. President Wilson has come out in unqualified opposition to this reduction. The second amendment denies benefits to the widow of a soldier if she became his wife after he left the service, regardless of the extent of his disability when leaving and regardless of the degree of help and comfort which her marriage brought him.

The House committee report included the following statement:

Your committee thinks this bill wise and beneficent in all its features and though a radical departure in some respects thinks it will prove a great blessing to our soldiers and their families and be very satisfactory to the country.

The first, second, and third features provide for the maintenance of the families of the soldiers during service and for compensation in case of death, and it is believed this is effected much more satisfactorily in this bill than in the existing pension system and will not be so expensive in the long run. The elements of certainty and security afford an incentive to the soldier to go forward confident of protection by the government to themselves and their families and go far to mitigate the anguish of the families themselves during the unhappy separation from the soldiers.

Opposition to the measure, attributed by friends of the bill to the fear of pri-

WHEN the manager of the *Delineator* appropriated money for a test year of baby-saving, there was created what is practically a new philanthropy.

Dr. Charles E. Terry, formerly health officer of Jacksonville, Florida, is in charge of the entire plan. Assisting him are Franz Schneider, Jr., formerly of the Russell Sage Foundation; Marie L. Rose, R. N., Johns Hopkins Hospital, for three and one-half years inspector of factories and child labor in Maryland. Miss Rose is chief of the nursing staff. Bacteriological work will be in charge of W. L. Dodd and H. N. Parker, both experienced sanitarians.

The field work begins when an invitation comes from a city or town to begin a survey there. This health survey means the cooperation of local associations—board of health, board of trade, the C. O. S., woman's club, etc., and from these societies and from the citizens as a whole are drawn voluntary committees to aid the nurse who opens the survey. For the nurse is first on the scene. With what assistance she can command from the voluntary groups, she secures information regarding the milk and water supplies, vital statistics—when they exist, housing conditions, health records, the number of mothers who work, and much else, making from carefully constructed case histories, an intensive study of possible factors in pre-natal or post-natal conditions of babies who died last year under one year of age. Later, perhaps after two weeks, a staff bacteriologist will go to the place, give lectures and demonstrations and answer questions. Report to headquarters is followed by advice from Dr. Terry and Mr. Schneider concerning a constructive health program for that particular town.

“SAVE
THE
SEVENTH
BABY”
CAMPAIGN

vate insurance interests that the government will stay in the life insurance business after the war is past, is expected to find vigorous expression when it is before the Senate. This opposition, of course, centers on article four, which deals with the insurance to be furnished the soldier by the government at low rates both during and after the war. Article four is discussed by Mr. Chamberlain on page 504 of this issue of the *SURVEY*.

Henry P. Davison, as chairman of the Red Cross War Council, has endorsed the bill, saying that “obviously the task of providing for the financial assistance of the families of our soldiers and sailors is so large that the government alone can assume it.” Colonel Roosevelt has written an open letter whole-heartedly supporting the measure and the Cleveland City Club, before whom Judge Mack spoke last week, received it with the greatest cordiality.

EARL GREY AS A SOCIAL REFORMER

EARL GREY, governor-general of Canada from 1904 to 1911, whose death is announced from London, would have won a name for himself as a social reformer even if he had not been the head of a great Whig family and if he had not occupied high public offices. He lent intelligent and active support to the most modern developments in the movement for housing reform and tried to interest administrators in every part of the British empire in the principles of city planning which would prevent future congestion.

As a temperance reformer, he was inclined towards local option but took little part in political wrangles, giving much of his energy and financial support instead to the elimination of private profit from the retail sale of liquor and the introduction of disinterested management by the development of a system of licenses held in public trust. In 1901, he formed the Central Public House Trust Association for the promotion of non-commercial license-holding companies. Of these companies there are now some thirty-five in England and several more in Scotland and Ireland, managing among them over 200 public houses.

These houses are conducted as refreshment houses rather than saloons; many of them are real centers of wholesome community life. All profits in excess of 5 per cent are applied to constructive temperance reform, more especially the provision of recreational facilities, not necessarily connected with the trust companies or under their own control. This trust principle, through the initiative of Lord Grey, has been applied also in Ontario, Manitoba, South Australia, New Zealand, Tasmania, Mauritius, Natal and the Transvaal.

In the last five or six years, Earl Grey

ONE BABY IN EVERY SEVEN DIES IN ITS FIRST YEAR OF LIFE

WHICH ONE?

HALF OF THESE DEATHS CAN BE PREVENTED; HALF OF THESE LIVES CAN BE SAVED.

THIS IS WHY BABY WEEK IS BEING HELD IN THOUSANDS OF AMERICAN TOWNS AND CITIES.

THIS IS ALSO WHY THE DELINEATOR HAS BEGUN ITS CAMPAIGN TO SAVE THE SEVENTH BABY.

WHAT ARE YOU DOING TO PREVENT THIS HAVOC OF BABYHOOD?

AMERICA NEEDS THAT SEVENTH BABY!

has figured in public life chiefly as the strongest and most persistent advocate of labor copartnership. An utterance of his, in 1912, may be regarded as prophetic of the tremendous advance of this principle in Great Britain under the pressure of the present war:

England's greatest undeveloped asset is man himself. How to get each man to do his best is the problem before England today. It is because copartnership harnesses to industry not only the muscle but the heart and the intelligence of the worker that we are justified in regarding it with reverence and enthusiasm as the principle of the future.

NO LONGSHOREMEN STRIKES EXPECTED

THE government took steps last week to prevent dock strikes during the war. It entered into a direct "labor treaty" with the International Longshoremen's Association, through the president of that organization, T. V. O'Connor, of Buffalo, binding the government and the owners of the shipping lines to recognize union wages, hours and conditions in each port, and the longshoremen to refrain from striking while this labor standard is maintained.

All disputes are to be adjusted locally, or by appeal to a national board comprising Vice-chairman Stevens of the Shipping Board, Assistant Secretary of the Navy Roosevelt, Walter Lippmann for the War Department, Messrs. Franklin for foreign shipping lines and Raymond for coastwise lines, and Mr. O'Connor for the longshoremen's association. Mr. Roosevelt will act only where navy matters are involved and only one of the shippers' representatives will act in any given case.

As the Lake Carriers' Association did not participate in the negotiations which led up to this agreement, the treaty applies at present only to the Atlantic, Pacific and Gulf ports. A meeting of the lake carriers on September 6 was expected to bring the lake ports into camp.

VICE BEHIND THE FRENCH LINES

EX-PRESIDENT ELIOT, of Harvard, took a testy bull by the horns in a letter last week to the *New York Evening Post*. Writing on sexual vice and the alcoholism which is its partner, he said:

The failure of the French government to protect their soldiers from these evils is the gravest error that government has committed; for those vices have proved more destructive to the French people since August, 1914, than all the German artillery, rifles, hand grenades, poisonous gases and fire blasts. The killed and wounded by shot and shell transmit no poison to their families and descendants—the victims of alcohol and prostitution do.

A friendly desire to refrain from criticizing France and the position of

the Committee on Public Information which deprecates publication of material criticizing our allies, has all but prevented discussion of the situation behind the French lines, in spite of the figures on the incidence of venereal disease among the Canadian and Australian troops. But it has given the gravest concern to social hygienists, to the Y. M. C. A., and now, it is said, to General Pershing and his staff.

The situation seems to be that with our restrictions on the sale of liquor and on the social conditions of communities in which training camps are established, we shall send to Europe the cleanest troops since the time of Cromwell's armies. At the front they will be immediately and completely exposed to the results of the French policy of *laissez-faire* in all things sexual. And France is so sensitive to discussion of her morals and manners that no one has, as yet, thought of a way out.

RACE DISTINCTIONS AND THE COURTS

DOES the Negro get a square deal in the American court of law? As part of a larger study Judge Gilbert Stephenson, of Winston-Salem, N. C., author of a book on Race Distinction in American law, has analyzed 19,000 municipal court cases in his city—two-thirds of them dealing with Negroes and one-third with whites—collected by him in his former capacity of prosecuting attorney. Winston-Salem is typically southern, with a large Negro population. Whether its courts are typical only a broader inquiry could of course show. But of the local record he summarizes his findings as follows:

In fixing the amount of fine or length of sentence, the court took into account the greater frailty or poverty of the Negro and made his fine less or his sentence shorter. This court has final jurisdiction of all crimes under felonies. I selected ten of the most prevalent crimes common to both races and, compiling enough individual cases of each offense to make the statistics based upon them trustworthy, ascertained the percentage of white and Negro offenders fined, sentenced and released upon payment of the costs. In like manner I ascertained the average fine in dollars and the average term of imprisonment in days of both white and colored law-breakers. I took no account of the cases dismissed, because, in doing so, one runs the risk of confusing the dereliction of the police force with the judgments of the court. That is, if police officers discriminate against Negroes in arresting in groundless cases, then the court should not be charged with race discrimination because it dismisses more cases of Negroes than white, or *vice versa*.

It appears that, upon the whole, 49.3 per cent of whites and 46.7 per cent of Negroes are fined, which is a difference of 2.6 per cent in favor of the white if it be leniency in the court to fine rather than imprison. For running disorderly houses, public drunkenness and vagrancy a larger percentage of Negroes than whites are fined; for the other seven crimes a larger percentage of whites are fined. The greatest differences between the races are made in cases of running disorderly houses, carrying concealed weapons and lar-

ceny. Fifty-nine per cent of whites as compared with 25 per cent of Negroes are fined for carrying concealed weapons; 17 per cent of whites as compared with 7 per cent of Negroes are fined for larceny; and 21 per cent of whites as compared with 54 per cent of Negroes are fined for running disorderly houses.

Upon all the crimes investigated, 25.4 per cent of whites and 33.8 per cent of Negroes receive sentences, a difference of 8.4 per cent in favor of the whites if sentences indicate severity. It follows as a matter of course that the larger percentage of either race fined for any crime the smaller percentage can be sentenced for that crime; that is assuming that the number released on payment of costs is static, which is the fact. One finds that a larger percentage of whites are sentenced for running disorderly houses, violating the liquor laws and vagrancy; and that a larger percentage of Negroes are sentenced for the other offenses. No distinction has been made between terms of imprisonment imposed as the primary punishment and terms imposed for non-payment of fine or costs. Sometimes the offender is fined and given a day of grace in which to pay the fine; if he fails, the fine is stricken out and a term of imprisonment imposed. Sometimes the offender announces to the court that he cannot pay a fine or even the costs, and the court, even if inclined to impose a fine, must either impose a sentence or turn the convict loose. It is common knowledge that a much larger percentage of Negroes than whites have to be sentenced for non-payment of fine or costs. When a deduction for this is made, the percentage of Negroes sentenced to terms of imprisonment will be found to be not much, if any, more than the percentage of whites sentenced.

In the amount of fine and length of sentence the advantage appears to be altogether with the Negro. The average fine of the white convict is \$18.05; of the Negro \$14.55, a difference of \$3.50 in favor of the Negro. The average term of imprisonment of the white convict is 86.04 days, of the Negro, 79.37 days, a difference of 6.67 days in favor of the Negro. The white man convicted of gambling is fined about twice as much as the Negro, and if imprisoned, his sentence is considerably longer. The fine of the white person convicted of violating the liquor laws is nearly twice that of the Negro convicted of the same kind of offense.

COMMUNICATIONS

NO SOONER SAID THAN DONE

TO THE EDITOR: May I reply to the open letter of Alice Henry [the SURVEY for August 25, page 460] suggesting that the Children's Bureau should translate the Castberg law, by saying that the bureau realizes the importance of the Norwegian legislation and expects to be able to send to the press in about two weeks a translation covering the following material:

The Children's Code of Norway, which consists of a principal law entitled "law concerning children whose parents have not formally married."

Amendments of certain supplementary laws, such as that defining the property relations of husband and wife, of June 29, 1888, amended April 10, 1915.

Amendments of the same day to the law on the dissolution of marriage (August 20, 1909).

A law on the rights and duties of parents and their legitimate children, April 10, 1915.

The law on the care of children, April 10, 1915.

The law on the supervision of children placed out, April 29, 1905.

Several decrees and orders of government departments concerned in the administration of these laws.

The above so-called children's code of Norway is contained in an annotated compilation (Barnelovene av 10 April 1915 og Pleiebarnloven av 29 April 1905—the children's laws of April 10, 1915, and the child-caring law of April 29, 1905), by G. Wiesener, chief of the Municipal Statistical Office of Bergen.

JULIA C. LATHROP.

[Chief Children's Bureau.]

Washington.

WARNING TO ADVERTISERS

TO THE EDITOR: Several days ago I wrote asking that you insert an advertisement for a social worker for this organization. I asked that it be inserted for four issues, but now I am begging you *not* to insert that ad any more. For I am simply overwhelmed with replies, and I fear that I shall be completely drowned if I receive many more replies.

Will you credit this organization with the money difference or will you return it to me? I shall be grateful for whichever you do—only don't let the ad. appear again.

I think the SURVEY is the best advertising medium that I ever knew of.

SALLY KIRBY.

[Charity Organization Society.]

Goldsboro, N. C.

DEAFENED SOLDIERS

TO THE EDITOR: It will interest the St. Louis correspondent, mentioned in your issue of July 28 [page 375] to know that steps are being taken toward caring for soldiers who may be deafened by the war. The Volta Bureau of Washington, through its magazine the *Volta Review*, is giving publicity to this matter, and at its investigation a manual for the use of such men in the study of lip-reading is being prepared. The Reconstruction Service of the Industrial Union for the Deaf of Boston is taking up this work in several of the larger cities, and the New York League for the Hard of Hearing is actively at work along the same lines.

Plans are being made to teach lip-reading to these soldiers, beginning in the hospitals as they are convalescing; the instruction will be followed up by those who understand lip-reading practice, which is a very necessary part of the instruction.

The organizations working upon this branch of reconstruction will then offer suggestions for vocational re-education or re-adjustment, as the case may be, and will urge upon those at the heads of the institutes for the re-education of war cripples the necessity of including the deafened men in their classes. Meeting places for recreation will be found, as hard-of-hearing persons are especially in need of social life to counteract the depression which almost invariably attends this handicap.

Your St. Louis correspondent is right in thinking that these men will not have proper consideration as war cripples unless the general public is brought to the realization that this handicap is really as great a one as is the loss of an arm or a leg.

ANNIE HUNTER CLARK.

[Mrs. John Peyton Clark.]

New York city.

WISCONSIN'S NIGHT LAW

TO THE EDITOR: The article, Shorter Hours for Western Working Women, in the SURVEY of August 25, misinterprets the recent order of the Industrial Commission of Wisconsin relating to night work of women.

The error is due to regarding this order as the first action taken in Wisconsin to limit the hours of labor of women. On the contrary, it supplements the women's hours of labor law enacted in 1913. Under this law the hours of labor of women in Wisconsin are limited to 10 per day and 55 per week.

Under date of June 29, 1917, the Industrial Commission entered orders, which became effective August 1, 1917, supplementing this legislation in two respects.

First, there is an order prohibiting night work in manufactories and laundries, between 6:00 P. M. and 6:00 A. M. This order does not apply to pea canneries, but it is not true that the hours of labor in pea canneries are unlimited, as your article implies. This order represents a new policy in Wisconsin. We believe it is noteworthy because it makes 6:00 P. M. the dividing line between day and night work, while other states prohibiting night work in manufacturing establishments define night work as work after 8:30 P. M. or 10 P. M.

Second, the commission made an order providing that night work in mechanical and mercantile establishments, restaurants, telegraph and telephone offices, express and transportation establishments, is to be limited to 8 hours per day and 48 hours per week. In such establishments, work on one night each week is permitted, without becoming subject to the above limitations. But if work is done after 6:30 P. M. on more than one night a week, the limitation of 8 hours per day and 48 hours per week applies, although the major portion of the work may be done during the day time. This order of the commission merely restricts the provisions of the law of 1913, as it was understood prior to a decision by the Supreme Court of this state in 1916.

The questions which the commission leaves open for further investigation are whether the permitted hours of labor per day should be reduced from 10 to 8, and whether night work should be prohibited or further restricted in any places of employment other than manufactories and laundries.

EDWIN E. WITTE.

[Secretary Industrial Commission of Wisconsin.]

Madison.

AS OTHERS SEE US

TO THE EDITOR: Elihu Root, Charles Edward Russell and many American editors after them, have been "shocked by the unfavorable accounts of American life given in that country" by the Russian immigrants who have returned to Russia after the revolution. Their critical attitude toward the country that gave them shelter from persecution is editorially explained by the assumption "that they are little acquainted with the conditions of life in this country," while on the other hand, they "know about every peace manifesto, every disloyal utterance," etc.

May I suggest that if the SURVEY for August 18 were to come into the hands of any reader in Russia, and he chanced to read the letters of Roger Baldwin, recently secretary to the St. Louis Civic League—presumably not an "anarchist" (whatever that may mean)—and of Jessie Fauset, he would come to the following conclusions:

(1) That race riots, as cruel as the anti-Jewish pogroms, have occurred in the United States.

(2) That while in Russia the pogroms were condemned by all decent citizens, in the United States the president of the American Federation of Labor publicly attempted to find mitigating circumstances for the perpetrators of the fiendish acts.

(3) That this was not an isolated outbreak of savagery, but that "what happened in East St. Louis might happen anywhere."

(4) That the police and the militia connived at the mob violence against the Ne-

groes, just as the police and the soldiery of Nicholas II connived at the pogroms against the Jews in Kishinev, Honiel, etc.

(5) That the labor leaders of East St. Louis urged the authorities to "devise a way to get rid" of the Negroes—a thing which has never happened in the labor movement of Russia, with her mixed population consisting of many races, including Mongolians and other Asiatics.

(6) That "a people whose members would snatch a baby, because it was black, from its mother's arms . . . and fling it into a blazing house, while white furies held the mother until the men shot her to death, such a people is definitely approaching moral disintegration."

(7) That municipal government in many American cities is controlled by corporations, in partnership with the politicians and the underworld—and that "it is an old story—and simple."

My suggestion, in order to counteract the evil effects of the propaganda of returning Russian immigrants, is to withdraw from the SURVEY the second-class mailing privilege, as was done with similar "anarchist" publications like the *American Socialist*, the *Masses*, etc.

By all means let us put a stop to all those disloyal utterances!

ISAAC A. HOURWICH.

Brooklyn, N. Y.

THRIFT

TO THE EDITOR: In your excellent and much-needed article on Thrift and Saving in your issue of August 4, should you not give America the credit for its most popular method of saving money, as well as one of its largest, viz., through life insurance? Some years ago the Russian minister of finance in discussing in what countries some Russian securities could be placed, replied to the suggestion of the United States, "No. All Americans invest in life insurance." It is not generally known that America has popularized and developed this institution until America carries 20 per cent more life insurance than all the countries in the world put together.

The latest figures show that probably 29,000,000 Americans are carrying 46,373,135 policies for \$24,679,312,325, for which they are paying each year \$847,983,760, and including the interest upon their own money amount to \$1,117,860,328. Some deductions should be made from these totals, because some of this insurance is carried in Canada and other parts of the world; but the deduction would not be very large in proportion.

This number of Americans laying by money not so radically but systematically, this way, probably exceeds those who have money invested in all other forms put together—bonds, stocks, savings banks, real estate and business, and is a credit to American thrift and foresight as well as to love of home. These persons have started out on a definite plan of saving a specific amount of money to be paid at a specific time, and to be laid by for a purpose usually far into the future, and this is exclusive of the more than \$150,000,000 annually paid into fraternal and beneficial organizations which perhaps do not involve so much of an element of saving, as such certificates seldom have definite values available during lifetime; but if these are included, it runs the American total up to the following figures:

Total policies or certificates.	\$55,620,685
Amount of insurance in force, including certificates.	\$34,198,684,701
Total assets represented.	5,752,320,280

Of course, the total number of policies or certificates does not represent the total number of persons carrying them, because many carry several.

The magnitude of this sum may be illustrated by the fact that there are but four nations in the world whose total wealth exceeds his principal: Americans are systematically providing for the future, for themselves or their families, in this way, in addition to the wise methods of saving through savings banks, building and loan associations, and lately by the purchase of bonds, the number of bond-holders having fortunately been increased from 200,000 or 300,000 to 4,000,000.

EDWARD A. WOODS.

Pittsburgh.

WHEN LABOR IS CHEAP

TO THE EDITOR: I have read with much interest the letters and articles appearing in the SURVEY from time to time, regarding Negro emigration. I do not know whether anyone from Georgia has addressed you on this subject or not—I do not remember reading any such communication—so I feel that a word or two from someone who has lived his span of years in the South, in both city and rural communities, can possibly add something to the many things already said about the situation both in the North and South which might be helpful.

There are two viewpoints to be taken into consideration when thinking of Negro emigrants in connection with their settlement in northern cities: First, the adjustment; and second, their readjustment. The work to which they have gone in the northern and eastern states cannot at the present time be regarded as permanent. If I am informed correctly, the majority of the Negroes have gone to or near the larger cities. The work in which they have engaged is more or less of the mushroom variety; I mean by mushroom variety, the operation of large manufacturing concerns on contracts brought about by the heavy demands created by the present war in Europe.

In considering the adjustment of the Negro emigrants it might be well to bear in mind this fact: There are two separate and distinct types of them, viz., the city type and the rural type. The rural type is by far the most ignorant, due to the lack of educational advantages in the rural districts. They have been reared upon farms, and their work has been that of farm laborers. If it is true that the majority of the emigrants are of the rural type, knowing them as I do, I can appreciate just what a tremendous task it must and will be to adjust them to the environment of the manufacturing cities of the North and East. After having seen some of the tenements and attached houses they will have to live in there, and contrasting such with the healthy cabins surrounded by their garden plots in the rural sections of the southland, one hesitates in his prognosis of what the results to them will be after passing several winters under such widely different housing and climatic conditions.

In this immediate connection I recall a recent letter from a charity organization society in an Ohio city of a half-million population. They requested the verification of the legal residence of a family of Negro emigrants numbering eleven in all. The men in the family were ill with tuberculosis, thus rendering partially dependent the entire family. The legal residence of this family was established in a rural section of north Georgia. I do not believe anything short of a complete survey of the northern and eastern cities affected by Negro emigration will reveal just how many families became dependent after arriving in their new homes, and of the number whom it became necessary to tide over breakdowns due to the change of circumstances.

It appears that the attractiveness of the wages offered was the principal power which drew the majority of the Negro emigrants

away from the South. Very little, it seems, was said to these simple, unsuspecting folk of the relative increase in the cost of living. The writer, while in one of the largest northern cities in June, 1915, inquired into the difference of the cost of living of the Negro in the North as compared with the South, and also the difference in wages paid to unskilled and semi-skilled laborers. I found that while the wages paid in the North were higher, the cost of living was correspondingly high. Since 1915 the rate of wages has greatly increased, but along in the wake of the greatly increased wage has stalked the ever-increasing cost of living.

Ever since the Civil War there has not been a time when there was not sufficient work for Negroes, both male and female, in the entire South. Anyone who is familiar with the characteristics and peculiarities of the Negroes, knows just how happy and healthy they are when engaged in agricultural occupations. Some of the successful farmers of the South are Negroes, and thousands of acres of farm land are owned by them in the southern states. A banker, who knew the Negro family mentioned above, in response to a letter of inquiry as to the advisability of returning them to their home country, wrote as follows: "As to the work they might find to do in the vicinity, there is plenty of it, as has always been, if they will do the work."

The city type of Negro emigrant will be much more easily adjusted to their new environment, because the work he will engage in in his new environment is similar in many respects to that in which he engaged in his former environment. He, like his rural brother, however, will be greatly handicapped by the climatic change as well as the change in living conditions which he must undergo. The labor market in the South is largely like that of the North; shortage of work during the past has usually affected both alike. At the present time, in fact, for the last ten years, barring the severe unemployment situation of the winter of 1914, there has been plenty of work for the Negroes in the many and varied manufacturing industries of the South.

As both North and South have faced the results of Negro emigration and have been forced to effect the best possible adjustment of the situation brought on by their migratory flight, so also will both North and South have to undergo a process of readjustment before we have finished with this problem. Whether we think so now or not, wars have a peculiar manner of ending, and sometimes rather abruptly. Sooner or later the present war will end, the tremendous demand for colored labor in the North will cease, and then—what? Those of us who are thinking at present in terms of social readjustment, are faced with the old adage reversed, "In time of war, prepare for peace."

I do not think the demand for colored labor in the North will entirely cease at the end of the war. Northern manufacturing industries will come in for their share of the contracts for materials to be used in the reconstruction of devastated Europe, and will be able to absorb permanently a part of the colored labor so recently come to them. There will be, however, a residuum, probably 50 per cent, of which some permanent disposition will have to be made.

Georgia, along with other southern states, will harvest a bumper crop this year. This crop was planted and will be harvested without the aid of the thousands of Negro laborers who left us. The agricultural districts have been able so far to adjust themselves to the enforced labor shortage.

When the war shall cease and the northern and eastern labor markets find themselves more or less glutted with colored la-

bor; when those best fitted to remain are retained and the rest summarily dismissed, what then will become of the residuum, the unfit percentage? Just after that unspeakable race riot in East St. Louis, Ill., a gentleman from Mississippi agreed to charter a steamboat and return one thousand Negroes to the plantations along the Mississippi river. I do not know whether this offer was ever accepted or not, but had it been accepted and this thousand returned, I am wondering if they, along with the other thousands of these simple tillers of the soil, who sooner or later will drift back to their native heath, will return to the little cabins in the clearings as sound in body and as happy as when they left, and with the perpetual song upon their lips, as is their wont?

To those of us who understand and appreciate the southern darkies, a great pity is in our hearts for those who were enticed away from their homes by rosy-hued promises of big wages. We deplore the fact that they have been made mere pawns to be moved about at will on the board of war-time industry.

BOYCE M. EDENS.

[Assistant Secretary Associated Charities]
Atlanta.

JOTTINGS

AMONG the banners carried in the Americanization demonstration under the auspices of the St. Louis Chamber of Commerce were the following: Birth an Accident, Citizenship a Choice; Italians by Birth, Americans by Choice; We Came from Syria, but Now We Are Americans.

FOURTEEN white and nineteen colored citizens of Cincinnati make up the Negro Civic Welfare Committee, appointed by the Cincinnati Council of Social Agencies. Immediate attention will be given to housing, migration, and working girls.

FAYETTE county, Kentucky (the city of Lexington and its environs), has raised \$3,000 more than the \$55,000 required to pay for the buildings of its tuberculosis sanitarium. Popular vote two years previously authorized the sanitarium, but expenditures for roads used up the county funds, and rather than wait indefinitely, the citizens decided to raise the money by contribution.

ALMOST a half-million women of New York city and more than 900,000 in the state have signed statements asking for the vote. At the convention last week of the state Woman Suffrage Party addresses and cordial letters were received from men prominent in both political parties, including President Wilson, Governor Whitman and Mayor Mitchel. New York votes on the suffrage amendment in November, and Maine in September.

THE annual convention of the Central States Cooperative Society, a federation of about fifty cooperative stores, will be held at Staunton, Ill., September 10. The main subjects under discussion will be the unification of the American cooperative movement and the establishment of central buying. It is expected that a wholesale society will result from this convention.

INCREASE of Negro prisoners in the Cleveland workhouse from 9 per cent of the total

to 57 per cent in the course of the year ending August 7, during which period the white prisoners decreased by more than 50 per cent, is one of the findings of the Committee on Urban Conditions Among Negroes, recently organized by the Cleveland Welfare Federation. The large number of Negroes is said to be due to the large Negro migration from the South, including many who have had records in their former homes; to lack of proper housing and recreation; to ignorance of northern customs and laws; and to a cumbersome probation system. The last three factors are evidenced in the fact that most of the Negro prisoners are locked up on minor charges. The new committee will concentrate its immediate efforts on the provision of adequate housing and lodgings, on probation work and on safeguarding Negro girls. The chairman is Elbert H. Baker.

ROBERT S. SPEAR, secretary of the Presbyterian Board of Foreign Missions, is to be chairman of the war commission of the Federal Council of the Churches of Christ in America, which will consist of one hundred leading clergymen and laymen from all parts of the United States and of all Protestant denominations.

DR. WILLIAM J. ROBINSON, editor of the *Critic and Guide*, sends the first issue of a new magazine, *A Voice in the Wilderness*, in which he very kindly recommends the *SURVEY*, along with the *New Republic*, the *New York Evening Post*, the *Public*, and half a dozen other periodicals as "those few courageous papers who have not lost their sanity, their humanity, and their sense of fairness and decency." The new magazine is political and individualistic. The chief contribution (Apologies! The editor apparently has written the whole issue himself) in the first number is a long open letter to President Wilson in defense of free speech, of an early peace, of the conscientious objector. The magazine is outspokenly critical and favors the immediate repeal of the draft law. It is published monthly at 12 Mount Morris Park, West, New York city, for 15 cents a copy, one dollar a year.

THE War Relief Clearing House for France and Her Allies, established soon after the outbreak of the war, has been closed and the Red Cross, against the opposition of some of the independent war relief charities, has succeeded in monopolizing all the work of material distribution in France and Belgium. "In order to secure the greatest efficiency, it has been found necessary to place the administration of the new organization on a strictly military basis and to vest in it full discretion with respect to distribution of relief supplies in France." In other words, independent relief agencies are no longer able to secure cargo space and are advised to direct the hospitals, orphanages, etc., to whom they have been accustomed to ship supplies, to apply to the Red Cross for France and Belgium for a supply of needed articles from its warehouses. Such applications will be met in the order of relative urgency, as judged by the Red Cross representatives. The council of independent war charities recently formed has, so far, taken no action upon this new development, but it is understood that several of them will refuse to fall in with the Red Cross plan and endeavor to secure shipping facilities by direct negotiation with the French government.

FRANCE'S losses at home, through the death of infants and children, together with a hirth-rate for last year estimated at only 8 per 1,000, against a death-rate of perhaps 20 per 1,000 (exclusive of death from military causes), has led to the appointment of a Red

Cross commission to look into the situation on the ground and to recommend ways in which this country can help. The work is financed by Mrs. William Lowell Putnam, of Boston. The head of the commission is Dr. William P. Lucas, professor of pediatrics at the University of California. Associated with him are Dr. J. Morris Slemmons, of the Yale Medical School; Dr. Julius Parker Sedgwick, of the University of Minnesota; Dr. N. O. Pearce, of Cloverton, Minn.; Dr. John C. Baldwin, of Pittsburgh; Dr. Clain F. Gelston, assistant to Dr. Lucas at California; and the following, described in the announcement as "experts in sociology and child-welfare work": Mrs. Slemmons, wife of Dr. Slemmons; Mrs. Lucas, wife of Dr. Lucas; Elizabeth Ashe, head resident of Neighborhood House, San Francisco; and Rosamond Gilder, daughter of the late Richard Watson Gilder, the poet.

THE second Pan-American Congress on Child Welfare will be held in Montevideo, the capital of Uruguay, March 17-24, 1918. The executive committee, of which Dr. Luis Morquio, a pediatricist of Montevideo, is chairman, extends a cordial invitation to all societies and persons interested to become members and, if possible, to attend. Four sections have been arranged—sociology and legislation, education, hygiene and medicine. In each country of the three Americas a committee has been authorized to enroll members, secure papers, draft resolutions, and take charge of the local affairs of the congress. Julia C. Lathrop is chairman of the committee for the United States, and Edward N. Clopper, 105 East 22 street, New York city, is secretary.

WHAT sociologists may do toward solving the problems of the present war situation—a symposium in the July issue of the *American Journal of Sociology*—includes the following by E. L. Talbert, of the University of Cincinnati: "As a practical expedient to counteract the bombardment which emanates from the newspapers and other agencies which build up unconscious social attitudes, I suggest that sociologists make special effort to extend the circulation and influence of the periodicals which stand for analyses of social causation and impartial interpretation of changing situations. I refer to publications such as the *SURVEY* and the *New Republic*, as well as to the more academic journals of the social sciences."

THE Richmond School of Social Economy, for the training of both social workers in the narrower sense, and of public health nurses, will open on October 1 with the cooperation of the state and local agencies, whose executive officers will take part in the teaching. Hitherto the South has of necessity depended for its trained social workers on outsiders, whose interests were in their former homes, or on southern students sent to the northeastern and middle-western schools, many of whom never returned because of the higher salaries offered elsewhere. The Richmond school hopes to overcome this situation, beginning with Virginia, but gradually extending its influence over the whole South, and to serve, moreover, as a demonstration of the value and necessity of trained service. This is especially needed in the public health field, it is stated, for few southern nurses have had social training. The choice of Richmond is pointed out as especially happy in this connection, as the nursing service of its Department of Health and its Instructive Nursing Service offer field work of the first rank. The director of the school is Henry H. Hibbs, Jr., a southerner, a graduate of Columbia, and for two years a fellow in the Boston School for So-

cial Workers. His assistant is Loomis Logan, formerly a district agent of the Associated Charities of Birmingham and executive secretary of the society at Lawrence, N. Y. She, too, is a southerner, who has taken work in the New York School of Philanthropy.

AFTER months of wrangling, the state legislature of New York passed a Food Control Bill which provides for the creation of a commission of three members, to be appointed by the governor, and to serve without salary. The principal business of the commission will be to discover and report to the federal authorities any hoarding, destruction, waste, monopolization or interference with distribution of foods, feeds, seed, fuel oil, fertilizer or tools, utensils and implements required for the production of these necessities. If the federal food administration in such case does not take action within three days, the state commission is empowered to proceed directly against the offender, for instance to seize and sell at public auction hoarded foods and pay the original owner the proceeds of the sale less the cost of legal proceedings. Following federal legislation in this respect, also, the commission is empowered to license food manufacturing plants and warehouses and to make rules for their conduct, violation of which would lead to suspension of the license. It is authorized, further, to compel common carriers to give preferential treatment to the necessities named. Its permission is required by the municipalities in the state for the purchase and retail sale of food and fuel, whether for the purpose of relieving distress or that of stabilizing prices.

THROUGH cooperation with village solicitors and mayors, the Committee on City Plan of the Cleveland Chamber of Commerce has secured since last April the adoption in 17 out of 27 villages in Cuyahoga county, of a uniform ordinance governing the laying out of new subdivisions. Inasmuch as the three cities in Cuyahoga county outside of Cleveland have adopted housing codes practically identical with Cleveland's, all the territory contiguous to Cleveland, certain to be annexed sooner or later, is now protected by regulations which will ensure essential uniformity in development. The ordinance calls for highways 100 feet wide, secondary highways 80 feet wide, no street less than 40 feet, and no alley less than 20. The committee is about to give a certificate and place a bronze tablet on the best factory, the best apartment and the best commercial building of three stories or less erected in 1916. Scores of the buildings are based on percentages assigned to the following points: 1. aesthetic value—simplicity, proportion, artistic and practical use of inexpensive materials, adaptability of building to site and neighborhood; 2. adaptation of space to use-plan; 3. sanitation—fire safety, light, ventilation, provision for economic and thorough cleaning.

TRAINING in Red Cross civilian relief work in Cleveland is given to classes of fifteen members for periods of six weeks each by Helen M. Hanchette, educational secretary of the Associated Charities, under the direction of the School of Applied Social Sciences of Western Reserve University. A similar class is being organized by a committee of the Junior League of Cleveland, of which Mrs. Paul C. Root is chairman. Service to the Civilian Relief Department of the Red Cross by the Visiting Nurse Association has been put on a full-pay basis, equivalent to that furnished to various factories and to the Metropolitan Life Insurance Company. The charge of seventy-five cents for each

COMMUNITY WORK—

Professional Leaders Needed

A satisfying course for men and women of social vision and personality.

THE TRAINING SCHOOL FOR COMMUNITY WORKERS

of the People's Institute, New York. JOHN COLLIER, Director

In a one year course of training we prepare our students for well-paid positions in Community Centers, Social Settlements, Public Employment and Child Welfare Services. We have never had enough graduates to fill all the desirable positions for trained, competent workers that have come to us.

We have just been formally asked by the Mayor's Defense Committee to undertake the training of whole-time professional workers to be utilized in its Americanization campaign and to organize in addition a course of training for about 200 regularly enrolled volunteers.

This call upon the Training School for Community Workers stamps its achievements with the

highest mark of civic approval. But more important is the fact that this co-operation with the Mayor's Committee will make it possible for us to secure as lecturers and instructors for the coming year the foremost specialists in all lines of community work, thus enriching our course and extending the opportunities of our graduates in a way we could not have offered under ordinary circumstances.

visit not exceeding an hour in length is based on the actual expense.

ENQUIRIES made in the different training camps show that the taste in movies is exactly the same in the four military departments. "The men don't want sob stuff. They do not want pictures of home, mother and heaven. At the same time they do not like pictures depicting the soldier as being especially heroic or patriotic. They like romances, real war pictures, and farces. In fact, they are working hard and want entertainment." The National War Council of the Y. M. C. A. has arranged with the Community Motion Picture Bureau for the presentation of eight million feet of film per week, to render 1,126 programs weekly in 343 cantonments, camps and posts.

CUSTOMARY city grants to the private charities of Lexington, Ky., are held up by the mayor because of an injunction entered by Mrs. Desha Breckenridge, a director of the Associated Charities, against the payment of \$720 (\$60 monthly) appropriated to the Salvation Army for relief work, emergency home and hospital dispensary. The Salvation Army promised that all the money spent for relief would go into relief and not into "overhead." Members of the city council expressed their approval of the principle of "doing charity at once, without investigation." Mrs. Breckenridge alleged that the Salvation Army's relief work was not necessary and was subordinate to its religious work, that all Lexington's needs for an emergency home are cared for by the police and the Associated Charities, that dispensary facilities are provided by the Public Health Nursing Association, and that the city could not rightfully pay over funds to an organization which was directed from outside the city and state and which turned over a part

of its funds to that outside authority. One result, apparently, of a matter still unsettled, will be a survey of charitable work, for which the council has appropriated \$1,000. The American Association for Organizing Charity has been asked to undertake it.

Pamphlets are listed once in this column without charge. Later listing may be made under CURRENT PAMPHLETS (see page 515, last column).

HOME SCHOOL SPARKILL, N. Y.

Mr. and Mrs. John Collier announce the 2nd year of the Home School, Sparkill, N. Y. Boarding School for small group of boys and girls between the ages of four and nine. Sleeping porches, open air school rooms. Work and play along modern educational lines.

WHY BONDS?

The Nation needs money. Bonds extend long after "war profits" end. They increase all taxes, burden industry until paid and ultimately cost \$2.00 for every \$1.00 raised. They increase living costs and reduce wages.

THINK OR PAY

A tax on land values only will raise yearly \$5,000,000,000, will abolish all other taxes, force idle land into use, increase crops, boom industry and perpetuate real prosperity.

Investigate—Booklet Free

Your Minister

returning from vacation full of ambition to make your church of service in this war year, would find the SURVEY uniquely helpful.

It would show him how your church can participate in all the great vital social movements of the war and how to get at the local problems which are vexing your own community. It would give him splendid illustrations for his sermons.

One minister said: "I have on my desk only two pieces of literature—my Bible and my SURVEY." Your minister, too, would find the SURVEY worth while.

Why not make him a present of the SURVEY, now, at the start of his year's work? Send three dollars at once with your minister's name and your own.

THE SURVEY

EXPERIENCED worker to direct evening clubs in settlement house. Address 2587 SURVEY.

THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

SURVEY

ASSOCIATES
INC.

KEY

If you know the name of the agency or organization, turn direct to the listings (3d column) for address, corresponding officer, etc. [They are arranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject classifications, as "HEALTH," printed in capitals.]

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but offers an opportunity for you to share spiritedly and seriously in your community or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall endeavor to get your inquiry into the right hands.

WARTIME SERVICE

"HOW the SURVEY can serve" was the subject of an informal conference held early in April, in our library, to which we asked the executives of perhaps twenty national social service organizations. The conference was a unit in feeling that as a link between organized efforts, as a means for letting people throughout the country know promptly of needs and national programs—how, when and where they can count locally—the SURVEY was at the threshold of an opportunity for service such as has seldom come to an educational enterprise.

The development of this directory is one of several steps in carrying out this commission. The executives of these organizations will answer questions or offer counsel to individuals and local organizations in adjusting their work to emergent wartime demands.

Half of the South furnishes information on all phases of the race problem and on the Tuskegee idea and methods.

ARMY AND NAVY INFORMATION

By MAJOR DE WITT CLINTON FALLS, N. G. N. Y.

Net, \$1.00

Uniforms, Organization, Arms and Equipment of the Warring Powers.

Illustrated by six color plates and thirty line cuts by the author.

Presenting important information concerning the military and naval service in so simple a form that it can be readily understood by all. Also giving to the soldier and sailor technical information regarding organization, uniforms, insignias, etc., in such a way as to make the book an extremely useful work of reference to the young men who are to enter into military life and wish to acquire a general knowledge of this new profession.

IN PRESS

THE PRINCIPLES OF MILITARY ART

By MAJOR SIR FRANCIS FLETCHER-VANE.

Net, \$1.25

The book places before officers and men only the principles of the military art, leaving the details to the ordinary textbooks, so that when they have grasped the fundamentals they may easily fit in their work to these.

AMERICA'S CASE AGAINST GERMANY

By LINDSAY ROGERS.

Net, \$1.50

Our case against Germany should be understood by every intelligent citizen in order that the country may see the necessity for a successful outcome of the war. A high morale in our fighting forces is dependent upon a clear understanding of the points at issue, and this can be secured from the present volume.

RAILWAY NATIONALIZATION AND THE AVERAGE CITIZEN

By WM. H. MOORE.

Net, \$1.35

No one who wishes to understand the present railway situation in Canada can afford to be without this book. Because of its clearness of thought and simplicity of construction it will appeal to "The Average Citizen."

SELF GOVERNMENT IN RUSSIA

By PAUL VINOGRADOFF.

Net, \$1.25

Newark Evening News, "The volume, so informing—and so hopeful—gives in brief, but measurably comprehensive form a sketch of what the author happily calls 'a very remarkable and powerful individuality.' The reference is to the real Russia." New Edition

SIX MONTHS ON THE ITALIAN FRONT

By JULIUS M. PRICE. Net, \$3.50

As war artist and correspondent to the *Illustrated London News* through the Italian campaign, Mr. Price has described what he saw and heard with vigor and vivacity. His brilliant pictures, drawn from life, are especially attractive.

ITALY AT WAR

By HERBERT VIVIAN.

Net, \$2.50

Impressions and adventures while tramping about Italy in wartime. There are chapters on the court; character sketches of leading physicians; the Pope's personality and policy; the Italian Army at work; Romance of German Espionage. Many of the illustrations are from photographs especially given by the Italian government. The book is full of rare charm and literary atmosphere.

THE WAY OF THE CHILDISH

By SHRI ADVAITACHARYA.

Net, .50

A little book of maxims along the lines of the New Thought presented by Tagore and others of that school.

CHATHAM'S COLONIAL POLICY

By KATE HOTBLACK.

Net, \$2.50

A study in the fiscal and economic implications of the Colonial policy of the Elder Pitt. An important work of historical research of especial value for reference purposes at the present time.

EARLIEST MAN

By FREDERICK WILLIAM HUGH MIGEOD.

Net, \$1.50

A study of Primitive Man and Early Society, based on the author's researches amongst the tribes—and wild animals—of West Africa. Sketches the evolution of man from his simian ancestry to his attainment of the rank of *Homo primigenius*.

FOOD, FRUIT AND FLOWERS

By WALTER P. WRIGHT.

Net, \$2.00

Food before flowers is the author's principle thought. He shows how even the small garden can be used to grow more fruit and vegetables. The author is one of the best-known gardening authorities in England.

CIVILIZED COMMERCIALISM

By ERNEST G. STEVENS.

Net, \$1.25

An application of democracy to business. It outlines a scheme, sane, modern and just for eliminating oppression, czarism and cut throat competition from business and yet of permitting the fullest useful growth and activity to business corporations of any size.

THE BOOK OF HOME NURSING

By FRANCIS CAMPBELL.

Net, \$1.25

A practical guide for the Treatment of Sickness in the Home. A most invaluable book for all homes. Mrs. Campbell, herself a trained nurse, does not try to teach you to be a trained nurse, but she does tell you what to do in an emergency and how to care for the sick in your household.

ON THE THRESHOLD OF THE UNSEEN

By SIR WILLIAM F. BARRETT.

Net, \$2.50

An examination of the phenomena of spiritualism and of the evidence for survival after death. Giving some new and remarkable evidence, supplementing in a most striking manner that adduced by Sir Oliver Lodge in his recent work.

Uniforms from Sweatshops

A LARGE, fat leisurely gray louse, one so large he seemed a very limousine of a louse, appeared on the immaculate olive-drab front of an army uniform. The soldier complained bitterly. He denied any previous relations with the intruder—"lice are not gray, sir, in my part of the country"; said he came without credentials or even an introduction; and it was a new coat anyway—he'd not even had it on. Followed an investigation as to where the coat was made and now it appears that the gray louse performed a valuable public service.

Army uniforms are to be taken out of the sweatshops. The new contracts will effectively forbid home work on them, and Uncle Sam can no longer be held up to scorn and contumely for buying his new fall clothes regardless of their origins.

Some months ago the New York Child Labor Committee, the Consumers' League and the Amalgamated Clothing Workers' Union protested that in New York uniforms were not safeguarded, and that work was being sent out to even worse fate on sub-contracts in other states which tolerate low standards of sanitation and child labor. Official Washington had apprehensive recollections of the epidemics of measles which ravaged our armies in the Civil and Spanish-American wars.

Secretary of War Baker met the situation by appointing a Board of Control of Labor Standards consisting of Louis E. Kirstein, of the Filene store, Boston; Mrs. Florence Kelley, secretary of the National Consumers' League; and Captain Walter E. Kreusi, of the Quartermaster Corps, U. S. R., formerly superintendent of the Public Employment Bureau of New York city. They are charged with taking such steps

that the quartermaster-general will be enabled to enforce the maintenance of sound industrial and sanitary conditions in the manufacture of army clothing, to inspect factories, to see that proper standards are established in government work, to pass upon the industrial standards maintained by bidders in army clothing, and act so that just conditions prevail.

The new board has been able to draw on the investigations of a number of social agencies. The New York Child Labor Committee, especially, has been since early July continuously on the trail of uniforms given out for finishing in tenement homes. The results have been placed daily at the service of the board and have been of substantial value to it. George A. Hall, secretary of the committee, reports thus on what his investigators found:

In nearly every street and house where they went they were sure to find army uniforms piled up on dirty kitchen floors, on kitchen tables with the remains of the last meal, on beds in bad-smelling, dark bedrooms; under tables amid filthy floor sweepings, or spread out upon floors for temporary beds for druling babies and dozing cats and dogs. These tenement dwellers had their usual unhappy quota of sore eyes, summer complaint, skin diseases and vermin.

In some sections the uniforms were not even given out; they were "hawked" out. Open wagons loaded with uncovered army goods were sent down the street with a man calling out, "Who wants coats or pants to finish?" . . .

Both disease and dirt were present in a number of the homes in which our investigators found army goods. In one flat overcoats were piled all around on the bed, in the dark bedroom, and in heaps on the very dirty kitchen floor. A palefaced boy about ten years old helped the worn-out mother to finish these uniforms, they earning together \$3 to \$4 a week. In another tenement, on a pile of army coats on the kitchen floor, was seated a little child dropping greasy crumbs, at the same time wiping on the uniforms the filth of the street which had collected on the tiny bare feet. To get away from the stifling heat of the little rooms in one tenement, the woman had taken army pants to finish on the fire-escape. The main pile filled the few kitchen chairs. Near by was a sick baby, while five other children crowded about the visitor. One of these was suffering from a skin-disease, with ugly open sores nearly ready to fester.

The weight of army overcoats was complained of everywhere. The strain of lifting heavy uniforms and sewing on such thick cloth is helping to ruin the health of these frail workers, especially in the many cases found of pregnant women. Early and late these women worked. Some said they had to begin sewing before five o'clock in the morning, while working until nine or ten at night was fairly general. In a few cases, the women declared they worked until midnight.

Child labor in connection with this tenement work was common. Experience of years has proven that wherever grown-ups are allowed to do manufacturing in tenement living rooms, it is impossible to keep children from helping. . . .

Children under fourteen years of age are forbidden employment in tenements "on work for a factory," yet girls of eight and nine and women were working at sweated piece-rates, for unregulated hours. In fact, the New York state law regulating home work in tenements—always hard enough to enforce—seemed to have gone entirely by the board in the face of huge government contracts for a million uniforms in a jiffy.

Secretary Baker has long been an adherent of the Consumers' League principle of buying no clothing made under unfair or unsanitary conditions. He has, in fact, been for two years and now is president of the league. His appointment of the Board of Control and, in particular, his selection of the three members, bids fair to apply that principle on a tremendous scale.

To Keep the Kettle Boiling Back Home¹

The Generous Separation Allowances Proposed for the Families of Army and Navy Men

By Porter R. Lee

STAFF OF THE NEW YORK SCHOOL OF PHILANTHROPY

IF the Alexander-Simmons bill now before Congress becomes a law, the United States will have made most generous provision for the families of its soldiers and sailors. The bill has three divisions: one providing for the insurance of soldiers, one providing for compensation in case of disability or death, and one providing for separation allowances and allotments of pay. This article discusses the third of these provisions.

The pay of a private in the United States Army is thirty-three dollars a month. It is not sufficient to support even a family of two living together, much less a family one of whom is at home and the other in France. To supplement this inadequate income various plans have been proposed. It might be done through existing relief organizations, through a national fund raised for the purpose and administered by a nation-wide organization such as the Red Cross or through a system of allowances from the government. The essential features of the adopted plan should be stability in administration, adequacy in its provisions, and consideration for the status of those who receive the money.

The task is clearly not one for existing relief agencies. It would impose an impossible burden upon them which would demoralize their natural work. Even more important, it would give to the families of our fighting men a status which they should not be forced into. A national fund for the purpose might be difficult to raise, and if so the stability and adequacy of our provision for the families would be threatened. The system of governmental allowances is the only one of the three possible plans which combine these essential features. It is stable, it can be made adequate, and it is essentially just.

The bill now before Congress makes the following provisions for the support of the families of soldiers and sailors.

1. The enlisted man is compelled by the terms of the bill to allot to his family not more than half his pay, or less than \$15 a month. This compulsory allotment applies to a former wife divorced, up to the amount specified in a court order or agreement to be paid to her.

2. The wife of the enlisted man may waive the compulsory allotment of pay upon producing satisfactory evidence of her ability to support herself and children. The man may be exempted from the compulsory allotment for good cause shown, such as the infidelity of the wife. There are no other exceptions to this feature of the plan.

3. In addition to the compulsory allotment to his immediate family, the enlisted man may allot further portions of his pay to any person he may designate, subject to regulations made by the War and Navy Departments.

4. The monthly allowance to be paid by the government to

the immediate family of the enlisted man, in case allowance is not waived or exemption granted, is according to the following schedule:

Wife without children.....	\$15.00
Wife and one child.....	25.00
Wife and two children.....	32.50
For each additional child.....	5.00
No wife, but one child.....	5.00
No wife, but two children.....	12.50
No wife, but three children.....	20.00
No wife, but four children.....	30.00
For each additional child.....	5.00

5. The schedule of monthly allowances to be paid by the government to other persons specified by the enlisted man is as follows:

One parent	\$10.00
Two parents	20.00
Each grandchild, brother or sister.....	5.00

6. The maximum allowance to the dependents of any one enlisted man is to be \$50 a month.

7. The allowance to a former wife divorced is payable only out of the difference, if any, between the allowance to the man's immediate family and the maximum allowance of \$50.

8. Allowances to other designated persons are payable only while they are dependent upon the man. They are payable also only while he is making a monthly allotment of his pay equal to the amount of the governmental allowance, except where he is also making an allotment of pay to his own family, in which case the government requires of him a minimum allotment of not less than \$5, or one-seventh of his pay.

9. Under the terms of the bill the term child includes:

(a) A child legally adopted more than six months before the enactment of the law or the enlistment of the man, whichever of these dates is the later.

(b) A step-child, if a member of the man's household.

(c) An illegitimate child, if acknowledged by the father or if he is under court order to support the child.

(d) A person unmarried and under eighteen years of age, unless mentally or physically incapable of earning a living.

10. The total monthly allowance to beneficiaries outside the man's immediate family added to his allotment to them shall not exceed the amount habitually contributed by him to their support monthly during the year preceding enlistment or the enactment of the law.

To illustrate the operation of the law, the following case is supposed in the letter of Secretary McAdoo, which accompanied a draft of the bill to the President:

A private gets \$33 a month for service abroad. If he has a wife and two children, he must allot to them at least \$15 of his pay. The government supplements this by giving the family an allowance of \$32.50. The family's minimum income, therefore, would be \$47.50. The father can allot as much more as he pleases. If there is another child, the government will allow \$5 additional. If that man should have a mother or father actually dependent upon him, and to whom he has been accustomed to contribute, say, \$15 a month, he can secure an allotment of \$10 a month from the government for the parent by allotting \$5 more of his pay. Thus, the private with a wife, three children and a mother actually dependent upon him,

¹The main features of the bill drafted by Judge Mack for the Treasury Department were given, the week it was introduced in Congress, in the SURVEY for August 25. The insurance features of the bill were discussed in last week's issue by Joseph P. Chamberlain. Next week Dr. I. M. Ruhinow will write on the compensation provisions. The bill is out of committee in the House and, as an administration measure, is expected to move rapidly toward enactment.—EDITOR.

by giving \$20 out of his \$33 a month, would get from the government for his family \$47.50 a month, giving his family \$67.50 and still leave the man \$13 per month for spending money. If there are more children, or if there is also a dependent father, the government would give up to \$50 in all, over and above the man's own allotment.

This is a generous provision for the families of our fighting men—not too generous, but amply so. It provides better support than do the allowance programs of any of our allies. Canada provides a flat allowance of \$20 a month. The schedules of England, France and Italy are given here in comparison with that proposed in Judge Mack's bill:

MONTHLY SEPARATION ALLOWANCES TO SOLDIERS' FAMILIES

	English	French	Italian	United States
Wife alone.....	\$13.00 ¹	\$ 6.50	\$ 3.92	\$15.00
Wife and 1 child.....	18.00	12.00-15.00	5.88	25.00
Wife and 2 children....	22.00	18.00 and over	7.84	32.50
Wife and 3 children....	24.00	22.00 and over	9.80	37.50
Wife and 4 children....	26.00	30.00 and over	11.76	42.50
Wife and 5 children....	28.00	13.72	47.50
Wife and 6 children....	30.00	15.68	52.50
Wife and 7 children....	32.00	17.64	57.50
Wife and 8 children....	34.00	19.60	62.50
Father or mother alone..	36.00	3.92	10.00
Both	6.38	20.00

¹Includes 6d. a day from man's pay.

There will be instances in which this governmental allowance will not be adequate, necessitating a supplementary grant from other funds. It is probable, however, that the income which the allotments and the allowances together provide will at least equal the accustomed incomes of the families which receive them. Indeed, unless the experience of our allies is reversed in this country, many of the families of our fighting men will, if this bill passes, find themselves in possession of larger and more stable incomes than they have been accustomed to. The permanent effects of this change upon the American standard of living will be interesting to watch, although they may be difficult to trace.

This aspect of the matter raises some interesting questions of administration. Our local governments particularly have made rapid strides in the work of raising standards by the education of individuals and family groups in important matters of living. Much of our public health nursing, the work of infant welfare stations, contacts between the school and the home are primarily educational for the families concerned. Under the plan of separation allowances proposed by the Alexander-Simmons bill, many families will for the first time be able to finance the higher standard of living which this educational work is intended to promote.

The large majority of these families may be depended upon to rise, by virtue of their own good sense, to this opportunity. Others will need the same leadership in doing so which the workers in many of our public welfare movements are attempting to provide. In the situation created by the assur-

ance of reasonably comfortable support to thousands of families under this bill, there is a distinct challenge to our public welfare movements from the Red Cross, national in its scope, to the public welfare activities of our local communities. There should be and will be no attempt on the part of any public welfare agency to assume any right of entry into the homes of soldiers and sailors because they are receiving governmental allowances as part of their compensation. This cannot be too strongly insisted upon. To those families, however, who voluntarily seek counsel and other aid in new problems which the war has brought them and old problems for which the leadership of the man is no longer available, we must be prepared to offer whatever form of helpfulness they may need and human resourcefulness can provide.

The bill itself makes no specific reference to the administration of the law other than to lodge it in the Bureau of War Risk Insurance in the Treasury Department for the investigation of applications and the making of awards and to make the actual method of payment subject to regulations of the War and Navy Departments.

One feature of the bill has caused considerable discussion. Enlisted men, without dependents, may be required, under regulations of the War and Navy Departments, to deposit one-half of their pay to be held during such period of service as may be prescribed. Such deposits are to bear interest at 4 per cent and are to be paid, principal and interest, to him or his designated beneficiaries, at the expiration of the prescribed period of service.

The justification of this compulsory saving by men who have no dependents is stated by Secretary McAdoo to be "to instill thrift, to enable a man to build up a fund out of which he can pay the insurance premiums and, above all, better to preserve equality and democracy among the members of our own forces and between them and the allies."

It is reported that the difference in the spending money of our troops in France and that of the English and French troops has already created embarrassment, as has been the case with the greater incomes of the Canadian and Australian troops since the beginning of the war. At the hearings on the proposed law, Judge Mack reported the judgment of General Pershing that ten dollars a month was ample spending money for our troops. The compulsory allotment of pay by soldiers with families is hardly open to question. There is much force in the argument that it is likely to create less discontent in the soldier who has a family if his unmarried fellows are for the present on the same financial footing as himself.

This bill represents a tremendous stride forward from the flat-rate program of allowances adopted during the summer of 1916, when our troops were on the Mexican border. It will assure all of the essentials of a sound program for meeting the situation: stability, adequacy and consideration.

CLOSE QUARTERS

From the Yiddish of Abraham Raisin, by Leah W. Leonard

EIGHT in the family,
Beds only two—
When bedtime comes round,
Pray, what do they do?
Three sleep with father,
With mother you'll find
Three more are sleeping—
Hands, feet—all entwined.

Each night at bedtime
And each to his bed—
'Tis then the poor mother
Would wish she were dead.
Yes, truly she'd wish it
Deep down in her heart—
Though narrow the grave is,
Yet each sleeps apart!

The Ant and the Grasshopper¹

By *Elsie Eaton Newton*

IF you happen to be traveling anywhere in the great West, turn to your neighbor and ask him what he thinks about the Industrial Workers of the World. A hundred chances to one he will answer after this fashion: "The I-Won't-Work's? Why, they are a lot of nuisances and worse. If they ever try to get busy in my front yard, something will happen to them so they will never come back."

Presuming that you are in a chair-car such as our western roads run as day-coaches, your neighbor is likely to be one of those lean, brown men in a soft shirt, a soft hat and well-fitting store-clothes of the season. He is the kind that shaves daily, gets pressed spasmodically, reads the local papers and the *Saturday Evening Post*, and probably one of the weekly periodicals that digest the news. When he goes to Spokane or Denver, which he does not infrequently, he drops in to see a good vaudeville, or Charlie Chaplin on the screen; or, if he is a rancher who sold his wheat at a dollar seventy-five, he paid off nearly all the mortgage and took his wife and daughters to the city, putting up at the best hotel and giving them a good time generally.

Modern Schools and a Great White Way

HE HAS little or no class-consciousness. For a mere money-getter he has no worship, but for a "pile" he has a very human admiration. He is everlastingly at work on making his own, which at the moment is represented by his business and by a modest but very modern bungalow in a small town—or it may be an unpretentious ranch house with its own lighting and water systems and some effective machinery for running the ranch. There is also a Ford if not a more expensive car, which every member of the family drives. Each summer he takes "mamma" and the "kids" for a long trip in the machine, or for a two weeks' camp in the mountain cañons. His son is a Boy Scout, his daughters are Campfire Girls; and all the children are to have a high-school education—which he never had. His wife belongs to the Woman's Club and the Red Cross and does all her own housework. He—and she—lately voted for a bond issue to provide a system of cluster lights for the town streets, regardless of the fact that the corporation was already pretty heavily bonded for an up-to-date high-school building with its equipment for domestic science and manual training.

In national affairs, his interest is fairly keen, but rather remote; in those of his county and state and his little city it is absorbing. He did not want war (he voted for a president who kept us out of war) chiefly because Germany seemed too far away to bother us; but when the right-about was ordered he bought some Liberty Bonds, contributed to the Red Cross, enlisted in the home-defense guard and ploughed up the front yard into a garden for the "kids" to work.

The picture of this man deserves all this detail, because

¹ Extended travel not only to cities but to villages and hamlets, cross-roads and the open country, have given the author of this article unexampled opportunity to test the temper of the average citizen of the Far West toward the I. W. W. That temper struck back in the deportations from Bisbee and the lynching of Little at Butte. It forms an interesting corollary to eastern feeling as brought out by the SURVEY at the time of the Lawrence and Paterson strikes and later at the hearings of the Industrial Relations Commission. The article makes no attempt to study the itinerant laborer of the West or the reasons for his being; nor does it embrace any discussion of the philosophy back of the I. W. W. movement; such as came out at the strike trials, most recently at Everett, Wash., reviewed by Anna Louise Strong in the SURVEY for May 19.—EDITOR.

there are so many of him, and it is upon him that the shadow of the I.W.W. falls with sinister effect.

His kind are essentially builders, putting courage and energy into the development of a country that may or may not yield all that their enthusiasm dreams of. This boundless belief in its future is their dominating characteristic. They have bonded themselves to the future and every ounce of energy and strategy is required to justify their optimism.

Across their anthill there threatens the trail of this strange wanderer, that has acquired its morals from undigested theories, or evolved them through bitter experience in acute competition. Carrying a banner, it sets its heel upon the anthill.

The great West is not an industrial region, but here and there are lumber and mining interests of large importance. Whatever the interest, whether industrial or not, it is "ours"—our mines, our mills, our fruit ranches, our wheat, our cattle. The shortcomings of any of them, either in management or purpose, will be discussed with entire candor, but as long as they contribute to prosperity they are sturdily ours.

These newer communities are more democratic, more individual, yet in a sense more social than the older ones. The day of solidified selfishness and viciousness of congested populations is yet afar off. There is a spirit of give-and-take, of live-and-let-live, of generous impulse. Understanding of modern industrialism is vague. The individualistic viewpoint prevails. A man who has whacked his way through adverse circumstances does not understand why every other man cannot do the same.

"I have lived in the woods, worked in the lumber mills, slept on the ground, eaten rough fare, blistered my hands, worked sixteen hours a day—and worked out of it into something better. Why should any husky man make such a 'holler' about working conditions? Let him cut his way out of them to better ones and quit talking so much." "Don't be a knocker," is a common expression. It is addressed usually to the man who refuses to be over-optimistic about his own town, but the spirit of it has crept into other relations.

Shoot First; Then Argue

THE sense of fairness in the westerner is equal if not superior to his respect for law. He expects a certain line of conduct from his fellows, and gives in turn what they require of him, but he does not think of these things in terms of law. Tolerance he has to a great degree; let the limit be reached and he is exceptionally quick on the trigger. Kill a rattler first, he will tell you, and argue about it afterwards.

When the I.W.W. instigates a strike in "our" lumber mill, the justification, if justification there be, is not taken into consideration. He resents the intrusion and its effect upon prosperity; when there is threat of destruction of the food and water supply, it is the primitive man who is outraged. Let him hear the utterances against the government or read in the papers the I.W.W. parody on Onward, Christian Soldiers, and there is but one thing, according to his code, that is to be done: he takes his gun, collects his neighbors, finds a whip or a rope—nor talks about it afterwards.

How far the press has contributed to an unreasonable prejudice against the I.W.W., only the press can say. One can-

not take up a daily paper of any importance that one or more outrages are not charged up in it to the I.W.W., or men arrested for petty crimes upon whom, it is reported, I.W.W. membership cards are found. The average citizen cannot investigate these reports, but he should be wary of having his feelings capitalized by either *pros* or *antis*. The stories of the I.W.W. that are passed by word of mouth are quite as potent for prejudice, many of them uncorroborated. One finds the shadow in nearly every state—in Kansas the I.W.W. threatened to burn the wheat field of this farmer; in Oklahoma the waterworks of that small city were dynamited; in Dakota, in California, in Washington—and so on.

As a matter of fact there was an I.W.W. epidemic in San Diego several years ago. Street-speaking became a menace, and an ordinance against it was enforced till the jails were filled. Then a policeman was shot; then the waterworks were threatened. The citizens, finding that the law did not deal effectually with the problem, formed a secret vigilance committee, rounded up the leaders, took them out of town, horsewhipped them and sent them away. By preventing the entrance of other leaders thereafter the city has been reasonably free from similar propaganda, I am told. But these measures, which have been repeated in other instances in more or less degree, did not prevent an Everett, a Bisbee, or a Butte.

The West and the Itinerant Laborer

THE West always has a bumper crop of wanderers. Some are hoboes, some are merely adventurers, a few are "tourists of the brake beam," a great many more are laborers who have become itinerant partly through necessity, partly through choice. At a reclamation camp near which I stayed for several weeks last summer there was a constant stream of laborers going in and coming out. Men were continually imported from the cities, their transportation being paid to the camp. Some of them deserted before reaching camp, others slipped out immediately upon arrival, very few remained for any length of time. Conditions and wages at these government camps are very fair, it could hardly have been a protest against either that sent them away before they arrived. The faces of most of the men were of foreign cast, here and there an alert American; a good many obviously down-and-out's, lacking even decent clothing; many carried their roll of bedding as if it were a habit. A few were plainly deficient, but the proportion seemed small. A large proportion were ignorant apparently. All the faces were joyless, somber, uninterested, a trifle suspicious.

At a lumber-company hotel on Puget Sound, a stream of similar-looking workmen came up the hill to dinner, the manager commenting thoughtfully upon them as they passed the window. Nearly all were of foreign origin, he said. Not many of them stayed longer than three months, and most of them asked for their "time" within a less period.

It is among these men who have no roots that the propagandist for a rearrangement of wealth finds the choicest soil. Apparently the I.W.W. has used this class in organization. The westerner has good reason to fear it, if he fears anything, for it has no habitation, but swarms over the land and holds no relationship to any of the things of his world—save that for a brief time it uses his tools. He is not organized against it; he can erect no barriers; the industries upon which all his living depends are made precarious. All his energies have been so intent upon sending down his roots in a new country that he is unprepared to meet the situation by any thoughtful effort.

As the Westerner Puts It

SAID one westerner, "The I.W.W. is human envy gone mad. It is covetousness with a president, a secretary and a membership card."

A young miner prospecting in Oklahoma asserted that no man could work where the I.W.W. is. "They won't let you work except at the wages they name, and if these are too high no one can afford to employ you."

"A set of bums," said one traveling man.

"They are on their way, but they don't know where they are going," are the words of another.

Commenting upon the happening in San Diego which has been referred to, a lawyer of that city is quoted:

It is my belief that the average citizen thinks the I. W. W. is a man who seeks to live without earning that living. This being true, he is therefore a thief, because he is taking or attempting to take that which belongs to another. I do not believe it is prejudice. American people are very tolerant; they stand a good deal without seeming to be affected; but when men attempt to break laws and take what is not properly theirs, something happens. The class of people who formed the I. W. W. here were a low type of men. I saw some of them in the court rooms. They were mostly young men who appeared to be guided by older men. It is my belief that the leaders were men of the type who seek to live by creating trouble. A community, no matter how small, must have laws or ordinances which shall govern its administration. If they are not willing to obey the laws, then let them leave the community.

Evidently they who broke the laws in San Diego were compelled to leave the community, without benefit of law!

The transcontinental railways—indeed, all the western railways—have never been able to deal effectually with the problem of the man who rides but will not—and maybe cannot—pay his way. This person becomes an adept in evasion. He is not always a hobo, he is not always an I.W.W., but this is a method of mobilization and an opportunity for propaganda whose importance cannot be overlooked. When something can be done to prevent it, the problem may become less acute. But it will not be solved. With characteristic optimism the westerner has given little serious consideration to the movement as such; this is why he is unprepared. At the present moment he prefers to get rid of it and discuss it afterward.

A Dry Look Ahead

By Elizabeth Tilton

BEFORE the war it was almost a "bromide" that, should this country go in we should close our saloons at once. We went to war. We tried to close our saloons. Up to the present time they are still run wide open, eighty-six of them within a half mile of the Boston Navy Yard, Brooklyn equally exposed and so on down the coast. Thus far the liquor interests have won more than the dries.

Here is precisely where the matter stands: Distilling stopped at 11 P. M. on September 8. But as the distilleries had greatly over-produced, the sale of distilled liquor in saloons and elsewhere will go on as usual for many months, the only change being that spirits will be more expensive. Gilmore, speaking for the liquor interests, says that they will make a fortune out of this measure; hence it was allowed to pass that stronghold of the wets, the United States Senate. But the President can take over this distilled liquor if we need it for munition purposes. He can also stop the making of wine and beer.

What that overworked man, President Wilson, will do is any man's guess. The brewers say that he will do nothing; that he is "safe." Others, dries, say he will do everything when the stress for food is greater and the appeal to the people can be made more poignant.

Mr. Hoover is very straight-thinking man. Business and social service are what he sees rather than politics. One must believe that personally he sees the absurdity of asking the women to save every crumb while the government wastes 70,000,000 bushels of grain in the manufacture of beer. The *New Republic* for August 25 says that Mr. Hoover, as food administrator, will seize the grain now diverted to the manufacture of liquor—all in the good time that is coming when stress of war needs puts efficiency first and snags politics under.

That is truly the virile thing to do. If we do not do it, it means we are a nation which tells the business interests of the few, led by such senators as Penrose, Lodge, Wadsworth, Calder, Reed of Missouri, Representative Meeker and others, to take precedence over human welfare, over the two things most needed now—general health and general efficiency.

In the meantime, the Anti-Saloon League will work on a second proposition. There were ten times as many petitions sent to Congress for war prohibition as for any other one measure. The Senate saw that an embarrassing number of people wanted war prohibition. They felt the rising wrath

of the West and the South when brewerdom won in the Senate. "We must throw some sop to the dry sentiment," said they, and they threw it. They passed the Sheppard amendment for nation-wide prohibition of all alcoholic beverages; when the House passes this amendment it goes to the state legislatures, and when thirty-six ratify it, we become a dry nation—dry for the war, dry in the weary days of reconstruction after the war. The wets got a clause tacked on that the states must ratify this amendment in six years. This clause will probably be dropped by the House.

The Anti-Saloon League believes the House will pass the amendment next December. It is already at work organizing its forces for getting the state ratifications. Twenty-six states are dry; ten more will be needed.

What to do now? First, we must see that our representatives at Washington will vote for a national dry amendment; second, we must see that only dry men are sent to our state legislatures; third, we must work towards having special sessions called in those states where legislatures do not meet annually. This is the political work.

For social workers, I see other work in addition to this. I wish they would all form prohibition committees, and let their chief task be getting the people with whom they work ready for prohibition. There will be a great fight to save wine and beer, that is, to keep the saloon. Headway cannot be made this way.

Again, the French wine industries are already laying plans to invade this country after the war. Wine countries, like France, not only overload themselves with wine but pass to stronger liquors. France is second of all the prominent countries (1906-10) in the amount of distilled liquor drunk, Denmark being first.

Charles Stelzle, of the Federal Council of Churches, has induced Vance Thompson to write a leaflet on wine to be sent to our boys in France. I hope that as soon as it is available social workers can get the facts in this leaflet to their friends. This is the time to make everybody understand that history shows that headway against liquor has not been made by half-measures—moderation, use of beer and wine—but by total abstinence followed as fast as the sentiment ripened by prohibition of all alcoholic beverages.

This is the winter in which to become anti-alcohol propagandists. I do hope that social workers will have committees that can act, for as old Meg Merrilies said in the cave under the rocks, "The hour and the man has come."

—Brown in the Chicago Daily News.

BAGGING THE CROW

COMMON WELFARE

COUNTRY-WIDE TRAINING IN HOME SERVICE

AS a result of a conference held by the Department of Civilian Relief of the American National Red Cross in Washington last week plans were made for a country-wide series of home service institutes for the training of workers to be enlisted in the home service of local Red Cross chapters [see the SURVEY for September 1, page 486].

Twenty-three institutes have already been established and will open on October 15. They will take the full time of students for a period of six weeks, devoted to class work and field work under supervision. The membership of each institute will be limited to twenty-five. Members will be recruited from the local chapters of the Red Cross and are not to be exclusively from the community where the institute is held.

The conference developed a remarkable blending of the educational program of universities with the procedure of practical social work which promises to give these institutes far-reaching influence. The need for trained workers in the home service of the Red Cross is not easily exaggerated, and demands for such training are increasing.

The home service requires workers who are trained to deal helpfully and efficiently with disorganized families. The raising of the national army, now mobilizing, will make the problem of assisting such families acute in every section of the country. The institutes will supply a measure of such training. They will follow the same general progress of instruction which will cover the following general topics in class discussion supplemented by the field work:

The functions and organization of the American National Red Cross, the field of home service, the normal family, the fundamental methods of home service, health, home economics, child welfare, the employment of women and children, the re-education and readjustment of the disabled, the unstable family, the personal factor in work with disorganized families, relief, the racial equation, community resources for home service, cooperation, responsibilities and qualifications of the home service worker.

The twenty-three institutes already provided for—they will be followed by many others in different cities and in some cases by a second course in the same city—are to be held in:

Atlanta, Boston, Baltimore, Chicago, Cleveland, Columbia, S. C.; Columbus, Ohio; Dallas, Denver, Indianapolis, Los Angeles, Minneapolis and St. Paul, Nashville, New York, Philadelphia, Pittsburgh, Richmond, St. Louis, Salt Lake City, Seattle, Springfield, Ill.; Washington, Milwaukee.

The wide range of interest in the institutes, both geographically and as to educational connections, is indicated by the list of those in attendance at the Washington meeting:

Prof. J. E. Hagerty of Ohio State University, Prof. Loren D. Osborn of the University of Colorado, Prof. J. J. Pettijohn of the University of Indiana, Prof. A. J. Todd of the University of Minnesota, Professor Robertson and Prof. Francis Tyson of the University of Pittsburgh, Prof. William F. Ogburn of the University of Washington, Prof. John L. Gillin of the University of Wisconsin, George B. Mangold of the St. Louis School of Social Economy, Katherine MacMahon of the Boston School for Social Workers, Flora Saylor of the Dallas School of Civics and Philanthropy, Bernard J. Newman of the Pennsylvania School of Social Service, H. H. Hibbs of the Richmond School of Social Economy, J. P. Kranz of Peabody College, Edith Thompson of Atlanta, Theo Jacobs of Baltimore, Miss Bell of Cleveland, Margaret Laing of Columbia, S. C., William J. Deeny of Salt Lake City, Mrs. Walter S. Uford of Washington, W. Frank Persons, director general of civilian relief of the American Red Cross; Thomas J. Riley and Porter R. Lee, national directors of home service institutes for the Red Cross.

GIFTS TO BE SPARED THE INCOME TAX

SOME \$30,000,000 will be added to the resources of educational, charitable and religious institutions, according to the estimate of Senator Hollis, of New Hampshire, by virtue of the Senate amendment to the war-revenue bill which exempts from the income tax all gifts to institutions of these classes up to 15 per cent of the net income of the donor.

This amendment, as offered by Senator Hollis on September 7, exempted from payment of income taxes all such gifts up to 20 per cent of the donor's income, and he had a sufficient number of votes pledged to secure its adoption in that form, but he accepted the lower figure when it was offered as a compromise, on behalf of the Senate Finance Committee, by Senator Simmons. The acceptance of the amendment by the committee gave reasonable guaranty of its adoption by the House and Senate conferees.

Discussing the amendment in the Senate, Senator Hollis said that his own experience in college had made him wish that all higher institutions of learning were maintained at public expense, rather than by the gifts of individuals. However, the country had built up a system of great colleges and universities dependent upon private donations for their maintenance, and the necessity for the protection of their funds was obvious. Former President Taft had expressed the opinion that if the proposed exemption of these donations from income taxation were not secured, Hampton Institute would be compelled to close its doors, he said; other institutions were in the same situation.

The amendment is the result of a movement organized under the Committee on War Charity and Social Work last June, under the leadership of Samuel McCune Lindsay, of New York. In a letter to Senator Simmons, Dr. Lindsay suggested three alternative methods of exempting gifts: the deduction of the full amount of such gifts

THE SURVEY

Published weekly by

SURVEY ASSOCIATES, INC.

112 East 19 street, New York

Robert W. de Forest, president; Paul U. Kellogg, editor; Arthur P. Kellogg, secretary; Frank Tucker, treasurer.
10 cents a copy; \$3 a year; foreign postage \$1.50, Canadian 75 cents.
Copyright, 1917, by Survey Associates, Inc.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

from all income subject to taxation; the exemption or deduction of a percentage—say 25 per cent, 50 per cent or 75 per cent—of the total contributions of such a character from all income subject either to the normal tax or any rate of surtax; or the full amount of gifts and donations might be allowed as an exemption deducted from gross income for the purpose of the normal tax only.

The alternative chosen by Senator Hollis for a test of sentiment in the Senate, and the one accepted by the committee, was the first—the deduction of the full amount of such gifts from all income taxes, whether normal or surtax. It was then restricted in total application, as above noted, to 15 per cent of the income of the donor.

EXPORTING THE AMERICAN PLAYGROUND

THE American colonies in nearly all the European cities keep up baseball as best they can with local facilities. These games, especially contests between different American teams, according to *Mind and Body*, attract large numbers of native spectators for whose benefit games are arranged, especially on the Fourth of July. Elementary explanations of the game are printed on the back of the score sheets in the native language of the country.

International football will be stimulated by the friendly rivalry of army teams in France. George B. Ford, a member of the American Red Cross commission to France, during his visit last year observed that outdoor recreation, a comparatively recent development and largely borrowed from England, has received a new impetus from the imperative necessity in wartime to keep men and women in the best physical condition. New recreation parks and playgrounds have recently been promoted in Rheims, Clermont-en-Argonne and Bordeaux.

But in neutral countries also the American idea of outdoor sports continues to find favor. A soccer team from St. Louis has been invited by the Swedish football association to play a series of games in Sweden. A cable received by T. W. Cahill, secretary of the United States Football Association, from the Scandinavian organization not only agreed to all the proposed terms of the trip of the St. Louis eleven but also requested that the St. Louis squad be composed of men who could make up two baseball nines. This invitation resulted from a number of exhibition baseball games played last fall in the Scandinavian countries by an all-American soccer team, which attracted large attendances.

Playground and recreation work on the American model is to be introduced in Tumkur, South India, by Deputy

Commissioner K. Chandy. Thitsumai-kan University in Kyoto, Japan, recently wrote to the Playground and Recreation Association of America, requesting information on how best to initiate in Japan work similar to that promoted by the association. "To the Japanese public," writes Setzuzo Mikami, "the idea of the work is new, and they are not yet informed of the ideal of the movement and its educational values." He particularly desires to know more concerning facilities for swimming.

The first annual meeting of the Tokio Boy Scouts of America was held on June 1 with scouts from Yokohama present as guests. Though chiefly composed of Japanese boys, the troop admits also foreigners and, under an American scout master, represents a truly international organization.

In Russia, war conditions have been directly responsible for giving a new impetus to recreational work for children. Mutual helpfulness is a social feature in that country to an extent which has not been fully appreciated here. When children fell into neglect through the absence of their fathers at the front and the obligation upon their mothers to go out to earn their support or to work the fields, patriotic women throughout the country took upon themselves the task of providing recreational activities.

Last summer, according to the Russian Translation Service, a teacher in the small village of Krasnow, realizing the need for supervision of her pupils during the summer, went to the district zemstvo council of Jaroslav and asked for funds to organize a playground. She was given thirty-five dollars unconditionally, except for the request of a detailed account. After organizing modeling and drawing classes and story-telling hours, and after winning over the mothers who at first were hostile, the value of her work was generally recognized, and the same zemstvo appropriated about \$1,000 for the establish-

ment of similar playgrounds in twenty villages this year. The movement has attracted widespread attention, and other zemstvos are considering similar action.

The first half of a series of illustrated articles, *Exporting the American Playground*, by C. M. Goethe, was published in the SURVEY last year. Pressure of space in a period of slender issues when paper has been costing double led to the postponement of the second half. Articles on recreation in French Africa, Germany and China are in type.

BRITISH WOMEN ENTERING AGRICULTURE

SO large and important has been the increase of women on the land that the English Board of Agriculture found it necessary in January, 1917, to organize a Women's Labor Department, of which Miss Talbot, previously engaged for some time as an inspector for the board, became the director. At the last census, in 1911, there were 120,000 women doing agricultural work in the United Kingdom, including seasonal workers. Between April, 1914, and April, 1917, there has been an increase of 44,500.

Miss Talbot is convinced—and is supported in this view by many expressions of opinion on the part of the practical farmers—that many of these women have found a permanent place for themselves in rural pursuits and that, in fact, they will be indispensable for the revival and extension of agriculture when the war is over. Only a small proportion of the women are of the educated classes, specially recruited in the season for fruit-picking, and look upon their work as an emergency war contribution.

The great majority are permanently engaged in farm work and have proved surprisingly efficient, especially in dairy work and in the feeding and management of stock. Prior to the war the milkmaid of folklore fame had become almost extinct. Now farmers find that they have made a great mistake in not taking greater pains to train women for responsible jobs in and around the dairies. They have proved more useful in rearing young animals than men; many have been given charge of teams of horses and they are engaged also in field work.

The number of farm women would be even greater were it not for bad housing conditions, unattractive food and low wages. So far all efforts have failed to get farmers to provide conditions of employment which, together with the natural attraction of open-air work, would effectively counteract the incentives of industrial employment, with its shorter hours and comforts of urban residence. The returns from small holdings such as women can man-

DRAWN BY CHARLES DANA GIBSON
FOR THE "RED CROSS MAGAZINE"

CHINESE STUDENTS SWAT THE FLY

GIRLS in the physical department of the Shanghai Y. W. C. A. gave a playlet definitely propagandist in its purpose of teaching the lesson of "Swat the Fly." One girl, whose white wings identify her as the Fly, crept round the stalls of various animals, hovered over the monkey and pig-sty, and finally came to the Child, who presently drooped and died!

The director of the department is Miss Ying Mei Chun. The sixteen students of the 1916 class more than fill the present dormitory accommodation, and the school is hoping for larger space; for, as the secretary says, "The Chinese cannot easily understand why, if you have a school you cannot take them in when they apply." Eight of this year's students came from government schools, seven from mission schools, and one from a Confucian family. Space for at least one more class is needed, and two more teachers and three secretaries could find abundant work in developing physical work and playgrounds, and assisting in the public health campaigns. Invitations to teach in the gentry and government schools are being refused because of shortage of workers for the Y. W. C. A. itself.

Abby Mayhew is secretary of physical education of the National Young Women's Christian Association of China.

age also are as yet precarious, especially for those of brief experience and partial training.

The government is now energetically promoting different methods of training women in agriculture. Besides agricultural colleges, comparatively few in number, there are 247 training centres and 140 farms registered as establishments for the instruction of women. On some of them an "emergency" training course of only one month has been inaugurated. Belgian experience is followed in the provision of instruction for the wives of farm laborers who are unable to leave their homes.

The Agricultural Organization Society has created 125 farm "women's clubs, misnamed "institutes," primarily for the purpose of cooperation in buying and in the use of modern appliances, but incidentally also excellent means of mutual instruction and advice by lecturers sent on circuit.

The Women's Labor Department of the Board of Agriculture has organizing secretaries in each of sixty counties and sixteen traveling inspectors. It is on the advice of the latter that the department issues grants to voluntary organizations, such as the Women's Land Service Corps and similar bodies which have been especially useful in recruiting and supervising seasonal labor. The

inspectors also look into housing conditions.

Miss Talbot and others who have studied the situation are certain that the outlook for women workers on the land is excellent.

TO MAKE NEW YORK AN AMERICAN CITY

TO make the melting pot melt is the aim of the program adopted by the recently organized committee on aliens of the Mayor's Committee on National Defense of New York city. To do this it is undertaking on a large scale phases of immigrant education that have already been successfully carried out in Detroit, Cleveland, Buffalo and other cities.

"One City, One Loyalty, One People" is the slogan that states the underlying motive; before there can be one people, however, the committee believes there must be one language. For that reason the practical making over of the city's evening schools for foreigners, to the end that English may be universally spoken, is one of the important items in the plan. While the war is the occasion for this effort to unify a heterogeneous population, the committee hopes to see its work become permanent.

Already the Board of Education, acting at the committee's suggestion, has added \$78,000 to the budget for even-

ing schools, the original estimate being \$24,000. If this money is granted it will be spent to employ 170 additional teachers of English, fifty teachers of physical training, eighty community visitors and four supervisors of community visitors. All but the supervisors are to be paid at the rate of three dollars a night.

To train both volunteers and paid workers for the position of community visitor, the Training School for Community Workers of the People's Institute has agreed to give a special short course beginning October 1. This will include fifteen lectures extending over a period of five weeks by specialists in various phases of community work. In addition, the course will include field work, one form of which will be visits to the homes of aliens in company with agents of city departments and other organizations. The first examination to establish a list from which community visitors may be appointed will be held by the city the middle of October.

Thorough socialization of the evening schools is being aimed at. The committee has added to its staff H. H. Goldberger, who, as principal of evening school 25, has already done a notable piece of work in this direction. The usual experience of an evening school for adult foreigners is to lose 80 per cent of its registration before the end of

the term. Mr. Goldberger has kept his pupils by making the school a social as well as an educational institution. Music, recreation and speaking have been as definite a part of the program as instruction in English. Every class has been made a club, with its own president and organization. On the hottest nights this summer the attendance fell off only slightly.

This is the success which the committee believes every evening school ought to attain. It has enlisted the cooperation of settlements, neighborhood associations and every sort of social agency to provide pupils for the schools and to make the social aspects valuable. In addition, such organizations will be urged to conduct classes of their own and to aid in the program in other ways. Robert T. Hill, professor of economics and sociology at Union College, Schenectady, and William C. Smith, the new state supervisor of immigrant education, comprise, with Mr. Goldberger, the committee's executive staff.

A STATE PROGRAM FOR WAR SERVICE

"DON'T build 'war orphans' homes' after this war."

This might be laid down as rule number one for states planning social programs in connection with the war, to judge from the emphasis put upon it by Hastings H. Hart, director of the Child Helping Department of the Russell Sage Foundation, in a report just made to the West Virginia Executive State Council of Defense. Both the governor and the council asked Dr. Hart to suggest a program "to meet conditions growing out of the prosecution of the war with Germany." Clarence L. Stonaker, secretary of the New Jersey State Charities Aid and Prison Reform Association, assisted in the survey.

After the Civil War Maine, Pennsylvania, Ohio, Indiana, Illinois and other states, says Dr. Hart, built "soldiers' orphans' homes." Most of the children admitted to them had living mothers. It was believed that the state could do better for the children than could be done by their mothers. Dr. Hart says:

In practice the orphans' home plan did not prove entirely satisfactory. It was very expensive, involving the maintenance of children at a liberal cost for many years. It was an unnatural plan of living. However well-conducted the homes might be the children were nevertheless deprived of the privileges and opportunities of natural family home life. It was a cruel plan. The state said to the widowed mother:

"Poor woman! You have lost your husband who has sacrificed his life for his country. We are deeply sorry for you and in order to testify our gratitude to him and our sympathy for you we will take your children away and bring them up for you and thus will enable you to get a living for yourself."

Thus the mother, bereft of her husband, was bereft also of her children.

Happily, in this generation we have found a better way, says Dr. Hart. This is the granting of mothers' pensions, which render it unnecessary for a competent mother to be separated from her children or to let them roam the street while she works. The state must ascertain, says Dr. Hart, whether the mother possesses the character, intelligence and physical strength to bring up her children properly. For such children as have lost both parents, or whose mothers are unfit, Dr. Hart recommends placing-out in family homes through an approved agency. West Virginia has no such approved agency at present, he says.

Referring to West Virginia's production of war material, such as coal, steel, farm products and live stock, the report points out that it is possible to lay so heavy a burden upon workers that their productive powers will be diminished.

In the long run, a larger and better product will be secured from 54 hours' work per week under favorable conditions, with good food

LIGHTNING

From the Spanish of José Santos Chocano (Peru), who, now that Ruben Dario is no more, is considered by many to be the greatest living Spanish-American poet.

Translated by Alice Stone Blackwell.

A RAGGED mother, holding out thine hand
Forever at the doors, in sorrow deep,
And seeing always bare and empty chests,
And human consciences fast locked in sleep!

O thou that goest gathering in the bag
Of thy sore poverty forever more
Leavings that in the shipwreck of each day
Follies and vices cast upon the shore!

Daughter art thou to him who went to war,
Marched in the ranks and shed his blood un-
bought,
Sank down in battle, fell to earth and died—
And no one now remembers that he fought.

Sister art thou to him who fell one day
Among machinery's teeth, which crush and
kill.
The wheels were all indifferent to his fate,
But human hearts were more indifferent
still.

Thou wast the wife of him who at the
plough
Died, sunstruck, as he labored on the plain,
Today all eat the bread his wheat has made.
Thou dost not eat it—and he sowed the
grain!

Thou art the daughter and the sister poor—
The widow, always left with child unborn;
Thou art the mother who of every rag
Will make a flag, when breaks tomorrow's
morn.

Still, as a consolation, in thy womb
A son of thy dead husband thou dost bear,
A cloud of rags: its thoughts are of the sky—
But of a sky where tempest fills the air!

Thy son will be no gentle cherub fair,
No honey-cup, no Mayflower soft of bloom,
O ragged mother! Lo, thou art the cloud,
And thou dost bear the lightning in thy
womb!

and with opportunities for wholesome recreation, than from 70 hours' work performed by men who are kept constantly at the limit of physical endurance.

Among the other recommendations are a convalescent home for wounded and crippled soldiers, a general state hospital, the extension of the juvenile court and probation system to the rural counties, employment of prisoners in farming and road-building, more adequate institutional care of the feeble-minded and epileptic, and the performance of the functions of a charities endorsement committee by the State Council of Defense.

TWO IMMIGRANTS OUT OF FIVE FEEBLEMINDED

IF you had gone over to Ellis Island shortly before the war began and placed your hand at random on one of the aliens waiting to be examined by government inspectors, you would very likely have found that your choice was feeble-minded. He would probably have answered your question, "What is a horse?" by replying, "To ride on," or with some other simple reference to the animal's use that did not differentiate it from a bicycle. He would have told you it was July if it was January and would merely have looked uninterested if you had asked him what year it was.

This, at any rate, is the conclusion reached by a study made in 1913 by psychologists of the Training School at Vineland, N. J. The results are now published for the first time by Henry H. Goddard, director of research at the school, in the *Journal of Delinquency* for September, out today. The SURVEY is permitted to make simultaneous publication of a summary of the findings.

Several members of the Vineland staff spent two and a half months at Ellis Island giving tests to immigrants. The most favorable interpretation of their results is that two out of every five of the immigrants studied were feeble-minded. Dr. Goddard admits that this conclusion is startling, but says that "it is never wise to discard a scientific result because of apparent absurdity."

Various tests for measuring intelligence were used, the Binet-Simon being regarded as the most satisfactory. The work had to be conducted through interpreters. At first it was feared that this might be a barrier to efficient testing. Experience showed, however, says Dr. Goddard, that this difficulty was overestimated.

Immigrants were selected for study only after the whole line had passed the government physicians and all whom these officials could recognize as mental defectives had been taken out. The Vineland psychologists then removed the

obviously intelligent. That left the great mass of "average immigrants." The number studied was 35 Jews, 22 Hungarians, 50 Italians and 45 Russians. Five Jews, 2 Italians and 1 Russian were children under twelve years of age and so were excluded.

Since the Russians were examined by a psychologist who spoke their own language, Mr. Goddard analyzes the tests of them first. Three of the 30 were found to be normal according to the Binet-Simon scale, 2 were classified as borderline and the remainder, 25, or 83 per cent, were feebleminded.

These results, says Dr. Goddard, are so difficult of acceptance that they can hardly stand by themselves. He, therefore, selects those questions that were passed by 75 per cent of the immigrants and by means of these constructs a new scale with which to measure the individuals in terms of their own group standards. More than 40 per cent of the Jewish immigrants failed to pass even this revised scale and "would be considered feebleminded," says Dr. Goddard, "according to the usual definition." The other groups give similar results.

Dr. Goddard says:

This method of interpretation gives us approximately half as many defectives as we counted by our first method. But even 40 per cent is a startling proportion for the feebleminded among our immigrants. And moreover we cannot escape feeling that this method is too lenient. The standard would seem to be too low for prospective American citizens. This feeling is intensified if we examine the questions that we have thrown out of the scale because not passed by the requisite 75 per cent. To define common terms better than by "use" is the first of the questions omitted. Only 40 per cent pass this test, the rest define a "table" as "something to eat on"; or a "fork," "it is to eat with"; a "horse," "is to ride," and so on. It cannot but give us something of a shock to realize that 60 per cent of this group of immigrants do not define common objects better than to mention the most obvious use for them.

Dr. Goddard does not contend that this study reveals the percentage of all Ellis Island immigrants who are defective. Nevertheless, he declares that "we cannot escape the general conclusion that these immigrants were of surprisingly low intelligence." The experiment helped to impress this upon the government physicians, and the number of aliens deported because of feeblemindedness increased approximately 350 per cent in 1913 and 570 per cent in 1914 over the five preceding years.

A follow-up investigation attempted by the training school two years later, proved disappointing because of the fifty sought for, only two were found and three others heard from; these were apparently doing well. Such meager results, however, says Dr. Goddard, cannot be held to contradict the criterion based on the group standard.

A PAGEANT OF AMERICA IN THE MAKING

HOW patriotism may be taught in a neighborhood inhabited by aliens in such a way as to stimulate rather than repress their love for the cherished traditions of their home countries, was demonstrated recently in a street pageant organized by the Neighborhood House in Harlem [New York city]. It was the first venture in community drama in that populated area and strictly home-made. A Slovak group in picturesque costume presented a lively pantomime, based on the life of Janosik, a peasant hero of the eighteenth century, and Slovak children danced a folk dance. The Hungarian neighbors, in four tableaux, represented scenes from the lives of John Hunyadi, Louis Kossuth and Helen Zrinyi, and in song and dance made live again the village life of their native plains. Italian girls, also in peasant dress, danced the tarantella.

From Julius Caesar to Victor Emmanuel, the heroes of popular tradition passed in revue. The closing episode brought these various groups together in common appreciation for their new home. Columbia, surrounded by figures representative of American history and of the present guardians of her military power and civil liberties, was followed by a procession of Allegiance, symbolic of the children of an older world pledging their loyalty and devotion to the new.

THE DECLINING BIRTH-RATE: ITS CAUSES AND EFFECTS

Report of the National Birth-rate Commission. E. P. Dutton and Co. 450 pp. Price, \$3.50; by mail of the SURVEY, \$3.62.

Birth-Rate of Britain

The report of the National Birth-rate Commission, instituted with official recognition, by the British National Council of Public Morals, constitutes an exceedingly interesting and important contribution to the literature of the subject. The report itself presents the data under five elementary divisions:

1. as regards the statistical evidence; 2. as to the economic and social aspects; 3. with reference to the housing question; 4. from the medical point of view; and 5. with reference to moral and religious considerations.

The make-up of the commission of inquiry was typical of the British method of procedure in parliamentary or interdepartmental investigations. The chairmen of the commission were: the Rt. Rev. Boyd Carpenter, and the Very Rev. W. R. Inge. The vice-chairman was the Rt. Hon. Sir J. Gorst, LL.D., whose treatise on *The Children of the Nation* is familiar to American readers. Among the two next ranking members of the commission were Dr. Sir Arthur Newsholme, the principal medical officer of the local government board, and well-known author of a standard treatise on vital statistics; and Dr. T. H. C. Stevenson, the superintendent of statistics for the registrar-general, through whose efforts a very material improvement has been brought about in the arrangement and practical utility of the annual reports of the vital statistics of Great Britain. The commission as a whole consisted of some forty members.

The plans and scope of the inquiry took four main directions: the extent and character of the decline in the birth-rate as statistically ascertainable and in correlation to social and political phenomena; the alleged causes of the decline, under such headings as the effect of town life, lateness of marriage, fertility, prudential motives, methods of restraint (moral, mechanical and chemical); the effects of the decline of the birth-rate, whether due to natural or artificial causes; and the economic and national aspects, such as the alleged results of a rapid increase of population in a country where the land is fully cultivated, etc.

The governmental sanction of the investigation was emphasized by an announcement by the then prime minister, Mr. Asquith, in the House of Commons. A large number of witnesses were heard, including some of the foremost names in Great Britain, and in addition thereto prolonged sittings were held for a qualified discussion of the various aspects of the intricate problems in consequence of the evidence presented. The investigation extended over two and a half years, and, as said before, the report constitutes a notable addition to the literature of the subject, quite exhaustive of all the essential phases of the questions, but rather difficult of concise presentation in a briefly summarized form.

With reference to the correlation of the birth-rate to income, the conclusion is advanced that all the various investigations seem to show "that the birth-rate falls as the income rises." With reference to occupation, the fact was brought out that the decline in the birth-rate was "greatest in the professional and commercial classes." The birth-rates in town and country were found to be rather conflicting, but it is pointed out that in France the highest legitimate fertility rate was in the nine departments which contained less than 30 per cent of agricultural population. With reference to religion, it is pointed out that in Germany the birth-rate was distinctly higher among Catholics than among other religious denominations.

The statistics of childless marriages for different countries are of interest, with special reference to the Massachusetts returns for 1885, when the proportion was nearly 12 per cent of childless marriages in marriages where the wife was over fifty years of age. Appropriate reference might here have been made to the more recent maternity statistics of Rhode Island, and it may be said in this connection that it is exceedingly regrettable that the state of Massachusetts should have discontinued the publication of maternity statistics, than which no social facts could possibly be of more profound interest in connection with the subject under review. The same conclusion applies to the maternity statistics of the United States census, which have not been tabulated, but which, if subjected to critical analysis, would produce results of far-reaching economic and sociological importance.

The British report itself falls short of the required exhaustive analysis of available data, but the facts are presented with sufficient clearness to illustrate the point of view, for, after all, the really conclusive evidence is that of the witnesses examined rather than of the statistical returns. As said in the report, a rapid survey "of the continental evidence does not lead to the discovery of any important facts casting doubt upon the validity of the inferences drawn from the official statistics of the United Kingdom." These findings are briefly summarized as follows:

"That the birth rate has declined to the

extent of approximately one-third within the last thirty-five years.

"That this decline is not, to any important extent, due to alterations in the marriage rate, to a rise of the mean age at marriage, or to other causes diminishing the proportion of married women of fertile age in the population.

"That this decline, although general, has not been uniformly distributed over all sections of the community.

"That on the whole the decline has been more marked in the more prosperous classes.

"That the greater incidence of infant mortality upon the less prosperous classes does not reduce their effective fertility to the level of that of the wealthier classes."

In addition thereto, however, the committee advanced the further conclusions, though based upon evidence less substantial, to the effect that:

"Conscious limitation of fertility is widely practiced among the middle and upper classes, and there is good reason to think that, in addition to other means of limitation, the illegal induction of abortion frequently occurs among the industrial population.

"There is no reason to believe that the higher education of women (whatever its indirect results upon the birth rate may be) has any important effect in diminishing their physiological aptitude to bear children."

Of these seven conclusions, the last is perhaps the least in conformity to prevailing convictions, sustained by the conclusive data derived from an analysis of the fecundity of college women. Whether the higher education itself is the immediately underlying cause of the aversion to maternity, or reluctance to bear children, or whether the more active cause is the generally higher social and economic status of college-bred women, is, of course, debatable.

Passing over the economic and social aspects of the question, and the housing question, which is only briefly considered, it need only be said that the commission did not deem it prudent to go further than place on record its deliberate opinion "that the housing question, both in town and country, makes the rearing of large families by the working classes a matter of great difficulty and also affects the birth-rate."

As regards the important medical aspects of the subject, the committee at the outset distinguished between totally different factors of an artificially reduced birth-rate, and they condemn generalizations "which take no cognizance of the medical, medico-legal and ethical distinctions," which cannot very well be discussed in detail. It may be said, however, that the commission points out that "the prevention of conception and the destruction of the concept are fundamentally distinct, medically, medico-legally, and ethically, and the commission cannot attach serious importance to pronouncements, from whatever source, which perceive no such distinction."

It must be considered regrettable, however, in this connection, that the commission was unable "to present a definite pronouncement as to the physical consequences of the use of these devices" employed in the prevention of conception, such as are widely suggested by utterly reckless and irresponsible advocates of so-called birth-control.

The commission discussed the destruction of the product of conception, which, it is pointed out, is contrary to law and medical ethics except where the life of the mother is at stake, and they express themselves as "in entire agreement with the accepted canons on this subject." The discussion of the influence of venereal diseases on the birth-rate is quite interesting, but of secondary importance to the question of deliberate or wilful prevention and control.

Finally, the commission discussed the moral

and religious aspects of the problem on the basis of evidence presented by members of the principal religious bodies, and it is said that it was found that the clerical witnesses "were almost without exception opposed, on moral and religious grounds, not only to the practice of abortion, which has had no defender among those who have given evidence before the commission, but to the use of mechanical and chemical means to prevent conception." There was not, however, the same unanimity as to the morality of restricting the family in other ways. The report concludes with the extremely suggestive statement that:

"While we have confined ourselves to discussing the moral and religious aspects of the declining birth-rate in respect of the married, we cannot close our eyes to the fact that the more widely spread knowledge of the means of preventing conception by the unmarried not only involves the removal of the prudential restraint on license in sexual relations, but may affect the birth-rate in the future in two ways: 1. Marriage with its responsibilities may be avoided, since sexual gratification is being obtained without any social obligations being incurred; 2. A practice begun before marriage may be continued after marriage."

An additional report was subsequently presented, signed by the Duchess of Marlborough and others, including Dr. C. W. Saleeby, with special reference to the question whether the present decline in the national birth-rate is regrettable, and, if regrettable, whether preventable, and if so, how. Reiterating their condemnation of abortion and the use of mechanical and chemical preventives of conception as injurious to health, it is said that while an unrestricted birth-rate is not advocated, it is recognized that "the natural functions of parenthood should be exercised under the control of affection, reason, conscience and racial obligation, with such voluntary restriction as the health of mother and child, the welfare of the family as a whole, and the moral duties of parents towards their children may impose." The further argument is advanced, however, that an increasing birth-rate, for imperial reasons, may be extremely desirable and well worthy of national encouragement to the extent of more substantial wages, or the adoption of minimum wage standards, or payment of a state bonus to families with low earnings for all children under fourteen years of age, a remission of taxes in the case of parents, facilities for cheap education, etc.

The evidence appended to the report is quite voluminous and exceedingly valuable. It is rather curious to find that the bibliography does not contain even a reference to the report and the evidence of the Royal Commission on the Decline of the Birth-Rate in New South Wales, than which no more convincing indictment of the injuriousness of widespread methods of prevention has been published. The evidence was, in fact, of such an exceedingly scandalous nature that only a very small edition was published, being marked "For private use only."

The evidence appended to the New South Wales report makes a folio volume of nearly four hundred pages, with illustrations, suggestive of the Sanger pamphlet on family control. The two investigations amplify and supplement each other, but unfortunately the evidence collected by the Royal Commission on the Decline in the Birth-Rate of New South Wales, issued in 1904, is practically inaccessible on account of the very limited edition published, and its immediate withdrawal from general circulation. Evidence of this character and its qualified analysis is essential to a rational understanding of the so-called birth-control.

FREDERICK L. HOFFMAN.

THE OFFENDER AND HIS RELATION TO LAW AND SOCIETY

By Burdette G. Lewis. Harper & Brothers. 382 pp. Price \$2; by mail of the SURVEY \$2.20.

A few years ago Mr. Lewis was an examiner in a municipal department in New York city. In 1914 he was appointed deputy commissioner of correction by Katherine B. Davis, and two years later succeeded her as commissioner. His acquaintance with the field of penology is therefore practical; he has settled strikes among prisoners, issued orders concerning their dietary, changed their work, altered their punishment, and solved or attempted to solve hundreds of difficult problems that are bound up in caring for law-breakers.

It is refreshing to find an administrator so alive to the modern scientific study of the individual delinquent and to the need for individual treatment. Mr. Lewis knows that criminals may be produced in herds, but not often by herds. They are not to be studied primarily for their contributions to group psychology; each offender is in a double sense a law unto himself. He is the product of particular forces working on his particular temperament, defects, heredity and passions. Reformation lies in individualizing treatment, in a complex process of curing physical defects, building health, imparting a habit of industry, teaching a trade, awakening moral consciousness, and doing to each individual whatever is necessary to bring out the normal, the sane, the sense of unity with his fellows.

Mr. Lewis's approach to his subject is for the most part liberal and scientific; his information goes far beyond the files of his own department. One can trace in his occasional dogmatism the lingering effects of recent criminological discussions, such as his transparent disgust with the extreme advocates of self-government. He apparently has them in mind when he rebukes people who regard discipline and form of government, rather than the improvement of the offender, as the chief ends of prison management. The advocates of self-government never tire of pointing out that the strongest argument for their plan is precisely that it is a means and not an end—a means of training the offender to a self-controlled interest in social regulations when he comes out. Mr. Lewis comes much nearer a sound criticism of their activities when he suggests that only the more intelligent prisoners can profit from self-government, and that this plan ought to be allowed chiefly in institutions from which the incorrigible, the low-grade feebleminded, the insane, the old rounders and the feeble inebrates have been removed.

He finds the best development of self-government to be in the limited "Hamiltonian republicanism" of the Preston School of Industry in California, which was described by its originator, Calvin Derrick, in the SURVEY for September 1.

The book goes beyond institutional organization and treatment. Mr. Lewis discusses defects in court procedure and methods, tells who should be placed upon probation and parole, points out the merits of the indeterminate sentence, proposes a scheme of industrial training not unlike the Gary public school plan, and in the last sixty pages treats of fundamental social forces and the prevention of crime. Prevention, he shows, must be begun early. The average age of offenders is rapidly declining. Fifteen years ago the average age of men committed to

the New York county penitentiary was thirty-seven; at present it is twenty-six. Mr. Lewis declares that the church, the home, the school and the individual are variously held responsible for this, and devotes a number of pages to the weaknesses and failures of these institutions.

The book sets on the whole a stake in the progress of prison reform. At the same time it shows what way improvement lies. It is not as fluent in style as Wines' Punishment and Reformation, but it supersedes that volume for the student of penology today. There is much in it, too, that a casual reader will find illuminating.

WINTHROP D. LANE.

THE MINIMUM COST OF LIVING

By Winifred Stuart Gibbs. The Macmillan Company. 93 pp. Price \$1; by mail of the SURVEY \$1.06.

"Circumstances make the lives of our unskilled working folk a series of vicious circles. The very lack of provision for various necessities contributes to the low state of health that, in turn, decreases the power to earn more" (page 78). The first essential in an attempt to remedy such a situation is to know the facts. Miss Gibbs has had a unique opportunity to analyze the details of expenditure of a large number of families of very limited income living in New York city. Her carefully collated statistics show to what extent ignorance, indifference and necessity bring about departures from the ideal division of the income.

Some of us find that the difficulty of living on twenty-four hours a day can only be solved by intelligent planning and forethought. Miss Gibbs' little book emphasizes the same essentials with respect to living expenses; but beyond that it gives concrete evidence for the philanthropist, the lawmaker, and the employer regarding the now undeniable interrelation between human progress and the minimum wage. With the unpleasant bluntness of actual experience it points to public duties; and it indicates what many publicists have not yet learned to admit, namely, that the problem of living—i.e. home economics—is one for experts rather than orators.

LAFAYETTE B. MENDEL.

THE CHRISTIAN MINISTRY

By Charles D. Williams. The Macmillan Company. 131 pp. Price \$1; by mail of the SURVEY \$1.06.

With characteristic directness of speech and glow of spirit, Bishop Williams delivers within the compass of these few pages the life message which he has been preaching and teaching from pulpit and platform all the years of his wide-reaching ministry. Starting with the prevalence of

the new social conscience, he proceeds directly to "the inequitable distribution of production" as the "whole fundamental and paramount question" which state and church must squarely face, because it is "the tap root and primal source of all the evils, wrongs, moral perils and characteristic sins of wanton and swollen wealth and despairing and abandoned poverty." Into this "region of causes" he summons both social and religious ministries as fundamental to their part in almsgiving and social service, which are superficial and ineffective when disconnected therefrom.

In dealing with these causes he finds "the true radicalism" exemplified by Jesus and by his thoroughgoing followers. And yet he

wisely cautions and counsels his fellow "radicals" that neither Jesus nor his apostles advocated any specific ecclesiastical, economic or political program, formed any party or led any movement of mere reform, although facing social problems as acute and some social conditions vastly worse than any that confront us. "But they preached an everlasting gospel of essential righteousness, justice and brotherly love, whose principles, wherever and whenever apprehended and applied, have everywhere and always inspired men to rise up and deal effectively with every form and manifestation of social wrong and injustice."

Bishop Williams would not flinch, as he did not in his sermon before the National Conference of Charities and Correction at Pittsburgh, to admit that the prevalence of social wrong and injustice throughout Christendom proves how far those principles have failed to be apprehended and applied. But surely he is one of those who have risen up to deal thus with wrong and injustice.

"I am root and branch a single taxer," he affirms. "That is the particular policy, method and means of social and economic justice which I personally believe to be most rational and in the end effective. And I take every opportunity offered by the public press and platform to recommend and propagate this particular program of social righteousness. That is my privilege and duty as a man and a citizen, and also as one who has made some slight study of social and economic questions." But he adds, in words that many ministers should heed and make their own: "I have never preached single tax from any Christian pulpit, and never shall. I do not find that the single tax or any other particular economic program or social philosophy is a part of the gospel, and I will not attempt to inject it into the gospel. In the pulpit I must deal not with the accidental modes and methods of reform, but with the essential principles and motives of righteousness and justice."

This Bishop Williams does with a fearless outspokenness when and where it costs more courage to do so than all the indiscriminate criticism of the Christian ministry costs its "radical" critics.

GRAHAM TAYLOR.

AN INTRODUCTION TO THE STUDY OF ORGANIZED LABOR IN AMERICA

By George Gorham Groat. Macmillan Company. 494 pp. Price \$1.75; by mail of the SURVEY \$1.90.

A valuable and much needed work is George Gorham Groat's study of the philosophy and activities of the labor movement. Organized Labor in America is written on the assumption that "the American labor problem is the problem of organized labor, that American unions are the

embodiment of the aggressiveness, the restlessness, the hopes, the fears and the ideals of American laborers." Consequently, the author describes not only the beginnings of unionism in England and the United States and their development, but the structure and the aims of present-day unionism.

He naturally devotes the greater part of the book to a discussion of straight trade-union problems and methods, drawing his material in the main from the experience of unions affiliated with the American Federation of Labor. Several valuable chapters are devoted, however, to revolutionary industrial unionism, in which the philosophy of syndicalism is discussed, the I. W. W. is

treated historically and sabotage and other of its methods are explained.

Professor Groat writes in a clear, vigorous style. His book sets forth succinctly and with substantial accuracy most of the outstanding factors in the struggle of the workers for recognition and advancement. The section on Collective Bargaining, including chapters on The Strike Arbitration and Boycott, and the Closed Shop, and the section on Political Activity, set forth admirably the current theories of trade-unionism.

One feature of the book is the clear distinction made between ideas or words that are sometimes confused, such as "syndicalism" and "industrial unionism."

A thing that the reviewer finds somewhat irritating, in spite of his admiration for the book as a whole is the author's tendency to quote extensively without naming either the person quoted or the published source. In spite of that, the book is one that every student of the labor movement should read.

JOHN A. FITCH.

JEWISH PHILANTHROPY

By Boris D. Bogen. The Macmillan Company. 389 pp. Price \$2; by mail of the SURVEY \$2.15.

The entire field of Jewish social service, both theoretic and practical, is here discussed by a man who has been engaged in it for about twenty-five years as educator, settlement head, relief agent, and now field secretary of the National Conference of Jewish Charities. He believes that the problem of modern philanthropy is to "reduce the waste of society to a minimum" and that only insofar as social service, Jewish or general, does that, insofar can it be regarded as successful.

As early as 1832 the first specifically Jewish institution in the United States was established in New York city—an orphanage, built because of the fear of proselytism by Christian institutions and to observe the dietary laws of the orthodox Jews. As to the reasons for specific Jewish relief agencies, Dr. Bogen points out that Jewish dependency is unique. There is no Jewish pauperism. He says that "Jewish poverty does not carry with it the burden of heredity, and it is not characterized by a downward tendency, repellent of reclaiming influences. Though poor and economically disabled, the Jews never before constituted the lowest strata of society, nor were they inhabitants of the slum districts of their native cities."

The Jew in this country generally is dependent only temporarily, due to being displaced by adverse laws and to transplantation to a new environment. His dependency being due to objective rather than subjective causes, to his being persecuted because of his faith, his co-religionists feel that, since they share his faith, they should bear the burden of his adjustment to new conditions. Dr. Bogen estimates there are about 2,000 philanthropic agencies engaged in Jewish work in the United States, expending not less than \$10,000,000 annually, caring for some 40,000 Jewish dependents.

The author points out that the pre-eminent Jewish contribution to social service in this country is the "federation idea." By federating their charities, the Jews succeeded in uniting communities, in raising more funds to carry on work more adequately; they have prevented duplication of effort, conserved energies and eliminated waste. Others have followed their example with good results.

The Jewish applicant for relief feels that his fellow Jews owe him the assistance for which he applies. He knows there was a time when he helped others and he is certain the time will come again when he will give to others the things he now demands from the community of Israel. In Hebrew, the word *Zdakah* stands for both justice and charity.

Dr. Bogen reviews the entire field of Jewish social service. He discusses methods of administration, standards of relief and Ghetto forces. His book is wide in scope and will be found useful as a handbook for non-Jewish as well as for Jewish social workers.

OSCAR LEONARD.

THE CALL OF THE REPUBLIC

By Jennings C. Wise. E. P. Dutton & Company. 141 pp. Price \$1; by mail of the SURVEY \$1.08.

Here is a well-thought-out, carefully stated argument for universal compulsory military service and training in the United States. It is the author's purpose to prove by the historical presentment of his case that the volunteer mercenary army system, which is—or was when he published his

book—retained alone by the United States, is undemocratic both in origin and effect. He gives an interesting outline of medieval military systems and the development of the modern national army, indicating clearly the reasons why the English-speaking peoples, following England's lead, have developed our ideal of voluntary or mercenary service. That ideal, he says, sprang from the British worker's long and bitter experience under feudalism, when he was summoned from his plow with increasing frequency to fight in the quarrels of his lords and barons. His own interests suffered through the military service exacted from him and he watched his crops spoil while he garrisoned a stronghold whose flag meant oppression to him.

His distaste for prolonged and irregular military service became traditional after feudalism disappeared, and he has continued to believe that his interests are best served if he pays a professional soldier to do his fighting while he works. The source of the United States' ordinary practice of allowing the citizen to determine the extent of his own obligation to the republic, and to be paid by his fellows for defending his own rights, is clear even if that practice is as absurd as Colonel Wise endeavors to prove it.

The body of the book describes the ideal military institution in which "the tax of blood" shall become a burden equally distributed among all adult male citizens. The methods of his conscriptive plan are liberal and elastic; they do, in fact, mitigate very generously the old difficulties with their broad exemptions and "dispensations."

But when the author exalts the social and moral advantage of "a powerful army" the reader becomes more and more dubious. It is true, to the mind of your reviewer, that "no citizen should be allowed to make the decision as to whether or not he should render that service in arms, which his own and the security of his fellow citizens may or may not require." But it is offensive to him to be told that our nation, because it is honeycombed with pacifism, seems unable to rise with the sword of Christ to a plane of moral belligerency, and has sunk under the false teachings of Tolstoi to a lower plane, where the moral grandeur of righteous war is obscured. To hear that we must cast aside the fatuous doctrines of misguided, over-zealous humanitarians sounds like an echo of Von Bissing. We know, says the author, that God has created between men the great antagonisms out of which strife arises. War, righteous war, a war for ideals, is no more out of line with the infinite than the destructive elements of fire and flood and drought. And finally, he strikes the full Prussian note when he asks:

"Shall we deny the wisdom of God who imposes upon His people the ordeal of battle?"

Well, yes. Let us endeavor to state our problems in the terms of world economics and democratic politics. Let us at least mark an advance from narrow nationalism by leaving out the familiar appeal to the good old idea of a God who blesses his tribal protegés!

W. E. K.

HOW TO BECOME A CITIZEN OF THE UNITED STATES

By Charles Kallmeyer. Kallmeyer Publishing Co. 93 pp. Price, \$1.25; by mail of the SURVEY, \$1.33.

The contents of a book of this title are necessarily restricted; but within the inevitable limits the material is well presented. There are, first, the qualifications of citizenship; then the procedure; and then the stated questions and answers to be faced by an applicant. Historic documents—the Declaration of Independence, the Constitution—are included for reference and study; and a summary of the most important naturalization laws concerning citizenship, passports, etc., close the volume. The same material is repeated in German in the second part of the book.

To describe this as a most convenient little handbook for the class it aims to enlighten, is only giving well-deserved praise.

G. S.

THE ORIGIN, SYMPTOMS, PATHOLOGY, TREATMENT AND PROPHYLAXIS OF TOXIC JAUNDICE OBSERVED IN MUNITION WORKERS

By Dr. T. M. Legge and others. Longmans, Green and Company. 106 pp. Price \$2.50; by mail of the SURVEY \$2.60.

Since the war a new occupational disease has been listed in the British factory inspection reports and has been added to those for which compensation can be claimed under the law. This is toxic jaundice, a form of poisoning caused by contact with the explosive trinitrotoluol, or triton, or TNT, to give it all its names. It was quite unknown to physicians up to the beginning of the war, but it soon became conspicuous in both England and Germany and, though reports from the latter country have not reached us for the last two years, they have come from England in large numbers, culminating in this volume, which sums up all the information thus far gathered in that country.

The facts given here are of great value to us, for TNT is the chief constituent of the charges for our high explosive shells and we have several hundred men engaged in its manufacture and a much larger number in the more dangerous work of making the charges and filling shells. Triton poisoning has appeared in American plants already, sometimes in fatal form, and it behooves us to study carefully the British experience, so as to avoid, if possible, the harm done in their factories during the time of their ignorance.

In 1916 there were reported in Great Britain 181 cases of toxic jaundice—the severe form of TNT poisoning—with 52 deaths. Milder forms need not be certified, but they are said to number about 30 times as many (some 5,400). Women showed no more susceptibility to the poison than men, but the immature of both sexes are very susceptible. While in general the mortality of toxic jaundice is 33 per cent, for those under 18 years of age it is eight deaths out of eleven cases.

Toxic jaundice develops usually after about three months' exposure, then the cases drop off, so that a force of workers who had been employed as long as six months would probably be largely a force of immunes. Poisoning takes place chiefly through the skin, less often by inhalation of fumes, and therefore prevention of poison-

ing depends on protection of the body from contact with TNT.

This is a most cursory survey of what is really a mine of interesting information concerning this new and important industrial disease. While much of it is very technical and of value only to physicians, there is a great deal for the lay inspector or welfare worker. As our output of munitions increases, TNT poisoning will inevitably increase unless we adopt the means of prevention worked out in England.

ALICE HAMILTON.

RURAL SOCIOLOGY

By Paul L. Vogt. D. Appleton and Company. 443 pp. Price \$2.50; by mail of the SURVEY \$2.60.

Professor Vogt's book is a plea for the village as the center of country life. The writer very definitely commits himself to the expectation that American people interested in the farm—about one-half of our whole population—will find the village a satisfactory center of their life. He goes so

far as to say that both the urban mode of life and that of the open country have proved their unfitness and that the village will probably become the most attractive and satisfactory way of life in the United States. For some time a book on the village has been predicted, and though the chapters presenting this contention of Professor Vogt are the least convincing of his book, he has laid the foundation of a study of the village for which we have been waiting.

Rural Sociology presents two methods of study of the material—analysis and idealization. Under the former method, for which the writer displays uncommon ability, is the treatment of the Land Question, Means of Communication, Farmers' Labor Income, Health Physical, Health Mental, and the Church. In all of these chapters Professor Vogt very carefully analyzes the existing material, getting it in good perspective and displaying excellent judgment in handling the details and the particular fragments of his theme. For the student who desires the general view and a definite measured statement of every step of the way these chapters cannot be excelled.

The method of idealization is not so satisfactory. In the chapters under this mode of treatment the writer tells what ought to be rather than what is. Under this head come the Church, Measures for Improvement of the Church, the School in Rural Life, the County Fair, and the Village.

There are two final chapters, the first of which contains rare and new material on Rural Morality and Social Organization. In the study of Rural Morality no one else has worked so industriously or so well or has added so much to the knowledge of country life in respect to the adherence to standards of conduct by country people.

Particularly interesting and valuable also is the discussion of the Farmers' Labor Income and the comparison between the incomes of farmers in the country and business men in the city. Because he is pleading for congested and intensified country living, sometimes called the "urbanization" in country life, the author is naturally interested in the approach between certain classes of city dwellers and certain classes of country dwellers. He makes the most patient analysis of the farm-tenant problem and proposes without qualification the elimination of tenancy from the American farm. This he would accomplish by a land tax and a farm

board—which apparently is proposed in the interest of eliminating speculation—and by a system of rural credit, of which we have now the beginning.

The writer of Rural Sociology is a man with an open mind, a fine hand for details, a capacity of delicate weighing of evidence and the ability to present his conclusion without dogmatism and in inspiring completeness.

WARREN H. WILSON.

SECOND WIND

By Freeman Tilden. B. W. Huebsch. 169 pp. Price \$1; by mail of the SURVEY \$1.10.

"But don't buy that farm till you have read this book," says the cover. After you have read it, you will probably conclude to buy only three acres, and not to be a "farm eater."

It is the story of all the "unremitting toil" which for years "brought no rewards save the subsistence of day to day," which is the usual lot of the farmer who tries, with too much land and too little capital, to do too many things. (To be sure, that's all the average city worker gets, and gets with less liberty.) The gloomy picture is relieved by a pictorial literary style that makes the book readable, and by our recognition of the indomitable courage and common sense of the hero, Hadlock. He finally wins out, after incredible hardships, by specializing—on feeding for milk.

Second Wind is not a portrait title, nor a happy one; it refers to the protesting surrender of nature's resistance to overstrain, which seems to us a new strength, but which is really acquiescence in wasting the principal of our vigor to attain an immediate object. Nevertheless, Hadlock's philosophy is sound and inspiring.

There is a lot of instruction in the book, which aims to tell the tale, not to provide "food for thought." People do not need food for thought until they get some thought.

BOLTON HALL.

SOCIAL INSURANCE; AN ECONOMIC ANALYSIS

By Robert Morse Woodbury. Henry Holt & Company. 171 pp. Price \$1.25; by mail of the SURVEY \$1.33.

Contrary to general expectations, our entrance into the war did not wipe out the results of the growing propaganda for social insurance. With eight states studying the entire field or some of its branches through official commissions, with the startling evidence of physical deficiency disclosed by the drafting boards, and with the comprehensive plans of the War Department of compensation and insurance for army and navy receiving the approval, not only of the President, but also of the venerable leader of the American Federation of Labor, who until now has been the greatest effective opponent of the social insurance movement, one may reasonably expect a rapid development of constructive legislation immediately following the conclusion of hostilities.

Professor Woodbury's compact little essay is therefore to be welcomed because it presents an attempt "to study the question of the burden of insurance critically," the question of which so much was made by the opponents of the health insurance movement last winter. Not only does the author endeavor to solve this complex problem as to the "incidence of social insurance charges," but also "to reach a reasoned conclusion with respect to the wisdom of a policy of social insurance." The conclusions, briefly stated in the three pages of the last chapter, are in entire harmony with every argument which the advocates of social insurance, including the reviewer, have been making for several years. The author finds that instead of destroying thrift, social insurance will rather encourage and stimulate it; that com-

pulsory insurance against sickness and accident and superannuation is a definite step towards elimination of poverty.

It is to be regretted that the publication of the book, written as a doctor's dissertation in 1915, has been delayed so long with resulting disregard of recent events, which must be irritating to the informed reader and limit the usefulness of the book to the non-initiated. There is also a certain youthful recklessness of statement in regard to some very broad principles, which is particularly objectionable in what is intended to be a calm scientific inquiry. Thus, for instance, we are told that "social insurance, strictly speaking, is not insurance at all," a phrase which is essentially a phrase only. The author thinks that (page 21) "we are still predominantly agricultural" and that only in the eastern manufacturing and in the mining states "a permanent working class has begun to appear." On page 110 we learn that German capital is loath to invest in foreign industries, as compared with American capital.

Notwithstanding these somewhat irritating slips, Professor Woodbury's study may safely be recommended as the first serious effort to analyze the problem of cost. It may be hoped that further studies will follow on the basis of American rather than European experience.

I. M. RUBINOW.

NOTES ON THE CAUSATION OF CANCER.

By Rollo Russell. Longmans, Green & Co. 116 pp. Price \$1.25; by mail of the SURVEY, \$1.37.

The author of this posthumously published work is one of those laymen who have long been interested in investigating a long statistical lines the conditions underlying the widespread occurrence of cancer among all people. While he had to a certain extent a scientific training, such as was given by

the English universities in the early seventies, had traveled widely, and had collected opinions from medical writers bearing on the relation of cancer to food and drink, his statistical ability, as he himself acknowledged, was not very great, and the observations which he made, being isolated records of a few cases, cannot be accepted as definitely proving the correctness of his theory as to the causation of cancer. Generalizations like the following are quoted to show that tea and coffee play a part in the etiology of the disease: "Dr. Eli Jones, of America, states that his country has become a nation of tea-drinkers, and that three out of five persons have some form of dyspepsia."

Such an observation has the same importance in the study of cancer as would the note that in America three out of five persons had blue eyes.

Russell also makes the statement that the high rate of cancer among Scottish ministers as compared to the English clergy is due to the fact that the former consume large quantities of strong tea. If there be a high rate of cancer among the Scotch ministers, it will be found in all probability to be correlated with their long life and consequent high distribution in the upper age groups, rather than with their tea-drinking. In fact, the whole book, while interesting as a collection of scattered opinions, cannot be regarded as of any scientific importance in the discussion of either the occurrence or the increase of cancer.

The fact that peoples of widely differing habits of life, with diets varying from pure

vegetarianism to one composed almost entirely of meat, all suffer from cancer in about the same proportion, as is shown when accurate figures of the numbers of births and deaths in the community and accurate certifications of the causes of death are obtainable, proves that excess of any type in either food or drink has nothing to do with the appearance of cancer.

Unfortunately, the investigations of 4,000 years have not as yet enabled us to make a

more positive statement than that we do not at the present time know anything about the cause of cancer. We do know that cancer frequently follows chronic irritation in persons who have reached the cancer age, but we know, also, that it does not inevitably follow such chronic irritation and that there is still a factor behind all our superficial information, to discover which is the real cancer problem.

FRANCIS CARTER WOOD, M. D.

Communications

CALIFORNIA'S SCHOOL TERM

TO THE EDITOR: In justice to California and to those here who are trying to maintain existing standards of child care during the war, I think that one statement in Mr. Lane's article in the SURVEY for August 4 should be expanded. Speaking of California, Mr. Lane says, "the legislature granted power to the state board of education to reduce the school term to six months when necessary for agricultural or horticultural purposes. The term is now legally six months, but it is actually much longer in many places."

This act was passed by the legislature, though how it happened no one seems to know. We are just awakening to the fact that this law is on our statute books. However, the state board of education has steadfastly refused to use the power given it, in spite of immense pressure brought to bear on it by vested interests.

Setting the date for opening the fall term of school rests with the local school boards, provided they fix the time so that the required number of days of school may be held between the time appointed and July 1 of the following year. October 1 is the latest date that schools can open to meet this requirement. There has been much pressure brought to bear in certain communities to postpone the opening of schools till that date.

An inquiry was made recently to determine whether or not there had been delay in opening our schools. It revealed the fact that in a few places the local authorities were postponing the opening of schools from one to three weeks. It is, however, not a common practice.

The real situation has not been altered to any extent, therefore, by the legislation referred to by Mr. Lane. Education has not been interfered with to any appreciable extent, I am happy to report.

PHYLLIS McDONALD.

Berkeley, Calif.

BY A DRAFTED MAN

TO THE EDITOR: Since I received notice that I have been drafted and must appear for a physical examination, I have been asking myself just what are the reasons why I shall insist on exemption. I have called myself a conscientious objector, but I find that this does not satisfy me.

In the first place, I cannot locate or define conscience. I think I understand the faculty of reason, or at least am aware of such a faculty; but conscience escapes me. And then, too, I am not satisfied with being against anything. We live by virtue of concrete, positive acts. While to be against anything is negative, and negation is nothing. And, as everyone must be for some-

thing, for me to say I am against war does not truly reveal my position.

The more I think of this matter the more unsatisfactory I find the present statement of my case. And while I now refrain from killing even a spider, yet I have never really been opposed to killing a man. That has never entered my mind as a possibility.

So I see now, plainly, that I am not actually opposed to war and killing. Rather I am for a new social order. Having studied life and seen that the purpose of man's life is to bring comparative order out of comparative chaos, and that morality is that part of order which embraces the conduct of man, it is natural that I should be active in promoting a way of life which is more orderly than the present system of organized selfishness.

From a study of man's nature I conclude that man is happiest when he lives in harmony with his fellows. This is indicative to me of the fact that harmony or love is the same thing as order. This is fundamental. The nearer the conduct of man approaches a stage of brotherly love the nearer he approaches a life of order, wisdom and happiness. This is as "scientific" and demonstrable as mathematics. And inasmuch as peace, concord, harmony, order can exist only where there is goodness, generosity, wisdom, it follows that wherever war, discord, disorder exists there must be selfishness and ignorance. It is not necessary that I place my finger on the particular bit or kind of selfishness and ignorance which caused this particular war, because it follows as a matter of cause and effect, and we know it to be true just as we know that where there is light the sun must vibrate, or where there is sound there must be vibration, or where there is plan there must be order.

Therefore, I, being for order, cannot be for disorder. I, being for generosity, cannot be for selfishness. I, being for love, wisdom, and recognizing my own reason as the only guide of action, cannot be for hate, ignorance, or for anything which would necessitate my ignoring my reason and acting as though I lacked one. I, being for peace and all its blessings, cannot be for war and all its horrors. It is not that I am *against* war so much as that I am *for* peace. Rather it follows that being for peace I cannot also be for war.

Some people have so little common sense that they think they can be for peace and war at the same time. But one cannot any more be for peace and war at the same time than he can at once be both awake and asleep, or in the light and the dark, or dry and wet, or white and black, or sick and well, or wise and ignorant, or any other two things which are opposites. It follows that if a person is one thing he cannot be

its opposite. This is self-evident, obvious, apparent, unmistakable. So about war: if I am for peace, I cannot be for war. Nor can anyone else. There is a definite number of people in the world, all of whom are either for peace or for war. Where there is life there is no such thing as impartiality, neutrality or passivity. Hence every effort I put forth for peace must naturally lessen the number of adherents of war; and every effort another puts forth for war must in the same manner lessen the extent of peace.

Accordingly, I have reasoned out my position. I have given a true representation of it. It is essentially constructive, positive. I am not against war; but I am for peace. I am not against killing men or lessening life; but I am for saving and increasing life. I am not against autocracy; but I am for the essence of democracy, the right of every man to decide his own destiny, and to an equal share in our common heritage. Having but one passion, humanity, I refuse to blind my eyes to the present brutalities and injustice in order to dwell on vague and sentimental thoughts of a possible future good. I see time and space as infinite and believe the only time and place for us to do good deeds is the here and now. My attitude is positive, creative. I do not obstruct. I lead. I'm not *against* anything; I'm *for* something. I do not act of free will, but of necessity.

This is clear, simple, reasonable and consistent to me. Being possessed of a reason and, therefore, able to see only wisdom in perpetual peace, order, harmony, concord, amity, I am actively engaged in promoting this state of things among men; hence, it is obvious that I cannot engage in fighting and killing, which is disorder, chaos, nothingness, the limit of foolishness and irrationality, and the opposite of everything I strive for.

WALTER C. HUNTER.

Marblehead, Mass.

CONSCIENTIOUS OBJECTORS

TO THE EDITOR: I beg leave to express to you my gratitude for your publication [the SURVEY for August 4] of the plea for conscientious objectors of the war by Norman Thomas. It seems to me that Mr. Neuman, in his letter August 18 [page 447], so far from strengthening the position of Mr. Thomas, completely surrenders the case for pacifism. He compares those "members of the community who share the benefits of a war which they count unrighteous" to those who use coal which they did not themselves dig. "Are we shirkers," he asks, "when we choose not to dig coal or face death in a steel mill?"

The toil and the risk of the coal-miner and the steel-mill worker are indispensable to the social weal. But we cannot all dig coal. If my physical strength, my training, my location, are such that I can serve society more effectually by doing some other useful work, then I ought not to be a coal-miner or steel-worker. But if the circumstances and my qualifications constitute a just social demand that I engage in one of those hard and dangerous employments, of course I ought to do it, and I am a "shirker" and a coward if I do not, and should be ashamed of myself.

Similarly, if war brings benefits to society, and I am of military age and proper physique, I ought to enter military service. Mr. Neuman's argument assumes that war does produce "benefits" in the same sense that coal-mining or steel-making does. If that is true, then it is ridiculous to condemn war as "unrighteous." It has never occurred to anyone to have "conscientious" objections to digging coal. If war is beneficial, that fact makes it righteous. If, on the contrary, it is injurious, that fact makes it unrighteous. To denounce it as "unrighteous," and at the

same time to claim that in spite of ourselves we cannot escape a share of its "benefits," is a surprising confusion.

I venture to add that, in my opinion, there is a like confusion at the bottom of Mr. Devine's sharp rebuke of conscientious objectors in the First Obligation, [August 18, page 438]. Mr. Devine distinctly assumes that truth can be defended, humanity championed, internationalism builded, democracy safeguarded, by the method of war. If that assumption be granted, Mr. Devine's severe condemnation is amply justified. But assumption is not proof. The pacifist denies the truth of what Mr. Devine treats as self-evident. To say a thing is so does not make it so, even though the assertion be repeated many times, in forms rhetorically effective.

For example, Mr. Devine asserts flatly that "in order that we may live peacefully hereafter with Germans, the first consideration is to win this war against the military autocracy of Germany." Now—I may be mistaken, I may be foolish, but, at any rate, I am honest in disagreeing with that assertion. I think, with President Wilson, that: "Victory would mean peace forced upon the loser, a victor's terms imposed upon the vanquished. It would be accepted in humiliation, under duress, at an intolerable sacrifice, and would leave a sting, a resentment, a bitter memory, upon which terms of peace would rest, not permanently, but only as upon quicksand."

I honestly think that President Wilson's opinion is better grounded in the facts of human nature and of history than Mr. Devine's opinion. Therefore, because I desire a lasting peace with Germany, I do not want my country to "win this war." I want a "peace without victory" for either side, that it may endure. My motive is exactly the same as Mr. Devine's. If I am wrong, and deserve pity for failing "in the greatest crisis of all history," I should be pitied for my intellectual deficiency, not for any moral shortcoming.

The pacifist denies absolutely the assumption which the apologists for war constantly make. He holds with John Hay that "war is the most ferocious and futile of human follies." He cannot see that labeling a war as a "war for humanity" or a "war to make the world safe for democracy" or "our war" changes its character in the least. He believes that war is the worst scourge of humanity, the chief obstacle to democracy and to human progress in general. He looks upon the effort to end war by means of war as no more reasonable than the attempt to cure a case of delirium tremens by giving the sufferer whiskey.

If the pacifist is mistaken, give him enlightenment, not rebuke. Until his mistake is pointed out to him he will perhaps humbly trust that, despite the scorn of many of the wise, mighty and noble, he may be numbered among the "children of God," the "peacemakers" whom the Master of all Christians pronounced blessed. If he cannot be classed with the "stern, unsentimental, stout-hearted fighting men" for whom Mr. Devine claims the beatitude, he may find consolation in the fact that the Master himself could not be classed with them either. He is not yet willing to use the title which Mr. Devine's doctrine seems to demand, and consider himself a disciple of the "Prince of Enforced Peace."

HENRY W. PINKHAM.

[Minister Unitarian Congregational Society.]
Melrose, Mass.

TO THE EDITOR: Having once already set myself openly in opposition to the writer of Social Forces in War Time, I certainly should not in my own person repeat the ungracious act so soon. But his recent estimate of "conscientious objectors" recalls so vividly by way of contrast an English estimate

which I have lately seen, that I am impelled to quote the latter for the purpose of comparison.

Mr. Devine says: "War has its own dangers, physical and social, both in defeat and in victory. . . . About the least useful of all people, however, in the defense against such dangers will be those who stand aloof from the emotions and do not share affirmatively in the national undertaking."

Captain Gwynn, M. P., says: "These are people who are not a blight upon the community; they may very probably prove to be the very salt of the community. I am speaking now as one who has seen war. I think that everybody who has seen war has one governing desire, and that is to see war abolished from the world. I am not at all sure that these people . . . may not be the best people to help in the fight to make an end of war. There is one thing that nobody can deny them—I am speaking now . . . of the real conscientious objector, . . . and that is courage, the most difficult form of courage in the world, the courage of the individual against the crowd. That is a courage which every state would do well to protect and guard. That is the courage which, above all others, makes for freedom."

R. G. HENSHAW.

Wickford, R. I.

TO THE EDITOR: The First Obligation, in your issue of August 18, might well be left to make its appeal to those who look to the SURVEY for leadership and inspiration in social reform during war-time. Its dignity, temperance and broad vision cannot fail to impress even those who are not yet awake to the tremendous nature of the present war, in its possible set-back, by a failure to overthrow imperialism and militarism—of all the moral, social and economic progress of democracy in the life of the nation, and human brotherhood.

An individual may be pardoned for adding, as a personal testimony to the gentler judgment befitting editorial responsibility, the evidence that those who have failed to respond to the call of the President's immortal "declaration" are not merely exercising a "divisive, paralyzing influence" in their own war against the loyal, by shooting out their arrows, even bitter words against them, but are sometimes unconsciously putting a sword into the hand of the enemy.

ERVING WINSLOW.

Boston.

WHAT ARE WE FIGHTING FOR?

TO THE EDITOR: In the SURVEY for August 18, Mr. Devine bases a demand for unqualified moral support of the war on "the very justice of the national cause, the supreme importance of the issues at stake." I desire to be advised what is the national cause, and what are the issues at stake.

I am of New England English stock, and have always regarded England as my second country, with an affection only second to my affection for the land of my birth. When England has done a shameful thing, as in conquering the Boers or joining with Russia to suppress the democratic movement in Persia, I have been ashamed almost as if my own country had done it. My opinion of the conduct of the Teutonic powers, from July, 1914, to the present day, agrees substantially, I suppose, with Mr. Devine's.

Yet I do not know what we are fighting for. There are other readers of the SURVEY in the same doubt, who would be gratified, as I should, by Mr. Devine's setting forth in its columns what he conceives the purposes of the United States to be.

In order to help people in my state of mind, such a statement would have to be substantially free from rhetorical ornament, and would have to consist of a clear state-

ment of the ends which may be attained by the participation of the United States in the war. It might be of some academic interest to consider such questions as whether we took up arms in 1917 because Serbia or Belgium was wronged in 1914 and whether we are fighting for our "honor" in the sense of "the code of honor," that is, by way of avenging an insult, in the manner of a duelist.

To me, however, it appears that the rational grounds for war must lie in a desired future rather than in the past. Moreover, in the light of this war's experience, not much weight can be laid on promises regarding the conduct of future wars. An agreement, for instance, that private property of enemies should not be captured or destroyed at sea, or that submarines should not be used, would be broken as soon as either belligerent saw gain in breaking it. Such agreements may well enough be made for pious satisfaction, but they are surely not worth fighting for. No end, however good in itself, can be worth fighting for unless it can be made at once an accomplished fact, like a transfer of territory, or at least can be in some fashion enforced during peace, as perhaps a reduction of armaments may be.

The question may be stated thus: On the securing of what ends should the United States be ready to make peace and to urge peace upon its allies? Without trying to list all possible answers to this question, I will suggest some: Limitation of armies, and of military and naval armaments; expulsion of the Hohenzollerns; establishment of a republic in Germany; freeing of Belgium; freeing of Serbia; freeing of the occupied provinces of France; return of Alsace-Lorraine, or some part thereof, to France; acquisition of the Trentino by Italy; acquisition of Dalmatia by Italy; acquisition of territory at the eastern end of the Mediterranean by Italy or France or both; an autonomous Poland, including Prussian Poland or Galicia, or both; determination of the status of all disputed territories by plebiscite of their inhabitants; retention by Great Britain of the German colonies; payment to Belgium and France, by Germany, for damage done therein; a fund (according to the Russian proposal) for the restoration of all the devastated countries, to be furnished by all the belligerents in proportion to their war expenditures; a punitive indemnity to be levied on Germany and her allies; how much?

We have had a sufficiency of rhetoric: "to make the world safe for democracy," or, as Mr. Devine says in the article now in question, "to build a lasting international peace," to be "exponents of civilization where it is threatened, the champions of humanity, the defenders of truth." Mr. Devine knows, if he will stop to think, that what he says we are fighting for is what the Germans say they are fighting for. We need a program of tangible rather than rhetorical ends. In specific terms such as I have suggested above, I shall be glad, and I am sure many readers of the SURVEY will be glad, if Mr. Devine will say what he hopes the United States will effect by participating in this war, and on what terms it should be ready to make peace.

CHARLES E. EDGERTON.

Washington.

P. S. Since I sent you my appeal for light on our aims in this war, public knowledge has been much advanced by the President's reply to the Pope. Mr. Wilson there says plainly that we are not fighting to enforce punitive damages, nor for the dismemberment of empires. This appears to be a substantial endorsement of the Russian proposal—no forcible annexations, no punitive indemnities. It also seems to meet the views

of the more democratic-minded among the German people. If one rejoices in such a declaration, one may regret that the President did not see his way to make it earlier, in his communications to the Russian provisional government.

The one specific end which the President sets up to be obtained by our participation in the war—as when he invited Congress to declare war, but somewhat more clearly now—is a change in the political constitution of Germany. C. E. E.

MME. BRESHKOVSKY'S ADDRESS

TO THE EDITOR: Madame Catherine Breshkovsky, the "grandmother of the Russian revolution," has lately expressed the wish that she might hear oftener from her friends in America. Letters addressed to her at the Hotel Central, Moscow, Russia, will be forwarded.

The government has placed at her disposal a private car on the railroad, and she is going about the country making addresses to the thousands who everywhere crowd to hear her.

She writes that, as her voice is no longer adequate to say all that she wishes, she takes along with her a "grandson," who finishes the speeches that she begins.

Madame Breshkovsky from the first has urged a vigorous prosecution of the war.

ALICE STONE BLACKWELL.

Chilmark, Mass.

FROM A DISSENTER

TO THE EDITOR: In his description of the earthly paradise created in Yucatan by Governor Alvarado, G. B. Winton [the SURVEY for August 11, page 416] says: "Many buildings that had been used as churches were bought and converted into school houses."

"Bought"?

There is some mistake here, I think. Does not Mr. Winton mean—well, see the New Thesaurus (Roget & Mawson, Current Literature Co., New York) 791, page 265, for appropriate synonyms, and take your choice among them.

Please do not insult our intelligence too grossly!

THOMAS F. WOODLOCK.

Mt. Vernon, N. Y.

JOTTINGS

MAINE seems, by the latest reports, to have defeated woman suffrage at the special election held this week.

STUART A. QUEEN, secretary of the State Board of Charities and Corrections of California, will become director of the Texas School of Civics and Philanthropy at Houston on October 1.

THE Danish supreme court has confirmed a judgment forcing the repayment of strike benefit amounting to 240 kroner (about \$65) by a former member of a trade union who returned to work before the union had declared the strike ended.

A PSYCHOPATHIC clinic for the county court at Albany, N. Y., will be proposed to the next state legislature. A bill calling for the expenditure of \$5,000 a year is fathered by Judge George Addington on the basis of results obtained through the voluntary examinations by Dr. Clinton McCord.

MANUAL training in New Zealand is now

being supplemented by school visits to industrial establishments. The Auckland Association of Manufacturers has entered into an agreement with the school authorities to systematize such visits, to permit detailed investigation of their works by pupils and to give such information and demonstrations as may be desired to make the visits of maximum educational value.

ELIZABETH KELLY has been appointed director of a campaign to wipe out adult illiteracy in North Carolina. A state appropriation of \$25,000 a year for the next two years for this purpose is to be supplemented by county appropriations.

EVERY drafted man found to be afflicted or threatened with tuberculosis is followed up by the Wisconsin Anti-Tuberculosis Association. "Never before," says Dr. Hoyt E. Dearholt, executive secretary of the association, "in the nation's history has there been such an opportunity to discover the actual existing cases of tuberculosis."

RAYMOND ROBINS of Chicago has been left in charge of a permanent commission in Petrograd by the American Red Cross Commission to Russia, which started home last week. Graham Romeyn Taylor of the SURVEY staff, who went to Russia fifteen months ago to do relief work among interned Germans and Austrians under the American embassy at Petrograd, is now associated with Mr. Robins, following intervening service with the official American commission of which Elihu Root was the head.

AN AWARD of \$20,000 has been offered by the National Institution for Moral Instruction for the best method of character education in public schools. Competition is limited to a group of nine research students in each state. The prize will be divided among the members of the state group that submits the winning plan. The competition will run for a year from Washington's Birthday. David Snedden, professor of social education at Teachers' College, New York city, is chairman of the board of directors of the institution and Milton Fairchild is chairman of the executive committee. Headquarters are at 3730 McKinley street, Washington.

EAST AFRICAN employers of farm labor have become alarmed by an increase of wages which threatens to be permanent. Indeed, this increase exceeds a rate of 100 per cent. "Good men," formerly paid \$1.95 per month and perquisites valued at about \$1.95 per month, have become porters in army service, and less efficient men now are paid from twelve to fifteen rupees (\$3.89 to \$4.87) per month. The explanation given by the American consul at Mombasa why such compensation represents a fair wage, namely that "the average native African laborer is only about one-fifth as efficient as the white workman and requires much more supervision" has a familiar ring to it.

THE New York State Board of Charities has announced the appointment of heads of three of the four divisions created by the legislature last spring. Clarence E. Ford, formerly inspector for the board, becomes head of the division of medical charities; James H. Foster, formerly assistant secretary of the American Social Hygiene Association, becomes head of the division of children; and Dr. Chester Carlyle, senior assistant physician at King's Park State Hospital for the Insane, becomes head of the division of mental defectives and delinquents. The fourth division, that of adult wards, has been consolidated with the position of the superintendent of state and alien poor, now filled by Robert W. Hill.

BUFFALO social workers are still chuckling over the latest case of confusion between Frederic Army, president of the National Conference of Charities and Correction last year and secretary of the Buffalo Charity Organization Society, and his twin brother, Frank. In Buffalo everyone says that what Frank does, Frederic eventually will do. So, when Frank recently went to the hospital for a minor operation, all the mutual friends asked what would happen to Frederic. It happened in two weeks. Frederic went to the same hospital and had his appendix removed. Now the twins are both up and out, smiling and happy.

THE United Committee on War Temperance Activities in the Army and Navy, recently formed at the proposal of the Federal Council of Churches, and comprising prominent temperance organizations, both Catholic and Protestant, will send to various camps a stereopticon which automatically shows slides picturing the effects of alcohol on war-work. Prominent speakers have also been secured to explain the slides. The announcement states that "to assist in meeting the menacing conditions that our army will face in the rum and wine rations of Great Britain and France, an investigation is now being carried on and a commission may be sent abroad." The executive secretary is the Rev. Harley H. Gill, formerly of Niles, Cal.

THE BUILDING OF CITIES, by Harlean James, reviewed in the SURVEY for July 28, has been chosen by the Dallas Board of Education as a textbook for school instruction in the principles of city planning, which is to be introduced as part of the supplementary reading work in connection with "some of the existing courses." Contrary to the opinion expressed by the reviewer, J. M. McCormick, president of the board, holds that "the matter of the city plan forms one of the most important problems of our civic life and should be given proper attention in our schools. The children should be taught the nature and importance of city planning. They should know what has been done in other cities, what can be done and what should be done in our own, in order that they may think and act intelligently upon such matters when they grow up and take their part in the affairs of the community as citizens."

EMERGENCIES—why, for them the Travelers' Aid Society has existed. But the Philadelphia Travelers' Aid Society agents feel as if they had never known the meaning until the spring and summer of 1917. The lost coin, the runaway boy, the stranded old woman and even the white-slave case are simple compared with the unaccustomed and baffling developments of this year. Scarcely had the spring passed with its trainloads of southern Negroes bound for everywhere but liable to remain in the station in amiable huddles, when the summer brought its pathetic search for sailor and soldier lads. A mother journeys from the Middle West only to find that her son had been transferred before her arrival and she is alone without the promised carfare for her return. A young girl comes to marry a soldier friend—he has changed his mind; a wife travels to bid her husband farewell but does not know whether he is a guardsman, a marine or what not. Everything must be done quickly and yet through all the haste of action, the awful loneliness of the stranger must be remembered. The constant transfer of men, the lean purses and desolate plight of their friends has brought out speed and resourcefulness hitherto unknown.

THE SURVEY'S DIRECTORY OF SOCIAL AGENCIES

SURVEY

ASSOCIATES
INC.

KEY

If you know the name of the agency or organization, turn direct to the listings (3d column) for address, corresponding officer, etc. [They are arranged alphabetically.]

If you seek an unknown source of information, turn to the subject index, following. The initialings correspond to capital letters in names of agencies.

If you want to know the agencies at work in any great field of social concern, turn also to this index. [They are grouped under major subject classifications, as "HEALTH," printed in capitals.]

Correspondence is invited by the agencies listed; questions answered (enclose postage for reply) and pamphlets supplied free or at nominal charges. Membership is not required of those seeking information, but offers an opportunity for you to share spiritedly and seriously in your community or profession in an organized movement which is grappling with some country-wide need or cause.

If you are uncertain where to turn, address the SURVEY, and we shall endeavor to get your inquiry into the right hands.

Student, city, town, and county Associations; hygiene and physical education; gymnasiums, swimming-pools and summer camps; rest-rooms, lunch-rooms and cafeterias; educational and business classes; employment bureaus; Bible study and vesper services; holiday homes; national training school for secretaries; foreign work; war emergency work.

THE NEW YORK SCHOOL OF PHILANTHROPY

Dear Fellow Alumni and Friends:

The School needs more students. This year's enrollment will probably be its largest, but even a record registration will not be enough to meet the demand for trained social workers.

There is every chance that the importance and prestige of the War has brought social work will be increased if we can get the right sort of men and women to enter social work and to enter it with the right sort of training. (Fall registration, September 20.)

The new Bulletin, which we will be glad to mail you on application, is Mr. Devine's story of what the School has to offer. Won't you send us the name of one person—if you can send more, so much the better—who you think wants to or ought to become a trained social worker and to whom our Committee can write and send this Bulletin? We will be glad to send you additional copies of the Bulletin. Fall registration, Sep-

to a prospective name and address. Won't you do one or the other—or, for that matter, both! The School has more students if it is to meet the demand for more School of Philanthropy graduates.

Sincerely yours,

ALUMNI COMMITTEE.

THE NEW YORK SCHOOL OF PHILANTHROPY

EDWARD T. DEVINE, Director
105 E. 22d St., New York

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travels, Real Estate, twenty cents per line.

"Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19 St., New York City.

SITUATIONS WANTED

MASTER of Arts, broad education, New York School of Philanthropy graduate, Jewish, organizer, experience in socialized education, settlement work and vocational guidance. Now holds executive position. Seeks position as executive or assistant in progressive organization. Child welfare or social center preferred. Address 2584 SURVEY.

SINGLE MAN, thirty-three years old, several years' experience as business manager of institution, would like position as superintendent or assistant. Address 2586 SURVEY.

AN experienced housekeeper desires a position with institution. Good reference. Address 2588, SURVEY.

WANTED—A Settlement or Institutional position by a trained Kindergartner with experience in Kindergartens, club work for children, girls and foreign women. References. Address 2589 SURVEY.

PUBLIC Health Nurse experienced in various branches of nursing and social work desires position as visiting nurse. Address 2591 SURVEY.

WOMAN executive, head of settlement, 14 years experience, exceptional organizing ability, open for position. Jewess. Credentials. Address 2592 SURVEY.

CONSTRUCTIVE club worker, woman, will give whole or part time or one or two evenings a week to group problem work in Nonsectarian or Jewish institution. Address 2593 SURVEY.

DIRECTOR of women's work, broad experience and efficient, especially adapted for work of that kind seeks connection with dignified organization doing constructive work. Jewess. Address 2594 SURVEY.

NEIGHBORHOOD worker of reputation is open for position, 10 years experience. Jewess. Credentials. Address 2595 SURVEY.

SUCCESSFUL Americanization Director with practical experience as secretary, social service organizer, linguist, seeks immediate connections. Address 2596 SURVEY.

HELP WANTED

WANTED—Young woman as resident assistant in Jewish Settlement, New York City. Address 2572 SURVEY.

WANTED—In small town in Massachusetts, swimming pool director and instructor. Young man with practical experience capable of taking entire charge of, and developing new activities under advisory council. Pool open about November first. For interview address 2590 THE SURVEY, giving details of qualification and experience with references. Please state salary expected.

WANTED—Institutional business manager, to buy, supervise accounts, handle boys in dormitory and chapel and take general charge in superintendent's absence. Address BERKSHIRE INDUSTRIAL FARM, Canaan, N. Y.

112 East 19 Street, New York

High School Teachers

will find that the SURVEY, used as a supplementary text book in high school classes in civics, economics, sociology, industry and political science, will help overcome the pupils' distraction by the press of events in a world at war, through its lively, graphic presentation of current news and opinion along these lines, fresher than any text book.

High school students, reading the SURVEY now, will be better fitted for citizenship later on.

If you are a teacher, ask us for our student rates; if you are not, but know one who might be interested, send us his or her name, and we will do the rest.

Compensation for Invalids of the War¹

By I. M. Rubinow

DIRECTOR, BUREAU OF SOCIAL STATISTICS, DEPARTMENT OF PUBLIC CHARITIES, NEW YORK CITY

THE fairly universal approval which greeted the compensation provisions of the army and navy insurance bill, which was passed by the House on September 13, is very satisfactory evidence of the victory achieved by the essential principles underlying social insurance over American psychology during recent years. The soldiers' and sailors' insurance bill represents perhaps the greatest step in the social-insurance movement made in the United States during the current year. As Commissioner Royal Meeker, of the Bureau of Labor Statistics, recently put it, in his usual striking manner, "from one to two million men will soon be engaged in the business of killing and maiming Germans." The business being admittedly an extra-hazardous one, all the principles of compensation and accident insurance are applicable to this new industry.

Since the United States government is not only the employer but also the administrative authority and, for obvious reasons, its own insurer, the administrative methods and the question of a proper system of compensation insurance are matters of secondary importance and this part of the bill must be judged largely by the liberality of the compensation scale provided. The situation is somewhat complicated by the extensive changes in the bill made in the House of Representatives on Thursday, September 13. The very radical character of these changes makes it certain that a struggle between the two scales of compensation may be expected both in the Senate and in conference committees. Practically, therefore, two plans are before the public at present.

1. The original bill grants compensation for "death or disability resulting from personal injury suffered and disease contracted in the course of the service."

There is, therefore, no occasion for controversy concerning definition of "accident" or "injury" or "occupational disease," for all injuries and diseases are covered. The formula, "in the course of the service," avoids controversy as to interpretation of the common phrase "arising out of employment."

Even outside of a fuller measure of justice to the injured, the broader formula has this great advantage of preventing

unnecessary controversies and delays. Unfortunately, the very satisfactory formula of the original bill was seriously affected by the addition of the words—"in the line of duty." Just how much trouble this phrase may create it is impossible to foretell with any certainty, but especially is it dangerous in application to sickness. The intention of the original bill was definitely to furnish the men with complete accident and health insurance. Any legal enquiries as to whether a particular injury or disease was obtained in the line of duty is contrary to that offer. As a substitute, the suggestion has been advanced that compensation should be denied only "if the injury occurred through serious and wilful misconduct." While less objectionable than the language of the House amendment, it is nevertheless undesirable also.

That this is not mere quibbling will be apparent if the problem of the venereal diseases is considered. It is naive to expect the American army to be so superior morally to all other armies that it will avoid this scourge of warfare. In every European country the return of the diseased soldiers has proven a serious menace to public health. These diseases are not acquired in the line of duty, they probably would come under the designation of "wilful misconduct," but excluding these cases from a system of compensation will seriously aggravate the problem of their cure.

2. Industrial injuries may be roughly classified in four groups: those leading to temporary disability, to partial permanent disability, to total permanent disability and to fatal cases. The bulk of all injuries and diseases result in temporary disability only, about 95 per cent in industrial life and, perhaps, 60 per cent in military activity. Theoretically, cases of temporary disability also come under the provisions of this act, but since it is doubtful whether any enlisted men will be discharged from the army while suffering from a temporary injury or disease requiring treatment, and since no compensation is payable while the person is in receipt of his service pay, few, if any, cases of temporary disability will come under the act.

The scale of compensation provided must, therefore, be studied under two headings: (a) death and (b) permanent disability. In both of these very serious changes were introduced in the House.

¹ The insurance features of the bill drafted by Judge Julian W. Mack (the Alexander-Simmons bill) were discussed by Joseph P. Chamberlain in the SURVEY for September 8 and the separation allowances it provides by Porter R. Lee in the SURVEY for September 15.—EDITOR.

3. The provision originally made for fatal cases may be presented in the following table:

To surviving widow without children—25 per cent of pay, but not less than \$30.

To widow and one child—35 per cent of pay, but not less than \$40.

To widow and two children—40 per cent of pay, but not less than \$55.

To widow and three children—45 per cent of pay, but not less than \$50.

To widow and four or more children—50 per cent of pay, but not less than \$60.

With no widow surviving:

To one child—20 per cent of pay, but not less than \$15.

To two children—30 per cent of pay, but not less than \$25.

To three children—40 per cent of pay, but not less than \$35.

To four children—45 per cent of pay, but not less than \$45.

To five children—50 per cent of pay, but not less than \$50.

To widowed mother—20 per cent of pay, not less than \$25.

This compensation to the dependent widow mother is subject to the limitation that it must not increase the total compensation beyond 50 per cent, or \$60, whichever is the greater.

This scale of compensation has been criticized as inadequate; it falls below the level of $66 \frac{2}{3}$ per cent, which has been urged by the Social Insurance Committee of the American Association for Labor Legislation as the minimum of adequacy in accident compensation, and in cases of few dependents the scale is even below 50 per cent, admitted as inadequate. The compensation act for civil employes of the federal government has already set a precedent of both the $66 \frac{2}{3}$ per cent scale and benefits payable to the widow for life. Mr. Dawson also points out (in the *Economic World* for August 5, 1915) that in all specific provisions of the proposed act the pay is computed excluding all allowances, since such allowances are but a form of wages. Sound compensation theory requires their inclusion in the computation of pay upon which the benefits are based.

But the force of this criticism is considerably reduced by the minimum provisions as given above. Since the ordinary enlisted man's pay is but \$33 per month, the minimum will be effective in the case of enlisted men, and practically the percentages given are not applicable at all to the million of enlisted men, but to the officers only. Comparison with ordinary compensation acts becomes difficult, since in the latter provisions for maximum benefits are usually found, but are very much narrower than those in the bill under consideration. There are very few cases, indeed, under which a monthly compensation for fatal cases can rise above \$60, no matter what the pay of the deceased. The maximum allowance under this bill is \$200 per month, much the highest to be found in any compensation act. Mr. Dawson's point, that "industries do not usually ask men of big earning capacity to risk their lives and limbs in perilous employment at much less than their talents enable them to earn elsewhere," is well taken, but on the whole probably applies much less to the officers than it does to enlisted men, since the salaries of officers compare favorably with salaries usually paid in American industry, except for the few men of very high earning capacity. In so far as the enlisted men are concerned, the $66 \frac{2}{3}$ per cent basis, even including allowances, will not produce a bigger sum than those provided in the bill, and to meet Mr. Dawson's point it would be necessary to base compensation not at all upon the pay in the army, but on the earnings in civil employment preceding enlistment.

The inadequacy of the scale is, perhaps, more pronounced in the case of benefits provided to children surviving without mothers, since in the majority of cases such children require care in addition to sustenance. There is absolutely no reason

why a lower scale should be provided for them per capita than for the surviving widow, who in many cases may be able to support herself. Fifteen dollars a month will not pay for the care and living of a child, nor \$25 for two.

The entire above scale of compensation for fatalities was radically changed in the House after one hour's discussion, especially in so far as the officers are concerned. Instead of percentages of pay, specific amounts entirely independent of grade of service were substituted, the amounts uniformly exceeding the minima stated in the above table by \$5. This was accomplished by means of a rather cheap appeal to "American principles of equality," which were claimed to be injured by the compensation scale based upon percentage of pay. Evidently members of Congress, most of whom belong to the legal profession, have never read or even seen the compensation acts of their own states. As may have been expected from the somewhat demagogic move, this equalization was accomplished very cheaply by cutting down the officers' compensation to the level of private soldiers.

A more deserved criticism of the original bill, which has remained uncorrected though criticized in the House, is the omission of any dependents other than the immediate family and the widowed mother. While promiscuous distribution of pensions out of the public treasury to various assorted relatives without any "insurable interest" is not to be encouraged, actual dependents, such as aged parents and minor brothers and sisters, provided that the fact of dependency is sufficiently established, have rights that are recognized under most compensation laws and should not be so lightly cast aside.

The omission of these dependents has been defended during various hearings on the ground that the admission of their rights would require an enormous administrative machine for the determining of actual dependency and also would open a great opportunity for fraud. The writer regrets to be absolutely unable to admit the force of these arguments. Surely the administrative problem that is being met daily under dozens of state compensation boards should not prove too difficult for the powerful federal government. It is true that these dependents may be protected through the insurance provisions.

It is impossible, in fact, to criticize the scale of compensation for death without taking into consideration facilities for voluntary insurance made available by the act, reviewed by Mr. Chamberlain in the *SURVEY* for September 8. Since the government under the bill is to assume the cost of the additional hazard due to war, and since the war hazard is very much greater than the normal hazard, the government's contributions will necessarily be so much larger than those of the insured that it is difficult to imagine how any officer can fail to avail himself of this advantage.

As far as the enlisted men are concerned, it is admitted that probably a minority will avail themselves of the provisions. In a country that has made no provision for either old age insurance or pensions, the eventual dependency of parents upon their children must be assumed in a substantial proportion of families. The difficulty with voluntary insurance lies in the obvious fact that it is bound to receive a very much more limited application among the unmarried men with dependent parents and brothers than those who leave wives and children behind.

4. The scale of compensation for total disability of the original bill is shown in the following table. It introduces, perhaps for the first time in American compensation legislation, the principle of adjustment of disability benefits to the family status. Such adjustment is common in case of

death benefits, but for disability the same amount is usually paid whether the injured has no dependents or a house full of them. Yet the arguments for some such adjustment hold equally true in disability as well as death.

Benefits for total disability payable when the injured has—
 Neither wife nor child—40 per cent, but not less than \$40.
 Wife, but no children—50 per cent, but not less than \$55.
 Wife and one child—55 per cent, but not less than \$65.
 Wife and two or more children—60 per cent, but not less than \$75.
 No widow, but one child—50 per cent, but not less than \$50.
 Two children—55 per cent, but not less than \$60.
 Three or more children—60 per cent, but not less than \$70.
 Widow mother dependent—10 per cent, but not less than \$10.

If the injured person is so helpless as to be in constant need of a nurse, an additional amount up to \$20 may be paid.

Here, again, the scale of minima was the only one applicable to the enlisted men, while the percentages were intended for the officers. In the House, however, this scale was modified in harmony with the changes in the death benefits by eliminating the percentages altogether. If doubts were expressed in regard to the adequacy of the provisions in the original bill, the utter failure to do justice to the men of high earning capacity by the bill as amended in the House becomes obvious. Here, again, equalization was accomplished by a crude process of leveling down. Only in one group of injuries did the House move a slight increase of benefits, by providing the rate of \$100 per month for the loss of both feet or both hands or both eyes or total blindness. No one would begrudge this high rate of compensation to a soldier suffering any one of these gruesome injuries. But one may well ask whether this larger amount accomplishes the same degree of justice in the case of an unskilled laborer, whose earning capacity before entering into the army may have been only half that amount, and the higher skilled officer drawing \$300 or \$400 before the injury. Of course, the insurance provisions which cover total disability as well as death offer an available correction to the possible charge of inadequacy. This, however, is predicated upon the assumption that the insurance provisions remain intact. If, under pressure of objections from insurance companies and their interests this should be stricken out, an inadequacy of the compensation scale would be very marked. May a firm believer in the principles of compulsory insurance indicate at this time that a system of compulsory insurance on a graduated scale adjusted to the various grades of service would be much more effective than an optional insurance which is bound to adjust itself to the paying capacity and possibly to the shrewdness of the individual?

5. More complex is the problem of partial invalids who may be expected to be much more numerous than the totally disabled. The usual way of treating these cases under American compensation acts is by a schedule of so-called "specific benefits" which specify the number of weeks of compensation payable for specific injuries. As to the inadequacy and unfairness of this method there can hardly be difference of opinion among qualified students. Instead of this prevailing method the Social Insurance Committee of the American Association for Labor Legislation introduced in the federal employes' compensation act the principle of adjustment of compensation to a degree of loss of earning capacity, benefits being payable as long as the disability lasts, for life if necessary.

The objection has been raised against this method that it tends to penalize and, therefore, to prevent an effort on the part of the injured to reestablish his earning capacity, since the first result of such rehabilitation would be to deprive him of his compensation. As will be shown presently, an effort

towards surgical and educational reconstruction of the injured constitutes perhaps the most important aspect of the bill, and the difficulty referred to above has been recognized by the authors of the bill. Section 302 provides that there shall be no reduction in the rate of compensation for individual success in overcoming the handicap of a permanent injury. But since the actual amount of compensation will not depend upon "an impairment of earning capacity in each individual case," but the "average impairment of earning capacity resulting from such injuries in civil occupation," it is impossible to foretell how equitable such compensation will be.

The average impairment of a serious permanent injury is an abstraction that may mean very little when applied to individual cases, especially when dealing with a temporary industry, such as the business of killing and maiming Germans must necessarily be. The army consists of men who have come from widely different occupations and who, if possible, will endeavor to return to those occupations. Equity requires that in determining the loss sustained, the age and occupation of the individual victim be taken into consideration. This principle has already been recognized in the laws of California, West Virginia and some other states. There is no reason why a similar system should not be recognized in case of the soldiers and sailors. Of course, the particular occupation in which the injury has occurred, has no application to the army and navy. Especially as far as the National Guard and the newly trained men are concerned, this principle must be modified so as to base the valuation of the injury upon the occupation previous to enlistment.

As the bill stands at present with the House amendments embodied, the principle of specific payments for definite injuries has been accepted in substance, though in form it is based upon loss of earning capacity, for if age and occupation of the individual are to be disregarded and only the "average impairment" is to be taken into consideration in order to determine the percentage of loss, then the amount of compensation payable for every specific injury will be the same for all men so injured. This is effectually the principle of the specified benefit schedule, except that the actual amounts are left undetermined in the bill and a future executive officer is entrusted with an important legislative function.

6. Although temporary injuries, for reasons explained above, will not to any large extent come under the provision of this act, the bill grants "reasonable medical, surgical and hospital services and supplies, including artificial limbs, trusses and similar appliances," thus lending additional support to the movement for satisfactory medical aid under compensation. In case of chronic ailments, these benefits will be of very great value. It is popularly assumed that the problem of the one-legged man has been solved by giving him an artificial leg, but as a matter of fact, artificial limbs need replenishing almost as frequently as do shoes, and few, if any, compensation laws make such provision for these serious injuries.

7. This liberal provision for medical aid is in harmony with the tendency of the law to stimulate both individual effort and social provisions towards rehabilitation. Most American compensation laws grant temporary benefits for permanent injuries on the theory that readjustment takes place. It is true that the experience of Europe during the war has demonstrated such readjustment is very frequently possible, but only when helped along by proper surgical care and specialized training. The most important contribution of this bill to the theory of compensation, is in making "rehabilitation, re-education and vocational training" the essen-

tial part of the compensation scheme. Already the influence of this bill has been felt in the discussion of compensation for industrial injuries at the recent session of Industrial Accident Boards and Commissions held in Boston in August, where the following resolution was passed:

Resolved: That this association emphatically endorses all ways by which to rehabilitate those injured in industry and also those injured in military service.

One may reasonably hope not only that the principle will be carried over into industrial compensation, but that the very institutions, surgical and educational, to be established by the United States government will soon become available for invalids of industry and that any exploits in that direction will not be wasted even if the gods of war will, by chance, be cheated of their victims.

8. A very important provision of the bill which may be apparent only to those familiar with the difficulties of administration is one which imposes upon the injured the obligation of cooperating in the medical and surgical care as well as in the efforts towards rehabilitation under penalty of loss or suspension of the compensation benefits. Section 303 provides that each person in receipt of compensation shall submit to any reasonable medical or surgical treatment furnished by the bureau, and Section 305, that the injured person shall follow such course or courses of rehabilitation or re-education and vocational training as the United States may provide. If these sections mean what the language seems to convey, they effectually dispose of the objections that might come from the numerous healing fads, whose growth has become a real danger to public health in this country.

No effort has been made in this brief review to subject the language of the bill to any critical analysis from the point of view of expert drafting. Taking Article 3 of the original bill

as a whole, which deals with compensation for injury or disease, the statement is justified that, barring a few minor points, it was perhaps the most scientific and most satisfactory way of treating the problem of injuries arising out of war.

The bill, however, comes out of the House in a very much less desirable shape. With all the display of fireworks in favor of the "common soldier," the House failed to make any substantial increases where the scale had been inadequate and by reducing the amount of compensation of officers to the level of privates, has made it thoroughly inadequate for thousands of families. There is, however, back of the action taken in the House one fact that deserves consideration. The statement was repeatedly made on the floor of the House that the enlisted man and his family may be of the same social status ("as refined and as educated and as worthy," in the words of Mr. Black, from Texas) as the officer and the officer's family. In an army constituted as is ours it must undoubtedly be true in many cases that the officer's rank is largely a matter of accident only. It is for this reason that the principle of the ordinary compensation law which adjusts benefits to wages is not altogether applicable without some modification. A fair and equitable scale of compensation must be adjusted to the loss sustained, which is largely a loss of earning capacity preceding entrance into the army. The army pay may have no relationship to that earning capacity. The old National Guard and the recent volunteers have very largely come from classes of much higher earning capacity than is measured by the \$33 of monthly pay. The adjustment of the scale of compensation to that normal earning capacity preceding the war is, of course, a complicated matter, but it cannot be ruled out as absolutely impossible, at least within certain specified limits.

How the High Cost of Living Is Reduced in Australia

By William Notz

IN view of the numerous efforts made at the present time in European countries and in the United States to reduce the high cost of living and to curb excessive prices on the necessaries of life, the practical results attained along this line by the present labor administration of Australia are of particular interest and significance.

Nowhere else in the world has the policy of nationalization of trade and industry been put to a practical test on such a large scale as in the commonwealth of Australia, notably in New South Wales and Western Australia. For years Australia has been far in advance of other countries in the matter of government ownership of industrial establishments like woolen mills, cement and harness factories, munition plants, and even a coal mine in connection with a state railroad. The primary purpose in all these undertakings was to furnish necessary supplies for certain government departments at lower cost than under the old system of making contracts with private concerns for such supplies. Little if any effort was made to compete for outside business.

Western Australia outdistanced the other states considerably in the number and variety of government-owned enterprises. That state for many years past owned and operated

not only brickyards, quarries, sawmills, but also steamships, hotels, agricultural-implement factories and even a laundry.

An entirely new departure in state participation in trade was initiated a little over a year ago with the advent into office of the Labor Party. Retail butcher shops, fish markets and bakeries owned and operated by the state were opened in several large cities. Special significance attaches to these novel business ventures of the government, because here for the first time the state entered into direct competition with private enterprise in retail trade. Additional interest developed in view of the fact that the avowed purpose of the ruling Labor Party in establishing these retail food shops was to control and regulate the prices of foodstuffs by this method of competing for retail trade. The immediate cause that led to this experiment was the failure of the old Liberal Party to regulate prices by special price-fixing boards provided for by legislation enacted for this purpose shortly after the outbreak of the war, when food prices began to soar. The whole system of maximum prices fixed by these boards proved a failure.

A rather interesting combination of circumstances brought about the opening of state butcher shops. Prior to the present

war meat prices in Australia, as elsewhere, were steadily going up, owing to a world shortage in meat supplies. The increased demands for army purposes following the outbreak of the war drove up prices to still higher levels. Retail prices doubled within a year. A severe drought, which was experienced about the same time in Queensland and other parts of Australia, reduced the sheep supplies one-third and the cattle available for market about one-tenth. Maximum price regulations failed to reduce or steady the constantly rising meat prices.

The leaders of the Labor Party seized upon the high cost of living as a political issue in the campaign, singling out the high meat prices in particular. When that party came into office, the public urgently demanded that the promises made by its leaders on the stump be redeemed. The result was that in the fall of 1915 retail butcher shops owned and operated by the state of Queensland were opened. In addition to the retail trade, a limited wholesale business is conducted. At present the state operates three retail butcher shops in Brisbane and three in Rockhampton. All of them engage in direct competition with the other local retail meat markets.

From the very outset these state shops sold for cash only and made no deliveries to customers' houses. Thereby the cost of doing business was considerably lessened, so that the sales prices could be slightly reduced below the average selling prices of privately owned butcher shops.

While some of the state-owned enterprises in other parts of Australia have been criticized for poor management and inferior goods as compared with private establishments engaged in the same line of trade, it is generally conceded that the state butcher shops in Brisbane have been managed in a very efficient manner, are sanitary and clean and handle products of a superior quality. It is also freely granted that they served to steady the prices paid for cattle, and thus, in turn, steadied the retail meat prices.

Supporters of the ruling party claim that the state butcher shops are paying their way, and this seems to be borne out by the official government reports.

The Argument Over Profits

ACCORDING to these data, which cover the net results of the first business year, the cash receipts for the three shops in Brisbane amounted to £50,136, and the total net profits to £7,576, while the average number of daily customers was 2,546. Thus far the state has invested £7,000 in establishing and running these butcher shops.

Opponents of the government's plan claim that the profit realized thus far by the shops is due to the fact that they drew on the government stores for their supply of frozen meat, and that the storage meat had been originally bought under contract before the rise in wholesale meat prices took place. They contend that as soon as that source of supply was exhausted and the state had to go into the open market to buy cattle and sheep, the state shops were compelled to raise their prices to practically the same level as the "proclaimed" prices fixed by the governmental price-fixing board. Furthermore, they claim that the state butcher shops, being on government property, have an advantage in so far as the rent is merely a matter of arrangement between different departments of the same government.

The state fish supply of Sydney is a parallel enterprise to the state butcher shops in Brisbane. The state operates three fishing trawlers and owns and manages five retail

fish markets in the city of Sydney and one in Newcastle. From time to time fish auctions are held, where the government sells fish caught by the state trawlers.

Unlike the state butcher shops, the state fish supply thus far has not netted a profit on the government investment. Last year's deficit amounted to a total of £10,988. Poor management is blamed for this. Yet in spite of this loss, the government decided to continue the enterprise and appropriated £75,000 for the next year.

Fish, Flesh, Fowl and Loaves

FROM the fact that 71,000 customers patronized the five retail shops in Sydney during the year it appears that with a more efficient and economical management there are prospects of placing the venture on a self-supporting basis. Though the fish markets have not been a financial success, in so far as profits on the investment are concerned, they have, nevertheless, brought about a number of beneficial results. Not only has the fishery industry been developed and expanded, but as a direct result of this government trade venture the monopolistic practices of a ring of fish dealers, who formerly controlled the local markets, have been thwarted and broken.

An enterprise equally interesting and unique, as far as state participation in trade for the purpose of regulating the price of necessary foods is concerned, are the state bakery and flour mill in Sydney. Here, too, the government sells directly to consumers in free competition with other local bakeries. The total sales of bread last year amounted to £41,810, and the net profits were £3,015. Just as in the case of the state butcher shops, no credit is given to customers, all sales being for cash only.

Other state-owned and operated industrial establishments relating to food products are the Maffra beet-sugar factory, a butter factory and dairy farm and numerous cold-storage plants and abattoirs.

It need hardly be said that the Australian public has followed the practical working of these new experiments of state regulation of food prices with keen interest. Press comments as to their success vary greatly, according to the party affiliations of the papers. While the organs of the Labor Party are favorable and perhaps slightly overstate the beneficial results attained thus far, other papers not in sympathy with that party subject all the industrial ventures of the labor government to sharp and frequently unjustified criticism.

It cannot be denied that, on the whole, these enterprises have not proved to be the unqualified success, from a strictly financial point of view, that was claimed for them by enthusiastic supporters of government ownership. In many cases the government has been obliged to continue financial subventions at the close of the first and second fiscal years. There were grounds, too, in certain cases, for criticism of want of right supervision, of poor management, inefficient business methods and interference by self-seeking politicians. However, publicity and criticism in most cases sufficed to correct these evils and to bring about reforms.

On the other hand, impartial and well-informed observers agree that the state butcher shops, fish market and bakery have served a very useful purpose and are proving to be a material factor in keeping the prices of bread, fish and meat down to fair levels. They have stimulated competition and have, in numerous cases, offset the evil effects of combinations and rings of producers and distributors of food supplies, where mere government regulation by means of maximum price laws was wholly ineffective.

NATIONAL ASSOCIATIONS FOR THE STUDY AND PREVENTION OF—

THE national associations for publicity and research, which have been one of the most important developments of social work in America in the twentieth century, have had a unique opportunity to be of service in the present emergency, and one which they have been quick to see and to use. They are doing this not so much by carrying out war-time "programs," in their corporate capacity, but rather by lending their officials to the government or to quasi-governmental agencies—usually at no expense to the borrower—thus putting their accumulated knowledge and experience at the disposal of the nation for its present tasks. If you go to the office of one of these associations and ask what their war-time program is you are apt to hear that they have none, but that they have been making suggestions which are being carried out by this public official, that they have supplied "literature" for this other department, that Mr. X is in Washington, and also Mr. Y and Mr. Z, that Dr. P and Dr. Q have become majors in the Medical Reserve Corps, and so on. In other words, though there should be only a clerk in the office to represent the body of the association—which, however, is not apt to be the case—"its soul is marching on."

The problems of tuberculosis, venereal disease, insanity, and recreation, which, even with all our highly intelligent and energetic propaganda, have hitherto interested only a handful of specialists, comparatively speaking, have suddenly become the common concern of all the branches of the federal and state governments which have anything to do with the fighting forces, and of everybody who has a son or brother or sweetheart, or even a mere acquaintance, in khaki or serge or linen. The prospects are that the American soldier will be the most "protected" and best-cared-for individual that the world has ever seen, and that there will be protection and care left over for at least part of the civil population.

To describe how this is being done would require an enumeration of too many names, of organizations and of individuals, an unraveling of too many intricately crossed threads of cooperation, a repetition of too many news items, for an editorial page. It may, however, be permissible to express the belief that if such a happy situation should result, it will be due in no small measure to the various national associations with the long names, which through the years of peace have been patiently studying, each its own chosen social problem, trying out methods for controlling it under different conditions and in different localities, gathering together men and women of whatever profession who have something to contribute to its solution, taking the difficult first steps in "educating the public" about it, and which when war came were ready with expert knowledge, and ready to help wherever and however they could.

ANOTHER STATE BOARD OF CHARITIES

THE paragraph in this department a few weeks ago about some of the war-time activities of the Indiana Board of State Charities has brought a letter from Charles H. Johnson telling what the New York board has been doing.

Mr. Johnson points out that the amount and character of the work a state board can do is necessarily determined to some extent by the statutory or constitutional limitations under which it operates, and that the supervisory character

SOCIAL FORCES

of the New York board imposes restrictions which may not exist in some other states. The account of what has been done, however, hardly suggests the need of any such explanatory preface. The limitations have not at any rate prevented a substantial contribution to the state's preparation for the national emergency. It is another example of that "standing at attention" of which so many instances come to our notice day after day that we suspect it must be the general attitude of the social agencies of the country, not a rare gesture.

In the spring a letter was sent by the New York state board to all the charitable institutions of the state, public and private, asking what contribution they could make to the state or national government, should they be called upon, in the form of use of property, inmate labor, institutional equipment, or personal service. In reply to this letter several hundred communications were received, which were carefully tabulated by counties and by institutions and submitted to the governor and the adjutant-general's office. Without exception, there was an eagerness on the part of the institutions to render service up to the limit of their abilities. Some offered the use of land, others particular equipment such as laundry and canning facilities, others the services of nurses or of inmates in such work as they were able to do, and all were anxious for advice and direction.

After carefully considering needs and possibilities a second letter was sent to all the institutions, suggesting that there were several definite things that could be done immediately. The first was the education of the inmates in patriotism and loyalty to the government. Methods of accomplishing this were outlined, and a copy of the President's message was enclosed. The second suggestion was the necessity of testing the loyalty of all institution employes; the third, the importance of the cultivation of increased acreage as constituting a great opportunity for all the institutions which have available property. This was followed by another letter giving information about how and to whom application should be made for seed potatoes and other planting material.

Another letter was sent to the children's institutions, inquiring to what extent they were compelled to modify their dietaries and how they were meeting the present financial situation. Several hundred replies were received which revealed that the children's institutions were having a very hard time. This was accordingly followed up by another letter to the same institutions making various suggestions, such as: elimination of waste by curtailing the food waste from the tables; the possibility of cooperative buying by institutions in the same locality; exchange of summer vegetables between institutions; the necessity of increased compensation from public authorities.

Later a series of conferences was arranged for the children's institutions in certain localities. At these conferences, which were very informal, the questions of finance and dietary were discussed and plans were made for increased income. These conferences were and are being conducted throughout the state and are a part of a scheme which the board has for

in WAR TIME

Edward T. Devine, Editor

regular semi-annual conferences with officers of the various institutions. A large supply of leaflets was secured from the Department of Agriculture in Washington and these have been distributed to the institutions.

The pressing financial needs of the private charitable institutions, because of the fact that many contributors have been giving their money to the Red Cross and other emergency relief organizations, have been brought to the attention of the newspapers throughout the state, and a letter has been sent to each institution asking their help to see that the communication or its equivalent is printed in their local paper.

The secretary of the board feels that this is "but the beginning of what may be done" and that with the new divisions which are about to begin operation, the board will be able to be of greater assistance to the institutions, "both in war time and in the time of peace which we hope soon will come."

THE WAR ON CAPE COD

IT is with some trepidation that we venture to refer to another town in Massachusetts as "a fishing village," since receiving from a Gloucester lady an indignant repudiation of that title as applied to the "thriving city" on the north shore. If any of the artists or summer visitors or men attached to the wireless station think it unfair to North Truro, we apologize in advance. Except for these three extraneous elements in the population, however, the little town near the tip of Cape Cod is largely made up of New England and Portuguese fishermen and their families. There is practically no poverty, and simple and thrifty habits have built up many tidy little bank accounts. How this little community has been brought from its natural isolation to an active share in the nation's present task, how it illustrates the process of social integration that is going on all over the country, is told in a letter from a social worker who is spending the summer there:

I came here when the Liberty Loan drive throughout the country was nearly over, and finding very little knowledge or interest in it, I did what could be done to arouse interest in the short time remaining. Information as to the bond issue, the importance of increasing the output of the soil, etc., was conspicuously posted in the post office. Then a Liberty Loan rally was arranged, with the energetic assistance of the local minister and the chairman of the local committee of safety. The rally was held in the village hall. One of the speakers represented a federal reserve bank; another was a young Belgian priest, who has not heard from his parents for over a year. As a result of the meeting fully a fourth of the households now own the bonds, and—what is more important than this—there is far greater interest in and appreciation of what the war means.

Later, gathering at my cottage a number of the women, a league was organized for war relief work. This met at the homes of the members until the kitchens—we meet in the kitchens, in the true Cape manner—became too small to accommodate the growing membership, when the village hall was secured. Now in most of the homes of the village the click of needles is heard as great quantities of wool are transformed into sweaters, mufflers, etc. Many of the old people are finding gladly that age is no barrier to usefulness, and though unable to attend meetings, they knit with great faithfulness at home.

Next a knitting class of little girls was formed, taught by one of the indefatigable women of the place. Some of the children have even earned the money for their wool, so great is their interest. Next a separate club of the young girls was organized, and they are now canvassing the place for "members, money, materials." Every

adult is to be asked to become either an active or an associate member.

The league has also done good work in connection with the Food Conservation Committee. One of the summer visitors from a domestic science department of a university gave an able demonstration of substitutes for bread, which was eagerly listened to by the housewives present. Several of the members made a house-to-house canvass to secure the promise of the housekeepers to do all in their power to aid in conserving the food supply. At one Portuguese home I visited, the woman was in bed with a new baby by her side. Over the bed was an American flag. "Of course I will sign. I want to do everything I can to help along. I didn't give my husband no rest till he bought one of them Liberty Bonds." At another Portuguese home the swarthy fisherman said he had bought a bond: "I made up my mind that if there was anything I could do to help—I am too old to fight—I would do it. And if the government wants my money, it's a-going to have it. If I get it back all right, and if I don't all right."

All the officers of the league are village people, which augurs well for its permanence and usefulness after the summer people leave. The additional bonds sold, or articles made, may not make much difference to the nation or to our allies, but every enlargement of sympathetic interest is of great importance, both to those who feel it and to the rest of the country.

A UNIVERSITY TOWN IN FRANCE THIS SUMMER

GRENOBLE is a clean, thriving, industrious, cheerful, contented city in southeastern France, beautifully situated on a winding river with a semi-circle of snow-capped Alps to bound the view in two directions. It is the seat of a university which has for a number of years offered special courses to foreigners who wish to learn the French language and understand the French literature and institutions. Before the war the attendance at the summer session of the university numbered five or six hundred, nearly half of whom were Germans. Italians and Russians were next in importance, with a substantial representation from England and America, and a scattering of picturesque individuals in native costume from India and Africa. It suggested the gatherings from all parts of the world which we associate with the medieval universities. A letter from a college professor who is there this summer gives a picture of some of the ways in which the war has affected this city of Dauphiné, remote from the fighting lines and conscientiously going on with its missionary undertaking of interpreting France to the foreigners who can come to learn:

Can you imagine the university here without the Germans? There are about a hundred students in the summer school, and more than half of these are Serbs, who are the guests of France and have been here all year. The rest are almost all Italian girls, two priests alone representing the stronger sex from the peninsula. These two have been "réformé," and are going back to teaching, I suppose. There is one Japanese. There are two Englishmen, one lame, the other past military age. There are three Americans. There are no English girls.

There seems to be no modification in the scheme of instruction, except that naturally fewer courses are offered. One or two sentences further may be quoted, for the picture they give of everyday life:

The city is still well kept and full and busy, though not with tourists. Certain things are usually counted as extras now. For instance, butter with your morning coffee is charged 25-50 centimes. Butter has doubled in price since 1914. There are two days each week when no meat is sold, but the supply bought in advance usually lasts over the first day. On two days also the *patisseries* are closed. On other days we go regularly to the same good place as in 1912, where the tea is as good as ever and the toast likewise. I don't know by what fluke they get whitish bread for toasting. But the bewildering array of *gateaux* has shrunk to feeble proportions. As no wheat flour may be used for cakes, they have contrived devices of potato flour or rice flour. There is fine fruit in abundance. The trolley cars are worn and old and crowded and infrequent.

Books on World Relations

INSIDE THE BRITISH ISLES

By Arthur Gleason. The Century Co. 434 pp. Price \$2; by mail of the SURVEY \$2.15.

The New England

Previously familiar with men and politics in the United Kingdom, the author has used a prolonged stay there during the war to study the changes in its social fabric under the pressure of new and unforeseen influences. Thus he is in a position to give more than the results of chance observations

and at the same time to take a wider view of the forces at work than is possible to many of the native writers who are too closely identified with some specific war activity or policy to retain the necessary freedom of vision. The primary value of this book to the student of contemporary events is its description of tendencies, accompanied in nearly all cases by sufficient evidence to allow the reader to judge for himself what amount of intended or unconscious exaggeration there may be in the predictions made.

Of paramount importance for the future development of industrial relations are two discoveries made by the British people: that high wages give high productiveness and that high productiveness or high wages cannot be the ultimate aims of an industrial democracy, however necessary both may be to economic security. The war has awakened England to a recognition of the simple fact that her class differences and her remnants of a feudal social organization are dangerous to the national security because they inhibit the exercise of will power on the part of both the privileged and the disinherited. To the one, it has given new careers of social usefulness, and the other a more insistent claim to participation in social control. What this means in the industrial field is here elaborated by the author from the instances given by him in his contribution to the SURVEY for May 19.

"The desires and impulses of the mass have today a power in shaping legislation, controlling administration, adapting environment, and establishing new social relationships which, through lack of organization, they did not possess in earlier periods. . . . An increasing number of people are seeing what they want and are getting it."

Mr. Gleason does not believe that industrial reconstruction in Great Britain will come about without much struggle and, possibly, some false steps. He recognizes an "absence of fundamental brain-work" in the labor movement and, hence, absence of an enlightened leadership which would direct the current of new aims and desires into channels of adequate width and depth. Nor does he overlook the conservatism and "passive resistance" of the average British industrial manager, though there is much evidence that even in the short three years of war he has already undergone a considerable metamorphosis.

"The women of England, having received the thanks of a grateful kingdom, are now about to be rushed to the door and kicked downstairs."

But, if we may judge from the evidence presented by the author, there is going to be considerable resistance; for of the eight hundred thousand or so additional women in industry many have been enabled for the first time to purchase that most precious possession, self-respect and social status. They will not be content to return to the back-kitchen and wash dishes, to spend nothing on their own clothes and comforts while husbands and children enjoy the amenities of civilized life.

If, with the coming of peace, the semi-skilled women who now live better than ever they did before as "dependents" are expected to make room for men, there will be an outbreak of female militancy compared with which the suffragette warfare of the past will have been mere child's play. They have won spiritual freedom as well as economic independence, and the latter cannot be taken from them unless the former be crushed out completely by a long process of deliberate suppression. There is no sign of any such happening. On the contrary, every month of the war sees women enter spheres of activity previously barred to them and an increase of appreciation for their services.

Other sections deal with Ireland and with Social Studies. They contribute to our knowledge of a Great Britain which in many ways has undergone a radical change. But what appears to be a most revolutionary change in public opinion often is merely a new development from roots long grown deep and strong in the British character—it signifies merely that some factor in the life of the nation, long prominent, has gone into the background and others, equally well established, have come to the fore.

The social changes, more in particular, are signs not of disruption but of vitality. Many institutions are bound to disappear, some of them to the regret of those who love beautiful tradition; but what we witness is not the introduction of a new and

foreign spirit, rather "the emergence of the England of John Bull and Cromwell's soldiers from inarticulateness into power."

BRUNO LASKER.

THE SOUL OF ULSTER

By Ernest W. Hamilton. E. P. Dutton & Co. 188 pp. Price \$1; by mail of the SURVEY \$1.35.

THE NATIONAL BEING—SOME THOUGHTS ON AN IRISH POLITY

By A. E. (George Russell). Maunsel & Co., Ltd., Dublin. 176 pp. Price \$1.35; by mail of the SURVEY \$1.43.

The Way Out for Ireland

Considering the vastness of the literature on Ireland, there is a remarkable dearth of books interpreting the viewpoint of Ulster. Captain Hamilton, formerly a member of Parliament for North Tyrone, though he does not perform this service in any scientific spirit and does not assume a judicial

attitude which could not be genuine, yet gives us valuable insight into the philosophy of his former constituents by rewriting Irish history as they see it. His case against home rule is built up almost exclusively on historical grounds. He goes back to the twelfth century to prove that in the first instance the settlement of the island with a people of alien culture and religion was an act of philanthropy; and all Orange politics since that time he justifies by the necessity imposed upon them of safeguarding a precarious existence surrounded by a perfidious native population which would bring into play every crime and infamy rather than fight it out in the open. He advances the old argument that "only the example of a more advanced civilization working in their midst could be expected to open the eyes of the natives to the higher possibilities of existence" and, of course, ignores the one-sided justice meted out for centuries to Irishmen by their conquerors which enabled one section of the population, the colonists and their offspring, to prosper and acquire the virtues of industry and thrift while the rest was reduced to the extremes of poverty.

As regards the future, though he speaks of the Sinn Fein movement with the utmost contempt, the author anticipates a gradual integration of the Irish people as the result of that movement's non-religious character which, he expects, will lead, for the first time in Irish history, to the inter-marriage of Roman Catholic home-rulers and protestant Ulster people.

"The building up in this way of a new breed, cleansed of traditional prejudices, and educated on broad and liberal lines, cannot fail to revolutionize political aspirations in Ireland. The probability is that the clamor for home rule, being (outside of predatory politicians) based on a foundation of ignorance, will die a natural death, and that its place will be taken by a vigorous internal socialism."

To an outsider, this hope, in view of recent events, would seem preposterous and explained only by the complete misconception of the spirit which animates every branch of the home rule movement. So long

as this is conceived as "predatory," "base," "prejudiced," "bombastic," "covetous" and "purely sordid"—to borrow some of the author's choice adjectives—the "thirteen hundred thousand solid objections" to home rule, no doubt, will remain solid. But it is inconceivable that such a conception can remain if there are in the Orange counties any leaders of opinion capable of approaching the problem of Ireland in the spirit of such practical common sense as that of Sir Horace Plunkett, of "A. E." and of the large body of home-rulers which they represent.

"A. E.," the poet, in his own country better known as George Russell, the propagandist and organizer of agricultural co-operation, in the second book under review, presents the outlines of a political program in which labor is the central factor.

"If we build our civilization without integrating labor into its economic structure, it will wreck that civilization, and it will do that more swiftly today than two thousand years ago, because there is no longer the disparity of culture between high and low which existed in past centuries." He foresees and plans for an Irish commonwealth in which "men no more will be content under rulers of industry they do not elect themselves than they were under political rulers claiming their obedience in the name of God."

He looks upon the concentration of population in great cities as the danger which most threatens the modern state and, therefore, sees the greatest task of Irish statesmanship in bringing about conditions which will enable the countryman to satisfy, without migrating either to the large cities or to foreign lands, his economic, social, intellectual and spiritual needs.

One can see how the author's political philosophy has grown out of his preoccupation with the solution of rural problems and out of the success of the wonderful co-operative movement which he himself has helped on so energetically for so many years. Satisfy the rural unrest, is the lesson which he presents to the world, and you will build up a stable, prosperous, and powerful state!

Russell is not, however, a crank with but one idea. While he claims much for a democratic rural organization and cooperation, he is not blind to many other needs which must be filled. There must be a readjustment of rural and urban interests before national unity can be attained. Geographical representation in government must give way to the representation of interests. Home rule, for him, thus takes the aspect of a direct participation of every citizen in the regulation of the social functions which most closely affect him. "Parliament may act as a kind of guardian of the unorganized, but, once an industry is organized, once it has come of age, it must resent domination by bodies without the special knowledge of which it has the monopoly within itself."

Military organization of the state, before the organization of the people on natural principles has been achieved, seems to "A. E." one of the greatest dangers which Ireland has to face. He is not a pacifist; but it seems preposterous to him that in the midst of a fight for freedom a revival of the military spirit and of the outside pressure of military discipline upon the people should be preached as a means of fusing the diverse elements in the nation.

National safety can lie only in national harmony. By stressing and reiterating again and again this point, as he works out in detail the machinery by which Ireland might find self-expression and complete self-government, the author is driving home a lesson which may well be heeded also in other lands.

BRUNO LASKER.

THE ENGLISH-SPEAKING PEOPLES

By George Louis Beer. The Macmillan Company. 322 pp. Price \$1.50; by mail of the SURVEY \$1.62.

Mr. Beer's case is that the plain logic of the present situation points to the desirability and the need of a closer alliance of the English-speaking peoples. At this time of day it would require a considerable hardihood to deny him the verdict he pleads for, and his argument is indeed not likely to meet serious opposition save from minds of the stiff doctrinaire type who failed to see the havoc that recent events have wrought upon the shibboleths. The presence of an American army in Europe is the symbol of a revolution the full significance of which we shall not discern for many a long day. The political ideas of a century are cast bodily into the melting pot; and it is not yet given to mortal man to see the form in which they will re-emerge.

The author himself is well aware that he has the advantage of treating his subject without the handicap entailed by the pressure of outworn political concepts. He recognizes that the political ideas and syntheses which served the conditions of the last century have ceased to be relevant in a world made new by the very process of being made one. The traditional doctrine of the sovereign state, with its divisive tendencies, is at its last gasp; and it is questionable whether it can ever be made respectable again.

It is indeed true that this doctrine was being seriously called in question before the war. In England, ever since Maitland's time at Cambridge, the course of events—notably the discussion evoked by the Taff Vale and the Scottish churches' cases—was lending irresistible force to his criticism of the Austinean theory; and the performances of the sovereign states of Europe both within and without their borders, before and during the war, make it abundantly clear that without some profound modification of state authority there can be neither liberty within nor harmony without. Most certainly the cause of internationalism is bound up with a radical change in that doctrine of the sovereignty of the national state which has prevailed in Europe since the Reformation.

Mr. Beer might have strengthened his general case very materially by a more exhaustive treatment of this point, especially with reference to the immense changes which such a doctrine would work in the temper of the peoples affected by it. It would undoubtedly stimulate and release loyalties (hitherto much limited by the claims of the state) to other ideals and institutions, both domestic and international. Sentimental attachment to the crown or the flag (or whatever the symbol may be) will have to compete with other associations in which the broadening cultural and economic interests of mankind will increasingly embody themselves. And for Mr. Beer's more particular thesis this has very great importance. For, unless the signs are wholly misleading, present tendencies in England are certainly moving strongly in the direction of a diminished authority for the state. It is the beginning of the end of self-regarding nationalism as a factor in the affairs of the world.

Mr. Beer raises many points of interest which we may not now discuss. But we are bound to demur to his too facile assumption of the abandonment of free trade by Great Britain. The truth is that the post-bellum situation in England is full of the most ex-

traordinary possibilities. Most certainly there will be new political alignments; and it is not unlikely that a strong party will come into existence composed of labor, socialist and radical elements and united on the basis of Guild Socialism; and recent events, pointing, as they do, to the discrediting of the older type of labor leader, may rally the British labor movement to this new party. And that this party will be free-traders appears to admit of no doubt. In any case the movement will be altogether favorable to the most intimate friendship with America.

RICHARD ROBERTS.

THE REBIRTH OF RUSSIA

By Isaac F. Marcossou. John Lane Co. 208 pp. Price \$1.25; by mail of the SURVEY \$1.35.

Mr. Marcossou was in London when the Russian revolution broke out and he was the first American to reach Petrograd after that event. He does not claim for this account of the happenings which he witnessed or heard from witnesses more than it really is: a brief but honest chronicle of momentous issues which will ever live in history, intermingled with a narrative of occurrences which, though of no deep or peculiar significance, derive importance from the light they shed on the state of public opinion in Russia at the time.

The book includes a character sketch of Kerensky, the most notable man of our time, and describes the different aims of the parties and factions whose activities are so anxiously followed in the western world today. There are a number of good and telling photographic illustrations. Until it is replaced by a more weighty and judicious history of the revolution—and that cannot be for many years—this little volume is a decidedly useful source of information on contemporary Russia.

B. L.

THE SLAVS OF THE WAR ZONE

By Rt. Hon. W. F. Baily, C.B. E. P. Dutton & Company. 268 pp. Price \$3.50; by mail of the SURVEY \$3.64.

This is a colorful and more or less readable account of scenes and conditions in Galicia, Bohemia, among the Slovaks of Hungary, in Vienna, Budapest and Fiume, in Croatia, Bosnia and Serbia. It is well for the author that the stringencies of wartime economy do not affect lavishness in the use of adjectives. It will be well, too, if his readers are content with his easy generalizations and somewhat superficial accounts, for he does at the same time bring together much that is entertaining and instructive and not very generally known. His habit of mingling what is apparently genuine first-hand observation with fictitious matter, as in the account of the assassin of the Archduke Franz Ferdinand in a Sarajevo café the night of that pregnant crime, tends to diminish one's sense of confidence. It is like the old panorama with its foreground of real objects fading imperceptibly into the illusion of the back scene; one does not quite know at what point to allow for the work of imagination.

In Bohemia, as I saw it over ten years ago, the wearing of the old peasant costume was almost wholly obsolete. In the town of Domazlice, if anywhere, I was told, it would be still in evidence, but even there the men seemed to have abandoned it definitively and J judged that it was moribund even among the women. Nevertheless, ac-

According to Mr. Baily, "many and beautiful are the costumes to be met with in the Prague markets. Here are men in rich black velvet jackets and short full scarlet petticoats [!]; other men in close-fitting breeches, white vests, embroidered with curious flower designs, high shining Hessian boots and round Astrakhan jauntily plumed caps. Here are girls, too, resplendent in flaring headkerchiefs, purple or russet-brown dresses, half-hidden by orange or green lace-edged aprons—neither dress nor apron reaching below the wearer's knees, thus affording a pleasing view of plump legs clad in red-and-white-ringed stockings. There are other damsels clad in trim blue bodices, lilac or poppy-hued skirts, black headdresses and brilliant hosiery."

The book is not unnaturally affected by a sentiment of sympathy with all things labeled Slav and a not very virulent antipathy for all things labeled "Teuton." It would be to inquire too curiously to ask how far the judgments passed would have differed had the book been published before 1914 and so without any retouching to fit in with the psychology of war-time.

The pictures are reproductions of photographs such as any traveler in these most picturesque parts of Europe is likely to bring home with him. Even more than the text they recall the ineffable charm of these beautiful and in many parts ravaged lands. When the war ceases may wise and abundant assistance be forthcoming for the enormous tasks of reconstruction that will then have to be met.

EMILY GREENE BALCH.

WHEN THE PRUSSAINS CAME TO POLAND

By Laura de Turczynowicz. G. P. Putnam's Sons. 281 pp. Price \$1.25; by mail of the SURVEY \$1.37.

One Woman's Story

This is a story of harrowing interest simply and appealingly told. An American girl married to a Russian Pole, the author, was held in Suwalki, when the Germans were about to occupy it for the second time, by the illness of one of her three little children. There she endured practical captivity for seven months. Her house was used as headquarters by German officers, for some time by Hindenburg, while she nursed her children through typhus, part of the time ill herself with the same terrible disease. During these months she and her children were obliged to see the most terrible sufferings which she did the utmost that she could to mitigate, feeding war prisoners and otherwise befriending those in distress, often at the most imminent risk. By sheer moral force she impressed brutal and drunken soldiers and made herself respected by them.

It is the record of the courage, efficiency and deep and generous feeling of an American woman of whom her country may well be proud. But it is the darkest possible picture of the cruelties, indecencies and unspeakable miseries of war. The author does not deal in general charges. She has apparently kept amazingly clear of the corrosion of hate and has striven hard to do so. She carefully records the many kindnesses, great and small, received from Germans, as well as the manifold cruelties of other Germans. The horror of it is all the greater because of the impression of restrained simple truth-telling.

The fatal logic of war reprisals! First the Russians invaded East Prussia; then the Germans invaded Russian Poland and behaved badly there; the Cossacks took hideous

revenge for this in the second Russian raid on East Prussia; the Germans, reinvading Poland, exerted themselves to repay Cossack atrocities with systematic *Schrecklichkeit*. And in every case it was the poor, simple folk of the country, for the most part neither Germans nor Russians, who suffered.

After the fighting about Suwalki, the able-bodied men and women had been carried off by the Germans. At the suggestion of a priest, Madam de Turczynowicz went out to pick up the children thus abandoned. The houses had been burned and the children were wandering alone starving. One child of four was carrying about a baby of eight months. "Going through the forest at dusk we heard a child's cry but could not locate the sound." In the two days' search she rescued eighty. When she saw them again some time afterward she says "they were getting to look more like children."

It is not the atrocity of this or that man or army, it is the atrocity of war that is branded on one's mind by this unforgettable book.

EMILY GREENE BALCH.

THE RECONSTRUCTION OF POLAND AND THE NEAR EAST

By Herbert Adams Gibbons. The Century Co. 218 pp. Price \$1; by mail of the SURVEY \$1.08.

Where Interests Clash

This reprint of articles which have appeared in the *Century* magazine is an important contribution to the literature on American foreign relations. It emphasizes the fact, as yet so little understood by some of those who discuss peace terms in this country, that the principles of American

policy concerning the Near East are fundamentally and necessarily different from those of our allies, and that a mere following in the wake of London and Paris diplomacy on the part of our state department would have disastrous consequences not only to ourselves but to the peace of the world. Dr. Gibbons avoids the exaggerated fault-finding with British diplomacy in the Balkans, past and present, which disfigures so much of the professedly "independent" political writing of these days. But he shows quite clearly that, protestations of their unselfish aims notwithstanding, Great Britain and the rest of our allies do in fact pursue aims inspired by national advantage—real or imagined—as well as those dictated by the desire for an equitable, durable peace.

We are guilty of an optimism bordering on wilful self-deception if we act on the belief that the aims and peace conditions proclaimed by President Wilson are shared by the statesmen who control the policies of our European allies, if we allow ourselves to forget that they have been brought up in a school of diplomacy foreign to our ways of thinking, if we abandon the fate of the oppressed and dependent smaller nationalities in the Near East or elsewhere to the supposed altruism or good judgment of our comrades in arms.

Dr. Gibbons makes a strong case for the retention of Turkish control over Constantinople and the waterway of the Bosphorus, the Sea of Marmora and the Dardanelles on the grounds of freedom of development for a nation prevented in the past by her more powerful neighbors from effective internal reform and advancement, of world interest, of equity, of logic. He lays bare the designs of European statesmen on the wealth of Asia Minor as the permanent and as yet unaltered motive of singularly vacillating and fickle

policies. He shows that the integrity of two other great Mohammedan states, by no means guaranteed as yet by our allies, that of Afghanistan and Persia, is essential for the equilibrium of western Asia and should have the ardent support of the United States on the basis of President Wilson's Senate speech of January 22.

As regards the future of Poland, he does not believe that Russian liberals are entirely to be trusted. Nor has the British government ever effectively intervened on behalf of the Poles, though popular sentiment in favor of their freedom has often been as strong as it is now on occasions just as favorable for the realization of Polish independence. He does not believe that any solution of the Polish problem will be permanent which does not completely eliminate Russian as well as German control over the reconstituted Polish state and which is not, at the same time, determined "by conservative, unsentimental, ethnological considerations and by sound economic and political considerations," rather than on historical grounds.

Most needed for their educational value are, perhaps, the pages in which the author sets right misled public opinion in this country concerning the nature of Panislamism and the Islam conception of the state. The conception of a universal khalifate was forced upon a reluctant Ottoman ruler by European intrigues; it is not indigenous. On the contrary, Islam is essentially theocratic, and a Mohammedan ruler has religious jurisdiction only over people subject to his political sovereignty. This is a matter of considerable importance when it comes to that part of the American peace program which has to do with the self-government of free peoples.

Dr. Gibbons makes many detailed suggestions for a new map of the Near East, some of them widely accepted here and among our allies as desirable objects, others likely to become those of acute controversy in the near future. There can be no question, however, as regards the pertinency of his general thesis that this country's entry into the war has thrown upon it an even greater responsibility for the smaller nations of Europe than it would otherwise have had, and that no other action will fulfill its claims than a fearless, if need be single-handed, application of the Monroe doctrine to the affairs of the world, "that no nation should seek to extend polity over any other nation or people, but that every people should be left free to determine its own policy, its own way of development, unhindered, unthreatened, unafraid, the little along with the great and powerful."

BRUNO LASKER.

BELGIANS UNDER THE GERMAN EAGLE

By Jean Massart; translated by Bernard Miall. E. P. Dutton & Co. 368 pp. Price \$3.50; by mail of the SURVEY \$3.64.

In this painful exposition by a Belgian, "vice-director of the class of sciences in the Royal Academy of Belgium," the attempt is made to give a strictly objective and scientific character to the picture of Belgium under German rule. The documents on which it is based are all said to be of German origin or censored by German authorities: books, newspapers, posters, and so forth.

The book was compiled in Belgium during the first twelve months of the German occupation. It therefore, says the author, "precisely reflects the state of mind of a Belgian who has lived a year under German domination." The violation of Belgium's neutrality, reprisals for alleged Belgian atrocities and sniping, various illegalities, exactions and cruelties, all as far as possible documented, make up the body of the book.

The reader is aware that one side only

is being presented, and that the author, however hard he tries to be accurate, cannot possibly be an impartial witness. But making every allowance, it is still a sufficiently ugly story.

EMILY GREENE BALCH.

ALSACE-LORRAINE, A Study in Conquest

By David Starr Jordan. Bobbs-Merrill Company. 114 pp. Price \$1; by mail of the SURVEY \$1.07.

Twenty-three times, according to Bismarck, has Germany been invaded by her Gallic neighbor through the gateway between Strasburg and Metz. When he closed the gate and kept the key, he also kept a land and a people which was only partly and distantly of German origin, had become a

member of the great French democracy through many generations of common experience, spoke French for the most part and had behind it a history of successful self-government. Dr. Jordan, who traveled through this country in 1913, came back convinced that in 1871 neither of the provinces was in any sense a German *irredenta* and that no significant proportion of the original population desired inclusion in the German empire, even on terms of equality with other autonomous states.

After forty years the public sentiment had, naturally, undergone a change. Dread of war, of another futile tug between the two great powers in which the beloved motherland would be the chief sufferer, was the dominant note. Between 1871 and 1873 about one-fifth of the total population, 270,000, including, of course, the most ardent French patriots, had taken advantage of the option given them in the peace treaty to emigrate to France. Probably more than an equal number followed later when the oppressiveness of German rule became recognized as a permanent condition of life.

On the other hand, large numbers of Prussians settled in the new Reichsland and occupied practically all official positions, civil as well as military. The majority of the present generation were taught in German schools by German teachers—even those in Lorraine who speak a French dialect receive their teaching of French in the German language. New industries, predominantly owned and managed by Prussians, had grown up and prospered around the old centers of native population. The former aspiration towards a speedy reunion with France was slowly changing into one towards self-government and participation on equal terms in the counsels of the German empire.

With the present war old hopes have been revived, old wounds reopened. No one can say with certainty what would be the result of a referendum to ascertain whether the people preferred a German or a French affiliation, if the Prussian settlers and their children were included in it. Economically, the Alsace-Lorraine of today leans upon Germany; emotionally, upon France. But such a referendum, even at the conclusion of a drawn war, would be neither a fair nor an expedient basis for a solution of the problem of Alsace-Lorraine. What the people want is not this or that political affiliation but political independence. "Neither France with her mourning figure of Strasburg, as little as possible like an Alsatian maid, nor Germany with her *Abwehrgesetz*, her laws of exception and repression, has ever quite grasped the present spirit of Alsace."

If the author is unable to forecast the best solution of the perplexing problem of

Alsace-Lorraine, at least he brings sufficient evidence to show that many of those which have been proposed from time to time are utterly impracticable. An exchange of Alsace-Lorraine for Madagascar, or, for the matter of that, all the French colonies together, is impossible for Germany, who insists that these provinces were "won back," not conquered. The creation of a new dynasty is equally out of the question, as is the inclusion of Alsace-Lorraine in the German empire as an autonomous republic. Dismemberment with a view to returning to France the more French-speaking sections is impossible, because "the feeling of a people in no way depends on the dialect they speak at home," and the communes most conspicuously attached to France are hopelessly mixed up with those which have become more German in complexion. Also, there is as much sense of common destiny between Alsace and Lorraine as there is between the Flemish and Walloon provinces of Belgium; and in both cases a splitting of the country into two separate parts would not lessen but increase the frontier difficulties and problems, quite apart from the fact that it could only be accomplished in violation of the strongest patriotic sentiment.

The creation of a new "buffer" state, a republic which would link up Switzerland with Luxemburg and Belgium in a broad belt of unfortified, independent states, not so much separating the two great nations at either side as giving them the greatest historical opportunity for conciliation and furtherance of mutual economic and cultural relations, though not advanced by Dr. Jordan as the solution, from an analysis of the material which he brings does stand out as at least the most promising approach to it. Alsace-Lorraine is not a nation today; but the racial and political contrasts within her boundaries are not nearly so strong as were those of other independent European states which have proved a blessing to their citizens and to the world at large. The real affinity of Alsace, the author tells us, lies with Switzerland.

An independent Alsace-Lorraine, offending the vanity of both her neighbors, would have to carry one of the heaviest responsibilities for the future peace of Europe. If the new Europe were, in outlook and organization, to resemble the old, the position of such a state would be untenable. Without a port, without an assured market for her products, hemmed in on every side by the tariff walls of mighty nations, she would bleed to death.

But the war is not to end like that. The peoples of the world are out for a healthier and a juster relation of nations to each other, even if some of their rulers and diplomats still fight in the old spirit of *Realpolitik*, so called. America will welcome into the fellowship of nations this newcomer who loves peace, progress and humanity and who will be a gateway to understanding and friendship between two great peoples, not to aggression.

BRUNO LASKER.

HYGIENE IN MEXICO

A study of sanitary and educational problems. By Alberto J. Pani. G. P. Putnam's Sons. 206 pp. Price \$1.50; by mail of the SURVEY \$1.60.

This is an ardent plea for public health in Mexico, and a vigorous statement of difficulties in the way thereof. The plea is made by a man who has held many official positions in his country, and was a member of the Joint Mexican-American Commission of 1916. His first thesis is that it is necessary for the powers that be to take action insuring health—*salus populi suprema lex*; and the proceeds from the sale of his Spanish edition were given to the People's University

of Mexico for its work, especially in teaching hygiene.

Dr. Pani's comparative statistics are startling: the death-rate per thousand in Mexico City is nearly treble that of American cities equal in population; two and one-half times greater than that of comparable European cities; greater even than that of Madras and Cairo where cholera is endemic and plague always a possibility. The fact that the largest average of deaths is due to digestive disorders, Dr. Pani explains as perhaps traceable to "bad or deficient food, including water." Respiratory diseases cause the next highest fatality, and tuberculosis does much to raise the total of "general diseases," among which it is included. For the high rate, Dr. Pani finds explanation in dwellings defective in sanitation; a climate of sudden and extreme changes; and such civic sins of omission as bad paving, insufficient cleaning and sprinkling of streets.

It is to improved conditions of housing and nutrition that Dr. Pani looks for the greatest improvement in Mexico's health. He lays upon the government a strict charge, of investigation of health conditions and intelligent endeavor for this improvement, in its great task of national reconstruction.

G. S.

THE MEXICAN PROBLEM

By C. W. Barron. Houghton Mifflin Company. 136 pp. Price \$1; by mail of the SURVEY \$1.06.

This is a small book on a very large subject. It supplies fresh and valuable information concerning one major economic interest in Mexico—petroleum. But quite outside its purview lie four others—agriculture, mines, rubber, henequen. It surveys with some degree of intimacy five to ten thousand square miles of territory. Mexico has

over 750,000.

No reader of the volume can afford to forget these limitations. Within them it is an excellent piece of work. The romance of coal oil in Mexico was worth the telling. The truth of it is so incredible that not even a Jules Verne would have dared imagine it. Oil wells at sea level, that do their own pumping, that even have to be curbed to keep them within bounds, that drive their product through pipe lines aboard ocean-going steamers, that yield (when allowed) hundreds of thousands of barrels a day, that force their largess upon men under a pressure of hundreds of pounds to the square inch, that make millionaires of their owners while they sleep—it is a veritable Arabian Nights' dream. Experts declare the geology of those fields to be unintelligible. It defies all known laws. Nobody knows what to expect. An innocent drill hole may in a moment become a roaring volcano, overwhelming men, machinery and landscape with its seething, gummy riches.

Mr. Barron is sympathetic in his attitude toward the Mexican people, in marked contrast to many who have written about them. He pays a fine tribute to the fidelity and capacity of the Mexican laborers in the oil fields. Yet it should be remembered that the inhabitants of that hot coastal strip have always ranked rather low in the country's population. Until petroleum smothered the malaria mosquitoes, settlements there were almost impossible. Frightful fevers devastated whole townships. Even the cattle died at times. Only the apathetic and inferior elements of the population remained.

But while kindly toward the people, the

author is rather sharp with the Mexican government. He is also impatient with Washington. There are a few axioms accepted by those widely acquainted with Mexican affairs which a more extended study will probably bring home to him: (1) Mexico must solve her own governmental problem. Forcible interference from without can do only harm. (2) The disturbances there are phases of an ethnical and social evolution. Evolution is ever slow. (3) The Carranza government is by far the most trustworthy factor now in sight. It should have our sympathy in its struggles and our help whenever support is needed. Henry Bruère, who has just made a careful study of that government's situation, mentions as one element of great importance to it "the cooperation of the great mining, oil and other foreign industrial interests."

G. B. WINTON.

NATIONALISM, WAR AND SOCIETY

By Edward Krehbiel. The Macmillan Company. 276 pp. Price \$1.50; by mail of the SURVEY \$1.62.

A most usable and useful book. Not a book to read. A systematic arrangement of analyses of arguments pro and con, brief quotations from leading authorities, names, dates, lists, bibliographies, make of this volume a storehouse of suggestion and material. As a

guide to the solitary student, or to the leader of a study group, as first aid to the lecturer, as a help to documenting an argument, it is invaluable.

By "nationalism" Professor Krehbiel means the theory of absolute sovereignty of the state with imperialism, international rivalry and the philosophy of force as corollaries. The first part of the book deals with this—with the case for and against nationalism and the war system. Angell's doctrine of "the great illusion," the economic consequences of war and public debts, with the sociological, biological, political and ethical aspects of war.

Part II deals with evolutionary changes, with alterations in the institution of warfare, and the developments making for modern internationalism.

The third part deals with pacifism in the widest sense; with the literature of peace ideals, with the growth of international law and international arbitration, with the Hague conferences, and the development of international organization, with schemes and forces making for better international relations.

The appendix gives data on army and navy appropriations of different powers, the pacifist periodical press, fiction and drama dealing with war and peace, and finally a list of the cases decided by the Permanent Court of Arbitration.

As an example of the pithy style, take the author's analysis of the contrast between police force and military force, comparison as to which is such a constant rock of offense to the anti-pacifist:

"Martial force is exercised by the interested party in his own behalf; it is competitive and seeks to impose its will, which it identifies with the right upon its advocacy by violence if necessary. Police force is not exercised by the interested parties to a dispute, but is the force exercised by the agents of a cooperating society; its function is not to help one of the disputants to impose his conception of right on the other, but to see that each is protected against the other and that both are obedient to society."

EMILY GREENE BALCH.

THE INTERNATIONAL CRISIS: THE THEORY OF THE STATE

By J. S. Mackenzie and others. Oxford University Press. 163 pp. Price \$1.50; by mail of the SURVEY \$1.60.

No phase of the great war is now so important as its connection with political organization and theory. It has, taking the utterances of statesmen, settled down to a war for democracy. Just what democracy is depends on the individual defining it, and there are at least as many varieties as

there are classes or social groups. Is it personal liberty after Rousseau, Jefferson and Jackson? Is it the "consent of the governed" even if their individual liberties are slight? Is it the political condition which would spring from a socialistic state? Or what? Upon the answer given to this question much of our future depends. And to answer it is not so easy as is at first imagined.

It is with this subject, the theory of the state, that the six lectures delivered at the Bedford College for Women have to do. Broadly, they contain the now generally accepted doctrine that there is a fundamental difference between the German and—at least—the British, French and American theories of state: the former regarding the state as above, and virtually independent, of the individuals who compose it, the latter conceiving the state as a joint-stock concern of its citizens. The German theory also regards the state as power, and hence readily adopts the doctrine that might makes right.

This doctrine forms the substance of Professor Sorley's lecture on The State and Morality, and Professor Mackenzie's analysis of Might and Right. The former rejects the view of publicists—chiefly though not without exception German—that the state is under no moral law, on the ground that the interaction of states produces a certain community of interests, which cannot tolerate the doctrine that a state cannot sacrifice itself to something higher, as there is nothing higher. He contends that the common interests of states are higher and that sacrifice of a state to them is the greater good. Still, how complex, and even treacherous, this subject is, appears in Mr. Mackenzie's contention that a more highly civilized and better governed state may feel called upon to interfere with the affairs of a state not so placed, and frankly admits that whether this is right or not is a question of power (p. 72). If it can successfully do so it is wise and right. It is very difficult to distinguish this from the might-makes-right philosophy!

Highly instructive is Mr. Lindsay's lecture on The State and Society. Noting that the two are not synonymous, that, indeed, the German theory of state runs counter to the interests of modern society, he develops the idea that the political task of the future will be dominated by the present discrepancy between the need for a political organization in harmony with the economic interconnectedness of states and man's capacity and will for such an organization.

Under the caption, Egoism, Personal and National, Canon Rashdall touches first upon the very fundamental relation of emotion and reason to the morality of states, and declares that only if morality is the product of reason or intellect can we talk of a universally binding morality. Right, then, for a state as for a person, is something that is reasonable—and the 'selfish aims of the individual state, however keenly felt, are not reasonable. Altruism is required.

The other parties must be considered. The common welfare, only, is reasonable. Patriotism, to be sure, is a sort of instinct, an emotion. But it, with all other emotional moralities, should be required to give an account of itself at the bar of reason and be modified accordingly. "We must essay the task of teaching a higher, a more rational, a more humane and more Christian patriotism."

The two remaining lectures are less instructive, indeed, that of Mrs. Creighton on Church and State is contrary to American traditions and beliefs. It takes the position that an established, a national church, is desirable (page 20), and in discussing the relation of church and state it gives no satisfactory rule for determining the functions or the jurisdiction of either. The church, it is stated, should act as the conscience of the state, and it has a deposit of principles which it is bound to preserve; the state is concerned with expediency which often threatens the principles of the church. But the church, the conscience of the state, "will do much to avoid collision if it will be content to express itself as the spiritual organ of the nation, and will abstain from fighting for what it considers its rights" (page 20). Two pages later is the opinion that the church must be ready to lose all its property rather than submit to an unrighteous state.

It is to be expected that there will be discrepancies between lectures by a number of persons. Mr. Sorley rebukes the German writers for regarding their nation as a "chosen people." He forgets that Cecil Rhodes, Carlyle and many more thought the same of Englishmen. Mr. Mackenzie, who is fairer here, quotes from Carlyle to that effect, and from another writer who expands on "God's Englishmen," and notes that Nietzsche regarded the French as the most highly civilized of modern peoples.

One cannot read these lectures without noticing the strong vein of internationalism in them. They look for some system that shall overcome the defects of the existing order, and by various routes arrive at the same general conclusion, that the several states of earth must submit to a political organization that shall safeguard humanity. This is the best feature of the series; it points the way.

EDWARD KREHBIEL.

NATIONALISM AND WAR IN THE NEAR EAST

By Lord Courtney of Penwith. Oxford University Press. 428 pp. Price \$4.15; by mail of the SURVEY \$4.35.

This scholarly and important piece of work is a product of the Carnegie Endowment for International Peace, and in particular of the Division of Economics and History, under the direction of Prof. John Bates Clark. It is much more than a mere history, though it is that—an excellent

philosophical, readable and original history of that tangled twist of wrongs and aspirations that made Kipling's "war eagles" always anticipate "trouble in the Balkans before spring" and which made the passions of that troubled region the tinder, as everyone knew that they were likely to be, that set the world ablaze. The sense of what is to follow gives a tragic poignancy to the story as one reads. It is at the same time an analysis of the relations between nationalism and war, in the Balkans in particular, but also in their general bearings.

Of special interest to Americans is the emphasis laid by the British author on the influence of America, directly by her educa-

tional efforts at Robert College and the Constantinople College for Girls, but also in a permeating and deeply modifying way through the effects, political, moral and economic of emigration.

Of the anonymous author, Lord Courtney tells something in a brief preface. He speaks of his special qualifications, his first-hand knowledge of the Near East, his rare distinction in that "he has moved in and out among chancelleries and knows their atmosphere without ever having succumbed to its asphyxiating influence."

The charm of the book lies in this personal quality of the author, his wisdom, his deep and universal humanity. To read it is discipline in disinterested and humane appreciation of racial and political conflicts of a sort which are too apt to breed heat and partisanship even in the student of them. It is full of poignant sayings on peace and war.

For instance: "In the end, as is always the case in war, military pressure overcame political prudence. Once war is in sight, the only possible policy is that which promises the best prospect of successful warfare, not that which offers the best prospect of a successful peace. War cannot be kept in place as a means to an end, but always becomes the end itself."

The moral of the book, for it most definitely has a moral, is summed up at the close of the author's preface:

"When peace has again been established in Europe and the Balkans, and the time comes for the civilized peoples to reconstruct their international relationships, it will be well for the world if they have learnt one lesson—that national responsibilities may not be neglected with impunity in any region, however insignificant, nor by any citizen, however ignorant. . . . The European wars of today and the Balkan wars of yesterday are due to the failure of the electorates of western Europe to impress on their governments their own instincts of common sense and conscience. . . . The British citizen who thinks diplomacy a mystery beyond him, and the American citizen who thinks it a mummery beneath him, are only right in so far as they themselves have made it so. International politics will suffer as much through being cut off from the common sense and conscience of citizens and committed entirely to professionals as do municipal politics."

EMILY GREENE BALCH.

THE FRONTIERS OF LANGUAGE AND NATIONALITY IN EUROPE

By Leon Domiman. Henry Holt & Co. 375 pp. Price \$3; by mail of the SURVEY \$3.30.

As a
Man
Speaks

Anyone who thinks it will be quite easy to adjust boundaries after this war so as to insure stable equilibrium through any simple formula like "respect for the rights of small nationalities" should read this careful and scholarly study. This shows, to begin with, what an uncertain term "nationality" is. Is that sense of group unity which constitutes true nationality founded upon common political sovereignty, common language, common descent (racial homogeneity) or common habitat? Obviously it is not purely political in most cases. Race has evidently little to do with it, as we find in all the present European nationalities a mixture of two or perhaps three of the European races. Domiman's book considers that language exerts perhaps the strongest forma-

tive influence on nationality because words express thoughts and ideals. But underlying the currents of national speech is found the persistent action of the land, which restricts and directs their course.

Political boundaries drawn along the line of demarcation between languages would probably afford the most generally satisfactory and stable division of peoples, and in this book the author leads us along all the frontier lines of the European continents, painstakingly pointing out just where the language lines run. Sometimes there is not a clear line; sometimes there are language enclaves that no continuous boundary line can take in; sometimes there is a mixture of languages in one place, which leads us to see how much careful adjustment, how much compromise and conciliation will be needed, how much dissatisfaction will still remain, with boundaries run as scientifically as possible.

This is vividly shown by the quite remarkable maps colored and shaded to show linguistic and political areas. The map of Austria-Hungary, for example, is a patchwork of color, in big blocks, in little blocks, in long, straggling bands, mingled and intermingled; and even so the symbols fail to show the tracts where languages are spoken in layers—a vertical distribution through social strata as compared with a horizontal distribution through different localities.

The frontiers specifically discussed are those of the French and Germanic languages in Belgium and Luxemburg, in Alsace-Lorraine and Switzerland; of the Italian languages, the Scandinavian and Baltic languages, Polish, Bohemian, Moravian, Slovakian and Hungarian, and finally, almost one-half of the book is taken up with a detailed discussion of the Balkan peninsula and the peoples of Turkey, which is of especial value in view of the author's especial familiarity with the political, racial and linguistic tangle of that region, and our general ignorance of it.

Of particular interest is the historical review of Turkey as the great highway between east and west, from the time when the earliest known trade routes converged through this corridor to the days of the Bagdad railway, showing how persistently through the ages control of this route has been the object of European conflict, and turning our eyes away from the more familiar but more superficial causes of the present contention to its age-deep sources in the East.

KATE HOLLADAY CLAGHORN.

WOMEN IN WAR

By Francis Gribble. E. P. Dutton & Co. 342 pp. Price \$2.75; by mail of the SURVEY, \$2.90.

This book was completed before 1914 by a British man of letters who was subsequently interned a year in Germany. His lively narratives of romantic Amazons and of saintly heroines from Jeanne d'Arc to Edith Cavell include those of a surprising number of French and Russian women who donned male attire and either openly or secretly fought in the ranks. Among those who, though not in battle, were prominent factors in waging war are Catherine the Great, Empress Eugenie, many favorites of kings, the English women who perished at Cawnpore, and that noblest of ministers of mercy, Florence Nightingale.

The omission, made before the war, of accounts of German women is attributed by the author to the fact that Teutonic achievements of valor have been in organized efforts of the mass, rather than in the dash and daring of the individual, and because even exceptional women have been confined to domestic labors. He admits that Germany today possesses women who hold that

their country has "engaged in a bloody, vulgar and unprofitable quarrel, provoked by the turbulent crown prince." The one Teutonic woman whose work is chosen for favorable comment is Baroness von Suttner.

The book is a collection of facts regarding many amazing and dramatic careers. The fact that English women play scarcely any part in these is due to their island security and protection from invasion.

LUCIA AMES MEAD.

LES BASES D'UNE PAIX DURABLE

By Auguste Schvan. Librairie Felix Alcan, Paris. 245 pp. Price \$.75; by mail of the SURVEY \$.81.

THE BASIS OF DURABLE PEACE

By Cosmos. Chas. Scribner's Sons. 144 pp. Price \$.50; by mail of the SURVEY \$.55.

Les Basis d'une Paix Durable is the thoughtful production of a radical Swedish diplomat, whose German military training and studies led to his vehement repudiation not only of the German conception of the state, but of the modern conception altogether. He bases world law on human solidarity and

would substitute cosmopolitanism for internationalism, which implies nationalism as well. Free trade, a world court in many local sections, abolition of rival armies and navies, an ocean police, and great limitation of collective control over wide areas form parts of his scheme for a new world order. Exclusion of aliens would be permitted, but administration of collective affairs of citizens would be limited to a region so restricted that every law would closely affect the life of all. When the latter pass to other nations they, as world citizens, would share all its privileges and restrictions. In such a world exploitation of weak peoples and ambition for territory would cease.

The style is incisive; the half-way measures of the pacifist—the immunity of private property at sea, government manufacture of munitions, a league of nations—are scored with pungent wit. The book bristles with fresh ideas and startles by its proposals which, though not Utopian, can not be reached without many intermediate steps. Its stimulating pages can not be briefly summarized to do them justice.

The Basis of Durable Peace, written by an anonymous expert on international problems, is one of the ablest expositions of the subject that has appeared in small compass. Much less technical than Lafontaine's *The Great Solution*, it presents in the form of letters to the *New York Times* a candid discussion of the primary causes of the war, the objects of the allies and the constructive measures that should be adopted after the war and sedulously studied now.

The author advocates the return to France of Alsace-Lorraine and no half-way measure of neutralization. He shows how false views of international trade are constant causes of war; he sees Prussian militarism as a state of heart which can be got rid of only by the Germans themselves; he finds the present war closely connected with the suppression of the revolution of 1848; he discusses the freedom of the seas, and the enforcement of peace by a league of nations and shows this to be impracticable; and he analyzes the work that should be undertaken by the third Hague conference.

The author is no pacifist and advocates universal military training, a measure which President Wilson declares to be as yet inopportune. He also holds that the place of

the United States in history and its just development will depend upon the way in which it deals with the great international problems that confront us and that half of our protests against injustice and cruelty will be lost if we permit these evils to exist at home. A correspondence with Hall Caine published as an appendix still further elucidates his theme.

LUCIA AMES MEAD.

OBSTACLES TO PEACE

By Samuel S. McClure. Houghton Mifflin Company. 487 pp. Price \$2; by mail of the SURVEY \$2.16.

This is an admirable scrapbook, full of telling facts and illustrations throwing light on the origin of the great war and many of its phases which, to the general public, have remained well-nigh inexplicable. Among these, the mentality of the belligerent nations has, three thousand miles away,

remained a gigantic mystery, in spite of all the ink that has flowed over this one topic. Mr. McClure is rendering a service not only to his contemporaries but to future historians by giving this permanent form to his interviews and observations in England, Ireland, Germany, Austria, Hungary, Turkey, France and Belgium. The pages in which he records his personal impressions show a desire to know and to understand. The sketchy character of the book is due to an evident effort to abstain from generalizations which he could not support by drawing on his own knowledge. Nevertheless, certain conclusions stand out clearly.

Germany did not expect England's intervention. The possibility that later on, for economic reasons, Great Britain might come to the rescue of France under one pretext or another was considered and planned for by the imperial government. But neither the chancellor nor the masses of the people foresaw that the invasion of Belgium would be made an immediate and dominant issue. Mr. McClure does not doubt the genuineness of the resentment with which all Germany received the news and gradually absorbed the fact of the world's moral condemnation of that act. The excuse for it, that the nation was attacked from two sides and had to fight for existence, was sincere.

The tragedy of the war, as Mr. McClure sees it, lies precisely in the fact that it does not represent the self-defense of one innocent and injured side in European politics against wanton aggression on the part of a crafty and scheming power bereft of all sense of moral responsibility. On both sides he found not only a highly developed patriotism, but also a deep consciousness of obligation to the rest of the world. Neither German nor Anglo-French concern for the wronged and oppressed smaller nationalities of Europe can be lightly dismissed as cant and hypocrisy. But they have learned to view the problem of safeguarding the peaceful development of free peoples from the angles of totally different historical experiences. The problem of Turkey, to which considerable space is devoted in this book, is not unlike that of Mexico. Is it surprising that Europe could not agree on the right way towards its solution?

But the tendency of the book is not pro-German. It contains accounts of German cruelty as bad as any which have yet found their way to this country, always given with the source of information so that the reader can use his own judgment in belief and unbelief.

The author wisely has not attempted to reconcile these phenomena with the world-known facts concerning German customs and morals prior to the war. He could have succeeded in doing so only by using either a tar brush or a whitewash brush. There can now no longer be doubt, even among the most pacifist and Germanophile Americans, that on the essential characteristics of German war-making this country has not been misinformed; that the stupendous fall of a great nation into willing consent to inhuman practices is a fact. That recognition makes us shudder more than any possible fear of a naturally barbarous enemy organized for the sole purpose of destruction: for it brings close a realization of the danger which all enlightened peoples run, once the militarist spirit and philosophy is permitted to enter their conceptions of the state.

BRUNO LASKER.

THE NATURE OF PEACE

By Thorstein Veblen. The Macmillan Company. 367 pp. Price \$2; by mail of the SURVEY \$2.15.

Paths
to
Peace

ment in the exclusive interest of his wealthier neighbor. The national prestige is a cause to which he willingly sacrifices everything, even his sense of international decency. If patriotic glory can in some way be made to appear also the cause of justice, so much the better. Before he will go into war, he has to be persuaded that right is on his side; but it is extremely easy to bring about such a conviction. "The higher the pitch of patriotic fervor, the more tenuous and more threadbare may be the requisite moral sanction. By cumulative excitation some very remarkable results have latterly been attained along this line."

The author, of course, is not speaking merely of America or even in the main. In his quest for the terms of perpetual peace, all the peoples and all the history of mankind are his laboratory. "Modern culture is drawn on too large a scale, is of too complex and multifarious a character, requires the cooperation of too many and various lines of inquiry, experience and insight, to admit of its being confined within national frontiers, except at the cost of insufferable crippling and retardation." In the last analysis, he finds that "the patriotic spirit is at cross purposes with modern life," though in any test case it is life that yields.

Like other observers, the author notices that the range of items included in the possessions of national prestige is constantly growing as means are added for defending national claims, though, civic pride apart, these things are of no value whatever to the common man. This is particularly true of the conquest of foreign markets and territory which have to be defended by a fiscal policy diametrically opposed to the economic interests of the great mass of the population.

It is impossible in a brief review to follow the author in his intricate inquiry into the possibility of "peace without honor" as a basis of national policy. He is perfectly open-minded in his approach to this question—an open-mindedness which, no doubt, must appear unforgivable in the eyes of

true patriots—and comes to the conclusion that, on the whole, there is a great deal to be said for this Chinese alternative to modern western policy, that it may be counted on to preserve racial and cultural integrity and a comparatively free material development. "More particularly should a policy of non-resistant submission to the projected new order seem expedient in view of the exceedingly high, not to say prohibitive, cost of resistance."

Since the modern nations are not spiritually ripe for a peace of submission, since diplomacy and defensive armaments also have proved unavailing in the modern world as substitutes for peace, the author continues his search and finds much suggestive material in the parallel of social and industrial life. His most important constructive proposal is for as rapid as possible a neutralization of citizenship. He does not believe that the devices of the legal mind upon which most of the current projects of pacification are built up are likely to lead very far. Instead of exerting ingenuity in finding substitutes for institutional arrangements which have become obsolete, we had better make up our minds to do without them. For instance, if the war continues sufficiently long, the common man may possibly discover that he can get along quite well without the privileged classes. Instead of substituting all sorts of trade discriminations for diplomatic and military warfare against the Central Powers, the world may learn that its safety lies rather in free trade and neutralization of trade relations.

As a basis of discussion, he suggests to the allies the following terms for an immediate "peace without victory":

"(1) The definitive elimination of the imperial establishment, together with the monarchical establishments of the several states of the empire and the privileged classes.

"(2) Removal or destruction of all warlike equipment, military and naval, defensive and offensive.

"(3) Cancellation of the public debt, of the empire and of its members—creditors of the empire being accounted accessory to the culpable enterprise of the imperial government.

"(4) Confiscation of such industrial equipment and resources as have contributed to the carrying on of the war, as being also accessory.

"(5) Assumption by the league at large of all debts incurred, by the entente belligerents or by neutrals, for the prosecution or by reason of the war, and distribution of the obligation so assumed, impartially among the members of the league, including the peoples of the defeated nations.

"(6) Indemnification for all injury done to civilians in the invaded territories; the means for such indemnification to be procured by confiscation of all estates in the defeated countries exceeding a certain very modest maximum, calculated on the average of property owned, say, by the poorer three-fourths of the population—the kept classes being properly accounted accessory to the empire's culpable enterprise" (page 271).

This book is written for the student; no concessions are made to the general reader in the way of index or manageable chapter-divisions. The compensation will be found in a lucidity of exposition, wealth of vocabulary and epigrammatic crispness which mark all Dr. Veblen's works. I have no hesitation in predicting that this book will have a large German sale when the war is over and, in the meantime, will do much to stimulate American and English readers to clearer thinking on the task now confronting world-statesmanship.

BRUNO LASKER.

COMMON WELFARE

COMPENSATION ALIKE FOR ALL SOLDIERS

BY a vote of 139 to 3 the House wrote into the soldiers and sailors' insurance bill, before its passage on September 13, the principle of equal care as between the dependents of officers and of private soldiers and sailors. The amendments offered by Representative Black, of Texas, endorsed in this decisive fashion, provide that the payments to be made to the dependents of soldiers and sailors killed or totally disabled shall be specific rather than based on a percentage of the pay of the dead or disabled man. The details of the compensation are discussed by Dr. Rubinow on page 541 of this issue of the SURVEY.

Congressman Black, with a number of other members of the House, assailed the committee's plan of compensation, based on the rate of pay of the soldier or officer, as being an attempt to establish class and caste in America "while we are carrying on a war for democracy." They protested against what Mr. Black termed "preserving the distinction of rank and pay beyond the borders of the grave." He declared that, whereas the widow and two children of a soldier in the ranks would get but \$50 a month, the widow and two children of a brigadier-general, beside the savings from the general's higher pay, would get \$200 a month, although their standard of culture and usefulness might be no higher than in the case of the private soldier's dependents.

Representative Alexander, of Missouri, who had charge of the bill in the House, gave his entire approval to the Black amendments, when the measure was finally passed. He said:

It was clearly demonstrated in the debate that the House considered it only fair that there be established complete equality in treatment, as to this compensation on the government's part, of the dependents of all in the service. . . . Under the insurance feature, in which the House placed the limit of insurance at \$10,000 as proposed in the bill as introduced, the cost of \$10,000 of insurance, which will mean about \$50 a month in income to the family, is only \$80 a year. That is a very slight burden upon

the salary of an officer, so that he will, as a rule, insure for that amount. The insurance, plus the compensation payment, should be sufficient to provide for his dependents.

The private soldier can also afford the full \$10,000 of insurance as a provision for his family, since his needs while at the front are all provided for. . . .

An American soldier in France will get \$33 a month. Under this bill he will send \$16.50 of that home to his dependents. He has \$16.50 left. Out of that take \$7 a month, which will more than pay for \$10,000 of insurance, and he still has \$9.50, which is more than he can possibly need while in service. That sum is more than the English, the French or the Italian soldier has to dispose of, and is more, I believe, than even the Canadians have to spend.

Representative Huddleston, of Alabama, made a plea for the dependent fathers of soldiers, who are given no compensation in the bill, and for the dependent mothers, who are given no obligatory allotment, and who, if widows, still are given less compensation than the widows of soldiers.

The bill was amended also, on the floor, to define a "widow" as including "one who shall have married the deceased within ten years after the time of the injury," and to include among "children" those "from a marriage contracted before or within ten years after the injury."

The bill is now in committee in the Senate, and while an attempt is being made to postpone its consideration until the December-session, it is held probable that the administration will be able to secure action upon it within the month.

A WORLD INVENTORY OF FOOD

THE outstanding feature of the national conference held in Philadelphia on Friday and Saturday by the American Academy of Political and Social Science was the presence of diplomatic representatives from eight allied and neutral nations and their contributions to a discussion of the world's food needs, present and future.

Each, of course, was primarily concerned with the situation in his own country, but no doubt could remain, even after making every allowance for the fact that practically all these speakers had to address some special plea to the American public, that there is a world food shortage today which affects every nation in America and Europe. Nor are the difficulties merely temporary, due to embargo, lack of ships, shortage of labor or some such causes. Channels of trade have been destroyed which cannot be rebuilt immediately when peace returns. The soil of practically the whole of western Europe has been starved for lack of fertilizer; the slaughter of livestock in several countries has reduced herds for decades to come.

American statisticians who have studied the situation, notably B. S. Cutler, acting chief of the Bureau of Foreign and Domestic Commerce, have come to the conclusion that nothing but a continued international policy of rationing can possibly save the world from starvation. The immediate task of allocating this country's surplus of grain and other crops among the allies and needy neutrals by means of export licenses is very great. But it sinks into insignificance, to judge from the complications revealed by these discussions, compared with the gigantic project of effecting a world organization, when peace is restored, by which the surplus stocks of every producing country above the needs of its own population may be pooled and distributed in accordance with a plan at once economical and equitable.

In relation to problems of this size, the immediate need for food conservation and the detailed methods by which

THE SURVEY

Published weekly by

SURVEY ASSOCIATES, INC.

112 East 19 street, New York

Robert W. de Forest, president; Paul U. Kellogg, editor; Arthur P. Kellogg, secretary; Frank Tucker, treasurer. 10 cents a copy; \$3 a year; foreign postage \$1.50, Canadian 75 cents. Copyright, 1917, by Survey Associates, Inc.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

it may be effected would seem of no great consequence. The conference, however, in devoting special sessions to such subjects as the housekeeper and the food problem, price control, production and marketing plans for next year, comparative food values, brought even some apparently small objects of national effort into a significant relation to the whole.

Very remarkable in this connection was the account which C. J. Brand, chief of the Bureau of Markets of the United States Department of Agriculture, was able to give of the new developments in the information service of that bureau by which markets and producing centers are placed in the most intimate contact, and both the glutting and the starving of markets with perishable commodities are prevented to considerable extent.

Charlotte Perkins Gilman made her now familiar plea for making house-keeping a profession and thus giving to the proper feeding of the world the scientific knowledge and trained skill which cannot be developed by the overworked, unpaid "mother-servant." Peter Hamilton gave many striking facts from England, Germany and Belgium to show the importance of consumers' cooperation in war-time as an element in wise food economy. E. V. McCollum, of Johns Hopkins University, gave the impression that he wanted the deficiency of a cheap, *i. e.*, an almost exclusively cereal, diet in certain mineral constituents to be made good by new chemical extractions from plants not so far used for human consumption; but his chief argument was for a continued milk production "regardless of cost."

Joseph E. Davies, federal trade commissioner, who presided over one of the meetings, was the only speaker to point out that the high cost of food is primarily due to inflated currency and not to shortage (though there is a shortage); but while price control was discussed from different angles as a means of keeping down prices without discouraging production, not a single speaker mentioned higher wages as a natural way to balance the shrunken value of the dollar.

APPEALS IN THE MOONEY CASES

THOMAS J. MOONEY, under sentence of death for alleged connection with the bomb explosion in San Francisco in July, 1916, was last week denied a new trial which had been asked for by the attorney-general of the state. This does not entirely close the door of hope for Mooney, for there remains the original appeal of his own attorneys, which will be argued before the court in October. With his appeal, the attorney-general filed a letter from Judge Griffin, who sentenced Mooney to death, strongly urging a new trial on the basis of the Oxman disclosures (the SURVEY for July 7).

In the meantime, the trial of F. C. Oxman, the chief witness against Mooney, on the charge of subornation of perjury, has begun. If he is convicted, the action of the Supreme Court will be awaited with unusual interest, for it is generally conceded that Mooney would have been acquitted without the Oxman testimony.

Of the five defendants in the bomb case, three have now been tried—Mooney and his wife, and Warren K. Billings. Mrs. Mooney was acquitted, but is being held in jail pending trial on other indictments. The consent of three judges of the Superior Court is necessary to admit her to bail. Two judges are willing that she be released, but the other, who, on one occasion, severely denounced the attorneys for the defense from the bench, withholds his consent. Billings, who was sentenced to life imprisonment, was denied a new trial by the Court of Appeals on September 6. His attorneys have appealed again to the Supreme Court of the state.

The other defendants are Israel Weinberg, who, it is said, is to be tried soon, and Edward D. Nolan, who is at liberty on bail and is now in the East, telling the story of the trials to trade-union audiences.

ACCIDENTS AMONG GREEN HANDS

HOW do you enforce safety rules on men who are just naturally careless?" asked a Pennsylvania Railroad man last week at the big safety congress in New York.

"Fire 'em," answered the man from the Illinois Steel Company, who had just reported a reduction in one year of 57 per cent of accidents causing a loss of seven days or more.

"Fire 'em!" repeated the railroad man in astonishment. "If a safety man on the Pennsylvania Railroad recommended firing a man this year, he'd get fired himself."

Thus at the first general session of the sixth annual congress of the National Safety Council, the keynote of the congress, in a way, was struck. It was evident to everyone who has attended previous meetings that this year a new idea was cropping out in the discussions of safety—the labor turnover and its relation to accidents. This was down on the program in three different places, it appeared several times more under a slightly different name, and in nearly every session there was active discussion of the relation of the new man to accidents, or the subject of hiring and firing was frankly debated on its merits, wholly regardless of the question of shop safety.

The Cambria Steel Company a few years ago found that a man who had been employed less than thirty days was twelve times as liable to accident as the

man who had been there longer. T. H. Carrow, safety inspector of the Pennsylvania Railroad, reported that, with the highest turnover on record on American railroads, accidents to employes are increasing, and he predicted that the situation will not be improved as long as the present scarcity of labor continues. It was complained that of new men hired some quit at noon of the first day, others at night, and a majority on or before the first pay-day. This was explained in part by a man from the Union Pacific, who said that a man is generally dead broke when he gets a new job and often enough he quits just to get his pay. To meet that difficulty, some of the roads advance credit at their eating houses.

Proposals for meeting the situation were many and varied. A physician from the Norton Company, of Worcester, Mass., stated that the physical examinations he had conducted showed that 90 per cent of applicants for work are in some way physically defective. The most shifting class, he declared, are the physically sound. He recommended job analyses, therefore, to afford data for intelligently placing defective men.

The proposals that stood out over all others were those directed toward meeting the necessities of the men and thus affording satisfaction in the job. A. T. Morey, of the Commonwealth Steel Company, advocated the eight-hour day. Howard Elliott, of the Los Angeles and Salt Lake Railroad, recommended more direct dealings with the men, the imparting of knowledge of the financial and business facts of the business, opportunity to discuss grievances, provision for amusements, good housing and regular increases in pay, according to length of service.

ON "GETTING RICH QUICK" IN CHINA

FROM the Land of Sinim have come two curiously diverse pronouncements recently. One is in a reprint of an address given by Dr. Wu Lien Teh (the SURVEY, January 6, 1917) at the National Medical Conference in Canton last spring. The other, in a consular report of the United States service, published by the federal Department of Commerce. Says Dr. Wu:

The year 1917 will be made historic as the one in which opium, which has been the curse of China for seventy-five years, will be officially and finally banished from this country. For in this year, the ten-year agreement between Great Britain and China regarding its importation . . . will come to an end. So that even in the British settlement of Shanghai the last opium shop will be closed by the end of March. . . .

Dr. Wu's address gives also a warning concerning an alarming increase of the importation of morphin, a derivative of opium, into China. In 1911, from Great Britain alone came five and

one-half tons; in 1914, fourteen tons. The estimate for 1916 is over sixteen tons. And the ravages from this drug throughout Manchuria and Shantung, where it has but recently been introduced, are, he says, heart-rending. More than half of the regular "jail-birds" show needle signs all over their bodies; professional beggars in northern cities are victims, and of the thousands of poor people who die in large cities during winter months, many die not from cold but from inability to work because of their morphin habits. The practice, Dr. Wu says, first introduced by emigrants from Swatow, is spreading rapidly. The alkaloid sent from Great Britain to Japan

. . . is there made up into small packets or placed in small bottles labeled in different ways, e. g., morphin, white powder, soothing stuff, dreamland elixir, etc., and exported openly or smuggled secretly into China by way of Dalny, Antung and Formosa. Almost every Japanese dealer or peddler in Manchuria sells it in one form or another. . . .

Encouragement to peddlers of any and every nationality is given in the second document referred to, that bearing the name of Consul-General Sammons, of Shanghai, issued by the United States Department of Commerce as Special Report No. 76, and entitled Proprietary Medicine and Ointment Trade in China. Among the words of this federal document are these:

No country offers a richer field for the proprietary medicine trade than China. . . . It is positively asserted by one American who reaped a rich harvest after a good publicity campaign that with sufficient advertising anything at all within reason can in time be profitably introduced to the Chinese trade.

Certain specifications of what would be considered as "at all within reason" are given in the report. "Palatable tonics," "reasonably efficacious," may be advertised persistently, but without "too much exaggeration," since the Chinese are sensible; they may be illustrated by pictures of girls in western or Chinese dress, since these girl-pictures are now more fashionable than the more classic scenes of native story. There is a 5¼ per cent import duty. "There are no other restrictions upon publicity or sales in China," concludes this remarkable document.

The document is out of joint with the spirit of the United States ratification of the terms of the Third Opium Convention at The Hague in 1912. It is at variance with the whole trend of American lay and medical opinion in this country, since the revelations of patent-medicine methods from the laboratory of the American Medical Association, the investigations of Samuel Hopkins Adams, the publicity given by advertising clubs and newspapers of Chicago, Detroit and New York and

College Classes in the Social Sciences

in these days require what the other sciences long have had—laboratory work.

The only available social laboratory is the community, and yet the teacher cannot expect his untrained students to do investigatory work which requires the skill of experts, nor can he himself partly prepare the experiment and let the student do the rest, as in the chemical or physical laboratory.

The teacher of the social sciences who wishes his students to have laboratory advantages will find that social phenomena are accurately recorded in the SURVEY by its contributors, who carry on a continual study of the problems and solutions arising in the reconstruction of the social order. The whole country is the social laboratory of the teacher who uses the SURVEY as a supplemental text. While presenting the necessary fact-material, it leaves the student free to draw his own conclusions—which is the essence of any laboratory work.

Further, the student's familiarity with current social movements, gained through the SURVEY, creates in him not merely a social consciousness, but a sense of social responsibility—a matter of the utmost importance for his future as a citizen.

Special rates for short-term subscriptions to the SURVEY are available for groups of students. Write to

The Survey, 112 East 19 Street - New York City

elsewhere. Making patent medicines unpopular is a task in which laymen can do "a whole lot" and the layman has done it. In China itself the foreign branch of the Y. M. C. A. took to various cities the exhibit of the American Medical Association, after it had been seen at the Panama-Pacific Exposition, and with it did much to arouse suspicion of the trade which the American consul-general so intelligently aids in building up.

Letters of protest against the publication of such a report by the United States Department of Commerce have appeared in the medical press. The Medical Society of South Carolina has passed resolutions condemning it, and other organizations are likely to follow who are in sympathy with the modern scientific public-health method, rather than the devious ways of the patent-medicine trade.

FEDERATION RUSHING TO THE RESCUE

THE engaging drawing reproduced on the cover of this issue of the SURVEY is not from Alice in Wonderland or Pilgrim's Progress, reminiscent as it is of them both. It comes, in fact, from one of the most modern of institutions, the Bureau of Municipal Research of Toronto, and on a subject equally

modern, that of charity federation.

Toronto has had no charity organization society, depending for such co-ordination of social agencies as it secured upon the Social Service Commission, an unpaid body of seven men appointed by the City Council.

While the commission has done good work within its limitations, the report finds great unexplored areas of both public and private effort, particularly in making the public in general understand the necessity and value of social service and in enlisting a large number of persons as contributors of funds.

On this point a study was made of fourteen institutions which did fairly typical charity work. The study showed that a small group of givers formed the backbone of the support of all fourteen. The total income of the fourteen was \$39,742.95, an average gift of \$3.19 from 12,459 sources. Of these givers, only 10,703 gave their names; and when these were sorted out from the fourteen annual reports, they were found to number only 6,567 individuals—in a city of a half million population. These 6,000 subscribers are further tabulated by the number of institutions to which each one gave and otherwise analyzed.

From this study and from the experience of Cleveland and Eric in charity

The Universalist Church Wants

ministers. It affords a broad platform, a timely gospel, inspiring work for strong men who want to serve in this day of need. Universalism—"the religion of democracy"—is adequate for every world and individual problem. YOU can prepare for this ministry at the Theological Department, St. Lawrence University. YOUNG man, settlement experience preferred, to direct athletic, bowling and social activities. Boys' and Men's Club, New York City. Two or three evenings weekly. Must be energetic organizer. Address 2601 SURVEY.

federation, the report proposes a federation of philanthropies, including as many of the private charitable institutions of the city as are willing to join.

SOCIALIST AND UNIONIST HANG TOGETHER

SOCIALIST and Roman Catholic priest, trade-unionist and open-shop advocate, Jew and Protestant, single-taxer and plain citizen, all met on the same platform and united for a common cause at the meetings of the American Alliance for Labor and Democracy at Minneapolis. Ostensibly called to refute the imputation that labor and the leaders of the Socialist movement have been fomenting discord, the meetings fitted a new keystone into the arch of radical thought and principles. Given reels of newspaper publicity throughout the country, even in the most conservative sheets, the meetings spread to the four winds the ideals of radical reform, stamped with the seal of unswerving loyalty.

Of prime significance, the import of which it will take time to tell, was the assembling under one banner of the trades-union group dominated by Samuel Gompers and Frank Morrison, and the intellectual group represented by John Spargo, Charles Edward Russell and Mr. and Mrs. Stokes. It was current talk that the outcome might be a new political party in which labor, social reformer and the agrarian group of the Northwest can strike hands.

The business meetings were outwardly uneventful under the experienced hand of Mr. Gompers, who presided. The evening meetings, however, were tense with a note of conviction and moral power that communicated itself unmistakably to the audience.

The keynote was struck at the first meeting by Frank P. Walsh, the temporary chairman, who stated "this war must be paid for without unnecessary burdens on the producing masses. . . . If more taxation is needed let us make up the balance with a tax on unoccupied and unused land." Pointing out that in this war emergency the coal mines and railroads are practically governmentally owned, he argued that there is no reason why this policy should not be continued in a time of peace.

Samuel Gompers, who was elected chairman, brought the conference sharply back to the present world crisis. He said:

The man who is a traitor to his country is on a par with the man who is a scab to his trade union. Take the countries at war, examine and see where liberty and con-

FIRST ASSISTANT wanted in Union Relief Association, Associated Charities, Mass. Must have sufficient training to enable her to do case work satisfactorily. Salary not over \$1,000 per year. Union Relief Association, 613½ Main street, Springfield, Mass.

science and freedom prevail, and beyond question it will be admitted by those who are fair enough to see the right that the democracies of the world are engaged now in a titanic struggle to free the world from autocracy, imperialism and militarism at one full stroke. We want peace. To ask the government of the United States to state specifically the terms of peace is to play, unconsciously, into the hands of the enemy.

The following officers were chosen to carry forward the work of the alliance: Samuel Gompers, president; Frank Morrison, secretary; J. G. Phelps Stokes, treasurer; vice-presidents, W. R. Gaylord, Milwaukee; James Duncan, Massachusetts, and Gertrude B. Fuller, Pittsburgh. John Spargo was also made a member of the Executive Committee. Under their direction a campaign will be waged to bring before the people of the United States, especially the working class and the radical groups, the fact that the present war is a war for democracy, and to unite them for a common cause. To this end the following War Aims and Creed were adopted:

Recognition of the rights and liberties of small nations.

Recognition of the principle that government derives its just power from the consent of the governed.

WHY BONDS?

The Nation needs money. Bonds extend long after "war profits" end. They increase all taxes, burden industry until paid and ultimately cost \$2.00 for every \$1.00 raised. They increase living costs and reduce wages.

THINK OR PAY

A tax on land values only will raise yearly \$5,000,000,000, will abolish all other taxes, force idle land into use, increase crops, boom industry and perpetuate real prosperity.

WORKINGMEN'S ORGANIZATIONS IN THE ANTI-TUBERCULOSIS CAMPAIGN. A study, with suggestions on the utilization of workingmen in the campaign against tuberculosis. Price twenty cents.

Order from The National Association for the Study and Prevention of Tuberculosis, 105 East 22 street, New York.

PUBLIC SCHOOLS ATHLETIC LEAGUE. Playground and Recreation Association of America, 1 Madison avenue, New York city. Price Fifteen Cents.

Reparations for wrongs done and the erection of adequate safeguards to prevent their being committed again.

No indemnities except as payment for manifest wrongs.

No people to be forced under a sovereignty under which it does not wish to live.

No territory to change hands except for the purpose of securing to those who inhabit it a fair chance of life and liberty.

No readjustments of power except as will tend to secure the future peace of the world and the future welfare and happiness of its peoples.

A genuine and practical cooperation of the free peoples of the world in some common covenant that will combine their forces to secure peace and justice in the dealings of nations with one another.

The most significant action taken by the alliance, however, was its platform, providing for the conscription of men; taxes on incomes, excess profits and land values; insurance for soldiers and sailors; government control of industries in case of disagreement between labor and capital; equal suffrage; government action against speculators; the right of wage-workers to collective effort; opposition to the lowering of any of the standards of labor, and recognition of the small nationalities.

These resolutions also urge upon "the President and the international congress which will negotiate terms of peace, the legitimate claims of the Jewish people for the re-establishment of a national homeland in Palestine on a basis of self-government." Greetings were sent to the Russian democracy.

Space does not permit printing the resolutions in full, but a few excerpts may show their trend and temper:

We declare that the one overshadowing issue is the preservation of democracy. Either democracy will endure and men will be free or autocracy will triumph and the race will be enslaved. On this prime issue we take our stand. We declare that the great war must be fought to a decisive result; that until autocracy is defeated there can be no hope of an honorable peace, and that to compromise the issue is only to sow the seed for bloodier and more devastating wars in the future.

We declare, however, that predatory influences are at work at all times—and particularly in time of war—to lower these standards. These efforts, wherever made, must be resisted. Not only must all present standards be maintained, but there must be no curtailment of any of the present agencies which make for the betterment of the condition of labor.

We declare that the government should take prompt action with regard to the speculative interests which, especially during the war, have done so much to enhance prices of the necessities of life. To increase the food supply and to lower prices the government should commandeer all land necessary for public purposes and should tax idle land in private possession on its full rental value.

Inspired by the ideals of liberty and justice herein declared as a fundamental basis for national policies, the American Alliance for Labor and Democracy makes its appeal to the working men and women of the United States, and calls upon them to unite in unanimous support of the President and the nation for the prosecution of the war and preservation of democracy.

Hermann Fernau's New Book

THE COMING DEMOCRACY

Author of "Because I am a German"

Net \$2.00

In this new book a native German shows that the war was the inevitable outcome of the policies of the German government and pleads with his fellow Germans to oust the dynasty, the imperial government and all its imperial ambitions and purposes and make of Germany a democratic nation that will live in peace, harmony and justice with the other democracies of the world.

UNDER FIRE, (LE FEU) The Story of a Squad

FROM THE FRENCH OF HENRI BARBUSSE

Net \$1.50

Recognized as one of the most distinguished books on the War in France.

Frank Moore Colby in the Bookman for September, 1917, says: "There is much more than the life of a squad in this brilliant and varied narrative which records or divines wide areas of experience.

"It is not a chronicle, still less a diary, but combines pictures of men in masses, and of individual types, moralizings, impressions, observations, episodes, into a sort of epic of army life from the point of view of a private soldier."

The Argonaut: "The best the war has produced"

A STUDENT IN ARMS

BY DONALD HANKEY

Net \$1.50

Donald Hankey, the man who gave his life for his country. He loved mankind, and his book, *A Student in Arms*, is the one beautiful book of the war. Buy this book, read the chapter "The Beloved Captain" and then send a copy to some friend about to go to France on his country's business.

A STUDENT IN ARMS Second Series

Net \$1.50

North American—"Final essays by a fine scholar and brave soldier who has gone to join the men of Agincourt. There has been no more characteristic manifestation in literature of the vital spirit gleaming and glowing at the front of the battle in Flanders."

GONE TO EARTH

BY MARY WEBB

Net \$1.50

Author of "The Golden Arrow"

A powerful book, describing the fierce love and elemental jealousy of the Welsh people. The story is full of fire and enthusiasm, lighted with real humor and understanding of these quaint people.

THE JOYFUL YEARS

BY F. T. WAWN

Net \$1.50

Philadelphia Telegraph: "A happy story, a human story, told with a charm of style that adds to the delight of reading. It is a love story in its best sense. It satisfies the belief of every heart in the reality of true love."

DAY AND NIGHT STORIES

BY ALGERNON BLACKWOOD

Net \$1.50

Author of "Julius Le Vallon," "The Wave," "Ten Minute Stories"

Boston Transcript: "In this rampant era of hard and sordid fiction it is good to have a storyteller like Mr. Blackwood, who is able and content to tread the unbeaten path."

MY V . . .

BY ET VARD BURKE

Net \$1.50

The work of a new humorist who treats the modern conventional family life in a breezy spirit of burlesque and exhibits the foibles and affectations of the "lord and master" in a manner that suggests Jerome K. Jerome but with a more refined and subtle humor.

ON THE THRESHOLD OF THE UNSEEN

BY SIR WILLIAM F. BARRETT

Net \$2.50

New and remarkable evidence on Survival After Death obtained independently of any professional mediums. The *London Times* says: "Essential to a proper understanding of psychical research either by those who want to believe or by those who want to disbelieve in actual communications from the departed."

A SOLDIER'S MEMORIES IN PEACE AND WAR

Net \$5.00

BY MAJ. GEN. SIR GEORGE YOUNGHUSBAND

Detroit Press says: "It is so fascinating a narrative and set forth with such vivacity and humor that it is laid down with genuine regret at the end of 350 octavo pages."

AMERICA'S CASE AGAINST GERMANY

BY LINDSAY ROGERS

Net \$1.50

Our case against Germany should be understood by every intelligent citizen in order that the country may see the necessity for a successful outcome of the war. A high morale in our fighting forces is dependent upon a clear understanding of the points at issue and this can be secured from this present volume.

THE SPIRES OF OXFORD AND OTHER POEMS

BY W. M. LETTS

Net \$1.25

As poet and woman she rings true. She is mistress of the wistful. A volume of verses which has that rare thing, quality.

WHO'S THE LADY?

One of the Great Successes of the Hour, an Anonymous Book

HELEN OF FOUR GATES

Net \$1.50

Boston Herald: "The grip of a great talent is felt in its first pages. We wonder from what source she drew her fine perception of souls and the robust power that puts humans and nature before her readers in elemental simplicity. It is all profoundly human."

SURVEY

961

Cooperating Subscribers

WANTED before October 1, thirty-nine \$10 cooperating subscriptions to fill the membership roll of *Survey Associates* to 1,000 strong for the fiscal year. They are needed to decrease by \$390 a deficit of \$1,477 in the expense account for twelve months operations. They are needed to give support and encouragement to this venture in economic journalism during a period of financial strain.

and us; a still harder year is just ahead. When people are distressed abroad and care for our soldiers at home they have no time for a magazine. Nor are they impressed by the high cost of paper, when confronted by the high cost of living.

The function of the SURVEY has been so valuable. Never has it been so important to pool the social and labor problems arising out of war, to rally the spirit of workers and rally their criticism, to arouse the spirit of the masses, Red Cross undertakings, industrial regulation—matters of which others reported weekly in the SURVEY, are the concern of every man.

Our progress is a loyal body of cooperating subscribers. Regular three-dollar subscriptions meet current expenses. Larger gifts from generous friends make possible special investigations. But on a membership of 1,000 loyal "co-ops" depend the breadth and stability of the SURVEY as an educational enterprise.

Half and Half

The Quality of the Appointments Under Illinois' New Civil Code

By Graham Taylor

IN the appointments under the new civil code, Illinois fails to gain the full advantage of that very progressive measure through which the state might have been placed in the forefront of administrative efficiency. As hitherto described in the SURVEY, the code concentrates power and responsibility in nine departments that formerly were divided between about two hundred boards and commissions, working far more than less independently of each other.

Governor Lowden's repeated insistence that only the highest capacity for these departmental directorships would be considered in his appointments was qualified by his failure to secure his first choices of men in several instances, and by preference for political appointees in at least two of the departments. His primary emphasis upon business experience and capacity limited the technical qualifications secured to those departments requiring business technique. The departments of finance and public works and buildings fared better under this standard of selection than some of the others which required other qualities and training for their most effective administration.

The Department of Public Welfare, for instance, within which all the charitable, penal and reformatory institutions are for the first time placed under one directorship, gave opportunity for the selection of the ablest available institutional administrator. Such an incumbent indeed was at first sought in the person of Col. C. C. Adams, prison commissioner of Massachusetts and formerly superintendent of the State School for Boys at St. Charles, Ill. Upon his declination, the choice reverted to a business man, although the new code expressly relieved the public welfare director of responsibility for the purchase of all supplies and equipment and the erection and maintenance of all buildings, by placing those business functions under the department of Public Works and Buildings. Charles H. Thorne, indeed, brings to this first public office he has held a personal reputation of high standing, and large business capacity developed in the management of one of the oldest and greatest mail-order enterprises of the country. But he assumes this greatest public trust in the state without having had any experience with, knowledge of, or even observation of, the vast charitable and reformatory interests and institutions immediately dependent upon his directive author-

ity. In what other sphere of scientific work would the exactions of special training and technical skill be so ignored?

Even thus equipped, such a director would necessarily depend much upon highly qualified specialists in his staff for the successful administration of so many highly specialized interests. But their success, too, cannot fail to be conditioned by the lack of expert direction and coordination from the head of the department, especially at the initiative of such autocratic control. The assistant director, who might have been chosen for such social intelligence and practical insight into state institutions and related agencies as would have headed up the staff and also enabled him to be eyes and ears for his chief, unfortunately seems to have been selected for other qualities and relationships than those which would have fitted him for this indispensable service.

Fortunately, however, specialists have been appointed to the staff who are thoroughly capable of the best service in their respective branches of the Department of Public Welfare. The hospitals for the insane will be under the best supervision, as Dr. H. Douglas Singer has been transferred from the psychopathic institute connected with the Kankakee State Hospital, to be alienist of the department. Another transfer from the secretaryship of the former Charities Commission promotes A. L. Bowen, who has an intimate acquaintance with the state institutions and their staffs, to be superintendent of charities. Frank D. Whiff brings to his duties of fiscal agent a long and successful experience in the same position under the former Board of Administration.

Developments in the management of the penal and reformatory institutions will be watched with special interest, for they have been left hitherto without the standards and safeguards which have kept the charitable institutions far in advance of most of them. Two notably good appointments give promise of progress new to this state along these lines of "retarded development." The new office of criminologist will be well filled by Dr. Herman M. Adler, known and trusted for his scientific equipment and experience both East and West. No better man in Illinois, or far afield, could have been appointed superintendent of prisoners than John L. Whitman, who has long been very successful in the management of

the Cook county jail and the Chicago House of Correction, in both of which difficult positions he has proved to be effectively devoted to the reformatory spirit and method. But with an inconsistency, explicable only as a panic appointment during the formidable revolt at Joliet Penitentiary, a former warden was previously reappointed who has long been notorious for the very opposite personal qualities and prison policies which suggested Mr. Whitman for the superintendency of prisons. Unless the leopard changes its spots, the standards for which the superintendent of prisons and the criminologist stand will fail at the neediest point of their largest application—the state prison at Joliet—and just when the building of the new prison and the development of the honor farm afford the supreme opportunity to the new regime.

The appointment of the Advisory Commission in this department, as in others, after all other appointments had been made instead of at first when their advice might have been better worth while, scarcely complies with the importance of their function as very explicitly stated and strongly emphasized in the new code. Fortunately, Dr. E. C. Dudley, as chairman of the commission, is such an independent and thorough-going man as will never consent to allow the title "advisory" to stand either for supernumerary or rubber stamp.

The Department of Public Health is fortunate to secure as its director Dr. C. St. Clair Drake, whose effective services

in a subordinate, though important, position, under the Chicago commissioner of health, may now be extended with the freedom of his superior position. Dr. George Thomas Palmer, well known for his health survey of Springfield, Ill., conducted and published by the Russell Sage Foundation, will prove equally effective as the assistant director of this department.

After the failure to secure for director of the Department of Labor certain prominent trades union leaders, who declined the larger salary of the more prominent position in loyalty to their own organizations, Barney Cohen was promoted from being deputy factory inspector to this highest public office representative of labor. His prompt reappointment of the efficient superintendent of the Chicago branch of the Illinois free employment offices, the first non-political incumbent of that position, set a good mark at the start. But the replacement of experienced members of the office staff by men new to the job does not seem to be as truly for the "good of the service."

Although the appointments of Governor Lowden under the civil code have ranked far higher on the whole than those signaling the advent of any previous administration, yet it is a disappointment that full advantage was not taken of the supreme opportunity for still higher achievement which he was so free to improve.

Farmer and Factory-Hand

The New Alliance of Organized Producers and Organized Labor

By Eleanor Taylor

"THIS has certainly been a revelation to us," said the farmer-governor of North Dakota after he had heard Mrs. Jacob Panken, of New York, describe the food situation among the women of the East Side, at the convention held last week by the National Non-Partisan League at St. Paul. Governor Frazier's comment was echoed by many of the farmers attending the convention.

For years the farmer and the city worker have been in the habit of looking merely at their own problems. They have regarded each other with distrust. The city worker has been interested in low prices for his food. The farmer has eagerly anticipated a rise in prices for his product. These two objects have seemed incompatible. Since the convention at St. Paul marks the dawning realization on the part of each of these groups that low prices at the farm do not necessarily mean low prices in the city grocery shop, and emphasizes the growth of a new sympathy between country and city labor, it inaugurates a movement of great economic and political possibilities.

The National Non-Partisan League, which may need a word of explanation to readers who live in the eastern states, has been from its beginning in 1915 until now entirely a farmers' movement. It originated in the failure of one farmer, in spite of hard work and a good crop, to make his farm pay. It grew because the experience of this one farmer was a common one in North Dakota.

The one farmer, whose name is A. C. Townley, now the president of the Non-Partisan League, grew flax on his farm. In order to buy new equipment, seed, etc., he borrowed a large sum of money from a group of interests which controls not

only the credit offered to the farmer but also the transportation and marketing facilities of the state. When his crop was ripe it necessarily passed through the hands of this group to be put on the market. They paid Mr. Townley, as they did many of the farmers, a low price for his flax, and sold it for a high one. Their price to him was so low that he found it impossible to make the required payment on his mortgage. The mortgage was foreclosed, therefore, and his farm taken to liquidate the debt.

Townley saw other farmers in almost similar predicaments. In spite of hard work and intelligent effort they were so at the mercy of food and grain speculators that they barely made both ends meet. He gathered a few together, therefore, talked the situation over, and out of their conference grew the North Dakota Non-Partisan League, with today a membership of 130,000 farmers, and an annual income of about \$1,000,000.

The first object of the league was the redress of economic injustices suffered by the farmer. Its leaders soon realized, however, that control of political machinery must come before their organization could achieve substantial results. The old parties, Republicans and Democrats alike, had made glittering promises, sent their candidates to the legislature and nothing had happened. The farmers decided that their own candidates must sit in the North Dakota state legislature. They proceeded with the thoroughness and perseverance characteristic of the farmer to bring this about, putting up their own men in the primaries and conventions of the old parties. The results of one year's work are shown in the fact that

the 1916-17 state elections in North Dakota seated the Non-Partisan League's candidate in the governor's chair, in three of the supreme court judgeships, and gave the league 105 out of the 138 members of the state legislature.

The laws enacted by the legislature of 1917 included a number of measures fought for by the farmers for some years, such as that compelling railways to furnish sites for elevators and warehouses on their right of way, a good warehouse license law, a weighing and grading law for the state, county agricultural and training schools, additional appropriations for experiments of the agricultural college and a decrease in the taxation on farm improvements. The few holdover senators were able to defeat some important legislation, such as the constitutional amendment allowing the state to use its credit for industrial and cooperative enterprises for farmers. Nevertheless the record of the legislature is a good one.

The St. Paul convention, held September 18-20, marked the second step in the development of the Non-Partisan League. It calls attention to the fact that "national" has been added to the title of the league and that its headquarters are now in St. Paul, Minn., instead of Fargo, N. D., and emphasizes the importance of the fact that organizers for the league are now at work in ten of the middle- and far-western states. The league has become a national force.

Speakers of the most varied kinds took part in the convention. Delegates from almost all states in the union, representing widely different occupations, attended. Some 4,000 farmer members of the Non-Partisan League formed the body of every meeting.

Two notes were sounded persistently throughout by speakers and responded to enthusiastically by delegates and the audience. First, the farmer and the union man must cooperate. Second, both are ready to make the sacrifices entailed by war, but demand that wealth make a proportional sacrifice.

The farmer delegates voiced no protest at the price fixed for wheat; \$2.20 a bushel represents for some of the North Dakota farmers who have suffered bad weather conditions and who have, like all farmers, paid huge prices for fuel, machinery and the like, no margin beyond actual cost of production. They are willing, however, to accept the price, provided the government proceeds further and fixes a moderate price on oil, steel, cotton and other manufactured products which they must buy. They are anxious also to see that less profit goes into the hands of the middleman, whether he be the railway company, or the miller, or the wholesaler.

Price-fixing Favored

THE labor delegates seconded heartily all of these proposals. Representatives from ten state federations of labor joined with the farmers in passing resolutions such as the following:

Whereas, the Food Administration of the United States government, through its price-fixing commission, has set a price on the farmer's wheat by which at least 80 per cent on the average and in some cases 100 per cent of his profits have been taken from him, now therefore

Be it resolved that, in the face of national necessity and particularly in contemplation of the sufferings of the poor in our cities who must have bread at a price within their reach, we cheerfully acquiesce in the sacrifice, but we respectfully urge and will continue to insist that those who produce and sell other products necessary for the people's use and for carrying on the war be dealt with upon a like basis and that the government take the same drastic

action toward those who are making extortionate profits out of the necessities of the people in time of war; and be it further

Resolved, that we will support the government to the best of our ability in all its efforts to deal fairly with all factors in production and will do our utmost to build up a public sentiment which will make possible even justice in price-fixing, so that the rich speculator and the powerful trust may be compelled to bow to the same level rule as the toiling farmer and wage-worker.

The resolutions go on to suggest that if the profits in breadstuffs and in other articles of daily consumption cannot be reduced and passed on to the consumer by price-fixing or other regulation, then "we urge the Food Administration to exercise its power at once to seize and operate storage elevators, flour mills, bakeries, cereal and breadstuffs factories, for the benefit of the people;" and, later on, "we declare for the public ownership of public utilities."

Conscripting Men and Dollars

CONSCRIPTION of wealth was called for in these words:

We call upon Congress and the national administration to cause the dollars of America to be enrolled for service just as the youth of this nation has been compelled and has gladly responded to the call to enroll itself to fight and to die for human liberty, and that when thus enrolled the dollars of America likewise be conscripted and so much thereof as shall be necessary shall be taken for the uses of the war.

"A 2 per cent tax upon the value of all unused or inadequately used land, whether in city or rural districts, and income taxes levied upon all incomes in excess of \$2,000 so that the total net income of any individual shall not exceed \$100,000 per annum," represents the convention's point of view on the proper system of taxation.

The stand of the convention on political matters includes a request for the initiative, referendum and recall and for equal suffrage.

On the question of the war the convention declared itself emphatically loyal, endorsed the President's reply to the Pope's peace note and asked for a wage of \$50 per month for soldiers during the period of the war, with life insurance at a low premium, and guaranteed protection for the soldiers in their jobs when they return.

Perhaps most important of all, however, is the resolution which reads: "We heartily endorse the principle of labor unionism, and we urge that the closest possible affiliation and friendly relations be maintained between organized farmers and organized workers in the struggles of each, industrially and politically."

The National Non-Partisan League has become, therefore, more than a farmers' organization. It has made a definite bid for close alliance with organized labor. This is what gives the movement its special significance. Whether such a combination can be effected remains to be seen. Already, however, league officers point to the fact that both the St. Paul and Minneapolis Trades and Labor Assemblies were officially represented at the convention. That between 1,500 and 2,000 labor union men attended its meetings is significant. The rank and file of organized labor will hear the message of the farmers, say the league officials.

The political possibilities of such an alliance are pregnant in these words of President Townley at the convention: "The farmers control 35 per cent of the vote of this country; labor controls about 27 per cent; a combination of these two elements would make itself felt throughout the nation."

THE INTER-ALLIED CONFERENCE

IN the middle of May there was held in Paris an inter-allied conference for the study of one of the most serious of present social problems: professional re-education and other questions affecting men who are disabled in the war. "Inter-allied" is unfortunately as near as we can hope to get just now to the "international" gatherings which had become so important before the war, but even so there were delegates from as many countries as some international conferences have boasted: France and Belgium, Great Britain and Canada, Italy, Montenegro, Rumania, Serbia, Russia.

The proceedings, a volume of 462 well-filled pages, constitute a library of authoritative experience and opinion on one of the gravest and most perplexing of all the war problems. Most of the papers are from French and Belgian men and women actually engaged in the task of re-educating disabled soldiers, who characteristically have taken the time and trouble, in the midst of their absorbing duties, to analyze what they are doing, and make their observations and conclusions available to others. Editors and publishers deserve appreciation also, since they have issued the proceedings so expeditiously that a copy had reached this country within ten weeks of the date of the conference. The harassed "reporters" of the different sections pay frequent tribute to the energy of the "sympathique secrétaire," who kept calling for their summaries while on the other hand they were embarrassed by delays on the part of their contributors and by the receipt of valuable new papers after their summaries had been prepared and forwarded.

The conference was held in the Grand Palais, where extensive classes in re-education are carried on. There were exhibits of prosthetic appliances, special tools and machines and recent inventions of use to cripples, and photographic and statistical displays from the various institutions. Several motion picture programs were given.

Nature of Injuries in the Present War

AT the very end of the volume is the paper which is the logical introduction to the subject for *nous autres Américains*. M. Lucien March, director of general statistics for France, summarizes the available information about the nature of the disabilities which the war is producing, and about the occupation and family status of the men affected. The national bureau which was created in March of 1916, to coordinate the various institutions and services concerned with disabled soldiers (L'Office National des Mutilés et Réformés de la Guerre) has begun a registration of all the men in the country who are permanently disabled—sufficiently, that is, to be relieved of further military service. The register is not yet complete and so does not indicate the total number or the proportion among the fighting forces who have been seriously injured, but it already contains more than 40,000 records, a large enough sample, it may be hoped, to be taken as representative of the rest.

In the first place, the men are classified according to the nature of their invalidity, several hundred headings being used by the office in this analysis. Taking account only of the main divisions, it appears that out of 1,000 invalids

167 have suffered amputations
 63 of the upper limbs
 104 of the lower limbs
 833 have been injured in other ways.

Of the amputations, the great majority are at the upper

SOCIAL FORCE

arm or the thigh; relatively few are at the shoulder or hip, or at the wrist or ankle. Ablations of fingers or toes are not classed as amputations, but as injuries to the hand or foot, since their loss is ordinarily less serious than the stiffening or functional impotence which results in adjacent parts. If they were included they would probably transfer to the amputation group about 50 cases in each thousand, bringing the 167 up to 217. Amputations of the lower limbs are almost equally divided between the right and the left, but for the arms there are 53 per cent of the right against 47 per cent of the left.

Amputation of both arms or of both legs is extremely rare, there being only two cases of the former, and thirty of the latter among each 10,000 invalids.

The blind, *i.e.*, those who have lost their sight entirely, are not more than one per cent of all.

Among the invalids other than the blind and *amputés*, it appears that of each thousand

371 are injured in the arm or hand
 290 in the foot or leg
 74 in the head
 118 are blind in one eye
 6 are deaf in both ears
 141 are disabled in other ways, including disease.

The distribution according to family status follows closely the distribution of men of the same age in the general population, reminding us how little selection it has been possible for France to exercise in filling up the army.

Occupations, as would be expected, are represented among the invalids of war in the same proportion as among the total mobilized force. No relation is revealed between previous occupation and the nature of the injury received. Nor would any such relation be anticipated. The burning interest in occupation faces the other way. What is the relation between the injury and the occupation the disabled soldier goes into after recovery? To what extent do the cripples and other invalids resume their former occupations? Some interesting figures on this latter point are drawn from 7,200 records of placement by different agencies, but these figures undoubtedly greatly exaggerate the proportion of changes, and we shall have to await statistics that include men who have gone back to work without the intervention of an employment agency or other institution before we know what is really happening in this respect.

Plan of the Conference

THE program was divided into six sections. It was planned that a *rapporteur-général* should be appointed for each section, to whom all the contributions falling within the scope of the section should be consigned, as fast as they were received, for him to study and summarize in advance of the conference. Apparently this plan was modified to fit the material which came in, for in some of the sections there are several "general reports" on sub-topics which had attracted a considerable number of contributions. These reports seem to have been most scrupulously prepared, with every care to distinguish between the writer's own views and those of other contributors, and to present the views of all fairly and adequately. Many individual papers also are included.

in WAR TIME

Edward T. Devine, Editor

For us who are only beginning to think about the problem, this book is a revelation of its dimensions and complexity. The large numbers mentioned—as when one man referred to the 800 *amputés* who had come under his observation in the course of five months; the discussion of details of treatment of men with particular injuries; the sharp difference of opinion on many questions—all this makes us realize acutely how much we have to learn.

Section I. Physical Re-education

SIXTEEN reports on physiotherapy and medical gymnastics were reviewed by Dr. de Marneffe, director of the Belgian military hospital of Bonsecours. This discussion is for the most part outside our field, but certain conclusions concern the social economist quite as nearly as they do the physician; *e.g.*,

that surgeons should be urged to discharge their patients earlier to the institutions of physiothérapie, without waiting for the “irreparable” cicatrisation of the wound; and that medical gymnastics should be applied to the wounded at the earliest possible moment, before leaving the surgical hospital; that only competent attendants should be admitted in the halls of *mécanothérapie*;

that functional re-education should be complete before vocational re-education is allowed to replace it; and that until it is complete vocational training should be tolerated only in so far as it may be an aid to the main purpose. (The relation between functional and vocational re-education is evidently one of the sorely disputed points.)

In this section there is also a thorough discussion of artificial appliances for replacing lost limbs, by Drs. H. Rieffel and J. Gourdon, physicians-in-chief of the Centres d'Appareillage de Paris and Bordeaux. This again is a subject for surgeons, but social workers need to be intelligent about it. Such questions are discussed as the proper treatment of the stump to insure the highest possible degree of use; the advantages of different styles of appliances; differences in the demands of the upper and lower limbs, and of amputations at different points of the leg or arm; the principles involved in the construction of artificial limbs; at what moment it is desirable to apply a temporary device, and at what moment the injured member is ready for its “definitive” appliance.

On these last questions the conclusion is that a temporary appliance should be used at the earliest possible moment, as soon as the stump is in condition to bear its contact and pressure; that it is not possible to indicate exactly the period at which the permanent appliance may safely be adjusted, because of the great variation in the rate at which the healing and subsequent modifications of the injured member proceed in different individuals, but that in general an amputation of the forearm or lower leg may be expected to be ready in about two months after cicatrisation, of the upper arm in three months, and of the thigh in not less than four. Every case, however, must have individual attention.

The utility of an artificial limb depends on “a series of factors inherent in the stump, in the apparatus, and in the character of the individual. Where these factors are favorable, results truly encouraging are seen.” A tribute is paid to the progress made in France in the last two years in the manufacture of prosthetic appliances. At the outbreak of the war, it is well known, there was an embarrassing

scarcity of them, for most of them had been imported. One of Marshal Joffre's aides, it may be remembered, claimed by reason of his wooden leg that he was “part American”; and we recall an impassioned plea to the French authorities in 1915 to decide on desirable models—Danish, American, “or even German”—in order that the production of artificial limbs might be pushed in France.

Section II. Vocational Re-education

THE choice of an occupation, or in the more vivid French phrase, *l'orientation professionnelle*, is the subject in this section. The report is presented by Leon de Paeuw, secretary-general of the conference, who is in charge of the inspection of the Belgian schools for vocational re-education and of many other educational matters. It incorporates the opinions of fifteen other experts, as well as his own, including Dr. Carle, formerly physician-in-chief of the schools of Lyons.

It is hard to make selections for quotation from this report, so important and so instructive is every sentence. The extreme necessity for individual treatment is emphasized throughout. M. de Paeuw formulates the following conclusions:

(1) The choice of an occupation shall be made by a commission which should include a physician, a *pédagogue-sociologue*, and a technician, all with practical experience in re-education. The men shall undergo a thorough medical examination from the triple point of view, anatomical, physiological, and clinical. They shall be questioned carefully about their education, their former trade, their tastes and aptitudes, their family responsibilities and plans for the future, their economic situation. The man shall himself choose his new occupation, after visiting the work shops of the school to determine his ideas. He shall be guided, if need be, by the members of the commission, and notably by the physician, who will have to decide whether the practice of the chosen trade is compatible with his physical condition.

(2) The commission shall try to interest each man in his new occupation, by showing him concretely the possibility of establishing himself in a given locality and the prospects of success. When the man has made a definite choice he shall be admitted to the appropriate workshop. If after a short period of trial he shows the desired aptitude he shall be kept; but if not, he shall come again before the commission.

(3) The “commission of orientation” shall act as far as possible on the following principles: (a) Unless the interest of the wounded man demands otherwise, he should be re-educated for his former occupation, or for an allied occupation requiring less strength; (b) As far as possible he should be returned to his old environment; (c) It is preferable to make of him an artisan rather than a factory worker, and not to direct him towards overcrowded occupations but towards those in which labor is the most scarce and the most indispensable; (d) Prosthetic equipment to aid in their work should not be imposed upon the *mutilés* against their will; (e) Men who have lost an arm, especially when it is amputated at the shoulder, should be directed toward other than manual work if they have sufficient mental equipment.

(4) In places where there are several small specialized schools a single commission should advise all the men and distribute them among the schools as their needs indicate.

After this comes a report by M. Alleman, pedagogical director of the Belgian institution at Port Villez, who acknowledges great indebtedness to a paper from M. Basèque, of Lyons. This deals with practical questions of the program of re-education: when should it begin; what shall it include?

A period of pre-education, it is agreed, should begin in the hospital, before the wounded man can leave his bed, and should include a “moral preparation” of stimulus and encouragement; a “manual preparation” by means of light work executed for a pastime, with no idea that it will ever be a method of earning a living, and a series of tasks assigned for therapeutic reasons without any regard to probable choice of an occupation.

Re-education properly speaking should begin as soon as the

wounds are "consolidated," and should include moral, intellectual and manual training. The moral training is directed towards combating discouragement and stimulating self-confidence. The intellectual training, on the theory that "when a man is diminished physically it is necessary to develop his mental resources," includes (1) general instruction of an hour or two a day in reading and writing, "with occasional notions" of history, industrial economy, arithmetic, the elements of bookkeeping and social insurance; (2) theoretical instruction about the trades included in the curriculum; and (3) vocational training in bookkeeping, stenography and other branches, for those who are adapted by previous education and gifts to clerical or commercial occupations or to positions in the civil service. Wireless telegraphy is mentioned as offering a satisfactory career to certain cripples and requiring only a relatively brief apprenticeship.

In the selection of trades to be taught many considerations are set forth:

They should all be such as are remunerative in normal times. The production of small easily-made articles which find a ready sale for the moment because of the appeal to charity should be avoided.

They should be such as do not require a long period of training, except in so far as there may be a need to provide for men already acquainted with some part of the trade an opportunity to perfect themselves or to specialize in some operation of the industry allied to that which they formerly practiced.

The needs of the locality should be taken into account.

The manufacture of orthopedic appliances is especially suitable for cripples, for several reasons.

Each school should offer as many trades as possible, in order not to increase the labor supply unduly in certain occupations and in order that each man may find exactly what he is best fitted for.

The men must not be kept on elementary exercises but the instruction must constantly utilize their utmost physical and mental powers.

The latest and most rapid methods should be taught, in order that the man's output may be as large as possible.

The men should specialize on one or two of the elementary operations in their chosen trade, while securing a general knowledge of the whole.

As far as possible, the training should look toward the preparation of foremen, superintendents, and *petits patrons*.

Section III. Placement

IN the report by M. Fagnot, chief of the central placement bureau in the ministry of labor, on placement in industry and commerce, some of the questions previously discussed by surgeons and educators are taken up from a new angle:

(1) Is it desirable to keep the disabled soldiers, as far as possible, in their former occupation?—It is preferable to keep them at least in their old *milieu professionnel*, whenever possible, both in their own interest and for the general social and industrial advantage.

(2) Is it desirable to keep them in the locality where they resided before the war?—There is practically no difference of opinion on this point.

(3) Should special workrooms for cripples be organized in factories?—This would be difficult to arrange; there would be no advantage to the employer; and socially such segregation of the cripples could have only unfortunate results.

(4) Should the disabled soldier receive the same wage as the able-bodied workman for an equal output?—While there is but one answer theoretically to this question as it is put, difficulties arise in the case of wages by the day, because of the variability of the cripples' output, which is generally at best

less than the normal. Any reduction of wages on the ground that he is receiving a pension is considered unjustifiable. On the other hand, the wages he receives should not be determined by sympathy for his misfortune. The principle is clear: that compensation would be determined "simply according to the output and the capacity of the workman."

(5) Should special agencies be created for the placement of disabled soldiers, or should they be placed through the ordinary existing agencies, public and philanthropic employment bureaus and trade channels?—The weight of opinion is for relying in the main on the ordinary agencies and methods used for the able-bodied workmen, though the value of the work of private societies recently formed for this purpose is recognized, and it is considered desirable that they should continue while the war lasts. The schools for re-education, it is assumed, will place their own pupils "automatically," so great is the demand for them; "but it must not be forgotten that the great mass of the disabled have not had any vocational re-education, and will have to rely on the bureaus which already are charged with placing ordinary workmen."

(6) Are there any special rules which should be observed in placing disabled soldiers?—There should be greater precautions than usual to find out the conditions of employment and the rate of wages, whether the work is likely to be permanent, and so on, and it is suggested that the men should be instructed in the laws by which they are affected.

(7) Is it desirable to compel employers to employ disabled soldiers?—It is the task of the legislators in every state to decide whether or not to impose a legal obligation to this effect, requiring that a certain proportion of positions in each establishment should be filled by *réformés*; meanwhile, there is a moral obligation resting upon each employer to give occupation to the disabled in proportion to the size of his establishment.

Opportunities in Agriculture

SPECIAL consideration is given in sections II and III to re-education and placement for agriculture, as is appropriate in a country which is "essentially" agricultural, by reason of the richness and variety of its natural resources and the passion of every Frenchman to own his own plot of ground. Possibilities in agriculture seem good, especially for men of intelligence who can learn to use modern methods of intensive cultivation. The department of agriculture had organized special instruction for cripples at twenty-one of the agricultural schools, where 830 men had already been "re-educated" and 381 were in attendance on April 1. Six more centers were about to be opened. Bee-keeping, horticulture, dairy work, sheep-keeping, the mechanics of agricultural machinery, are among the specialties offered. Emphasis is put on the desirability of teaching the use of modern machines.

Many of the schools report difficulty in getting the *mutilés* to enroll at first, unless special efforts are made to attract them, and a general educational propaganda is urged to spread information about the transformation that is taking place in agriculture from human toil to machine work, changing it into "a veritable industry," about the advantages of rural work over industrial from the point of view of health and returns, and about the facilities which exist for becoming a small proprietor, or for getting the capital to resume operations in the case of those who already own land. The facilities already at hand to these ends, in the agricultural credit system established under the minister of agriculture in 1899, are briefly described by the chief of that service.

Section IV. Economic and Social Interests of the Disabled

UNDER this hospitable heading appears first a discussion of the pros and cons of compulsory re-education. As the report is made by M. de Paeuw it is possible that the Belgian influence is uppermost in the resolution proposed: that vocational or functional re-education should be obligatory on all those disabled soldiers "whose interest requires it." The more characteristically French position is however strongly presented by Dr. Leullier, of Angers, who advocates persuasion and pecuniary inducements as likely to be more effective than coercion. "Can we," he asks, "have the pretension to impose an obligation on Frenchmen to whom we stand in debt?"

Another report sets forth the necessity of providing for re-education after the war for the men who cannot profit by the facilities offered during its progress: viz.

(1) Those who are wounded in the last battles; for "it is not by flowery paths that we make our way to victory; . . . but up to the very last day of the war a stream of wounded will flow into the hospitals."

(2) The prisoners who will come back home "the day when our triumphant hands shall have broken their prison doors."

(3) The partially incapacitated who have been employed in auxiliary services.

A third subject in this section is provision for the "absolute" invalid, the man so seriously injured that he cannot do regular work. For this class General Malleterre proposes a reorganization of the Invalides.

Finally, an interesting report by Mme. Barthez proposes measures for the later benefit of the disabled, such as:

The extension of the system of rural credits to artisans, for the purchase of tools or a small business, either by the capitalization of a part of their pension, or by special banks;

The favoring of coöperative enterprises, industrial and agricultural;

The establishment of special work-shops for those whose working ability is greatly diminished or intermittent;

The distribution of motive power and of special machines to workers at home;

The organization of the labor market.

Section V. The Blind, the Deaf, and Those Affected by Troubles of the Nerve Centers

THE needs and possibilities of the blind and the deaf have fortunately been less neglected in the past than those of the other *mutilés*, and they are fortunately comparatively few in number. The methods recommended are those that have been proved in experience with adult blind and deaf in civil life, including of course instruction in methods of communication without the lost sense, Braille, especially, and lip-reading. In the first months of the war, it was feared that the number of deafened soldiers would be enormous, but time has shown that only a very small percentage of them are incurable, though no doubt a large proportion of the soldiers will come out of the war with their sense of hearing "a little less fine" than it was when they went in. Only those who are totally and incurably deaf are classed as *mutilés*, "otherwise all France would be in danger of becoming . . . a vast asylum of *mutilés*." Of the blind it is thought that 70 per cent can return to a useful life at home after proper training.

The last class of disabled to be considered are those who

have suffered some injury to the nerve centers. These "have been very numerous since the beginning of the war. They are peculiarly worthy of interest. They cannot remain indefinitely under the regular surgical or neurological services; nor can they be left to themselves or sent back to their families, who are not able to give them the delicate and costly care which they need for a long period of time. Special institutions must therefore be created for them," such as has been established by the health service in the Hôtel des Invalides. It is important that these institutions, in addition to meeting all the requirements for a modern hospital, should be equipped and conducted with taste and even with "coquetterie." There should be many of them, in different parts of the country, so that the invalids need not be far from home. The ideal location is in the country, near one of the large centers of physiothérapie. For many of these invalids vocational re-education is desirable, after their cure has advanced sufficiently, but the great need at present is for patient, long continued, expert attention from medical specialists and specially trained nurses.

Section VI. "Documentation" and Propaganda

THIS section was an addition to the original plan, decided upon only three or four months before the date of the conference, and charged with the heavy task of reviewing the legislation of all countries relating to vocational re-education and protection of invalids of war, the administrative methods and present status of the work in all countries, and of presenting plans for propaganda. The report was entrusted to the capable hands of M. A.-L. Bittard, whose book, *Les Ecoles de Blessés*, has already for over a year been an important instrument of propaganda.

M. Bittard's report is not included in the volume of proceedings, for lack of time and space, but his conclusions, which are given, summarize the experience of the modern world, not excepting Germany, on the questions which were discussed in the conference. Most of his conclusions repeat those already noticed in the course of this review, but the following touch on points that have not been mentioned:

The attempt made in France and in Germany to employ in "war-factories" *mutilés* who have been not at all, or only partially, "re-educated," has had deplorable results, and is contrary to the fundamental aim of re-education, which is to give a permanent trade, not a temporary occupation.

Protection of the disabled against illness, unemployment and invalidity has not yet been completely worked out in any country, but for protection against industrial accidents the "law Honnorat" of November 25, 1916, "may serve as a model."

M. Bittard proposes a center of information for each country, with a clearing house for all in the *Office National des Mutilés* in Paris.

Dr. Borne, of the council of public hygiene, makes a separate report on propaganda, in which he is obliged to give the honors to "our enemies, the Germans and Austrians, who have long possessed organizations for the industrial *mutilés* and disabled which they immediately adapted to the invalids of war." He outlines a plan for the education of the public, especially the disabled themselves, which would include conferences with the personnel of the hospitals; special consultations of experts, medical and vocational, with the wounded men; lectures and classes for groups of men in the hospitals, convalescent homes, and centers of physiothérapie; distribution of leaflets; permanent exhibits in the larger towns; cooperation with associations of employers and of workmen.

State Action for Soldiers' Families

By Katherine Z. Wells

NEW YORK SCHOOL OF PHILANTHROPY

THE Alexander-Simmons bill, now pending in the Senate, covers a field into which some of the states have already entered, and makes important an analysis of the action they have taken. Seven states—Connecticut, Maine, Massachusetts, Michigan, New Hampshire, Vermont and Wisconsin—have enacted legislation providing definite allowances for the dependents of soldiers and sailors, and ten others, Colorado, Iowa, Kansas, Minnesota, New Jersey, New York, North Carolina, Oklahoma, Pennsylvania and Rhode Island, report some kind of state-wide action for the protection of the interests of the soldiers. West Virginia, which has just completed a survey of its resources, and Florida, embarking upon one, should perhaps be included but are less subject to the danger of conflict with the federal law.

Our greatest interest is in the action of the seven states which have made definite provisions for the dependents for whose protection the federal bill is framed, and particularly in the administration of the state laws, their definitions of persons who may receive allowances, their scales of allowances, and their time limits or regard for possible federal action.

There are in these seven states seven kinds of administration, similar only in their tendency toward the use of military and pseudo-military boards rather than existing poor-law authorities. In Massachusetts, where for many years the laws have made a sharp distinction between so-called pauper departments and those which have to do with the dependents of soldiers and sailors, the Commissioners of State Aid and Pensions have entire charge, and decide all disputes between applicants and municipalities. New Hampshire has created a committee of three appointed by the governor with the advice of the council; the governor, adjutant-general and state treasurer have charge in Vermont, and the adjutant-general acts alone in Wisconsin.

The Connecticut Plan Criticized

THE CONNECTICUT LAW establishes a board of administration consisting of the governor, state treasurer, state secretary and state comptroller, which board in turn acts through the local selectmen and boards of charity, an arrangement which is said to be unfortunate because "many of the self-respecting dependents of soldiers, and sailors hesitate and sometimes refuse entirely to go to the public officials." The checks used in payment of these allowances in Bridgeport at least have nothing to indicate that funds are received through the Department of Public Charities. The local municipal authorities are used in Maine also, where the payments to specified amounts are refunded by the state, and a fine of \$100 is recoverable by court action if the local authorities do not administer the act according to its "true intent and meaning and to the satisfaction of the governor and council." Maine provides that "No pauper disabilities shall be created by reason of receiving the aid provided for" in the act, and the Michigan rules stipulate, in a similar attempt to remove the stigma of poor relief, that "No case will be dealt with . . . on the basis of charity, but on the contrary every allowance will be made strictly as a matter of right under the law."

More important than differences in administration are the differences in standards which have been incorporated in the seven laws. The states do not agree in their treatment of the dependents of different classes of soldiers. Massachusetts does not include in its aid the families of enlisted men in the service of the government prior to the declaration of war. Connecticut includes the National Guard, the naval militia and volunteer troops, and the act can be extended in the discretion of the board to cover the drafted men. Vermont's aid extends only to the enlisted men of the militia, National Guard and volunteers, in federal service. Michigan includes the dependents of soldiers in Michigan regiments. The laws of Wisconsin, New Hampshire and Maine only are so worded that drafted men, members of the National Guard and enlisted men are all included.

Actual dependence is the basis of the allowances excepting in Wisconsin, where the bill which first read "the amount of such aid shall be such that, together with the income of the dependent or dependents derived from other sources, except such as may be contributed from the service pay of the enlisted man, shall amount to" . . . etc., was amended to read—"the amount of such aid shall be thirty dollars for one dependent," . . . In Michigan the case of the wife, widowed mother or child is considered one of "presumptive need" and all others must be proved to be cases of "actual need." In Connecticut and New Hampshire the law specifies that to receive aid a person must be "wholly" or "solely" dependent upon the soldier.

Children "under 16" are included in Connecticut, Massachusetts and Michigan; "not over 16" in New Hampshire; and "under 15" in Maine. Vermont and Wisconsin do not specify the ages. In Massachusetts, Michigan and New Hampshire children over 16 but dependent by reason of physical or mental incapacity, are provided for. In no state is there any such inclusion in the law of adopted children, step-children, illegitimate children, divorced or common-law wives, as is provided in the Alexander-Simmons bill.

A certificate of the man upon enlistment as corrected by later certificates, if he becomes responsible for other dependents, is required in Connecticut only. Payments to others than those mentioned may be made there if the board thinks "an injustice will be done the bona-fide dependents of Connecticut soldiers if they are not so paid." In the other states the initiative seems to be left to the dependents. In no case is an allotment of wages required, although it is reported from Vermont that the ten dollars a month extra pay which was granted to enlisted men of the militia, National Guard and volunteers is in many cases assigned to their families.

Variations in the State Rates

BEARING in mind these confusing distinctions as to persons who may receive allowances, we may proceed to a comparison of the rates allowed, which can best be presented in tabular form. [See next page, second column.]

The Alexander-Simmons bill provides a maximum of \$75 a month to the dependents of any one enlisted man, which is increased by at least \$15 by the compulsory allotment of wages, a maximum which can be equalled only in Wisconsin,

and in comparison with which the \$35 maximum allowed in New Hampshire and Vermont seems meager indeed.

The necessity for providing for an adjustment with a possible federal law has been recognized by the laws of only two states. The Connecticut act becomes inoperative when the United States pays the same or a higher amount; if the United States pays a lower amount the difference is to be made up by Connecticut. Payments in New Hampshire may be reduced in the discretion of the committee whenever the United States provides for payments. The Massachusetts act extends to January 15, 1919, unless service terminates earlier; allowances can be paid in Maine for one year after death or discharge, with no reference to federal payments; Wisconsin's act, unless the legislature orders otherwise, is for the duration of the war.

The plans which have been adopted in the other states are such that there should be less difficulty in adjustments to the federal law. The governor of Rhode Island, under chapter 1469 of the public laws of 1917, is administering a fund of \$150,000, out of which fund he is providing money for the dependents of soldiers and sailors. Men in the army having dependents have through retirement been reduced to a minimum, and families of navy men whose salaries have been increased to an amount sufficient to support their dependents are dropped from the list. It is reported that no hard-and-fast rules exist, and that the list is small enough to be handled by individual inspection, the amounts granted ranging from \$20 to \$35 a month according to the recommendations of the inspectors.

The Minnesota Commission of Public Safety has an appropriation of \$1,000,000, one-half of which was automatically subtracted for extra pay for service on the Mexican border, and out of the remainder of which, among other objects, allowances may be made to the dependents of soldiers and sailors. The commission reports that it has waited upon federal legislation before formulating any policy in regard to dependents.

Citizen Committees in Charge

IN NORTH CAROLINA, where the legislature adjourned prior to the declaration of war, the State Council of Defense has arranged for committees of men and women, in every county, called Soldiers' Business Aid Committees, whose duty it is to "see that during the absence of the soldier there shall be no lapse in his insurance policies, no failure to pay taxes on property or interest on mortgage indebtedness and to make such legal transfers of property as the soldier or his family may desire . . . to look after and assist in caring for all persons who may be or may hereafter become dependent upon a soldier for support." The State Council of Defense will see that they are cared for either by county appropriation or voluntary contributions. Kansas, whose legislature had also adjourned before our entrance into the war, also reports that aid will be given through the State Council of Defense until the legislature meets, and it is possible that such a plan is being followed in other states. Municipalities in Massachusetts may add to the state allowances and chapter 535 of the laws of 1917 in New York permits counties, cities, towns and villages to provide for the families of men in federal service, National Guard or state militia. New York has also incorporated the New York Patriotic Fund, consisting of the governor, lieutenant-governor, speaker of the Assembly, president pro tem of the Senate, minority leaders of Senate and Assembly, and leading citizens, including the mayor of New York. The corporation can receive money for the assistance of the families of soldiers and sailors. Municipalities in New Jersey

are caring for such families by private subscription, a practice which is doubtless somewhat general in other states. Public action in California, under the leading of the State Board of Charities and the Associated Charities of San Francisco, has been centered entirely upon backing such legislation as the Alexander-Simmons bill represents. Close relation of the State Board of Charities with the Red Cross has been established, and it is the expectation that all parties will be able to agree upon a standard of relief "that has nothing to do with deterrent charity."

Compensation for Public Employes

NEW JERSEY, New York and Pennsylvania can supplement the salaries of state employes now in the army and navy. The State House Commission in New Jersey, made up of the governor, treasurer and comptroller, following an act providing full pay for such state employes, has recommended that they be paid the difference between their state and military pay. State and municipal officers and employes of New York who are drafted or under obligation to enter federal service, or who enter after the passage of the act with the consent of the mayor or governor, will not during the present war, or for a period of two months thereafter, be deprived directly or indirectly of any of their privileges or prejudiced with reference to promotion, continuance in office, reappointment or re-employment. Such an officer or employe will receive the difference between his previous pay and his military or naval pay, but such payment by the state or city shall not be less than \$25 a month. Five hundred thousand dollars has been

TABLE SHOWING SCALE OF ALLOWANCES

STATE	PERSONS ELIGIBLE	MAXIMUM AMOUNTS	TOTAL PER FAMILY OR MAN
Connecticut	Wife	\$20 per month	\$50 per month
	Child under 16	6 per month	
	Parents, hrother or sister on same basis		
Maine	Wife, aged, infirm and dependent father, mother or other member of household of which soldier or marine is the head	\$4 per week (i.e., \$17.33 per month)	
	Child under 15	\$1.50 per week (i.e., \$6.50 per month)	\$10 per week (i.e., \$43.33 1/4 per month)
Massachusetts	Wife, widow, children under 16, or "any child dependent by reason of physical or mental incapacity" or actually dependent parents, hrothers or sisters	\$40 per month	\$40 per month
	(Wages supplemented \$10 per month for all non-commissioned officers, soldiers, sailors in United States service)		
Michigan	Wife or widow	\$20 per month	
	Child under 16, or over 16, crippled or deformed and physically unable to earn a livelihood, and dependent upon soldier or sailor	\$7.50 per month	
	Other members of family	\$20 for family as whole	
New Hampshire	Wife	\$20 per month	
	Child, not over 16, or by reason of physical or mental incapacity dependent upon soldier or sailor	\$5 per month	
	Mother wholly dependent on soldier or sailor	\$20 per month	
	Sister or hrother wholly dependent	\$20 per month	\$35 per month
Vermont	Wife	\$35	\$35
	Widowed mother		
Wisconsin	Dependent children, not over \$10 extra per month to wages for one year		
	One dependent	\$30 per month	
	Two dependents	\$40 per month	
	Three dependents	\$50 per month	
	Fourth and each additional	\$5 additional	

appropriated by the state for these purposes, but there has as yet been no use of the fund, owing, it is said, to the fact that most of the men who have left are young and without dependents.

Appointive or civil-service officers and employes of Pennsylvania are not held to have resigned or abandoned their positions by reason of enlistment, their removal from office during federal service is prohibited, and one-half of their salary (to the amount of \$2,000 per year) is to be paid to their dependents. The remainder of the salary plus a sufficient amount to provide reasonable compensation goes to a substitute. The officer or employe files at the time of enlistment a statement under oath of his intention to retain his position and resume its duties at the expiration of service, and the names of his dependents, with a request that the salary be paid. City officials of the second-class cities may be paid upon action by the city council.

Institutions for Veterans and Children

THREE states report some enlargement or establishment of institutions. The special session of the Colorado legislature which met in July and August made an additional appropriation of \$75,000 to the Soldiers' and Sailors' Home, bringing the appropriations to \$100,000 for the biennial period 1917-1919, as compared with \$20,000 for 1915-1917. Oklahoma's State Department of Charities and Corrections has notified the National Defense Committee that the state stands pledged through its hospitals to care for soldiers who may become mentally unbalanced. The state is also preparing to erect an \$80,000 building which will provide for the care of veterans of the Civil and Spanish wars, and those who serve in the European war and their widows. The only progress so far is the securing of eighty acres of land, northeast of Oklahoma City. The optional provision for the construction of county tuberculosis sanatoria in New York has been made mandatory, with the purpose of providing sufficient facilities for the care of all those released because of tuberculosis from the military and naval forces.

A moratorium similar to that contemplated in the soldiers' and sailors' civil rights bill, framed in the office of Judge Advocate-General Crowder and introduced into Congress, has been established by law in Iowa since April. By an act published April 30, all soldiers, sailors and other persons in the federal military or naval service are exempted "while in such service and for six months after the termination of the war, or of said service or death, from payment of any bill of exchange or of any negotiable instrument or of any other payment in pursuance of any contract or from any writ of attachment or execution." Trials of litigations to which men in military or naval service are parties shall upon their request be continued until the termination of their service, or death. The homestead of soldiers, sailors or other persons in the military or naval service is exempted from taxes during their service or other property to the actual value of \$10,000, if they have no homesteads. The statute of limitations shall not run against any action held against anyone affected by the act during the time the action is stayed by the terms of the act.

It is impossible to forecast the effect which the passage of the Alexander-Simmons bill will have upon the administration

of these state provisions. Flexible plans of assistance such as those of Rhode Island, Minnesota, Kansas and North Carolina can easily be so developed as to meet local needs not covered by the necessarily precise definitions of the federal law, and in these cases an adjustment should be relatively simple. The institutional care contemplated by Oklahoma in its new home, and Colorado in its enlarged appropriation, is rendered unnecessary by the federal provisions for allowances and insurance. Hastings H. Hart, in his report to the Executive State Council of Defense of West Virginia, has demonstrated the value of a thorough analysis of the permanent as well as the immediate needs of a state, as a preliminary to the initiation of any war-time program, particularly of any which includes institutional development. So far as our information extends, no state has as yet provided for institutional care of the children of soldiers, but at least one private institution in the Middle West has signified in print its willingness to take the children of soldiers with no cost to their mothers. Similarly, manufacturers in certain large centers have considered the advisability of establishing large day nurseries to provide for the children of mothers who wish to work. One valuable outlet for state energy would be the combating of plans which, like these, are against the spirit of the federal act. The New York State Board of Charities is carefully watching commitments of children to institutions, and is at present investigating the one case reported to date which gives as the cause of commitment the drafting of the father.

In the seven states which have specific laws, adjustment is at the same time more essential and more difficult. The Connecticut law will automatically be suspended, since the federal allowances are higher than those it provides, and the New Hampshire allowances can in the discretion of the board be cut off. Since the other states, with the exception of Wisconsin, base their grants upon need, their boards of administration would seem to have the power to stop state payments upon the initiation of the federal allowances. The wording of the Wisconsin law creates a more difficult situation.

No Competition Under the Federal Bill

ALTHOUGH state laws first in the field might seem to claim precedence, it would be most unfortunate if their existence led to any opposition to the federal bill or to agitation for its suspension in these states. An analysis of the state laws leads to the conviction that none of them is equal to the federal bill in comprehensiveness, liberality or skilled consideration of the questions involved. It is certain that in all the states there would be a large number of cases not provided for, especially in the states which insist upon sole dependence or do not include all classes of men. The state laws have not in any sense removed the necessity for federal action, but on the contrary make the necessity for it more apparent. The support of the families of men in the federal service falls properly upon the federal government, the cost and benefits to be distributed by it over the whole country. It will remain possible for states which have allowance systems or which, like California, while supporting the federal bill, consider its grants insufficient to meet the local standard or cost of living, to supplement the federal allowances and to provide, in cooperation with the Red Cross, for special needs which may be left uncovered by the federal rules.

Book Reviews

THE FUNCTION OF SOCIALIZATION IN SOCIAL EVOLUTION

By Ernest W. Burgess. University of Chicago Press. 237 pp. Price \$1.25; by mail of the SURVEY \$1.39.

THE PHYSICAL BASIS OF SOCIETY

By Carl Kelsey. D. Appleton & Company. 406 pp. Price \$2; by mail of the SURVEY \$2.12.

OUTLINE OF APPLIED SOCIOLOGY

By Henry Pratt Fairchild. The Macmillan Company. 353 pp. Prices \$1.75; by mail of the SURVEY \$1.89.

Important and very useful additions to sociological texts have been provided, both for the general reader and for reference use in the classroom, under these three titles. While all three authors center their discussions upon the inquiry as to what constitutes progress and deal with the forces

promoting it, yet each starts from a different point of view and pursues distinctive lines of argument, which valuably supplement each other.

Professor Kelsey groups data concerning the factors of social evolution which he has used with his classes at the University of Pennsylvania as introductory to their course in sociology, and makes free use of collateral readings assigned them. Valuable background studies of the physical and physiological environments conditioning their status and progress are thus outlined, under such topics as Earth and Man, Heredity and Society, Racial and Sex Differences, the Influence of Society upon Population. In striking the balance at the end of these descriptive studies, the success or failure of a civilization is accounted for in "the terms of adjustment between man's institutions, and his environment, which is in part physical, in part social." And all along, the will to adjust and the capacity to adapt are emphasized as the winning factors in the problems of progress.

Professor Burgess, of the University of Chicago, takes his point of departure from the contention of Lester F. Ward that the spiritual part of civilization is so conditioned upon material civilization that "the moment such a basis is supplied it comes forth in all ages and races of men, and does not need to be specially fostered."

To the contrary, Professor Burgess's thesis is that "socialization rather than geography or heredity is the dominant factor in social evolution." As essential thereto, socialization is considered to be the process by which the group connects the individual with its collective activities, and by which the individual participates in the spirit, purpose and action of the group. Through three spheres of human experience and achievement, the necessity and effectiveness of socialization are tested, by the role it plays in discovery and invention, in social progress and in personal development. These tests are applied in very wide and varied references to industrial history, to the progressive stages of social evolution, and to the psychological factors of developing personality.

The conclusion thus reached is summed up in the statements that the end and function of socialization is the development of persons, and not social organization, and to this end, on the one hand, society is "an immense cooperative concern for the promotion of social development," but, on the other hand, the development of personality consists "in the individual's right relationship with his fellows, and the capacity of fitting into an infinitely refined and complex system of cooperation."

Professor Fairchild, to make "a more thoroughly scientific approach to the solution of the problem of social advancement," departs from the tendency "to treat each question as a thing by itself, and to forget that life and society is not divided into water-tight compartments." In so doing, he seeks "to take a comprehensive view of the entire field of social life, and social endeavor, to correlate in a systematic and logical manner the manifold aspects of the social organization, and to indicate the actual inter-relationship between seemingly divergent departments of life." In ignoring the separate treatment of the cross sections of human experience and action, and in compassing the sphere of man's whole human environment, this text-book is distinctive.

While directed to fulfil the purpose of applied sociology, "to re-shape the social organization, the better to serve human welfare," the volume recognizes general or pure sociology as the source of knowledge for practical application. So pervasive and dominant an element of the total human environment are economic factors and forces considered to be that fully two-thirds of the volume are devoted to their consideration. The standard of living and population, as both are related chiefly to the family, are the two foci of these environmental and volitional forces at which the author's treatment of all social phenomena centers. And nowhere have these two prime factors of the social problem received more complete analysis and classification than in his searching yet practical treatment. The æsthetic, intellectual, and religious interests involved in human advancement are regarded as essentially constituent elements of the human

environment, although treated less thoroughly, yet no less incisively.

The book is noteworthy for its inclusion and very direct dealing with so many pressing phases of present social development. Its references and supplementary readings, together with a good index, add to its value. Many articles in the SURVEY are referred to.

GRAHAM TAYLOR.

FAITH, WAR, AND POLICY

By Gilbert Murray. Houghton Mifflin Company. 255 pp. Price \$1.25; by mail of the SURVEY \$1.35.

The first of the essays and addresses here collected was written in August, 1914, the last in March, 1917. The finest testimony, perhaps, to the worth of the author's political and moral philosophy is the fact that there is no great contrast between his reaction to war at the beginning

and that after three years of it. He is consistent throughout these discussions and memoirs to a liberalism of heart and of intellect which it is difficult to imagine apart from the extraordinary width of knowledge and sympathies by which it is sustained. "It is well to try to think things out while our minds are still clear, while we still hate the war and not the enemy," Professor Murray said when the war had but just begun. "A little later it may be different. In a few weeks English and Germans will have done each other cruel and irreparable wrongs."

"We know we should let loose these evil powers," he says in 1917, "but we believe we can cling to our duty in spite of them. It was part of the price we had to pay if we wished to save Europe, to save the small nationalities, to save liberty and civilization."

Hatred, indifference to suffering, a gradual fading of the high ideals with which the country entered upon the war, the English liberals not only foresaw, but they accepted it as part of the price that had to be paid if a worse fate was not to befall their country—not the fate of conquest, but that of having failed in their trust as they saw it. Some day when the history of patriotism will be written, this great Gladstonian tradition of duty will receive triumphant vindication. The shouting and upbraiding of men who enthusiastically embraced the opportunity of war and who thought they had a monopoly of patriotism just because they could not see any of the serious moral issues which it raised will then be fittingly forgotten.

In his first essay, the author made a remarkable prophecy about Russia. He did not share the sorrow and shame of many other Englishmen to have Russia for an ally, but felt sure that the progressive elements in that country, strengthened by English friendship, would find liberation in the war.

Three essays on Ireland, brilliant pieces of special pleading, present a complete refutation of the charge of hypocrisy which during the last three years has so frequently been made against British liberals by American writers. Of even greater astuteness is the author's defense of British sea policy. In fact he does not leave American critics a leg to stand on.

But what we like most in this book, better even than two charmingly gracious and understanding interpretations of American attitude to the war—this was before the United States intervened—is the memoir of a former student of his who fell in France. Out of the intimate character sketch here attempted, there arises a picture of that Ox-

ford and that England which not armaments, material ruin or even prosperity can conquer, because it is of the spirit and eternal. A picture also of that fine band of young men, "exceptional in intellectual powers, in feeling for the higher values of life, in the sense of *noblesse oblige*, and in loving-kindness towards the world of men" who, without question, died for an ideal for which, equally unquestioning, they would otherwise have lived.

This book has an inspiring quality which to a very large extent must be ascribed to the lucidity and beauty of its style. One reads it with real pleasure even after the surfeit of war literature has created a strong aversion to other books of a similar kind.

BRUNO LASKER.

IS CHRISTIANITY PRACTICABLE?

By William Adams Brown. Charles Scribner's Sons. 246 pp. Price \$1.25; by mail of the SURVEY \$1.37.

Among the many apologetics for the Christian faith called forth by the war none has been more frank in admitting "the failure of the church to exercise any controlling influence upon the national policy of the so-called Christian nations," or "to make the Christian sentiment of the world felt in this supreme crisis in any unified and effective way." So serious is the implication of this failure acknowledged to be as to raise the question "whether Christianity is a practicable religion for society as well as for the individuals who compose it." The author's answers to it are more significant as addressed to the Japanese in fulfilling the function of Union Seminary lecturer in the Far East.

The achievements of Christianity in the lives of individuals, great as they prove to be, do not fulfill the author's interpretation of its founder's ideal and aim. With the rapidly prevailing school of Christian thought, Professor Brown recognizes that the individual life is essentially social in its nature and its religious needs and that the avowed purpose of the Christian faith is to realize its ideal of a social order far transcending the character it cultivates in the individual units.

The claims and arguments to these ends advanced in this volume demonstrate how completely the social interpretation of scripture teachings and the functions of the church have become identified with the tenets, defense and hopes of Christianity. His pathological diagnosis accounting for the situation of Christendom under war conditions is more conclusive than his attempt to justify the fundamental tenets involved. But his insistence upon the validity of Christianity's social ideals and upon their practicability, in view of the latent resources available for their realization, is strongly maintained, notwithstanding the fully acknowledged failure of the churches professing them even to attempt to apply them. The volume is a distinct contribution to the literature of social Christianity.

GRAHAM TAYLOR.

A CONFUSION OF TONGUES

By Paul Revere Frothingham. Houghton Mifflin Company. 256 pp. Price \$1.25; by mail of the SURVEY \$1.37.

The confusions of thought and feeling due to the great war are used as the foil upon which the author seeks to flash new light on the old duties of common life and the qualities of character which "survive unshaken and have suffered no eclipse." Chief among them are kinship, courage and the Christian spirit, which he holds to be coming to a new birth through the travail of the war.

Wholesome and helpful as these brief es-

says are in encouraging the cultivation of personal rectitude and hopefulness, they fall far short of measuring the shock which faith has suffered under the heel of war in Christendom. And they contribute little more than a very general hope for the reaffirmation and reconstruction of religion when the lack of it in national and international relations bears so hard and heavily upon individual faith and practice.

G. T.

THE NEW COUNTRY CHURCH BUILDING

By Edmund deS. Brunner. Missionary Education Movement. 141 pp. Price \$1; by mail of the SURVEY \$1.08.

Gymnasium and social hall, stage platform, dressing-room, corn club classroom, boys' club room, manual training room, canning club room, kitchen, lockers—the days of the old country church are indeed passing. The rooms just listed are to be found in one of the plans for the new country church building which appear in the Rev. Mr. Brunner's book. One needs but glance at sketches such as this or at those suggested for the parish house to realize that going to church in many rural districts now means more than attendance at religious services once or twice a week.

Mr. Brunner's discussion of the church building as it proceeds from site and materials to building plans, to remodeling, to equipment, to the parish house, carries always with it the conception that "the church stretches out into the community life, that it realizes that nothing which touches that life is foreign to the interests of the kingdom of God." It is not a technical book, but it should be valuable to the architect, though it is written for the country minister, the country layman and the rural social worker. The sketches and plans by James Grunert are most suggestive. Particularly interesting is the section by Mrs. Brunner upon the kitchen.

S.

FIRE PREVENTION AND PROTECTION

Compiled by A. C. Hutson. The Spectator Company. 778 pp. Price \$4.25, including postage.

This third edition, revised by a fire-protection engineer, is issued under the auspices of the National Board of Fire Underwriters and the National Fire Protection Association, the two organizations supported by the fire insurance interests of the country. It is intended to place in the hands of "merchants, manufacturers and underwriters" such information as will tend to benefit them and at the same time reduce the fire hazard throughout the country. It is an excellent summary of what fire protection means, and it is ignorance on the part of the layman of the information contained in this book which makes him contribute his quota to such a conflagration hazard as occasionally sweeps away his city and wipes out his belongings at the same time.

The book harks back to the time before the New York State Factory Investigating Commission, which was the first public body to give the fire hazard to life any consideration. These hearings brought out the fact that the fire insurance companies felt that it was not to their interest to consider the life hazard. This book reflects this feeling in not keeping abreast of the times. So great has been the advance since that time that some of the quotations are almost obsolete. Carelessness is shown also in their incompleteness. For instance, to cover this subject the chapter from the model building code of the National Board of Fire Underwriters and the report of the commission on safety to life of the National Fire Protection Association are both given almost in full.

The one constructive feature which was brought out by the Factory Investigating Commission was the "horizontal exit." In the quotation from the report above mentioned the term "horizontal exit" is defined and reference is made to section 29 paragraph 4 of the building code for details. On referring to this section we find merely a note, "Horizontal exits as emergency exits. See section 46 paragraph 2-C." Turning to this part of the code we find sections 40 to 58 omitted.

There is evidence of carelessness as well in proofreading. One would expect to find the word *fire* in a book on the subject correctly spelled, but we run across "first escape" and "five exits." A later edition ought to bring the book up to date and correct the typographical errors, but the present volume is valuable, nevertheless, as it is.

H. F. J. PORTER.

THE BUDGET

By René Stourm. D. Appleton & Company. 619 pp. Price \$3.75; by mail of the SURVEY \$3.95.

This is the second volume published for the Institute for Government Research, the first being *The Financial Administration of Great Britain* (reviewed in the SURVEY for August 18). For many years Stourm's *Le Budget* has been the standard work in this field. Those who teach public finance in our colleges will welcome it in English, for it may now be used more readily by their under-graduate students. Outside of academic circles it should be widely read because it contains the best account of the evolution of budgetary systems and sets forth in detail the problems encountered in France, many of which have been not unlike our own. The difficult tasks of translator and editor have been fairly well done.

H. A. MILLIS.

COOPERATIVE CREDIT FOR THE UNITED STATES

By Henry W. Wolff. Sturgis & Walton Company. 349 pp. Price \$1.50; by mail of the SURVEY \$1.65.

Until the development of the industrial era there was no such thing as productive credit. Money was borrowed for immediate consumption. The borrower was in need, the lender exacting; hence the laws against usury. Enterprise now has as its sustaining force the banking system. Productive credit is the life-blood of business. But into the broader field of economic endeavor, into agriculture and the smaller trades, this credit has not reached. The problem is to find ways and means of its extension. Agriculture in particular must secure it if it is to keep pace with the progress of industry.

Credit development has been slow in agriculture because of the unavailability of security, because farming, unlike business is an individualistic enterprise. The return of commercial loans is more sure than agricultural, because business is essentially cooperative. Agriculture must make up this deficiency by organization, by the cooperation which will standardize method, regulate distribution and establish the basis for credit.

Mr. Wolff presents in this book the principles of cooperative credit and illustrates their working out in the various countries of the world. Along the lines pointed out by him is the hope for the new agriculture, and for securing for small tradesmen and workers that economic emancipation which credit alone can give.

HARRY F. GRADY.

WITTE ARRIVES

By Elias Tobenkin. Frederick A. Stokes Company. 304 pp. Price \$1.25; by mail of the SURVEY \$1.35.

This book is presumably a novel with an autobiographical tang. The hero, Emil

Witte, is a Russian-Jewish immigrant who came to America at the age of ten with his mother and the other children to join the father in a middle-western town. The earlier chapters present a very good picture of the economic and social struggle of an orthodox Jewish family of ideals living outside of our great cities. A flavor of the old Russia appears with an uncle who had been exiled to Siberia, and who arrives unexpectedly at Spring Water, but the lure of exile was strong, and he returned to the Old World.

The rest of the book is the story of almost any newspaper reporter, who rose from small things to greatness—the greatness of writing a book or two. Witte was foredoomed to write, for had not his college professor one day singled out his theme to read to the class, and had he not called it literature? Oh! those professors!

Witte should have been a tailor. Then he could have married Lena, his first love, or supported Helen, his wife, so she need not, on account of financial stress, have resorted to abortion, for which she later paid the penalty with her life, when she gave birth to a dead child. We hope he did better by his third love, Barbara, the Gentile, in whose arms the author leaves him.

There is an element of pathos running through the story. Witte lived a singularly isolated life; he had few friends; and his loves he plucked from the wayside, as it were. The book lacks the artistry of a good novel. If it were a "human document" now—but it isn't. The author being, so the oracles tell us, a graduate of the University of Wisconsin and a former editorial writer on the Chicago *Tribune*, knew better than to give us that. But he has written an honest tale of a sincere youth and one could wish he had given it a better name.

Witte Arrives is not likely to make much more stir in the literary world than little Emil made in America when he came through the gates at Ellis Island at the age of ten.

ANNIE MARION MACLEAN.

TRAINING THE CHILDREN

By James L. Hughes. A. S. Barnes Co. 148 pp. Price \$.60; by mail of the SURVEY \$.66.

Just as the audience at a political meeting is composed mainly of those who already believe the principles professed by the speakers, so the public which reads a book like this one by Dr. Hughes is sure to be so largely made up of people to whom its message is not new that the thought is irritating in the extreme. For here in a tiny volume, entirely within the means of any one, so far as cash or time value to be expended is concerned, we find just such a clear exposition of the eternal principles of education and the relative values of free activity and development contrasted with "the negative and coercive ideal" of old times, as we long to inject into the consciousness of that great majority of adults who, as Dr. Hughes aptly says, no longer defend harsh methods of disciplining children, but still retain their faith in the old ideal.

Clearly it is this great majority to whom Dr. Hughes would speak. His long service in the public schools of his own city has acquainted him with their numbers and with their stock objections to real freedom for childhood. He gives excellent answers to the arguments inevitably raised in their discussions of the subject. Possibly his title, incorporating as it does the good, old-fashioned word "training," will prove sufficiently misleading to help on the book's sales among those who most need to read it.

As for the others, the comparatively few who agree with Dr. Hughes that "all training that interferes with the child's tendency to do things, to do things he plans himself, or to do things in cooperation with others,

is unmoral," some will question an occasional point he raises, as, for example, the value ascribed to that "freedom under law" attending the use of the Frobellian material, but none will question the truth and inspiration of such passages as these:

"True ideals of training will aid humanity to realize the great joy in work as transforming power, when men understand clearly the higher economic philosophy. We cannot much longer be satisfied to make the work of a large portion of humanity depressing to the highest intellectual and spiritual powers instead of life-giving and joy-giving, as it really should be.

"By doing the things he plans himself a child gets a revelation of his own selfhood or his supreme ability and power. This is the greatest revelation that ever comes to a child, or to a man."

JEAN LEE HUNT.

DIETETICS OR FOOD IN HEALTH AND DISEASE
By William Tibbles. Lea & Febiger. 627 pp. Price \$4; by mail of the SURVEY, \$4.20.

This is an interesting compilation of data pertaining to foods and their digestibility and nutrient value in the organism. It aims, further, to indicate some of the criteria which should guide in the construction of suitable dietaries for persons at different ages and under various circumstances.

More than half of the volume discusses the problems of dietetics in special diseases, and thus concerns the physician and institutional dietitian rather than the lay reader. It is not easy for one writer to review the literature of so large a field in any adequate up-to-date way unless he has worked intensively in some related domain of science. Much of the present book is timely, including a chapter on the modern vitamine hypothesis and its bearings (up to 1914). Some of the parts on the theory of nutrition are not equally modern, the discussion being based more largely on the views of older physiologists. Indeed, few clinicians seem to realize adequately what great strides the study of nutrition has made of late.

The book is readable in style and is conservative in its general recommendations. Food fads receive little emphasis other than in a historic way. Sometimes a little too much deference is paid to "authority," but this is almost inevitable where debated questions call for popular discussion. In common with many English writers the author translates the German "kur" into the English "cure," an inadequate expression for what is at best a mode of treatment. The "milchkur" and "traubenkur" or the "kur" at Carlsbad are not "cures" in most cases.

Rectal feeding as still commonly practiced receives a fitting rebuff from the statement that "nutrient enemata satisfy the mind rather than the body" (p. 320); yet detailed directions are culled from many sources for the reader (p. 324). We are told that the most common liver complaint is "torpor of the liver." This expression is a misnomer almost as intolerable as the familiar term "biliousness." The literature of today ought to be purged of such.

Writing of dietetics, the author says: "I deem it of such importance to mankind that I would there were appointed a professor of dietetics in every university and medical college throughout the world, and that this subject should be given the same prominence in the curriculum of the medical student which is given to *materia medica* and thera-

peutics. In all colleges of agriculture prominence is given to the study of animal and plant foods. If such knowledge is deemed of importance to the breeder of animals and the grower of grain or fruit, surely it is no less so to the physician who has the care of the human body. Indeed, I have no hesitation in saying that the study of dietetics and its practical application would benefit 50 per cent of the physicians' clients when they are sick, and is no less important as a branch of preventive medicine." This appeal deserves emphasis.

LAFAYETTE B. MENDEL.

NATURAL PAINLESS CHILD-BIRTH AND THE DETERMINATION OF SEX

By Dr. Filip Sylvan. E. P. Dutton & Company. 160 pp. Price \$.75; by mail of the SURVEY, \$.80.

This little book, entitled Natural Painless Child-birth, is good reading for any prospective mother, as by following out the system of exercises suggested, she can attain the highest stage of physical development. She should not, however, be deluded into the impression that child-birth is a painless process, even though she adhere strictly to the details so graphically described and excellently illustrated. Effective uterine contractions are always painful unless the pain be relieved by anodyne or anæsthetic, as it is impossible for the uterus to contract without pressure upon the terminal nerve filaments in the uterine muscle. Just at this time when the American public has heard so much of painless labor from the use of morphine and scopolamin and gas and oxygen, eutocia by set exercises would naturally be sought by many who have read of the disadvantages of the methods referred to. For some years we have been teaching our patients the value of exercise and know that it contributes to successful delivery, but not to painless delivery. The book is well arranged and the illustrations clear.

J. O. POLAK, M.D.

THE RISE OF ECCELESIASTICAL CONTROL IN QUEBEC

By Walter Alexander Riddell. Longmans, Green & Company. 195 pp. Price \$1.75; by mail of the SURVEY, \$1.83.

Special social interest attaches to the subject of this book from the deplorable lack of enthusiasm shown by the French-Canadians for the cause of their ancient European mother, and their consequently increasing importance in the population of Canada, whose English-speaking portions have been so sadly depleted by the superb loyalty they have shown. Even in a field adorned by the brilliant pens of Parkman and Fiske the work before us must take a very high place from its sound scholarship, abundant references to authorities, and good writing.

The story of the blundering efforts of the British conquerors to set up the Church of England in Canada (carried out as it was with all the characteristic tolerance and fair-mindedness of the British race) simply made the Roman church many times stronger than ever under the rule of the Bourbons. Nowhere in the world to-day is papal control more powerful than on the banks of the St. Lawrence. In some respects the spirit of the middle ages seems to brood over the towns and villages of French Canada more completely than over any other land that is in close touch with the modern world.

How this strange paradox came about is most interestingly set forth by Dr. Riddell, whose book can never be ignored by any serious student of the history of this continent. A companion volume on the contrasting state of affairs in Louisiana would give an extremely valuable basis for comparison of British and American methods of attacking problems not very dissimilar.

IAN C. HANNAH.

COMMON WELFARE

EMPTYING THE SCHOOL TO WORK THE FARM

LITTLE children who ought to be in school, both in law and in decency, spend much of their growing energy herding cattle, planting wheat, baling hay, picking cotton, cultivating potatoes, corn and sorghum, dairying, taking care of live stock and doing similar work on farms in the rural counties of Oklahoma, according to a pamphlet just issued by the National Child Labor Committee. These children, as would be expected, do not do as well in school as those who spend more time there. Some of them add to the army of illiterates when they grow up. Many of them cost the state in later life—as criminals, paupers, “inefficients”—more than their education would cost it today.

Unable to get the facts in any other way, the committee sent a number of its agents to Oklahoma. They studied what school records there were and interviewed teachers and children. Causes of absence had to be obtained by the second methods. The agents found that farm tenancy is prevalent, even in this territory “only recently ‘opened’ for settlement.” Tenants’ children outnumber owners’ children three to two and over half of the children of tenants belong to so-called “migrant” families, showing the extent to which moving about interferes with education.

In a group of over 6,000 children whose records were obtained, each farm-working tenant’s boy missed on the average 42.2 days, of which he spent 32.5 at farm work alone; each farm-working owner’s boy was absent on the average 35.6 days, of which 26.3 were spent at farmwork; each farm-working hired laborer’s boy lost on the average 29.6 school days, of which 23.1 were spent at farm work. Girls missed approximately the same number of days, many of them, too, being engaged in farm work. Since the average length of the school term in rural districts for 1916 was 136 school days or not quite seven months, it is apparent that rural child

labor considerably reduces the school term for many girls and boys.

The total number of days that these boys and girls should have attended was 800,442. They were absent 185,707. Farm work claimed the most days absence, 73,121. Illness was next with 44,148, and indifference, which is almost entirely parental indifference, was third with 26,382.

Farm workers are the most retarded, 51.1 per cent of their number being below normal grade. They are followed by those whose cause of absence is moving, 41.1 per cent of whom are retarded. The percentage of retardation for daily attendants is only 12.6.

The report, which is illustrated, contains a picture of four adults and ten children harvesting a cotton crop. One boy of three years picks twenty pounds a day on some days. Three five-year-olds pick more steadily, while five from seven to eleven years are regular workers. Another picture shows a five-year-old cotton picker whose parent said of him: “He haint old ‘nuff to go to school much, but he kin pick his 20 pounds a day, mostly 10 or 15 pounds.”

The Oklahoma compulsory education law applies to children eight to fifteen years old inclusive, who are required to attend for at least 66 per cent of the time the local public schools are in session. Not even this meager statute is lived up to. Moreover, the rural schools, which, from the standpoint of numbers, constitute the most important element in the state’s educational system, make the worst showing in attendance.

THE GARY PLAN AS A CAMPAIGN ISSUE

NEW YORK city is finding a live political issue this fall in her public schools. The issue is the Gary duplicate school plan. If Mayor Mitchel succeeds in establishing his close victory last week over William M. Bennett in the primaries for the nomination for mayor, the race will be between an ardent advocate of the plan, the mayor, and a vigorous opponent, Judge John F. Hylan, Tammany’s candidate.

The Gary plan in a modified form was introduced experimentally into New York city’s schools three years ago with the active support of Mayor Mitchel and under the direct supervision of its originator, Supt. William C. Wirt, of Gary, Ind. It has since been extended to twenty-five New York schools and will this year be operated in fifty; money has been appropriated to extend it ultimately to seventy-eight.

The plan, in the opinion of its friends, provides a richer “work-study-and-play” program for elementary school children than the traditional classroom system. It utilizes auditoriums, playgrounds, laboratories, workshops and gymnasiums for a larger portion of each day, accommodates practically double the usual number of children by a system of duplicate or rotating classes, thereby eliminating much part-time attendance, and saves money by greatly reducing the amount of new buildings required.

Opposition to the plan has been widespread since its first adoption. Parents’ and neighborhood associations have been organized throughout the city to fight it. At a meeting of one of these bodies recently Dr. Ira S. Wile, a member of the Board of Education, was refused permission to speak in defense of the plan and Howard W. Nudd, the director of the Public Education Association, was bodily thrown out for suggesting that there was a lack of fair play in the meeting. Hearings have been held before the Board of Aldermen at which parents have spoken vigorously against the plan.

The main charges against it have been

September 29, 1917 Vol. 38, No. 26

THE SURVEY

Published weekly by
SURVEY ASSOCIATES, INC.

112 East 19 street, New York

Robert W. de Forest, president; Paul U. Kellogg, editor; Arthur P. Kellogg, secretary; Frank Tucker, treasurer.
10 cents a copy; \$3 a year; foreign postage \$1.50, Canadian 75 cents.
Copyright, 1917, by Survey Associates, Inc.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the Act of March 3, 1879.

that it deprives the child of a permanent seat in a classroom reserved for his exclusive use and so increases part-time, that it gives too little attention to academic subjects, that its economical features are merely a subterfuge for "putting dollars above children," and that it opens the door to religious proselyting in the schools. The last charge is based on the fact that the plan frees the child, at the request of his parents, for certain supervised activities outside the school having an educational value, such as music study, religious instruction and reading in the public library.

Judge Hylan has openly fathered the charge that the extension of the plan shows the influence of the Rockefeller Foundation in the Board of Education. He has pointed to Abraham Flexner and Raymond V. Fosdick as two representatives of the Rockefellers in the board. Mr. Flexner is one of the secretaries of the General Education Board and Mr. Fosdick was for a time secretary of the Bureau of Social Hygiene, supported largely by John D. Rockefeller, Jr. Neither of these men was conspicuous in advocating the Gary plan and both have recently resigned from the Board of Education because they were too busy to attend to their duties as members.

Meanwhile prominent citizens representing educational, labor and other interests have formed a committee to champion the Gary plan in the mayoralty campaign. The fight has been hot in the Board of Education itself and a committee there has been created to draw up a statement of the history of the plan's introduction and operation in New York city. This, it is expected, will be used as campaign material by both friends and opponents.

CLEANING UP BEHIND THE FRENCH LINES

TO protect the social health of an army fighting abroad is the unique undertaking of the Army Committee on Training Camp Activities, assumed after a preliminary study of conditions which will confront American soldiers in France. Its work is supplemental to that first contemplated in the establishment of the army and the navy committees on training-camp activities. It is assumed largely because, in the guarded language of Raymond Fosdick, chairman of both committees, "we understand that the situation is far from satisfactory in France, particularly as regards venereal disease." The fight to keep the men of the American army physically clean and strong is going to be one of the most notable struggles of the war [the SURVEY for September 8, page 509].

France neglected the whole problem of social sanitation as applied to her soldiers in camp and on leave. England neglected it until too late and is now

striving to recover lost ground in dealing with one of the most powerful enemies she has encountered beyond the channel. The soldiers from Australia who stopped in Egypt and the Canadians who stopped in England and France are less able to withstand hardships than they were when they left home. General Pershing has studied the conditions in the allied armies in France. Now the American government, through the War Department and the Committee on Training Camp Activities, is to try to save the American soldier where the the French, the British, the Australian and the Canadian were permitted to be sacrificed. Mr. Fosdick says:

We are confident that we shall be able to arrange with the French government so that our commanding officers will be given civil authority in the towns or places where our camps are located. Preliminary steps have already been taken to protect our men while in France, and we are confident that we shall succeed in the undertaking.

Our problem is one of the soldier's leave, primarily. Will he be permitted to take his leave, when not on active duty, in England? Or, if kept in France, will he be permitted to spend his time of leave in Paris or the other chief cities? Or will he be restricted to the smaller towns?

We have three lines of defense in this fight. First, there is the positive work that this committee and the Y. M. C. A., and the recreation service of the Knights of Columbus are doing. That is, the athletics, the recreations of various kinds, and other activities to engage the interest of the men. Second, if that fails to suffice, there are the police powers. We are going to keep the prostitutes away from the camps and do all possible to discourage their trade. Finally, and only as a last measure, if the prostitutes do break through our policing, there are the prophylactic measures.

In England, what is known as the Exeter Hall group of social reformers has insisted that no prophylactic measures be permitted in their army, on the ground that these measures constituted a temptation to the soldier. We will do our utmost to protect the men of the American army by other measures, but we will not take that attitude toward prophylaxis.

More significant, perhaps, than even his confidence that the degenerating conditions in France can be overcome, is Mr. Fosdick's view of what has been inaugurated in the United States this summer. He is convinced

that we have made a start toward making prostitution unprofitable in America. I do not say that we are far on that road, but we have started. These committees have secured the closing up of red-light districts in thirty cities; they have cleaned up similar conditions in thirty other cities that did not officially recognize their vice districts. We have seen this constantly shifting population of commercial prostitutes excluded from the localities of the army camps, and we know today that many of them, finding the life unprofitable, have gone to work.

Maude E. Miner, who has done invaluable work in this country with respect to this problem, is at the head of a woman's committee connected with our organization, which is giving great help by tracing down the individual women who leave these red-light districts. We are convinced that con-

stant repression will ultimately reduce this trade to a minimum. In the old days there were always other cities to which these women would flock, when driven out of a city by a spasmodic wave of reform. Now a nation-wide organization, which will be effective during the war period, has at least seriously reduced the profits of this occupation.

Constructive work by the Committee on Training Camp Activities has resulted in the formation of eighty-seven community organizations in as many cities to help the soldiers in neighboring camps. These communities are in turn showing a new local pride in improving their parks and pavements, in installing public comfort stations, and in otherwise permanently upbuilding their public services.

In cooperation with these community organizations, formed for the purpose of giving clean and wholesome recreation and entertainment to the men in the army training camps while still in this country, the Playground and Recreation Association of America is starting to raise a fund of \$3,750,000 to provide the essentials of such recreation. President Wilson, in a letter to Joseph Lee, of Boston, president of the association, expresses his "keen appreciation of the value of this unique and excellent service." He adds: "The spirit with which our soldiers leave America, and their efficiency on the battle-fronts of Europe, will be vitally affected by the character of the environment surrounding our military camps."

SELF-GOVERNMENT ON ITS METTLE

WHEN Calvin Derrick, a former superintendent of Ione Reformatory in California, described in the SURVEY for September 1 the details of self-government as operated in that institution and introduced by him four years ago, he was unable to include the latest and boldest illustration of the working of the plan, because that illustration had not yet occurred. It is described in a letter just received by Mr. Derrick from the president of the board of trustees of the reformatory, who, telling of various ways in which the plan has been extended, says:

. . . . We permitted two hundred boys to attend the fair. They arrived here on Monday morning, and left about 5 o'clock on Tuesday afternoon. On Tuesday afternoon they were reviewed by the governor and received much praise from the governor and from army and navy officers who happened to be present. But note this: They came here and were policed entirely by their own officers and appointees. The boys themselves selected from the population those to whom the privilege of going was granted. Not a single escape occurred. The whole two hundred are now safely back at the school. It seems to me that this is the boldest experiment of the kind that ever has been made with any considerable number of the inmates of such an institution. President

Richardson [the inmate president] and his officers, were pretty well exhausted Tuesday night after the boys left.

SETTLING STRIKES IN THE SHIPPING TRADES

THAT arbitration agreements between government officials and labor leaders may not always be effective in preventing strikes was indicated last week when 30,000 men working in shipyards in San Francisco walked out, demanding a 50 per cent increase in wages, and 6,500 longshoremen in New York city struck for the discharge of a foreman.

Both strikes seemed, early this week, to be in a fair way of settlement. An agreement was signed in San Francisco last Sunday between representatives of the men, their employers and federal mediators, establishing a "temporary wage schedule." It provided that the men should go back to work pending settlement of the controversy by the federal commission, consisting of V. Everit Macy, chairman, appointed by the President; Edward F. Cary, of the Emergency Fleet Corporation, and Alfred J. Berres, secretary-treasurer of the Metal Trades Department of the American Federation of Labor.

The longshoremen's strike in New York had its origin ten weeks ago over the attitude of one of the foremen on the Chelsea piers, Frank Labardo. The men claim that he was overbearing and autocratic in his manner, and that he repeatedly refused them the rest periods which are customary on the docks. Dissatisfaction culminated when, as alleged, he refused one of their members leave to go to a nearby drug store and get medicine which he needed. The man went against orders and was discharged. The other men on this pier immediately walked out. An agreement was made to arbitrate the matter and Labardo was temporarily removed. An arbitration committee was appointed, which failed to take any action, and last week Labardo was reinstated by the company. The men again walked out, this time repudiating arbitration on the ground that while wages and hours might be a matter for arbitration, their personal quarrel with a foreman was not. The strike then spread until a large part of the water-front in the Chelsea district was affected.

A meeting of the men was called last Thursday morning at which three members of the National Adjustment Board were present: Walter Lippman, assistant to the secretary of war; R. B. Stevens, vice-president of the Shipping Board, and T. V. O'Connor, president of the Longshoremen's Union. The United States Army Transport Service was represented by Capt. William B. Baker.

An appeal was made to the men, based on the vital necessity of their work in

connection with the transport service. This made considerable impression and it was voted, 418 to 217, to go back to work and let arbitration take its course.

Both of these strikes seemed to be contrary to agreements recently signed. One was entered into on August 25 between representatives of the Navy Department, the Emergency Fleet Corporation, and the American Federation of Labor and international unions affiliated with it [the SURVEY for September 1, page 488]. Under this agreement all disputes in shipyards were to be settled by a commission, one of whom was to be appointed by the President, one by Samuel Gompers and one by the Emergency Fleet Corporation. At about the same time a similar agreement was signed by a representative of the government and officials of the International Longshoremen's Union. These strikes cannot, however, be looked upon as violations of these agreements, for the men involved had nothing to do with making them. While agreements of this character undoubtedly have influence, they are entered into by union officials as individuals and in most cases have no binding effect unless ratified by the members of the unions concerned.

The labor situation in the West which has been acute for some time is to be investigated by a commission recently appointed by President Wilson. William B. Wilson, secretary of labor, is chairman, and the other members are J. L. Spangler, of Pennsylvania, and Vernon Z. Reed, of Denver, both business men, and John H. Walker and E. P. Marsh, who are presidents of the State Federations of Labor respectively of Illinois and Washington. Felix Frankfurter, who has been an assistant to the secretary of war, is secretary of the commission.

COLLEGE SOCIALISTS SPLIT ON THE WAR

"IS the pacifist a scab?" and "shall democracy be laid away in mothballs for the duration of the war?" These questions, among others, were considered at a convention of the Inter-collegiate Socialist Society held at Bellport, L. I., September 18 to 24. Notable speakers were present and the convention was termed the most successful in the history of the society.

Of necessity the discussion of war problems overshadowed all other issues, and both interest and discussion were whipped to a white heat on the subject of universal service in time of war. Sweeping support of the state in its rights over the individual in exacting such service in defense of the rights of weaker nations, was given by former Socialist party members—J. G. Phelps Stokes and John Spargo—and the true internationalist was pictured as one who did not fail to respond to a weaker na-

tion's cry of distress. In fact, support of the state in such a crisis was so strongly presented that one of the speakers was accused of using language suitable to a German text-book on one's duty to the fatherland.

The simple affirmation of the liberty of conscience "without intellectualities," as against the duty of the state as at present imperfectly constituted, however, evidently received the assent of a majority of the hearers; as well as the claim that while the individual might resign from the Socialist Party in the time of present stress, it was quite impossible to "resign" with equal ease one's citizenship in the United States.

Pacifists and conscientious objectors were led by the Rev. Norman M. Thomas in a defense of the rights of the individual as against those of the state. Yet the question, what is the pacifist to do, was left unanswered by Mr. Thomas, who declared that now was the time for principles not programs.

Militarism as promoting the evils of a caste system received due attention from the pacifists, while one of the strongest supporters of universal service admitted that such service was not good in itself, but a necessity.

To the question, What peace proposals shall a radical advocate? Walter E. Weyl declared that by the terms of peace each nation must be given as far as possible national security on the basis of a dynamic and democratic internationalism.

Prof. Harry A. Overstreet held that by the terms of peace the present battle of capitalistic groups fighting for territory for an investment area must come to an end and that not only should the future ensure the open door for trade, but also the open door for free investment.

Socialist Representation at the Peace Settlement was the subject of an address by Norman Angell, who was introduced as the author of the "Bible of pacifism," an address which met the evident approval of his hearers. He favored a peace conference made up in part of representatives of the existing governments, whose duty it should be to draft and initiate peace measures, and in part of larger groups representing the various parliaments of the nations at war, with powers of revision of peace measures. The minority opinions of the Socialists and radicals must be represented in the final settlement, he said, to act as a check on the dead weight of an uncritical majority opinion. Such a conference would cut athwart national frontiers on the lines of interest common to the different elements within the various groups. Machinery for democratic control would thus be provided and worn out diplomatic methods combated at the peace table. The rights of the minority to be heard at all times are most neces-

sary, Mr. Angell declared, and free speech must be permitted as a guarantee of such rights.

While a great advance has been claimed in the trend toward Socialism in England, said the speaker, the rank and file of British labor is reacting against a state socialism under which the unscrupulous overseer can say to the worker of military age: "You talk back and into the trenches you go." Such state socialism, the workers already see, may bring in the future the truly servile state. Mr. Angell further asserted that British labor is moving toward a guild system, away from the old trade-union form of organization and from a state Socialist bureaucracy. On the other hand, the rights of the state as supreme have been dramatically brought home to the worker when he is presented with the blue ticket and ordered to the trenches. Conscription has changed the worker's ethical conception of property rights and such change foreshadows a future democratic form of government responsible to all the people.

While there was an attempt by Socialist party members at the conference to hark back to straight Socialist propaganda and the fight against capitalism as the root of present evils in society, and thus ignore the discussion of war problems, such an attempt did not meet the approval of the majority. As one of the conference speakers pertinently remarked in private, "How can you take the time to discuss the Socialist theories of surplus value and the class struggle when our soldiers are already preparing to enter the trenches?"

However widely radicals, pacifists, conscientious objectors and socialists might differ on questions of public policy, it was evident that the conference as a whole was agreed that the great masses of working people of the warring nations should have voice not only in the control of industry but in the settlement of diplomatic questions and international relations as well.

CIVILIAN HOSPITALS HIT BY WAR

WAR talk naturally held a prominent place on the program of the nineteenth annual meeting of the American Hospital Association at Cleveland, September 14-18, especially as Dr. Winford H. Smith, superintendent of Johns Hopkins Hospital and chairman of the Committee on Hospitals of the Council of National Defense, was present to represent the surgeon-general of the army in discussing the effect of the war upon civilian hospitals, dispensaries and medical schools.

It was apparent that the Washington authorities will make reasonable efforts to protect the internes and medical students of the hospitals of the country, but also that the need for medical men

is such that, if the war continues, a serious shortage of staff, both resident and visiting, must be anticipated. The internal problems forced upon the hospitals and dispensaries by the withdrawal of so many of their men have, up to the present time, distracted attention from the larger problem of helping out the community as a whole. Shortage of medical service, due to the enlistment of great numbers of medical men in the active ages, vitally affects the community; hospitals and dispensaries are only beginning to think about it. A feeling voiced by a number of superintendents at Cleveland that the work of their institutions would have to be curtailed was vigorously combated by authoritative speakers who argued that the special needs of war times called rather for an extension of their work in many communities.

The idea of pay-clinics for people of moderate means—the rich can afford to buy the best and the poor accept it free—seemed, by the discussions, to be making gradual headway in the hospital world. A new development is the establishment of special clinics for treating ac-

cident cases under the state workmen's compensation laws. Financial responsibility is placed by law upon the employer or upon the company in which he insures so that the hospital transfers to the new self-supporting clinic, in which the medical staff is paid, a large amount of the work which it formerly did free or for a nominal fee in the surgical dispensary. The largest clinic, at New York Hospital, had last year a gross income of \$35,000, and the next largest, at Pennsylvania Hospital in Philadelphia, \$10,000.

These new institutions, which are essentially pay-clinics for general surgical work, are expected to spring up rapidly in all of the states which have enacted workmen's compensation laws. The fact that they must compete with individual doctors and with doctors engaged by employers and insurance companies, should prove a powerful stimulus to efficiency in their work. The prediction was made that they will prove more satisfactory than the average private practitioner and that their establishment heralds a great extension of surgical pay-clinics in the next few years.

FEDERAL STORAGE AND MARKETING

TO THE EDITOR: The high cost of living is bringing out the usual cry for investigation, but with this clamor for investigation very little of a constructive or remedial nature is offered. The question of food prices and food control is largely a question of storage and marketing. A few men who own large storage plants control the price of eggs, butter and general produce, as well as fruits and vegetables.

To meet this situation, all we have to do is to adopt their method in a community for the benefit of the community. The writer proposes the establishment in the Department of Agriculture of a federal storage and marketing commission composed of five members appointed by the President, with the secretary of agriculture as chairman, this commission to have comprehensive powers to deal with the question of producing, marketing, distributing, retailing and handling of food products of every description; and to make a year in and year out study of all questions pertaining to the production, distribution and consumption of food products.

The main remedial value of the commission, however, would lie in its power to cooperate with any county in any state of the nation to erect and maintain at the expense of the county a completely equipped county storage plant. These plants would be owned by the counties in which they were erected and, of course, would be situated in the most central town or city in the county. The question of putting up these plants would rest with the county by public vote. The federal government, through the storage and marketing commission, would pass on the plans of each plant and approve the same and, through the government, guarantee the bonds

issued by the county for the construction of the plant.

The management of these county storage plants would be vested in a manager and a local county commission, subject to the rules and regulations provided by the federal commission. The profits made from the operation of the plants, after paying all expenses, would be applied to paying off the bonds guaranteed by the government. The bonds would be amortized, so much of the principal falling due each year. In this way, the profits made from the plant would in time pay for the cost of the equipment and buildings. The rates for storing food would be reasonable, but enough to pay expenses and make a profit on the investment.

THE REASON FOR WAR

TO THE EDITOR: It was with deep regret and sorrow I first knew that our beloved country had decided to enter the horrid war that Germany has forced upon the world. As I thought of Christ and His sayings, that He had power to call on legions of angels to protect Himself but instead was mocked and whipped and spit upon, and without resistance was so inhumanely put to death, I thought wars could never be right. But at last, the truth of what Christ's mock trial before Pilate meant, dawned upon me (Peter 1:14).

Governments are for the punishment of evil-doers and for the praise of those that do well. Pilate was on trial as well as Christ, for he admitted Christ's innocence, for he, it is said, knew that for envy Christ had been delivered to him, and he said of Christ to the people, "Why, what evil has he done? I find no fault in Him." But

there, as so often is the case, justice failed, because Pilate wanted place and power, as did also the leading Jews theirs.

So now, if our government stands for justice and the punishment of evil-doers as we believe it does, we must uphold the power to punish evil, that is, to stop the evil practices that are in the world, that is vested in it, and strive to have that lasting peace which *justice* will bring come soon.

MRS. A. HAMILTON.

A PLAYGROUND FOR JAVA

TO THE EDITOR: A letter has just reached me from my correspondent in Java, James Ety. He has been receiving regularly the *SURVEY* and the *Playground Magazine*. He writes, "I have great pleasure in stating that our place is getting its playground." He then modestly adds that, while he did not take an active part in it, "I think the many times I spoke about your American playground movement must have helped to level the paths."

It is just these beginnings all over the world, promoted by just such articles as appeared in the *SURVEY* and in the *Playground Magazine*, that are leading to a broader internationalism and helping to make the way for a better understanding and a more lasting peace in the future.

C. M. GOETHE.

MAKING THE WAR SAFE FOR CHILDHOOD

TO THE EDITOR: I have just read an article on this subject in the *SURVEY* of August 11. Having long admired the energy and the ingenuity of the American people, I am particularly interested in the new direction it has taken.

I expect shortly to hear of experiments with the object of making water dry and making fire cold. Try these first. You will find it comparatively easy to obtain satisfactory results. When you have succeeded you may have good hope of making war safe for childhood.

In the meantime would you like to hear some of the things that take place in spite of the efforts you quote in England to make the war safe for children. One has only to open the window of this English cottage to hear the cry of the children.

Pitiful enough, isn't it? The children who have been frightened into meningitis by air raids; the children who have died in anguish from bombs; the children whose "father died at the front; and it upset mother so she died when baby was born"; the babies who have been made old before their time because they know what death and parting and terror and anxiety mean. But none of these things could happen yet to American children.

Wait now, there's a neighbor's child running up the path. That's Muriel. Her father is in a munition factory; there's her mother come out to fetch her. She's a sturdy-looking little lass, nothing the matter with Muriel; look a bit closer. Something funny about those baby-eyes, isn't there? Movements jerky and uncontrolled, afraid the brain's not normal? That's right, Muriel isn't normal. She'll never be quite "like other children." Hear her mother apologize for Muriel.

"I had a young brother at the front. Only the two of us, there was. All the time I was carrying baby I was nearly out of my mind with worry about him. Then the telegram's come saying he was killed. Muriel was born that night. A seven months' child she was, and she's always been the same as you see. I'm sure I'd have borne anything myself rather than hurt the child, but a woman can't help her feelings."

You've got to see that the men in the trenches don't carry with them the hearts of

American women, if you don't want the abnormal child like Muriel.

There was a baby born down our street the other day. We all took an interest in him because his father was a discharged soldier "invalided out." He had been married immediately on his discharge to the girl he was engaged to before the war. Let's hear what nurse has to say about the baby.

"Mrs. Milligan's baby is going to be a rare handful. He's as pretty a baby as ever I saw, but you can't put him down a minute or he screams himself almost into convulsions. Not cry, he doesn't, screams right out."

"How do you account for that, nurse?"

"Well, you see his daddy had shell shock, he's as brave a man as ever I saw, but he gets caught hold of by terror. She thought she'd get him right, but with baby coming, very likely it got on her nerves instead. Anyway you've only to look at baby's eyes to see he was born frightened." You've got to see that American women don't marry men who've given their nerve for their country if you don't want neurotic babies.

Then there's little Mary, dainty little Mary with the blue eyes, down last week with bread-rash and dysentery, she doesn't seem to pick up. Her mother doesn't feel sure she's going to rear that only little daughter. "There doesn't seem any way we can get her the right food though we've got the money." There is a world shortage of food—wheat and milk used for munitions. When you take millions of men from production and use them in destruction, do you think you can be sure of having the pure bread and the unadulterated milk that is necessary to save the lives of your children like little Mary?

American people! Your children are in danger. In danger, both physical and moral. Your sensitive little ones are in danger of becoming neurotic from living in the war atmosphere of fear, excitement and anxiety. Your less sensitive child is in danger of becoming brutalized and hardened by the same atmosphere. Hurry on with your palliatives. Get all you can for the children while you can. And then you, great American nation, sit down and weep at the futility of your task of making war safe for childhood. Nay, rather, weep in an agony of great compassion and pity for the child-victim of war in every belligerent country. See, as in a vision, the millions of suffering and tortured and tormented babies. Weep, because fear and pain looks at you from the blue eyes of children. The children are weeping too; it is because they foresee that very surely when the war has eaten into the vitals of your nation the ranks of suffering babyhood must be joined by the children who will pay the price of war in America.

EDUCATE THE GERMANS

TO THE EDITOR: I wish to make a suggestion, which, it seems to me, will be one of the most powerful methods of winning the war, and still it seems, to me, to be much more neglected than it should be.

I speak of the education of the German people, the dissemination of knowledge and facts among the Germans, and, if necessary, a bureau to be created in the United States, Germany, France and Russia, possibly Italy, for this purpose.

Training the German mind to think properly and according to the standards adopted by humanity can do as much, and possibly more, than bullets, and in a much more human way. For example, the scattering of the President's speech inside of the German lines by aviators was the cause of numerous Germans deserting into our lines. The Presi-

dent's message to Russia was a strong factor in stimulating the Russians, and, no doubt, would have been an educator among the Germans if it had been carried to them, which fact I am not conversant on; facts pertaining to the wanton destruction of women and children and non-combatants, and the anger it arouses among the enemies of Germany, and in neutral countries.

The after-effect of the war on Germany, and the impossibility of building up her merchant marine, emphasize the fact that all neutral nations will hesitate and refrain from dealing with Germany; and the severe consequences arising therefrom, affecting Germany, probably as bad or worse than the immediate effect of the war, that is, eventually; the horrible destruction of the men of Germany and the consequent effect on the nation, later; the awful debt that Germany is piling up against her people, really mean that each man is to work for years and virtually pay himself, making the conditions such that it will be just as well for Germany to repudiate her debt as to pay it, as far as the people of Germany are concerned.

There are a thousand lines of thought, and my idea is that information should be scattered broadcast by the use of our air-planes, or other methods, in which information can be gotten into Germany. Appropriations should be made for this purpose, and I fully believe wide influence and results can be secured in this way.

A DELINQUENT HEADLINE

TO THE EDITOR: May I call your attention to a misleading headline in a Common Welfare item of September 15, which gives an inaccurate idea of the article reviewed from the *Journal of Delinquency*, by the words "two immigrants out of five feeble-minded." The idea is not borne out by your review which follows. The article in question begins with a summary of which the first two paragraphs are as follows:

"This is a study not of immigrants in general but of six small highly selected groups, four of 'average normals' and two of apparent 'defectives,' all of them steerage passengers arriving at Ellis Island." "The study makes no determination of the actual percentage, even of these groups, who are feeble-minded."

The most that the article contends is that 40 per cent of the very small number of immigrants studied were probably feeble-minded. Those of us who are engaged in efforts to improve the condition of the feeble-minded feel our task to be so serious that we are in constant danger of deserved criticism because of over-statement. I fear that people reading the headline only, or biased by it in reading the review, may imagine that this is an instance of that kind.

ALEXANDER JOHNSON.

[Field Secretary of the Committee on Provision for the Feeble-minded.]
Philadelphia.

JOTTINGS

IN A REPORT to the American people the American Red Cross says that from May 10, up to August 31, it had appropriated \$12,339,681 for work in Europe, \$10,692,601 of it in France, the remainder in Russia, Rumania, Italy, Serbia, England and Armenia.

Some appropriations are for a year but the greater part will have been spent by November next.

PRESIDENT VIERA of Uruguay has issued a decree officially recognizing the second Pan-American Child Welfare Congress to be held in Montevideo next March. This decree places the Congress under governmental auspices and authorizes the minister of foreign affairs to invite other countries of North, South and Central America to send official delegates. Julia C. Lathrop, chief of the Children's Bureau, is chairman of the committee for the United States and Edward N. Clopper, 105 East 22 street, New York is secretary.

EIGHT ten-hour courses in social welfare work by Nathan Peyser, director of the Educational Alliance, are announced by the extension department of the College of the City of New York. The courses are free and will be given downtown. Registration is now open.

WAR and Health will be the central theme of the annual meeting of the American Public Health Association at Washington October 17-20. The leading speakers will be representatives of the appropriate federal services.

WALTER E. CLARK, head of the Department of Political Science of the College of the City of New York, has been elected president of the University of Nevada, taking office January 1. He is a graduate of Ohio, Wesleyan and Columbia Universities and was for some years a resident of Greenwich House in New York city.

UNDER an appropriation by the last legislature, California has created the office of state director of physical education which is, practically speaking, a state superintendent of playgrounds. It is understood that Clark Hetherington of Wisconsin has been tendered the appointment and has accepted it.

THE first annual report of the New York city Children's Court since it was organized as a separate court has just come from the press. The presiding justice, Judge Franklin Chase Hoyt, shows that, although in 1916 there was an actual decrease in the number of arraignments, the number of hearings increased, indicating that the court gave more careful attention to the individual case. The establishing of the probation bureau, which now has fifty-five salaried probation officers, has reduced the number of commitments to institutions from 3,682 in 1912 to 2,893 in 1916. This decrease, it is estimated, has saved the city, \$238,680 in money paid for the maintenance of committed children. Of the 12,425 children arraigned in 1916, 84 per cent were arraigned for the first time, 11.4 per cent for the second time, 3.1 per cent for the third time and 1.5 per cent for the fourth time or oftener.

MAYOR MITCHEL, of New York city, spoke on Monday at the laying of the cornerstone of the first of twelve new buildings to be erected at the Children's Hospitals and School for the Feeble-minded on Randall's Island under an appropriation of \$1,600,000. Some of the present buildings were put up in 1869. "In an institution such as this," said Mayor Mitchel, "the buildings should last no longer than their usefulness. When better methods have been found for the treatment of the unfortunates who have occupied them and when better methods of construction have been devised, then these buildings that we are erecting today must come down and new buildings take their place. That is progress and nothing short of it is progress."

COMING MEETINGS

[Fifty cents a line per month; four weekly insertions; copy unchanged throughout the month.]
AMERICAN PUBLIC HEALTH ASSOCIATION, WAR MEETING, Washington, D. C., Oct. 17-20. Headquarters, Hotel Willard. Acting secretary, A. W. Hedrick, 126 Massachusetts Ave., Boston, Mass.

PERIODICALS

Fifty cents a line per month; four weekly insertions; copy unchanged throughout the month.

A. L. A. Book List; monthly; \$1; annotated magazine on book selection; valuable guide to best books; American Library Association, 78 East Washington St., Chicago.

American Red Cross Magazine; monthly; \$2 a year; Dohleday, Page & Co., publishers, New York.

American Journal of Public Health; monthly; \$3 a year; 3 months' trial (4 months to SURVEY readers), 50 cents; American Public Health Association, 126 Massachusetts Ave., Boston.

A Voice in the Wilderness; \$1 a year. A magazine of sane radicalism. At present deals particularly with our autocratic suppression of free speech, free press and peaceable assembly. An indispensable magazine to the lover of liberty. 12 Mount Morris Park, New York City.

Better Films Movement: Bulletin of Affiliated Committees; monthly; \$1; ten cents an issue. Information about successful methods. Address National Committee for Better Films, or National Board of Review of Motion Pictures, 70 Fifth Ave., New York.

The Child Labor Bulletin; quarterly; \$2 a year; National Child Labor Committee, 105 East 22 street, New York.

The Club Worker; monthly; 30 cents a year; National League of Women Workers, 35 East 30 St., New York.

The Crisis; monthly; \$1; National Association for the Advancement of Colored People, publisher, 70 Fifth Ave., New York.

The Critic and Guide; monthly; \$1 a year. Devoted to medical sociology, rational sexology, birth control, etc. Wm. J. Robinson, M.D., Editor. 12 Mount Morris Park, New York City.

The Journal of Home Economics; monthly; \$2 a year; foreign postage, 35c. extra; Canadian, 20c.; American Home Economics Association, 1211 Cathedral St., Baltimore, Md.

The Journal of Negro History; quarterly; \$1 a year; foreign subscriptions 25 cents extra; concerned with facts not with opinions; Association for Study of Negro Life and History, 1216 You St., N. W., Washington, D. C.

Life and Labor; \$1 a year; a spirited record of the organized struggle of women, by women, for women in the economic world. Published by The National Women's Trade Union League, Room 703, 139 North Clark street, Chicago.

Mental Hygiene; quarterly; \$2 a year; National Committee for Mental Hygiene, 50 Union Square, New York.

National Municipal Review; monthly; \$5 a year; authoritative, public spirited, constructive; National Municipal League; North American Bldg., Philadelphia.

The Negro Year Book; published under the auspices of Tuskegee Institute, Tuskegee, Ala.; an annual; 35c. postpaid; permanent record of current events. An encyclopedia of 450 pages of historical and sociological facts relating to the Negro. General and special bibliographies; full index.

The Playground Magazine; monthly; \$2; Recreation in Industries and Vocational Recreation are discussed in the August Playground. Problems involved in laying out playgrounds are taken up in detail by A. E. Metzdorf, of Springfield, Mass. Price of this issue \$.50. Playground and Recreation Association of America, 1 Madison Ave., New York.

Proportional Representation Review; quarterly; 40 cents a year. American Proportional Representation League, 802 Franklin Bank Bldg., Philadelphia.

Public Health Nurse Quarterly, \$1 a year; national organ for Public Health Nursing, 600 Lexington Ave., New York.

Social Hygiene; a quarterly magazine; \$2 per year; The Social Hygiene Bulletin; monthly; \$.25 per year; both free to members; published by the American Social Hygiene Association, 105 W. 40 St., New York.

Southern Workman; monthly; illustrated; folk song, and corn club, and the great tidal movements of racial progress; all in a very human vein; \$1 a year; Hampton Institute, Hampton, Va.

The Survey; once a week, \$3; once a month, \$2; a transcript of social work and forces; Survey Associates, Inc., 112 East 19 St., New York.
